Office: CLEANUP CHATSWORTH
Past Use that Caused Contam: MACHINE SHOP, METAL FINISHING, METAL PLATING - CHROME, METAL PLATING - OTHER
Potential Media Affected: CONTAMINATED SURFACE / STRUCTURE, SOIL, SOIL VAPOR, UNDER INVESTIGATION
Potential Contamin of Concern:

CHROMIUM III, CHROMIUM VI, TETRACHLOROETHYLENE (PCE), TRICHLOROETHYLENE (TCE), UNDER INVESTIGATION

Site History:

Bowman Plating - Operating Plating Facility from 1945. Large scale plating facility that runs a 24x7 operation. Bowman is made up of 9 continuous parcels only parcel #1 is listed as a contact. Site was screened in FY 2010-11. Site was sampled under South Central Discovery Project using DTSC Orphan funds. Found to have PCE contamination in soil, soil gas and groundwater.

Voluntary Cleanup Agreement was signed on March 09, 2015. Project is now under a VCA.

DTSC reviewed a Phase I Environmental Site Assessment (ESA) (Ramboll Environ US Corporation, July 2015) for the Site. The ESA identified the historic use, storage, treatment of these chemicals and the results of previous subsurface investigations as a general REC at the Site. Based on the information provided, DTSC determined that further investigation was necessary to define the nature and extent of hazardous substances releases in soil, soil gas and groundwater at the Site. DTSC requested submittal of Site Characterization Work Plan.

DTSC reviewed the Site Characterization Work Plan for the Site, (Ramboll Environ US Corporation, October 9, 2015). Fieldwork was completed in March 2016 and a report was submitted on October 2016. DTSC recommended a supplemental site investigation.

DTSC reviewed supplemental Site Characterization Work plan (Workplan) (KCE Matrix, January 31, 2020). The Workplan presents the methods to be used to perform additional groundwater investigation.

Violations

Violation Date: 09/25/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 09/25/2018. OBSERVATION: Observed three 5-gallon container of waste paint solvent and one 55-gallon drum of used oil accumulating with no hazardous waste label. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly labeled. Operator labeled the containers at the time of inspection.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 01/29/2020 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 06/02/2020. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. 1 x 55G Waste Oil 1 x 55G Waste Solvent CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
(1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 09/25/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 10/01/2018. OBSERVATION: Observed an open container of waste paint booth filter located next to the paint booth. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly closed.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F008
Waste Code Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 20120227
Handler Name: BOWMAN PLATING COMPANY INC.

Violations

Violation Date: 10/18/2016
Violation Source: CERS
Violation Program: HWLQG
Violation Division: Los Angeles County Fire Department
Citation: 22 CCR 15 66265.177 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.177
Violation Notes:

Returned to compliance on 10/21/2019. OBSERVATION: Incompatible wastes were found stored next to one another with no separation in the Hazardous Waste (HW) storage area. HW storage area • 1 - 55gallon poly drum storing chromic acid waste • 1 - 55gallon poly drum storing alkaline cleaner sludge CORRECTIVE ACTION: Incompatible wastes shall not be stored in the same container, nearby, or in an unwashed container which previously contained an incompatible waste or container. Immediately begin storing incompatible wastes in separate containers. If the containers are stored in the same area, they shall be separated or protected from the other containers by means of a dike, berm, wall, or other device.

Violation Description:

Failure to separate incompatible wastes from the same container, nearby containers, or unwashed containers which previously contained incompatible waste or materials.

Violations

Violation Date: 10/18/2016
Violation Source: CERS
Violation Program: HWLQG
Violation Division: Los Angeles County Fire Department
Citation: HSC 6.5 25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25201(a)
Violation Notes:

Returned to compliance on 11/19/2016. OBSERVATION: Hazardous Waste (HW) storage area • 1- 55gallon metal drum storing waste oil, HW labeling affixed, accumulation start date 06/21/16 • 1-cubic yard container storing NA3077 HW Solids N.O.S. (rags, methylene chloride) 9 III, HW label affixed, accumulation start date 07/11/16 CORRECTIVE ACTION: Facilities who generate more than 1000 kg of hazardous waste per month may store waste on site up to 90 days. Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA.

Violation Description:

Failure to obtain a permit or grant of interim status to accumulate hazardous waste longer than 90 days.

Violations

Violation Date: 10/18/2016
Violation Source: CERS
Violation Program: HWLQG
Violation Division: Los Angeles County Fire Department
Citation: 22 CCR 31 67100.9 - California Code of Regulations, Title 22, Chapter 31, Section(s) 67100.9
Violation Notes:

Returned to compliance on 10/21/2019. OBSERVATION: A Summary Progress Report (SPR) for 2014 reporting year was not available for review at time of inspection. CORRECTIVE ACTION: All generators subject to SB 14 in 2014 reporting year must prepare a SPR. Generators shall complete the DTSC Form #1262 titled "Summary Progress Report," and have it available for inspection. Provide a copy of the SPR for 2014 reporting year or immediately prepare and submit a copy to the CUPA.

DRAFT

Violation Description:

Failure of a large quantity generator to prepare a summary progress report every four years, using DTSC's Form # 1262 (3/99) titled "Summary Progress Report".

Violations

Violation Date: 10/30/2013 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Notes:

Returned to compliance on 11/04/2013.

Violation Description:

Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment:
1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order;
2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste;
3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design;
4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and
5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

Violations

Violation Date: 07/07/2017 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Notes:

Returned to compliance on 01/23/2018. Owner/operator failed to provide site maps to indicate all the required information. Resubmit the site maps to include all the required components; north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous material handling and storage areas, emergency response equipment. The maps currently submitted to the California Environmental Reporting System (CERS) are lacking most of the required components.

Violation Description:

Failure to complete and electronically submit a site map with all required content.

Violation Program: HWLQG ***Violation Division:*** Los Angeles County Fire Department
Citation: HSC 6.5 25244.21 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.21
Violation Notes:

Returned to compliance on 10/21/2019. OBSERVATION: A source reduction evaluation review and plan for 2014 reporting year was not available for review at time of inspection. CORRECTIVE ACTION: On or before September 1, 1991, and every four years thereafter, each generator shall conduct a source reduction evaluation review and plan pursuant to section 67100.5 and have it available for inspection. Every generator shall retain the original of the current review and plan and report, shall maintain a copy of the current review and plan and report at each site, or, for a multisite review and plan or report, at a central location, and upon request, shall make it available to any authorized representative of the department or the unified program agency conducting an inspection pursuant to Section HSC 25185. Provide supporting documentation that a source reduction evaluation review and plan was prepared to the CUPA or immediately prepare this report and ensure that this report is done in a timely manner.

Violation Description:

Failure to adequately complete, and maintain for review, all requirements of the source reduction evaluation review and plan (SB-14).

Violations

Violation Program: PBR ***Violation Division:*** Los Angeles County Fire Department
Citation: 22 CCR 45 67450.11(d)(4)(D) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.11(d)(4)(D)
Violation Notes:

Returned to compliance on 10/21/2019. OBSERVATION: The owner/operator failed to provide initial and annual training to employees, who handle cyanide process solutions, cyanide-containing rinse waters, or manage cyanide-containing aqueous waste per 22 CCR 67450.11(d)(4)(D) Training must include, but not limited to, procedures to: 1. reduce drag-out of plating baths, 2. minimize contaminants in process baths, 3. extend process bath life, 4. minimize chemical spills and splashes from process and rinse solutions handling practices, and 5. respond to chemical spills to reduce waste and minimize releases from process and rinse solutions handling practices. CORRECTIVE ACTIONS: Provide initial and annual training to employees who handle cyanide process per the requirements of this section. Submit supporting documentation that demonstrates compliance with these requirements to the CUPA.

Violation Description:

Failure to provide initial and annual training to employees, who handle cyanide process solutions, cyanide-containing rinse waters, or manage cyanide-containing aqueous waste, on how to reduce wastes in the production area, including, but not limited to, procedures to:
1. reduce drag-out of plating baths,
2. minimize contaminants in process baths,
3. extend process bath life,
4. minimize chemical spills and splashes from process and rinse solutions handling practices, and
5. respond to chemical spills to reduce waste and minimize releases from process and rinse solutions handling practices.

Violation Notes:

OBSERVATION: Various sizes of drums collecting waste sandblasting media (A-1, A-2, A-3, A-4, GB-1) located in the sandblasting area were observed without hazardous waste labels. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the containers listed above have been properly labeled.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 10/21/2019 ***Violation Source:*** CERS
Violation Program: PBR ***Violation Division:*** Los Angeles County Fire Department

Violation Notes:

Returned to compliance on 10/21/2019. OBSERVATION: Hazardous Waste (HW) cyanide treatment system modification without approval • A 1075-gallon capacity tank storing cyanide bearing rinse waste was replaced with (2) 1000-gallon capacity tanks • 1 additional filter press was installed CORRECTIVE ACTION: Replacement of identical or functionally equivalent tank system parts or components shall be approved by the CUPA prior to replacement or change out. Immediately obtain a written assessment reviewed and certified by an independent, qualified, professional engineer, registered in California, attesting that the system has sufficient structural integrity, is acceptable for the transferring, storing, and treating of hazardous waste, and that the tanks and containment system are suitably designed. Ensure that the approval from the CUPA is obtained prior to future replacement of identical or functionally equivalent tank system parts or components.

Violation Description:

Failure to obtain CUPA approval prior to the replacement of identical or functionally equivalent tank. The notification to the CUPA of replacement shall include the following:
(1) Name, address, and EPA identification number of the facility;
(2) Date of planned replacement;
(3) Description part or component to be replaced;
(4) Description of the tank system and type of waste(s) handled;
(5) Description of how the part or component is identical or functionally equivalent to the part or component to be replaced.

Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Los Angeles County Fire Department
Eval Program: CalARP
Eval Source: CERS
Eval Notes:

Massoud Akhavi It is recommended that the owner/operator develop and implement written operating procedures for the transferring/mixing of process solutions of regulated substances; nitric acid and sodium cyanide. There should be detailed procedures that employees can follow when they are tasked with the transferring/mixing of process solutions that involve the regulated substances.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violations

Violation Date: 03/15/2019
Violation Source: CERS
Violation Program: HW
Violation Division: Los Angeles County Fire Department
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Notes:

Returned to compliance on 03/29/2019. OBSERVATION: Bills of lading for used oil and fuel filters were not available at the time of inspection. CORRECTIVE ACTION: Obtain copies of all bills of lading for used oil and fuel filters for the past three years and submit copies to the CUPA.

Violation Description:

Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

Violations

Violation Date: 07/07/2015
Violation Source: CERS
Violation Program: HW
Violation Division: Los Angeles County Fire Department
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Notes:

Returned to compliance on 07/07/2015. OBSERVATION: The Owner/Operator failed to obtain or no longer has an active hazardous waste generator permit. CORRECTIVE ACTION: The Owner/Operator shall immediately apply to receive a new or renewed hazardous waste generator permit and maintain that permit as active as long as the facility is in operation and continues to generate hazardous waste.

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Permitting

Site Code: 300395
Program Type: HAZARDOUS WASTE FACILITY
Facility Type: HIST PERMITTED
Calenviro Screen Percentile Sc: 91-95%
Site Facility Type: UNDERGOING CLOSURE
Facility History:
Assembly District: 63
Senate District: 33
Census Tract: 6037540501

Inactive facility undergoing closure and corrective action: The Martin Metals Finishing (MMF) facility is located at 12150 South Alameda Street (on the northeast corner of Alameda and Dixon Streets) in Lynwood, California. The Harbor Freeway (Interstate 110) lies approximately 3 miles west of MMF, and the Century Freeway (Interstate 105) lies approximately 0.5 mile north.
MMF was in the business of applying conversion coatings of chromate and chromium phosphate to aluminum extrusions (such as metal window frames), prefabricated aluminum or steel components, assemblies, and subassemblies. The chromate conversion coating was applied by dipping, and the chromium phosphate was applied by automatic spraying on a conveyor line. The rinse waters generated in the conversion coating process were collected into a tank and treated in the on-site waste water treatment system. This effluent waste stream was dehydrated to a solid waste, drummed, stored on-site, and transported off-site to an authorized Class I facility.
Located at this same site is Chemical Technology Laboratories (CTL). CTL was a manufacturer of paint coatings that were made from raw materials (such as resins, powders, paint pigments, etc.) or from compounding of other existing coatings. CTL purchased and stocked raw materials and products from other vendors for sale to its customers. Through the process of manufacturing, decontamination of equipment, and various quality assurance/quality control (QA/QC) procedures involving the testing and spraying of products, CTL generated a waste solvent and recycled this solvent through an on-site distillation unit.
CTL and MMF ceased operations in August 1994. CTL was in operation from approximately 1979 to August 1994, and MMF was in operation from 1965 to August 1994. Since then, a new company, Processes by Martin, Inc., has operated on a portion of the site as an applicator of paint and powder coatings. MMF and CTL are the two entities responsible for the generation of the hazardous waste (CTL and MMF previously shared a common area at the facility). The facility was purchase in a tax sale in 2001 by Mr. William Little.

Calenviro Screen Percentile Sc: 91-95%
Site Facility Type: UNDERGOING CLOSURE
Assembly District: 63
Senate District: 33
Census Tract: 6037540501
Facility History:

Two facilities with separate U.S.EPA ID numbers operated simultaneously at the 12150 S. Alameda Street location: (1) Martin Metal Finishing, Inc., and; (Chemical Technology Labs, Inc. Martin Metal Manufacturing, Inc. core business was the application of chromate and chromium phosphate coatings to aluminum extrusions. Chemical Technology Labs, Inc. was a manufacturer of paint coatings. Currently, Processes by Martin operates at this location. It is a 90-day generator that began operation after the bankruptcy reorganization of Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. in 1994. This location was originally occupied by the Northrop Corporation (Northrop). Northrop operated an aircraft parts manufacturing plant at the site in the 1960's. Subsequently the location was occupied by the Levinson Turell Building Company about which there is no operations information available. Levinson Turell leased the facility to the Metalcraft Products Company which manufactured steel carts and operated a painting facility. In 1976, Pete Martin and Martin Metals Finishing, Inc. purchased the facility from Levinson Turell. Martin Metal Finishing, Inc. and Chemical Technology, Inc. engaged in the management of hazardous waste pursuant to two Interim Status Documents (ISD) issued by the Department of Health Services, which was DTSC's predecessor, on April 6, 1981 for Martin Metal Finishing, Inc. and on March 6, 1981 for Chemical Technology Labs, Inc. Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. ceased operation of all Hazardous Waste Management Units (HWMUs) in August, 1994 and submitted a Closure Plan on February 27, 1996. Therefore, both facilities authorizations to operate as hazardous waste facilities ended August 1994. On December 6, 1994 the Superior Count in Los Angeles issued an Application and Stipulation for Judgment and Entry of Judgment in connection with the bankruptcy settlement requiring Martin Metals Finishing and Chemical Technologies Laboratory facility to (1) put all rent collected from the lessees on other portions in a separate account for funding of closure of the Hazardous Waste Management Units (HWMU) and (2) commence corrective action to determine if releases occurred and the extent of the releases.

After DTSC review and comment, an Amended Closure Plan, dated [March 23, 2000 dated March 23, 2001] was submitted to DTSC. DTSC developed additional conditions for approval of the closure plan because of continuing concerns. The Closure Plan was noticed to the public on January 25, 2008. Approval is pending. The single Closure Plan covers both Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc.

Corrective Action work at Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. facility has resulted in the establishment of 19 on-site and off-site groundwater monitoring wells and the installation of soil borings and soil gas probes in the course of 3 investigations. An RFA was completed on November 29, 2004. The USEPA established four wells at the Facility in order to evaluate whether groundwater environmental indicators were under control. DTSC approved an RFI workplan on June 30, 2006, the work was implemented, and two RFI reports were received on February 26, 2008 and

DRAFT

May 23, 2008. Approval is pending.

Site History:

Inactive facility undergoing closure and corrective action: The Martin Metals Finishing (MMF) facility is located at 12150 South Alameda Street (on the northeast corner of Alameda and Dixon Streets) in Lynwood, California. The Harbor Freeway (Interstate 110) lies approximately 3 miles west of MMF, and the Century Freeway (Interstate 105) lies approximately 0.5 mile north.
MMF was in the business of applying conversion coatings of chromate and chromium phosphate to aluminum extrusions (such as metal window frames), prefabricated aluminum or steel components, assemblies, and subassemblies. The chromate conversion coating was applied by dipping, and the chromium phosphate was applied by automatic spraying on a conveyor line. The rinse waters generated in the conversion coating process were collected into a tank and treated in the on-site waste water treatment system. This effluent waste stream was dehydrated to a solid waste, drummed, stored on-site, and transported off-site to an authorized Class I facility.
Located at this same site is Chemical Technology Laboratories (CTL). CTL was a manufacturer of paint coatings that were made from raw materials (such as resins, powders, paint pigments, etc.) or from compounding of other existing coatings. CTL purchased and stocked raw materials and products from other vendors for sale to its customers. Through the process of manufacturing, decontamination of equipment, and various quality assurance/quality control (QA/QC) procedures involving the testing and spraying of products, CTL generated a waste solvent and recycled this solvent through an on-site distillation unit.
CTL and MMF ceased operations in August 1994. CTL was in operation from approximately 1979 to August 1994, and MMF was in operation from 1965 to August 1994. Since then, a new company, Processes by Martin, Inc., has operated on a portion of the site as an applicator of paint and powder coatings. MMF and CTL are the two entities responsible for the generation of the hazardous waste (CTL and MMF previously shared a common area at the facility). The facility was purchase in a tax sale in 2001 by Mr. William Little.Two areas have been excavated. Report on the excavation is being reviewed by GSU. Vapor wells have been installed and AQMD permitting has been applied for.
DTSC approved an RFI workplan on June 30, 2006, the work was implemented, and two RFI reports were received on February 26, 2008 and May 23, 2008. Both workplans have been approved.

Two area have been excavated. Report on the excavation is being reviewed by GSU. Vapor wells have been installed and AQMD permitting has been applied for.

DRAFT

The SVE is in place and has been operating for over 3 years. Because of the poor array of soil vapor probes at the extraction area, the true level of clean-up in indeterminate. DTSC is requiring this be addressed. A clarified was removed containing very elevated level of hexavalent chromium. The only remaining item for closure is a determination of the effectives of the SVE. This why the probe are required.

Further SVE activities are required to complete corrective action at an area of former UST at the site. On going Groundwater monitoring and this UST clean-up will be the Remedy for corrective action.(7/31/2017). The owner, Mr. William Little, is reluctant to continue to fund the cleanup. Anticipate further negotiations in the future.

Site History:

Two facilities with separate U.S.EPA ID numbers operated simultaneously at the 12150 S. Alameda Street location: (1) Martin Metal Finishing, Inc., and; (Chemical Technology Labs, Inc. Martin Metal Manufacturing, Inc. core business was the application of chromate and chromium phosphate coatings to aluminum extrusions. Chemical Technology Labs, Inc. was a manufacturer of paint coatings. Currently, Processes by Martin operates at this location. It is a 90-day generator that began operation after the bankruptcy reorganization of Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. in 1994. This location was originally occupied by the Northrop Corporation (Northrop). Northrop operated an aircraft parts manufacturing plant at the site in the 1960's. Subsequently the location was occupied by the Levinson Turell Building Company about which there is no operations information available. Levinson Turell leased the facility to the Metalcraft Products Company which manufactured steel carts and operated a painting facility. In 1976, Pete Martin and Martin Metals Finishing, Inc. purchased the facility from Levinson Turell. Martin Metal Finishing, Inc. and Chemical Technology, Inc. engaged in the management of hazardous waste pursuant to two Interim Status Documents (ISD) issued by the Department of Health Services, which was DTSC's predecessor, on April 6, 1981 for Martin Metal Finishing, Inc. and on March 6, 1981 for Chemical Technology Labs, Inc. Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. ceased operation of all Hazardous Waste Management Units (HWMUs) in August, 1994 and submitted a Closure Plan on February 27, 1996. Therefore, both facilities authorizations to operate as hazardous waste facilities ended August 1994. On December 6, 1994 the Superior Count in Los Angeles issued an Application and Stipulation for Judgment and Entry of Judgment in connection with the bankruptcy settlement requiring Martin Metals Finishing and Chemical Technologies Laboratory facility to (1) put all rent collected from the lessees on other portions in a separate account for funding of closure of the Hazardous Waste Management Units (HWMU) and (2) commence corrective action to determine if releases occurred and the extent of the releases.

After DTSC review and comment, an Amended Closure Plan, dated [March 23, 2000 dated March 23, 2001] was submitted to DTSC. DTSC developed additional conditions for approval of the closure plan because of continuing concerns. The Closure Plan was noticed to the public on January 25, 2008. Approval is pending. The single Closure Plan covers both Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc.

Corrective Action work at Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. facility has resulted in the establishment of 19 on-site and off-site groundwater monitoring wells and the installation of soil borings and soil gas probes in the course of 3 investigations. An RFA was completed on November 29, 2004. The USEPA established four wells at the Facility in order to evaluate whether groundwater environmental indicators were under control. DTSC approved an RFI workplan on June 30, 2006, the work was implemented, and two RFI reports were received on February 26, 2008 and May 23, 2008. Approval is pending.

Site History:

Inactive facility undergoing closure and corrective action: The Martin Metals Finishing (MMF) facility is located at 12150 South Alameda Street (on the northeast corner of Alameda and Dixon Streets) in Lynwood, California. The Harbor Freeway (Interstate 110) lies approximately 3 miles west of MMF, and the Century Freeway (Interstate 105) lies approximately 0.5 mile north.
MMF was in the business of applying conversion coatings of chromate and chromium phosphate to aluminum extrusions (such as metal window frames), prefabricated aluminum or steel components, assemblies, and subassemblies. The chromate conversion coating was applied by dipping, and the chromium phosphate was applied by automatic spraying on a conveyor line. The rinse waters generated in the conversion coating process were collected into a tank and treated in the on-site waste water treatment system. This effluent waste stream was dehydrated to a solid waste, drummed, stored on-site, and transported off-site to an authorized Class I facility.
Located at this same site is Chemical Technology Laboratories (CTL). CTL was a manufacturer of paint coatings that were made from raw materials (such as resins, powders, paint pigments, etc.) or from compounding of other existing coatings. CTL purchased and stocked raw materials and products from other vendors for sale to its customers. Through the process of manufacturing, decontamination of equipment, and various quality assurance/quality control (QA/QC) procedures involving the testing and spraying of products, CTL generated a waste solvent and recycled this solvent through an on-site distillation unit.
CTL and MMF ceased operations in August 1994. CTL was in operation from approximately 1979 to August 1994, and MMF was in operation from 1965 to August 1994. Since then, a new company, Processes by Martin, Inc., has operated on a portion of the site as an applicator of paint and powder coatings. MMF and CTL are the two entities responsible for the generation of the hazardous waste (CTL and MMF previously shared a common area at the facility). The facility was purchase in a tax sale in 2001 by Mr. William Little.

Cleanup Status:	ACTIVE AS OF 1/1/2008		
Cleanup Oversight Agencies:	DTSC - SITE CLEANUP PROGRAM		
School District:			
Past Use that Caused Contam:	ABOVE GROUND STORAGE TANKS, HAZARDOUS WASTE STORAGE - TANKS/CONTAINERS, MANUFACTURING - METAL, METAL PLATING - CHROME, PAINT/DEPAINT FACILITY, UNDERGROUND STORAGE TANKS		
Potential Media Affected:	OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR, WELL USED FOR DRINKING WATER SUPPLY AFFECTED		

Potential Contamin of Concern:

METALS, VOLATILE ORGANICS (8260B VOCS)

Site History:

Two facilities with separate U.S.EPA ID numbers operated simultaneously at the 12150 S. Alameda Street location: (1) Martin Metal Finishing, Inc., and; (Chemical Technology Labs, Inc. Martin Metal Manufacturing, Inc. core business was the application of chromate and chromium phosphate coatings to aluminum extrusions. Chemical Technology Labs, Inc. was a manufacturer of paint coatings. Currently, Processes by Martin operates at this location. It is a 90-day generator that began operation after the bankruptcy reorganization of Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. in 1994. This location was originally occupied by the Northrop Corporation (Northrop). Northrop operated an aircraft parts manufacturing plant at the site in the 1960's. Subsequently the location was occupied by the Levinson Turell Building Company about which there is no operations information available. Levinson Turell leased the facility to the Metalcraft Products Company which manufactured steel carts and operated a painting facility. In 1976, Pete Martin and Martin Metals Finishing, Inc. purchased the facility from Levinson Turell. Martin Metal Finishing, Inc. and Chemical Technology, Inc. engaged in the management of hazardous waste pursuant to two Interim Status Documents (ISD) issued by the Department of Health Services, which was DTSC's predecessor, on April 6, 1981 for Martin Metal Finishing, Inc. and on March 6, 1981 for Chemical Technology Labs, Inc. Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. ceased operation of all Hazardous Waste Management Units (HWMUs) in August, 1994 and submitted a Closure Plan on February 27, 1996. Therefore, both facilities authorizations to operate as hazardous waste facilities ended August 1994. On December 6, 1994 the Superior Count in Los Angeles issued an Application and Stipulation for Judgment and Entry of Judgment in connection with the bankruptcy settlement requiring Martin Metals Finishing and Chemical Technologies Laboratory facility to (1) put all rent collected from the lessees on other portions in a separate account for funding of closure of the Hazardous Waste Management Units (HWMU) and (2) commence corrective action to determine if releases occurred and the extent of the releases.

After DTSC review and comment, an Amended Closure Plan, dated [March 23, 2000 dated March 23, 2001] was submitted to DTSC. DTSC developed additional conditions for approval of the closure plan because of continuing concerns. The Closure Plan was noticed to the public on January 25, 2008. Approval is pending. The single Closure Plan covers both Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc.

Corrective Action work at Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. facility has resulted in the establishment of 19 on-site and off-site groundwater monitoring wells and the installation of soil borings and soil gas probes in the course of 3 investigations. An RFA was completed on November 29, 2004. The USEPA established four wells at the Facility in order to evaluate whether groundwater environmental indicators were under control. DTSC approved an RFI workplan on June 30, 2006, the work was implemented, and two RFI reports were received on February 26, 2008 and May 23, 2008. Both workplans have been approved.

Two area have been excavated. Report on the excavation is being reviewed by GSU. Vapor wells have been installed and AQMD permitting has been applied for.
Two areas have been excavated. Report on the excavation is being reviewed by GSU. Vapor wells have been installed and AQMD permitting has been applied for.

The SVE is in place and has been operating for over 3 years. Because of the poor array of soil vapor probes at the extraction area, the true level of clean-up in indeterminate. DTSC is requiring this be addressed. A clarifier was removed containing very elevated level of hexavalent chromium. DTSC approved the removal report which indicated the no CR+6 leaked to the surrounding soil. The only remaining item for closure is a determination of the effectives of the SVE. This why the probes are required.

Further SVE activities are required to complete corrective action at an area of former UST at the site. On going Groundwater monitoring and this UST clean-up will be the Remedy for corrective action.(8/11/2017). The owner, Mr. William Little, is reluctant to continue to fund the cleanup. Anticipate further negotiations in the future.

Status: ACTIVE
A2 Program Type: CORRECTIVE ACTION
CalEnviroScreen Score: 91-95%

Site History:

Two facilities with separate U.S.EPA ID numbers operated simultaneously at the 12150 S. Alameda Street location: (1) Martin Metal Finishing, Inc., and; (Chemical Technology Labs, Inc. Martin Metal Manufacturing, Inc. core business was the application of chromate and chromium phosphate coatings to aluminum extrusions. Chemical Technology Labs, Inc. was a manufacturer of paint coatings. Currently, Processes by Martin operates at this location. It is a 90-day generator that began operation after the bankruptcy reorganization of Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. in 1994. This location was originally occupied by the Northrop Corporation (Northrop). Northrop operated an aircraft parts manufacturing plant at the site in the 1960's. Subsequently the location was occupied by the Levinson Turell Building Company about which there is no operations information available. Levinson Turell leased the facility to the Metalcraft Products Company which manufactured steel carts and operated a painting facility. In 1976, Pete Martin and Martin Metals Finishing, Inc. purchased the facility from Levinson Turell. Martin Metal Finishing, Inc. and Chemical Technology, Inc. engaged in the management of hazardous waste pursuant to two Interim Status Documents (ISD) issued by the Department of Health Services, which was DTSC's predecessor, on April 6, 1981 for Martin Metal Finishing, Inc. and on March 6, 1981 for Chemical Technology Labs, Inc. Martin Metal Finishing,

DRAFT

Inc. and Chemical Technology Labs, Inc. ceased operation of all Hazardous Waste Management Units (HWMUs) in August, 1994 and submitted a Closure Plan on February 27, 1996. Therefore, both facilities authorizations to operate as hazardous waste facilities ended August 1994. On December 6, 1994 the Superior Count in Los Angeles issued an Application and Stipulation for Judgment and Entry of Judgment in connection with the bankruptcy settlement requiring Martin Metals Finishing and Chemical Technologies Laboratory facility to (1) put all rent collected from the lessees on other portions in a separate account for funding of closure of the Hazardous Waste Management Units (HWMU) and (2) commence corrective action to determine if releases occurred and the extent of the releases.

After DTSC review and comment, an Amended Closure Plan, dated [March 23, 2000 dated March 23, 2001] was submitted to DTSC. DTSC developed additional conditions for approval of the closure plan because of continuing concerns. The Closure Plan was noticed to the public on January 25, 2008. Approval is pending. The single Closure Plan covers both Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc.

Corrective Action work at Martin Metal Finishing, Inc. and Chemical Technology Labs, Inc. facility has resulted in the establishment of 19 on-site and off-site groundwater monitoring wells and the installation of soil borings and soil gas probes in the course of 3 investigations. An RFA was completed on November 29, 2004. The USEPA established four wells at the Facility in order to evaluate whether groundwater environmental indicators were under control. DTSC approved an RFI workplan on June 30, 2006, the work was implemented, and two RFI reports were received on February 26, 2008 and May 23, 2008. Approval is pending.

Site History:

Inactive facility undergoing closure and corrective action: The Martin Metals Finishing (MMF) facility is located at 12150 South Alameda Street (on the northeast corner of Alameda and Dixon Streets) in Lynwood, California. The Harbor Freeway (Interstate 110) lies approximately 3 miles west of MMF, and the Century Freeway (Interstate 105) lies approximately 0.5 mile north.
MMF was in the business of applying conversion coatings of chromate and chromium phosphate to aluminum extrusions (such as metal window frames), prefabricated aluminum or steel components, assemblies, and subassemblies. The chromate conversion coating was applied by dipping, and the chromium phosphate was applied by automatic spraying on a conveyor line. The rinse waters generated in the conversion coating process were collected into a tank and treated in the on-site waste water treatment system. This effluent waste stream was dehydrated to a solid waste, drummed, stored on-site, and transported off-site to an authorized Class I facility.
Located at this same site is Chemical Technology Laboratories (CTL). CTL was a manufacturer of paint coatings that were made from raw materials (such as resins, powders, paint pigments, etc.) or from compounding of other existing coatings. CTL purchased and stocked raw materials and products from other vendors for sale to its customers. Through the process of manufacturing, decontamination of equipment, and various quality assurance/quality control (QA/QC) procedures involving the testing and spraying of products, CTL generated a waste solvent and recycled this solvent through an on-site distillation unit.
CTL and MMF ceased operations in August 1994. CTL was in operation from approximately 1979 to August 1994, and MMF was in operation from 1965 to August 1994. Since then, a new company, Processes by Martin, Inc., has operated on a portion of the site as an applicator of paint and powder coatings. MMF and CTL are the two entities responsible for the generation of the hazardous waste (CTL and MMF previously shared a common area at the facility). The facility was purchase in a tax sale in 2001 by Mr. William Little.

Completed Activities

Title: Site Screening
Title Link:
Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Site Screening
Date Completed: 7/1/1991
Comments: Chemical Technology Laboratories (CTL) and Marlume Inc. are subsidiaries of Martin Metal Finishing (MMF) and currently share and operate at the same site with MMF. Marlume manufactures window frames, CTL manufactures paint, and MMF applies the paint coating manufactured by CTL to window frames. There were two 10,000-gallon tanks on the property; one was used to store gasoline and the other was used to store MEK. Both were removed in 1986 and transported to Mexico. The removal was overseen by RWQCB and the fire department. The contaminated soil due to the tank leak was excavated and stored in drums. The hazardous waste storage area is also contaminated with gasoline and MEK. Numerous violations were noted by the Department. Groundwater is contaminated with MEK, acetone, cyclohexanone, trichloroethylene and perchloroethylene. Pending status

DRAFT

recommended for DHS because EPA RCRA lead for PA.

LUST Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail(as Nov 16 2020)

RB Case No:
Local Case No: 001147-001205
Begin Date: 9/17/1997
Lead Agency: SWRCB
Local Agency:
CUF Case: NO
Potential Media of Concern: Under Investigation
How Discovered Description:
Calwater Watershed Name: Los Angeles River - Los Angeles (412.10)
DWR GW Subbasin Name: Coastal Plain Of Los Angeles - Central (4-011.04)
Disadvantaged Community: Disadvantaged Community
Site History:

Potential COC: Gasoline
How Discovered: Site Assessment/Site Investigation
Stop Method: Close and Remove Tank
Stop Description:
Case Worker: MC
File Location:

There is a State Water Board closure Order for this case issued 12/15/2015. The State Water Board needs confirmation that the corrective action wells and wastes have been removed from the site in order to close the case. Once confirmation has been received State Water Board can issue a Uniform Closure Letter and close the case. Attempts to reach the RP have failed. gwl 4/14/2016.

Designated Beneficial Use Desc: Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, Industrial Process Supply
Site History:

There is a State Water Board closure Order for this case issued 12/15/2015. The State Water Board needs confirmation that the corrective action wells and wastes have been removed from the site in order to close the case. Once confirmation has been received State Water Board can issue a Uniform Closure Letter and close the case. Attempts to reach the RP have failed. gwl 4/14/2016.

Handler Summary

Importer Activity: No
Mixed Waste Generator: No
Transporter Activity: No
Transfer Facility: No
Onsite Burner Exemption: No
Smelting, Melting and Refining: No
Underground Injection Control: No
Commercial TSD: No
Used Oil Transporter: No
Used Oil Transfer Facility: No
Used Oil Processor: No
Used Oil Refiner: No
Used Oil Burner: No
Used Oil Market Burner: No
Used Oil Spec Marketer: No

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Site History:

The subject property was undeveloped until the current residential dwellings were constructed between 1928. Three more homes were built around 1947. An apt. complex was built in 1963. A home was present between 1960 to 1973. Eastern and western portions of the site vacant until 1970's when used for parks. Historically the eastern portion of the site (Currently Los Amigos Park) was used for agriculture from at least the 1940s-1960s.

Facility History:

Hexion Specialty Chemicals. Inc. (Hexion) is currently conducting corrective action at its Lynwood facility in accordance with a Superior Court Consent Judgment dated March 28, 2000 (Consent Judgment). The Department of Toxic Substances Control (DTSC) is currently reviewing the Resource Conservation and Recovery Act (RCRA) Corrective Measures Study (CMS) report for the site.

Hexion produces a variety of synthetic alkyd and polyester resins. During the production of resins, which is completed via a batch process in kettles, a product termed "reaction water" is distilled off from the reaction vessel. In the early 1980's the reaction water waste stream was determined to meet the hazardous criteria of flammability and was designated a hazardous waste. After the waste stream was classified as hazardous the facility operated an incinerator at the site under the authority of RCRA interim status. An incinerator permit was issued with an effective dated of June 10, 1992. The

DRAFT

authorization to operate as a hazardous waste facility ended on June 10, 1997.

On January 13, 1989, a RCRA Facility Assessment (RFA) was completed for the site. The RFA identified 18 solid waste management units (SWMUs) and four (4) areas of concern (AOCs) at the facility. A RCRA Facility Investigation (RFI) was conducted and an RFI report was prepared dated December, 1993. The RFI report was subsequently approved by the U.S. Environmental Protection Agency, Region IX (USEPA) on March 30, 1994. Shortly after the RFI report was approved, the facility conducted a Corrective Measures Study and prepared a CMS report dated December 1994. In October 1995, DTSC received regulatory oversight of the facility from USEPA. Corrective Action at the Facility is ongoing. The CMS report has not been approved.

The Hexion facility has recently gone through a number of ownership changes. The following is a brief summary of the facility ownership history; Cargill Inc. (Pre 1950 to February 1994), McWhorter Technologies Inc. (February 1994 to May 2000), Eastman Chemical Company (May 2000 to August 2004), Resolution Specialty Materials LLC (August 2004 to April 2005), Hexion Specialty Chemicals Inc. (April 2005 to 2011), PCCR USA, Inc. (2011 to present).

In order to address soil contamination on the site, an Interim Measures Work Plan was submitted on October 28, 2011 and has been revised as treatment has progressed. A Tribal Cultural Outreach Memo has been sent out describing that Polynt ceased its operations in 2017 and the current Revised Interim Measure Implementation Plan dated 7/17/2017 is ready for public review and comment.

Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR
Potential Contamin of Concern:

OTHER, VOLATILE ORGANICS (8260B VOCS)

Site History:

The current owner, Polynt Composites USA, Inc. (Polynt), is conducting corrective action at its facility located at 2801 Lynwood Road, Lynwood, California. The Department of Toxic Substances Control (DTSC) is considering approval of the "Revised Interim Measures Implementation Plan," (Revised IMIP) dated July 17, 2017, and the "Addendum to Revised Interim Measures Implementation Plan," (Addendum) dated September 21, 2018. Together the Revised IMIP and Addendum describe a proposed corrective action (interim measures) project. Pursuant to the California Environmental Quality Act (CEQA), DTSC has prepared an Initial Study to evaluate potential environmental impacts of the proposed project. Based on the Initial Study, DTSC has determined that the project will not have a significant environmental impact and has prepared a draft Negative Declaration.

DTSC is seeking public review and comment on the proposed Revised IMIP with Addendum and the draft Negative Declaration with its Initial Study. DTSC issued a public notice for a public comment period from October 4, 2018 to November 5, 2018. The project, CEQA, and public review documents may be found on the Community Involvement tab.

The Lynwood facility produced a variety of synthetic alkyd and polyester resins for coatings and molded plastic products from approximately 1950 until operations ceased in the third quarter of 2017. Prior to Polynt, other manufacturing companies, including Momentive Specialty Chemicals, Inc. (formerly d.b.a. Hexion Specialty Chemicals, Inc.); Valspar, Inc.; McWhorter Technologies, Inc.; Eastman Chemical Company; Specialty Materials, Inc.; and Cargill Inc., occupied the site and performed similar chemical operations. Petroleum hydrocarbon products, such as mineral spirits, xylenes, and toluene and other chemicals were used at the facility. Hazardous waste generated on-site was managed pursuant to interim status requirements and subsequently by permits issued by the United States Environmental Protection Agency (USEPA) on May 8, 1990 and DTSC on March 7, 1992. The authorization to operate as a hazardous waste facility ended on June 10, 1997.

On January 13, 1989, a Resource Conservation and Recovery Act (RCRA) Facility Assessment (RFA) was completed for the site. The RFA identified 18 solid waste management units (SWMUs) and four (4) areas of concern (AOCs) at the facility. A RCRA Facility Investigation (RFI) was conducted and an RFI report was prepared, dated December 1993. The RFI report was approved by the USEPA on March 30, 1994. In October 1995, DTSC received regulatory oversight of the facility from USEPA. Disagreement between McWhorter Technologies, Inc. and DTSC over the scope of investigatory work and evaluation of corrective action alternatives resulted in a Superior Court Consent Judgment, dated March 28, 2000, which governs the on-going corrective action activities at the facility.

Active groundwater extraction and treatment has been conducted since October 1995. The groundwater extraction and treatment system (GETS) includes three extraction wells and an on-site treatment unit using granular activated carbon. The recent daily groundwater extraction rate is approximately 1 gallon per minute. Groundwater samples are collected on a semi-annual basis from 20 wells. Operation of the soil vapor extraction (SVE) system began in January 2003. There were 11 soil vapor extraction wells connected to a catalytic oxidizer treatment unit and 3 soil vapor monitoring wells. The SVE system had a mechanical failure in March 2018 and has been removed pending installation of the air sparging/SVE system proposed in the Revised IMIP. Monthly sampling for volatile organic compounds (VOCs) was started in May 2018 to monitor for potential rebound of soil

DRAFT

vapor concentrations after the SVE system shut down.

Status: ACTIVE

Sub Area Link:
Document Type: Operations and Maintenance Report
Date Completed: 5/22/2014
Comments: DTSC's Geological Services Unit accepted the Second Half Semi-Annual Progress Report in a memorandum dated May 22, 2014. A letter accepting the report was never sent to the facility. DTSC has reviewed and accepted subsequent Semi-Annual Progress Reports, so there is no need for further action on this task.

Site History:

Hexion Specialty Chemicals. Inc. (Hexion) is currently conducting corrective action at its Lynwood facility in accordance with a Superior Court Consent Judgment dated March 28, 2000 (Consent Judgment). The Department of Toxic Substances Control (DTSC) is currently reviewing the Resource Conservation and Recovery Act (RCRA) Corrective Measures Study (CMS) report for the site.

Hexion produces a variety of synthetic alkyd and polyester resins. During the production of resins, which is completed via a batch process in kettles, a product termed "reaction water" is distilled off from the reaction vessel. In the early 1980's the reaction water waste stream was determined to meet the hazardous criteria of flammability and was designated a hazardous waste. After the waste stream was classified as hazardous the facility operated an incinerator at the site under the authority of RCRA interim status. An incinerator permit was issued with an effective dated of June 10, 1992. The authorization to operate as a hazardous waste facility ended on June 10, 1997.

On January 13, 1989, a RCRA Facility Assessment (RFA) was completed for the site. The RFA identified 18 solid waste management units (SWMUs) and four (4) areas of concern (AOCs) at the facility. A RCRA Facility Investigation (RFI) was conducted and an RFI report was prepared dated December, 1993. The RFI report was subsequently approved by the U.S. Environmental Protection Agency, Region IX (USEPA) on March 30, 1994. Shortly after the RFI report was approved, the facility conducted a Corrective Measures Study and prepared a CMS report dated December 1994. In October 1995, DTSC received regulatory oversight of the facility from USEPA. Corrective Action at the Facility is ongoing. The CMS report has not been approved.

The Hexion facility has recently gone through a number of ownership changes. The following is a brief summary of the facility ownership history; Cargill Inc. (Pre 1950 to February 1994), McWhorter Technologies Inc. (February 1994 to May 2000), Eastman Chemical Company (May 2000 to August 2004), Resolution Specialty Materials LLC (August 2004 to April 2005), Hexion Specialty Chemicals Inc. (April 2005 to 2011), PCCR USA, Inc. (2011 to present).

In order to address soil contamination on the site, an Interim Measures Work Plan was submitted on October 28, 2011 and has been revised as treatment has progressed. A Tribal Cultural Outreach Memo has been sent out describing that Polynt ceased its operations in 2017 and the current Revised Interim Measure Implementation Plan dated 7/17/2017 is ready for public review and comment.

Document Type: Site Screening
Date Completed: 6/15/1993
Comments: Goldenhill Wood Products occupies a portion of a building owned by Shapco Partnership. The facility has operated as a manufacturer of wood products since 1978. Familian Corporation, a fiber glass manufacturing facility, occupied the site prior to 1978. goldenhill used a solvent based adhesive which contains 1,1,1-trichloroethane (TCA), in the vinyl lamination process untill December 31, 1992. Solvent based adhesive waste in the form of waste water and sludge was derived from the process. Treated waste water is discharged into the sewer line. The non-hazardous residue from the clarifier is sent off-site for reclamation. U.S. EPA conducted a Preliminary Assessment. It seems unlikely that past of present use of hazardous materials at the site could cause a serious problem. Therefore, U.S. EPA recommended NFA, under CERCLA. The Department concurs with the above recommendation that "No Further Action" is needed at the site.

Potential Contamin of Concern:

NICKEL (SOLUBLE SALTS)

Site History:

Lumar Industrial Metal was one of the sites identified in the discovery project.The Objective of the discovery project is to determine if metal recycling facilities in the study area pose a threat to human health & the environment. Sites were selected from Los Angeles, Sun Valley, Montebello, South Gate, Compton, Gardena, and El Monte. Transfer points as well as the facilities that conducted onsite recycling were chosen based on their housekeeping

practices.A site screening was performed and further action is required.

Cleanup Status:	ACTIVE AS OF 11/9/2006		
Cleanup Oversight Agencies:	DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY		
School District:			
Past Use that Caused Contam:	DISTRIBUTOR - CHEMICAL		
Potential Media Affected:	AQUIFER USED FOR DRINKING WATER SUPPLY AFFECTED, OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR		

Potential Contamin of Concern:

PETROLEUM, POLYCHLORINATED BIPHENYLS (PCBS), POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS), UNDER INVESTIGATION, VOLATILE ORGANICS (8260B VOCS)

Site History:

The site is a vacant narrow but long triangle shaped and owned by the State of California, CalTrans. CalTrans purchased the property for the realignment of Imperial Hwy for the 105 Freeway. The previous owner Witco Chemical Company operated a paint manufacturing plant with 19 USTs from 5,000-20,000 gallons and 45 ASTs. The UST's were removed in October 1987. Gasoline, diesel, and solvents are in site soils and/or groundwater. Vapor and groundwater extraction (free product) have been done in the past. Perched groundwater is at about 30 ft bgs and regional is at about 42 ft bgs and fluctuates seasonally. During the tank removal activities, product lines were damaged and investigations were conducted to determine the nature and extent of the release.

The site was transferred to DTSC per CalTrans request. CalTrans performs annual ground water monitoring and submits reports to DTSC regularly. Renewal of Agreement will depend on CalTrans's budget availability. CalTrans submitted Site Investigation Report in 2015 and DTSC approved. The Report documented the additional site characterization activities and the resulting data at the Site following the Site Investigation Workplan dated July 2014.

The Interagency Agreement was extended for another two years from 2018 to FY 2020 recently.

DTSC received and approved HHRA Work Plan. 2018 Semiannual Monitoring reports will be submitted in 2019.

DTSC approved the RAW in April 2020 for Public comment period which will end in May 2020. Will approve the RAW in June 2020.

Implementation of the RAW will occur in FY 2020/21. Ongoing Groundwater monitoring.

New Interagency is being drafted for another two years.

Potential Contamin of Concern:

1,2,4-TRIMETHYLBENZENE, BENZENE, TETRACHLOROETHYLENE (PCE), TRICHLOROETHYLENE (TCE), VINYL CHLORIDE

Site History:

The subject property occupies approximately 15 acres in a mixed industrial/ residential area of Lynwood, immediately south of the elevated Century Freeway(Interstate 105). The subject property currently contains a single warehouse building encompassing approximately 323,000 square feet (ft2), of which approximately 12,000 square feet dedicated as office space Almost all exterior portions of the subject property consist of paved driveway and parking areas to support truck
loading and unloading operation. Land use at the subject property was limited to agriculture from at least the late 1920s until the early 1950's, when Western Gear Works (later Westech Gear Corporation [Westech]) constructed a manufacturing facility on the site and on an adjacent property on the west side of Philadelphia Way Westech designed, manufactured, and refurbished metal gears for commercial and military use During Westech's occupancy, the subject property contained ten buildings, including a main manufacturing building located near the south boundary of the site which contained separate manufacturing and office areas. The subject property also contained administrative office buildings, parts and equipment storage

DRAFT

buildings, trailers, and the following features: a former UST farm; a paint booth and a sand blast booth; parts cleaning pad; a clarifier,a test tower; and a hazardous materials storage area. In February 1987, the eleven USTs were removed under oversight of LADPW.

DRAFT

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Document Type: Site Characterization Report
Date Completed: 10/28/2010
Comments: Issued letter stating that results from investigations do not demonstrate that VOCs detected onsite have significantly contributed to the regional groundwater contamination. Groundwater data indicate that TCE in groundwater beneath site appears to be the result of off-site historical releases. Requested property owner to sign access agreement to allow further groundwater investigation and monitoring by DTSC or consultants working under DTSC oversight.

Potential Contamin of Concern:

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS), TRICHLOROETHYLENE (TCE)

Site History:

The site is located at 2600 East Imperial Highway, in the City of Lynwood, California. Based on the Los Angeles County Office of the Assessor, the Assessor's Parcel Number (APN) for the site is 6169-012-016. The site currently appears unoccupied and is developed with multiple buildings including buildings for use as offices, manufacturing, assembly, and storage. The site is surrounded on the west by Alameda Street, the Alameda Corridor, Aaron Industries, and Lynwood Regional Collection; on the south by a trucking company; on the east by Pacer Distribution Services, Inc. (a trucking company); and on the north by Highway 105 and a Caltrans site, former Witco facility. A mobile phone transmitting tower is also located on the site. During the site reconnaissance, it was noted that buildings 7, 7A, 7B, 7C, and 7D were partially demolished with only the concrete foundation and some walls remaining and buildings 8, 8A, 8B, and 8C were partially demolished with only the concrete foundation remaining.
Lubricating oils leaked from two high precision cutting machines entered two trenches having exposed soil bottoms in the former HOB machine area located adjacent to the north wall of building 3B. A total of 167.49 tons of cutting oil impacted soil beneath the former HOB machine area was excavated and
off-hauled from the site for off-site treatment and recycling. The total depth of the excavation was approximately 12 feet bgs. Soil confirmation samples were analyzed for extractable petroleum hydrocarbon chain speciation. The results indicated that soil at two locations within the excavation still contained cutting oil impacted soil after the completion of the excavation activities. Side-wall sample SW-2 and bottom sample B-5 contained 26,015 mg/kg and 30 mg/kg of total extractable petroleum hydrocarbons, respectively. COCs include PCE, TCA in soil vapor, soil and groundwater at the Site. In addition Polycyclic Aromatic Hydrocarbons (PAHs) and TPHs are present in soil.
A Voluntary Cleanup Agreement was signed up between the DTSC and proponent in 2014 which was amended in 2015. Historical documents including Phase 1 and current Condition Report were submitted to DTSC. A Remedial Investigation (RI) Work Plan was approved for further characterization followed by approval of the RI Report in 2016. After data review and analysis DTSC determined that a removal action is necessary. Human Health risk Assessment and a draft Removal Action Work Plan along with the other required documents (Sampling and Analysis Plan, Quality Assurance Plan Storm Water Pollution Prevention Plan and Public Outreach documents have been recently submitted to DTSC for public commenting. DTSC reviewed CEQA/NOE and approved for public to comment. The Public Comment Period started on May 2, 2016 and ended on June 1, 2016. DTSC responded to each comment received in this period and approved the RAW in June 2016 and Removal Action Completion Report in June 2017. DTSC received and commented Soil Vapor Extraction Pilot Test Memorandum this year (2018).

THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F037
Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K086
Waste Code Description: SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.

Hazardous Waste Code: K087
Waste Code Description: DECANTER TANK TAR SLUDGE FROM COKING OPERATIONS.

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 131
Waste Code Description: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 161
Waste Code Description: Fluid-cracking catalyst (FCC) waste

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252

SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K086
Waste Code Description: SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.

Hazardous Waste Code: K087
Waste Code Description: DECANTER TANK TAR SLUDGE FROM COKING OPERATIONS.

Sequence No: 1
Receive Date: 20100722
Handler Name: DEMENNO/KERDOON
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

DRAFT

Hazardous Waste Code: 131
Waste Code Description: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 161
Waste Code Description: Fluid-cracking catalyst (FCC) waste

Hazardous Waste Code: 211
Waste Code Description: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: 213
Waste Code Description: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 251
Waste Code Description: Still bottoms with halogenated organics

Hazardous Waste Code: 252
Waste Code Description: Other still bottom waste

Hazardous Waste Code: 271
Waste Code Description: Organic monomer waste (includes unreacted resins)

Hazardous Waste Code: 272
Waste Code Description: Polymeric resin waste

Hazardous Waste Code: 281
Waste Code Description: Adhesives

Hazardous Waste Code: 291
Waste Code Description: Latex waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 341

DRAFT

Waste Code Description: Organic liquids (nonsolvents) with halogens

Hazardous Waste Code: 342
Waste Code Description: Organic liquids with metals (see 121)

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F004
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F037

DRAFT

Waste Code Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: F038
Waste Code Description: PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Hazardous Waste Code: K048
Waste Code Description: DISSOLVED AIR FLOTATION (DAF) FLOAT FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K049
Waste Code Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K050
Waste Code Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K051
Waste Code Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K052
Waste Code Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Hazardous Waste Code: K086
Waste Code Description: SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.

Hazardous Waste Code: K087
Waste Code Description: DECANTER TANK TAR SLUDGE FROM COKING OPERATIONS.

Hazardous Waste Handler Details

Sequence No: 4

Hazardous Waste Code: F005

DRAFT

Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 20190225
Handler Name: WORLD OIL RECYCLING
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Implementer

Waste Code Details

Hazardous Waste Code: 133
Waste Code Description: Aqueous solution with 10% or more total organic residues

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 731
Waste Code Description: Liquids with polychlorinated biphenyls > 50 mg/l

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D022
Waste Code Description: CHLOROFORM

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: D039
Waste Code Description: TETRACHLOROETHYLENE

Hazardous Waste Code: F001

DRAFT

Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

DeMenno Kerdoon, Compton Facility

QUARTERLY UPDATE:
Quarterly Update Period: October 1, 2019 - December 31, 2019
On December 12, 2019, Permittee submitted a Class 1 permit modification request to change the emergency coordinators in the contingency plan.

On November 6, 2019, DTSC acknowledged the Permittee's Class 1* permit modification request that made changes to the training plan to comply with new training regulations.

Quarterly Update Period: July 1, 2019 - September 30, 2019
On August 5, 2019, Permittee Submitted the response to the Notice of Deficiency for the batch tank Class 1* permit modification request.

On July 10, 2019 Permittee submitted a Class 1 permit modification to make changes to the Waste Analysis Plan for testing the Asphalt Flux product produced from used oil/waste oil process.

Quarterly Update Period: April 1, 2019 - June 30, 2019

DTSC conducted review of the Class 1* permit modification for authorization of the batch tank as a hazardous waste management unit and issued a Notice of Deficiencies (NOD) to World Oil Recycling on June 20, 2019.

Quarterly Update Period: January 1, 2019 - March 31, 2019

On March 25, 2019, World Oil Recycling submitted a Class 1 permit modification request to modify its training plan to comply with the new Senate Bill 673 training regulation.
.

Active Permit

On December 23, 2016, DTSC issued a RCRA-equivalent Hazardous Waste Facility Permit to DeMenno-Kerdoon with an effective date of January 31, 2017 and expiration date of January 30, 2027. The permit authorizes DeMenno Kerdoon to continue to store and treat hazardous waste at the Compton facility. The permit authorized the permittee a total maximum container storage capacity of 944-55-gallon drums and up to 200 cubic yards of solids in the Container Storage Unit; and storage and treatment of hazardous waste in tanks, a total maximum tank storage capacity of 5,201,662 gallons, and a maximum tank treatment capacity, in gallons per day, of 374,400 in the Used Oil Recycling Unit; 242,400 for the Waste Water Treatment Plant; 38,400 in the Antifreeze Coolant Recycling Unit; 80,000 in the RCRA Fuels Unit; 576,000 for three treatment tanks in the Solid Waste Reduction Unit.

FACILITY DESCRIPTION/ HISTORY

DeMenno-Kerdoon (DK) is located at 2000 North Alameda Street, Compton in Los Angeles County. It is bordered on the west side by Alameda Street, Pine Street on the north side, Oak Street on the south side and other businesses on the east side. DeMenno-Kerdoon is located 2.4 miles west of the Los Angeles River in Section 14E, 15H, Township 3S, Range 13W, San Bernardino Meridian. The facility is comprised of three parcels, identified by Los Angeles County Assessor's Parcel Numbers 6169-030-001, 6169-030-005, and 6169-030-011, page 30, book 6169.

The area where the facility is located is zoned for both industrial and residential use. The industrial zone is along Alameda Street and the residential zone is southeast of the facility. Primary access roads to the facility consist of major east-west arteries, El Segundo Boulevard, Rosecrans Boulevard and Compton Boulevard. The north-south arteries are Wilmington Avenue and Long Beach Boulevard. Freeway access to the facility is provided by interstate freeways 710, 110, 105, and state highway 91.

DRAFT

The facility is the largest used oil recycling facility in the state. It accepts a wide variety of RCRA and Non-RCRA wastes for storage, treatment, recycling and transfer. The different waste categories include used oil, oily waste water, waste gasoline, used oil filters, used antifreeze, fuels, and paints. A Hazardous Waste Facility Permit was issued to DK on May 31, 2001 with an effective date of July 6, 2001 and expiration of July 6, 2011. A new Permit Application was submitted for permit renewal in January 2011. In accordance with state law and regulations, the Facility continues to operate under the terms of the 2001 permit, which remains in full force and effect as long as DK continues to with DTSC requirements during the review of the permit application to renew the permit.

Hazardous wastes are accepted in drums, roll off-bins and in bulk. During treatment, DeMenno/Kerdoon generates wastewater and solids. The wastewater generated is treated on site at the wastewater treatment system and batch discharged to the sewer under an industrial wastewater discharge permit from the Los Angeles County Sanitation Districts and the solids are consolidated at the container storage area for shipment to an authorized off-site disposal facility. Treatment at the facility includes phase separation, dehydration, distillation, blending, pH adjustment and chemical addition.

Containers may be stored in the Container Storage Unit for up to one year. The maximum container storage capacity is 500 – 55 gallon drums or their equivalent volume in other DOT container sizes, 27,500 gallons, and 200 cubic yards of solids in roll-offs, end-dumps, super sacks, and/or boxes. The maximum liquid hazardous waste storage capacity in tanks is approximately 5.2 million gallons for 75 tanks.

PERMITTING REGULATORY DESCRIPTION/ HISTORY
DK submitted a permit application (Part A) and received an Interim Status Document (ISD) in August 1983. DK submitted a Part B application, in 1985 and several revised Part B application and was approved as technically complete in August 2000. On May 31, 2001, DTSC approved a Health Risk Assessment Report (HRA) and prepared an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA) for the issuance of a 10-year hazardous waste Facility permit for DK Compton Facility. This permit was effective on July 6, 2001, and was expired on July 6, 2011. This permit allows the Permittee to store, treat, and transfer used oil, ethylene glycol, oily water, oily waste, contaminated petroleum products, oily solids, used oil filters, and used glycol.
On January 14, 2011, DK submitted a permit renewal application before the expiration of the permit and pursuant to California Code of Regulations, title 22, section 66270.51, DTSC authorized DK to continue operating the Facility under the terms and conditions of the existing permit until the Department makes a final decision on the renewal application. DTSC determined the permit application was administrative complete on April 11, 2011.
DK submitted a revised Part B application on April 7, 2014. The permit application requests authorization for a total maximum container storage capacity of 944-55-gallon drums and up to 200 cubic yards of solids in the Container Storage Unit; and storage and treatment of hazardous waste in tanks, a total maximum tank storage capacity of 5,201,662 gallons, and a maximum tank treatment capacity, in gallons per day, of 374,400 in the Used Oil Recycling Unit; 242,400 for the Waste Water Treatment Plant; 28,000 in the Antifreeze Coolant Recycling Unit; 80,000 in the RCRA Fuels Unit; 576,000 for three treatment tanks in the Solid Waste Reduction Unit.

DTSC is also conducting corrective action oversight at the Facility. Details of the corrective action can be found on the cleanup section of DTSC's website.

Containers may be stored in the Container Storage Unit for up to one year. The maximum container storage capacity is 500 – 55 gallon drums or their equivalent volume in other DOT container sizes, 27,500 gallons, and 200 cubic yards of solids in roll-offs, end-dumps, super sacks, and/or boxes.

Site History:

Active, permitted Facility - operates under RCRA Facility Permit. A Hazardous Waste Facility Permit was issued to DeMenno/Kerdoon Inc. (DK) on January 31, 2017. DK is located at 2000 North Alameda Street in the City of Compton. Historic site operations are responsible for the environmental impacts to the site. The soil impacts are primarily from heavy-end, non-mobile petroleum hydrocarbons. The many spills over the years were never documented, detail/located and were released prior to the site becoming a RCRA regulated facility.

Master Lubricants Company, Inc. Petroleum Refinery (Refinery) began industrial operations on site in 1928. The refinery produced greases, soluble oils, quenching oil, transformer oil, and miscellaneous petroleum products. The facility produced these products from used charging stock or raw materials including lubricant distillates and petroleum stock. The facility packaged the products for distribution. Equipment was added from 1940 to 1945 allowing straight run refining of crude oil to the facility operations. At this time a major portion of the crude charging stock came from oil fields, refineries and local purchasers and included crank case drainings, contaminated lubricants and petroleum products. Sources of this type of charging stock were the U.S. Navy, North Island Training Station and independent dealers and brokers in the Los Angeles area. Bruce DeMenno bought Master Lubricants in 1974 and the facility went through several name changes before becoming DeMenno/Kerdoon. Asbury Oil, located south of the facility on East Oak Street, was owned by Bruce DeMenno, and began operations in 1982. The Asbury Oil property also appears to be a source of a release to the environment.

The facility consists of approximately eight-acres that is zoned heavy manufacturing by the City of Compton. The entire facility is paved with concrete or asphalt-concrete and surrounded by combination of concrete block wall and fencing. The property south of the facility at 300 East Oaks Avenue is used as a truck parking lot and dispatch office by Asbury Environmental Services, Inc. The adjacent property on the east side of the facility is leased for storage and used as a maintenance shop. The land use surrounding the facility is industrial to the north, east and south. A residential neighborhood is located across and south of East Oaks Street from the southeastern portion of the Facility. West of the Facility is Alameda Street. Between the north and south-bound lanes of Alameda Street is the below grade Alameda Transportation Corridor (ATC). The closest school is Thomas Jefferson Elementary School, located approximately 500 feet west of the Facility.

The facility is the largest used oil recycler facility in the state. It accepts a wide variety of wastes for storage, treatment, recycling and transfer. The different waste categories currently include used oil, waste oil, oily waste water, waste gasoline, used oil filters, used antifreeze, RCRA Fuels, and paints. Tank farms are present throughout the facility; the southwest tank farm is the largest. The facility contains a waste-water treatment plant and laboratory. Hazardous wastes are accepted in drums, roll off-bins and in bulk. During treatment, DK generates wastewater and solids. The wastewater generated is treated at the wastewater treatment system and batch discharged to a Publicly Owned Treatment Works (POTW) and the solids are consolidated in a roll-off bin or an end dump and stored at the container storage area for shipment to an authorized off-site disposal facility. Treatment at the facility includes ultrafiltration, distillation, blending, pH adjustment and chemical addition. Containers may be stored in the Container Storage Unit for up to one year. The maximum container storage capacity is 500 – 55 gallon drums or their equivalent volume in other DOT container sizes of 27,500 gallons, and 200 cubic yards of solids in roll-offs, end-dumps, super sacks, and/or boxes.

Facility environmental characterization and interim corrective measures under DTSC oversight dates back to the 1980s. A RCRA Facility Assessment (RFA) by DTSC in 1990 identified 16 Areas of Concern (AOCs) and 121 solid waste management units that either have or may release hazardous waste constituents into the environment. The Remedial Facility Investigation (RFI) process began in 1994 and many phases of characterization has continued to the present (2018). Because it is now recognized that soil and groundwater impacts across the site are not confined to the AOCs, the site is now mitigated holistically.

The groundwater has been monitored quarterly since the 1990s. Six groundwater monitoring wells were installed and sampled in 1993. Three more monitoring wells were installed in 1995 as part of a liquid-phase hydrocarbon (LPH) investigation. Aquifer characterization began with a 1994 aquifer test, followed by slug testing in 1995, both in the shallow aquifer. A Groundwater Monitoring Plan (Plan) was approved by DTSC in 1996 and DK continues to monitor the groundwater quarterly and install monitoring wells in accordance to the Plan. A major groundwater study was completed in 1997 to understand the regional hydrogeologic setting. Another study in 1998 included saturated zone characterization. The installation and operation of a groundwater and LPH extraction pumps began in 1995. Between 1995 and the end of 1998, approximately 2.2 million gallons of groundwater were recovered and treated, and approximately 10,000 gallons of LPH were removed for on-site recycling. In anticipation of the ATC construction dewatering, a 1999 and 2000 study included the installation of nine temporary piezometers and 10 recover wells, on and offsite, for LPH recovery. Aggressive groundwater pumping and total fluids extraction continued until 2001 ensuring that the ATC was safely installed. These efforts resulted in the extraction and treatment of nearly an additional 11.2 million gallons of contaminated groundwater. Subsequent to 2001, groundwater extraction continued, and as of the end of June 2015, over 30.7 million gallons of groundwater have been recovered. Offsite investigations completed in the 2000 to evaluate the lateral and vertical extent of impacts from site releases included groundwater characterization. The renovation, installation, and replacement of a total of eight monitoring wells with soil sampling and analysis in 2008 was accomplished to enhance the groundwater monitoring well network. Slug tests in 2009 of selected on and off-site wells at the southwestern and downgradient corner of the Facility was accomplished to further characterize the impact from the SWTF. A 2012 Interim Measures Work Plan for Groundwater, in response to a DTSC order, to complete an interim measures work plan for groundwater that will achieve USEPA Environmental Indicators for the site, proposed continued interim measure groundwater extraction and treatment. A Well Installation Report, Monitoring Well Clusters MW-15 Through MW-18 was ordered by DTSC and submitted to expand the existing network of groundwater monitoring wells south of the DK Facility in the first three groundwater-bearing zones (shallow, intermediate, and deep). Three wells (MW-1, MW-5, and MW-6) were destroyed and documented in the 2014 Groundwater Destruction Report. On-going interim remedial measures and groundwater monitoring are reported quarterly. Thirty-three groundwater monitoring wells, 11 piezometers, and 11 recovery wells are monitored quarterly.

A remedial investigation/feasibility study began in 1986 and completed the following year was the beginning of soil sample collection and analysis. The

1990 RFA included soil sampling which included shallow and deep samples; tanks were also sampled. The sampling showed the need to assess the nature and extent, both lateral and vertical, of soil contamination. Analytical results showed most samples contained total petroleum hydrocarbons between 2,200 and 88,000 ppm. Lead was also found at concentrations between 54.3 and 1,140 ppm. A 1993 investigation consisting of 70 shallow and deep soil samples collected for additional site assessment. This investigation discovered liquid-phase hydrocarbon (LPH) which led to an investigation of the Southwest Tank Farm (SWTF). The RFI process continued with soil borings drilled and samples collected and analyzed in the SWTF. An extensive study in 1998 of the vadose zone conditions employed cone penetrometer testing techniques coupled with ultraviolet-induced fluorescence to provide a continuous log of the vertical soil column and LPH in the underlying soils. Multiple investigations on and offsite, completed in 2000, evaluated the lateral and vertical extent of soil contamination. More soil sampling/analysis will be required for baseline and follow-up confirmation soil data comparisons following the proposed bioventing treatment in the SWTF. Soil conditions beneath the permitting units and Facility infrastructure will be addressed at closure.

In addition to groundwater and soil characterization, soil gas characterization has been on-going since 1996. Soil gas probes were installed and sampled in phases from March to September 1996. The probe placement was part of an assessment and Above Ground Tanks (AST) replacement in the SWTF. There were 44 double-nested probe locations with 88 samples collected in the SWTF and former parking lot south of the existing office building. Soil vapor probes were also installed and sampled from 55 locations throughout the facility during Fall 2001. In addition to sample and analysis of probes throughout the facility, on-and off-site utility vaults were also sampled for vapors. A 2010 soil gas survey included installation of 27 soil gas probes and 11 soil vapor monitoring wells. The survey collected 105 soil gas samples from 39 on-site and 11 off-site sample locations. A 2011 Vapor Extraction Test Report concluded that soil vapor extraction was a technically and economically feasible technology for remediation of soil vapor in the vadose zone. A higher capacity soil vapor extraction system (SVES) was installed and operated for three month in 2011. Soil gas samples were collected to determine the effectiveness of the operation of the higher capacity system. A 2013, Final Interim Risk Evaluation - Potential Vapor Pathway report concluded that the potential risk to on and off-site workers and off-site residents was acceptable according to DTSC and the USEPA. A 2014 report, Subsurface Investigation of Southeast Portion and Off-Site Area of DeMenno-Kerdoon Facility documented the installation of soil gas probes during 2012 and 2013. The report presented the results of soil and soil gas sampling in the southeastern areas of the Site, including 423 East Oaks Street and the adjacent off-site residential street area. Results indicated a potential off-site source for VOC impacts in soil vapor near the southeast corner of the Site. Soil gas samples are collected on an annual basis and documented in an annual report that is submitted to DTSC for review and approval.

As part of the RFI process, an investigation into liquid-phase hydrocarbon (LPH) delineation in soil began in 1993 after discovery of LPH; the investigation was completed in 1995. Monitoring wells were constructed in three of the borings drilled for soil sampling in the SWTF during the delineation process. The investigations showed the need to further assess the SWTF. Ten borings were drilled and sampled. Results showed heavy-end hydrocarbon contamination and LPH. The installation and operation of a groundwater and LPH extraction pumps began in 1995. Between 1995 and the end of 1998, approximately 2.2 million gallons of groundwater were recovered and treated, and approximately 10,000 gallons of LPH were removed for on-site recycling. Aggressive
groundwater pumping and total fluids extraction continued until 2001 ensuring that the ATC was safely installed. These efforts resulted in the extraction and treatment of nearly an additional 11.2 million gallons of contaminated groundwater and the recovery and recycling of an additional 6,000 gallons of LPH. Findings from the SWTF investigation led to above ground storage tank (ASTs) replacement and installation of soil gas probes. DK completed an extensive LPH recovery program for the ATC construction dewatering during 1999 and 2000. The work included installation of 10 LPH recovery wells and nine piezometers on and off-site. Aquifer testing and capture zone modeling assessed the hydrogeologic characteristics of the aquifer to optimize LPH removal. Subsequent to 2001, product extraction continued, and as of the end of June 2015, over 17,650 gallons of LPH have been recovered. These remedial activities have resulted in significantly reduced thickness of residual LPH, and have contained and reduced the lateral migration of dissolved-phase contaminants.

An IM involving extraction of on-site contaminated ground water began in 1995. Groundwater and hydrocarbon recovery and treatment began in 1995 and soil vapor extraction began operation in 2010 and is on-going as well as quarterly groundwater & soil vapor monitoring. The soil gas samples collected during 2011 following the installation of the higher capacity SVES found that the reduction in concentration of the risk drivers (benzene, 1,1-DCA, and vinyl chloride), and the near-elimination of petroleum hydrocarbon VOCs from the two on-site vapor extraction wells and three off-site soil gas survey locations demonstrated the effectiveness of the vapor extraction activities (SGI, 2011c); The water is treated to remove TPH, benzene, vinyl chloride and 1,1-DCA to POTW requirements and is discharged to the sewer. A Pilot Study involving cryogenic soil vapor extraction (SVE) has led to full time operation of a soil vapor extraction system that is operated as an Interim Measure (IM), but is proposed as a part of the final remedy. The Environmental Indicator Groundwater Migration Under Control was accomplished on October 2, 2015. There have been many environmental investigations of the Facility since the 1990s through 2019.

Soils underlying the treatment and storage units are contaminated from the surface to groundwater with light and heavy hydrocarbons, as well as halogenated VOC's. While the VOC's are being addressed by the SVE IM, remediation of the soil will only be feasible once the facility is shut down. Any further soil clean-up will be deferred until cessation of operation, subject to assurance of financial responsibility, DTSC has determined to overlap the CMS with the ongoing IM's and completion of the off-site ground water investigation. Since the CMS would address the continuation/completion of the IM as the essential element of the final remedy and run parallel with the IM's, considerable time would be saved with respect to selection of the final remedy, which under this strategy could come between 2012-2013. Determination of remedy constructed complete could follow soon after the remedy is approved.

The CEQA process and the Statement of Basis is approved. The Corrective Measures Study and the Remedial Facility Investigation were approved in 2019. A Community Update was sent out, the proposed corrective action final remedy was public noticed for 45 days from September 18 to December 1, 2019; a public meeting was held on October 22, 2019 during the 45-day public notice. A Remedy Implementation Report and Schedule Update, dated November 2, 2020 is currently under review.

QUARTERLY UPDATE:

Quarterly Update Period: October 1, 2020 - December 31, 2020
On October 6, 2020, facility submitted response to September 18, 2020 DTSC's request for additional information.

Quarterly Update Period: July 1, 2020 - September 30, 2020
On September 18, 2020, DTSC completed the review the additional information submitted for the Class 1 permit modification request to authorize the Batch tank to manage hazardous waste. As a result of the review, DTSC requested additional information.

On September 3, 2020, facility submitted a Class 1 permit modification to decommission the pugmill equipment.

Quarterly Update Period: April 1, 2020 - June 30, 2020
On June 4, 2020, DTSC completed the review the the Class 1* permit modification request to authorize facility to mix Recycled Oil from Used Oil recycling facilities with Used Oil/Waste Oil prior to treatment and Recycling the mixture. DTSC sent comments to facility with outlining the deficiencies with the modification request.

Quarterly Update Period: January 1, 2020 - March 31, 2020
On March 26, 2020, DTSC sent Acknowledgement Letter to facility for the Class 1 permit modification to change the emergency coordinators.

Quarterly Update Period: October 1, 2019 - December 31, 2019
On December 12, 2019, Permittee submitted a Class 1 permit modification request to change the emergency coordinators in the contingency plan.

On November 6, 2019, DTSC acknowledged the Permittee's Class 1* permit modification request that made changes to the training plan to comply with new training regulations.

Quarterly Update Period: July 1, 2019 - September 30, 2019
On August 5, 2019, Permittee Submitted the response to the Notice of Deficiency for the batch tank Class 1* permit modification request.

On July 10, 2019 Permittee submitted a Class 1 permit modification to make changes to the Waste Analysis Plan for testing the Asphalt Flux product produced from used oil/waste oil process.

Quarterly Update Period: April 1, 2019 - June 30, 2019

DTSC conducted review of the Class 1* permit modification for authorization of the batch tank as a hazardous waste management unit and issued a Notice of Deficiencies (NOD) to World Oil Recycling on June 20, 2019.

Quarterly Update Period: January 1, 2019 - March 31, 2019

On March 25, 2019, World Oil Recycling submitted a Class 1 permit modification request to modify its training plan to comply with the new Senate Bill 673 training regulation.
.

Active Permit

On December 23, 2016, DTSC issued a RCRA-equivalent Hazardous Waste Facility Permit to DeMenno-Kerdoon with an effective date of January 31, 2017 and expiration date of January 30, 2027. The permit authorizes DeMenno Kerdoon to continue to store and treat hazardous waste at the Compton facility. The permit authorized the permittee a total maximum container storage capacity of 944-55-gallon drums and up to 200 cubic yards of solids in the Container Storage Unit; and storage and treatment of hazardous waste in tanks, a total maximum tank storage capacity of 5,201,662 gallons, and a maximum tank treatment capacity, in gallons per day, of 374,400 in the Used Oil Recycling Unit; 242,400 for the Waste Water Treatment Plant; 38,400 in the Antifreeze Coolant Recycling Unit; 80,000 in the RCRA Fuels Unit; 576,000 for three treatment tanks in the Solid Waste Reduction Unit.

FACILITY DESCRIPTION/ HISTORY

DeMenno-Kerdoon (DK) is located at 2000 North Alameda Street, Compton in Los Angeles County. It is bordered on the west side by Alameda Street, Pine Street on the north side, Oak Street on the south side and other businesses on the east side. DeMenno-Kerdoon is located 2.4 miles west of the Los Angeles River in Section 14E, 15H, Township 3S, Range 13W, San Bernardino Meridian. The facility is comprised of three parcels, identified by Los Angeles County Assessor's Parcel Numbers 6169-030-001, 6169-030-005, and 6169-030-011, page 30, book 6169.

The area where the facility is located is zoned for both industrial and residential use. The industrial zone is along Alameda Street and the residential zone is southeast of the facility. Primary access roads to the facility consist of major east-west arteries, El Segundo Boulevard, Rosecrans Boulevard and Compton Boulevard. The north-south arteries are Wilmington Avenue and Long Beach Boulevard. Freeway access to the facility is provided by interstate freeways 710, 110, 105, and state highway 91.

The facility is the largest used oil recycling facility in the state. It accepts a wide variety of RCRA and Non-RCRA wastes for storage, treatment, recycling and transfer. The different waste categories include used oil, oily waste water, waste gasoline, used oil filters, used antifreeze, fuels, and paints. A Hazardous Waste Facility Permit was issued to DK on May 31, 2001 with an effective date of July 6, 2001 and expiration of July 6, 2011. A new Permit Application was submitted for permit renewal in January 2011. In accordance with state law and regulations, the Facility continues to operate under the terms of the 2001 permit, which remains in full force and effect as long as DK continues to with DTSC requirements during the review of the permit application to renew the permit.

Hazardous wastes are accepted in drums, roll off-bins and in bulk. During treatment, DeMenno/Kerdoon generates wastewater and solids. The wastewater generated is treated on site at the wastewater treatment system and batch discharged to the sewer under an industrial wastewater discharge permit from the Los Angeles County Sanitation Districts and the solids are consolidated at the container storage area for shipment to an authorized off-site disposal facility. Treatment at the facility includes phase separation, dehydration, distillation, blending, pH adjustment and chemical addition.

Containers may be stored in the Container Storage Unit for up to one year. The maximum container storage capacity is 500 – 55 gallon drums or their equivalent volume in other DOT container sizes, 27,500 gallons, and 200 cubic yards of solids in roll-offs, end-dumps, super sacks, and/or boxes. The maximum liquid hazardous waste storage capacity in tanks is approximately 5.2 million gallons for 75 tanks.

PERMITTING REGULATORY DESCRIPTION/ HISTORY
DK submitted a permit application (Part A) and received an Interim Status Document (ISD) in August 1983. DK submitted a Part B application, in 1985 and several revised Part B application and was approved as technically complete in August 2000. On May 31, 2001, DTSC approved a Health Risk Assessment Report (HRA) and prepared an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA) for the issuance of a 10-year hazardous waste Facility permit for DK Compton Facility. This permit was effective on July 6, 2001, and was expired on July 6, 2011. This permit allows the Permittee to store, treat, and transfer used oil, ethylene glycol, oily water, oily waste, contaminated petroleum products, oily solids, used oil filters, and used glycol.

On January 14, 2011, DK submitted a permit renewal application before the expiration of the permit and pursuant to California Code of Regulations, title 22, section 66270.51, DTSC authorized DK to continue operating the Facility under the terms and conditions of the existing permit until the Department makes a final decision on the renewal application. DTSC determined the permit application was administrative complete on April 11, 2011.
DK submitted a revised Part B application on April 7, 2014. The permit application requests authorization for a total maximum container storage capacity of 944-55-gallon drums and up to 200 cubic yards of solids in the Container Storage Unit; and storage and treatment of hazardous waste in tanks, a total maximum tank storage capacity of 5,201,662 gallons, and a maximum tank treatment capacity, in gallons per day, of 374,400 in the Used Oil Recycling Unit; 242,400 for the Waste Water Treatment Plant; 28,000 in the Antifreeze Coolant Recycling Unit; 80,000 in the RCRA Fuels Unit; 576,000 for three treatment tanks in the Solid Waste Reduction Unit.

DTSC is also conducting corrective action oversight at the Facility. Details of the corrective action can be found on the cleanup section of DTSC's website.

Containers may be stored in the Container Storage Unit for up to one year. The maximum container storage capacity is 500 – 55 gallon drums or their equivalent volume in other DOT container sizes, 27,500 gallons, and 200 cubic yards of solids in roll-offs, end-dumps, super sacks, and/or boxes.

QUARTERLY UPDATE:

Quarterly Update Period: October 1, 2020 - December 31, 2020
On October 6, 2020, facility submitted response to September 18, 2020 DTSC's request for additional information.

Quarterly Update Period: July 1, 2020 - September 30, 2020
On September 18, 2020, DTSC completed the review the additional information submitted for the Class 1 permit modification request to authorize the Batch tank to manage hazardous waste. As a result of the review, DTSC requested additional information.

On September 3, 2020, facility submitted a Class 1 permit modification to decommission the pugmill equipment.

Quarterly Update Period: April 1, 2020 - June 30, 2020
On June 4, 2020, DTSC completed the review the the Class 1* permit modification request to authorize facility to mix Recycled Oil from Used Oil recycling facilities with Used Oil/Waste Oil prior to treatment and Recycling the mixture. DTSC sent comments to facility with outlining the deficiencies with the modification request.

Quarterly Update Period: January 1, 2020 - March 31, 2020
On March 26, 2020, DTSC sent Acknowledgement Letter to facility for the Class 1 permit modification to change the emergency coordinators.

Quarterly Update Period: October 1, 2019 - December 31, 2019
On December 12, 2019, Permittee submitted a Class 1 permit modification request to change the emergency coordinators in the contingency plan.

On November 6, 2019, DTSC acknowledged the Permittee's Class 1* permit modification request that made changes to the training plan to comply with new training regulations.

Quarterly Update Period: July 1, 2019 - September 30, 2019
On August 5, 2019, Permittee Submitted the response to the Notice of Deficiency for the batch tank Class 1* permit modification request.

On July 10, 2019 Permittee submitted a Class 1 permit modification to make changes to the Waste Analysis Plan for testing the Asphalt Flux product produced from used oil/waste oil process.

Quarterly Update Period: April 1, 2019 - June 30, 2019

DTSC conducted review of the Class 1* permit modification for authorization of the batch tank as a hazardous waste management unit and issued a Notice of Deficiencies (NOD) to World Oil Recycling on June 20, 2019.

Quarterly Update Period: January 1, 2019 - March 31, 2019

On March 25, 2019, World Oil Recycling submitted a Class 1 permit modification request to modify its training plan to comply with the new Senate Bill 673 training regulation.
.

Active Permit

On December 23, 2016, DTSC issued a RCRA-equivalent Hazardous Waste Facility Permit to DeMenno-Kerdoon with an effective date of January 31, 2017 and expiration date of January 30, 2027. The permit authorizes DeMenno Kerdoon to continue to store and treat hazardous waste at the Compton facility. The permit authorized the permittee a total maximum container storage capacity of 944-55-gallon drums and up to 200 cubic yards of solids in the Container Storage Unit; and storage and treatment of hazardous waste in tanks, a total maximum tank storage capacity of 5,201,662 gallons, and a maximum tank treatment capacity, in gallons per day, of 374,400 in the Used Oil Recycling Unit; 242,400 for the Waste Water Treatment Plant; 38,400 in the Antifreeze Coolant Recycling Unit; 80,000 in the RCRA Fuels Unit; 576,000 for three treatment tanks in the Solid Waste Reduction Unit.

FACILITY DESCRIPTION/ HISTORY

DeMenno-Kerdoon (DK) is located at 2000 North Alameda Street, Compton in Los Angeles County. It is bordered on the west side by Alameda Street, Pine Street on the north side, Oak Street on the south side and other businesses on the east side. DeMenno-Kerdoon is located 2.4 miles west of the Los Angeles River in Section 14E, 15H, Township 3S, Range 13W, San Bernardino Meridian. The facility is comprised of three parcels, identified by Los Angeles County Assessor's Parcel Numbers 6169-030-001, 6169-030-005, and 6169-030-011, page 30, book 6169.

The area where the facility is located is zoned for both industrial and residential use. The industrial zone is along Alameda Street and the residential zone is southeast of the facility. Primary access roads to the facility consist of major east-west arteries, El Segundo Boulevard, Rosecrans Boulevard and Compton Boulevard. The north-south arteries are Wilmington Avenue and Long Beach Boulevard. Freeway access to the facility is provided by interstate freeways 710, 110, 105, and state highway 91.

The facility is the largest used oil recycling facility in the state. It accepts a wide variety of RCRA and Non-RCRA wastes for storage, treatment, recycling and transfer. The different waste categories include used oil, oily waste water, waste gasoline, used oil filters, used antifreeze, fuels, and paints. A Hazardous Waste Facility Permit was issued to DK on May 31, 2001 with an effective date of July 6, 2001 and expiration of July 6, 2011. A new Permit Application was submitted for permit renewal in January 2011. In accordance with state law and regulations, the Facility continues to operate under the terms of the 2001 permit, which remains in full force and effect as long as DK continues to with DTSC requirements during the review of the permit application to renew the permit.

Hazardous wastes are accepted in drums, roll off-bins and in bulk. During treatment, DeMenno/Kerdoon generates wastewater and solids. The

DRAFT

wastewater generated is treated on site at the wastewater treatment system and batch discharged to the sewer under an industrial wastewater discharge permit from the Los Angeles County Sanitation Districts and the solids are consolidated at the container storage area for shipment to an authorized off-site disposal facility. Treatment at the facility includes phase separation, dehydration, distillation, blending, pH adjustment and chemical addition.

Containers may be stored in the Container Storage Unit for up to one year. The maximum container storage capacity is 500 – 55 gallon drums or their equivalent volume in other DOT container sizes, 27,500 gallons, and 200 cubic yards of solids in roll-offs, end-dumps, super sacks, and/or boxes. The maximum liquid hazardous waste storage capacity in tanks is approximately 5.2 million gallons for 75 tanks.

PERMITTING REGULATORY DESCRIPTION/ HISTORY
DK submitted a permit application (Part A) and received an Interim Status Document (ISD) in August 1983. DK submitted a Part B application, in 1985 and several revised Part B application and was approved as technically complete in August 2000. On May 31, 2001, DTSC approved a Health Risk Assessment Report (HRA) and prepared an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA) for the issuance of a 10-year hazardous waste Facility permit for DK Compton Facility. This permit was effective on July 6, 2001, and was expired on July 6, 2011. This permit allows the Permittee to store, treat, and transfer used oil, ethylene glycol, oily water, oily waste, contaminated petroleum products, oily solids, used oil filters, and used glycol.
On January 14, 2011, DK submitted a permit renewal application before the expiration of the permit and pursuant to California Code of Regulations, title 22, section 66270.51, DTSC authorized DK to continue operating the Facility under the terms and conditions of the existing permit until the Department makes a final decision on the renewal application. DTSC determined the permit application was administrative complete on April 11, 2011.
DK submitted a revised Part B application on April 7, 2014. The permit application requests authorization for a total maximum container storage capacity of 944-55-gallon drums and up to 200 cubic yards of solids in the Container Storage Unit; and storage and treatment of hazardous waste in tanks, a total maximum tank storage capacity of 5,201,662 gallons, and a maximum tank treatment capacity, in gallons per day, of 374,400 in the Used Oil Recycling Unit; 242,400 for the Waste Water Treatment Plant; 28,000 in the Antifreeze Coolant Recycling Unit; 80,000 in the RCRA Fuels Unit; 576,000 for three treatment tanks in the Solid Waste Reduction Unit.

DTSC is also conducting corrective action oversight at the Facility. Details of the corrective action can be found on the cleanup section of DTSC's website.

Containers may be stored in the Container Storage Unit for up to one year. The maximum container storage capacity is 500 – 55 gallon drums or their equivalent volume in other DOT container sizes, 27,500 gallons, and 200 cubic yards of solids in roll-offs, end-dumps, super sacks, and/or boxes.

DRAFT

Potential Contamin of Concern:

POLYCHLORINATED BIPHENYLS (PCBS), UNDER INVESTIGATION

Site History:

APN 6169-001-008 The site was previously owned by the Estates of Hogue and Larsen, the VCA was terminated. A new VCA has been generated with the new owner, EDO, Inc. (Edvin Tavanian) who leases to small businesses operating on the property. The site was formerly occupied by MagneTek NEC from 1992 for the repair and maintenance of electrical transformers. PCBs are in the soils, the groundwater has gasoline, diesel, and VOCs. The site is entirely paved. The current owner is working with DTSC and USEPA on developing a Workplan to clean up the PCBs in the soil. Jan 20, 2015 RP notifies DTSC that he does not want DTSC oversight for the PCB cleanup process, but will have DTSC involved in the VOC and metals cleanup process.

Past Use that Caused Contam: AEROSPACE MANUFACTURING/MAINTENANCE, MANUFACTURING - ELECTRONIC, MANUFACTURING - OTHER, UNDERGROUND STORAGE TANKS
Potential Media Affected: AQUIFER USED FOR DRINKING WATER SUPPLY AFFECTED, CONTAMINATED SURFACE / STRUCTURE, INDOOR AIR, OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR, SURFACE WATER AFFECTED
Potential Contamin of Concern:

METALS, POLYCHLORINATED BIPHENYLS (PCBS), TPH-DIESEL, VOLATILE ORGANICS (8260B VOCS)

Site History:

The Phase II Environmental Site Assessment Sampling Plan (October 14, 2010) proposed to investigate RECs identified in the Phase I ESA which included the following:

.

Soil and Groundwater Contamination. Soil and groundwater beneath the Project Area is contaminated by chlorinated and non-chlorinated VOCs associated with a release at the 3000 East Imperial Highway property. The lateral extent of the on-site and off-site VOC contamination has been generally defined, although data gaps remain with respect to the downgradient and vertical extent of contamination. According to DTSC records, 3000

DRAFT

East Imperial, LLC is the entity working with DTSC to address the contamination and develop a remedial approach that is compatible with an City of Lynwood – Plaza Mexico Extension Sample Analysis Plan October 14, 2010 intended mixed-use development scenario.

Underground Storage Tanks. Nine USTs were identified in the western portion of the 3000 East Imperial Highway property. The USTs are believed to b the primary source of the VOC and TPH contamination discussed above. A review of regulatory agency records did not reveal information regarding the dates of installation, contents and environmental condition of the USTs.

Long-Term Industrial Use. Based on the results of our historical records review, available environmental reports and a site reconnaissance, light and heavy industrial operations have been associated with the northern portion of the Project Area dating back to the 1930s and 1940s. These long-term industrial operations have the potential to have resulted in significant and widespread soil and/or groundwater contamination. Contamination (discussed above) has been documented for the 3000 East Imperial Highway property. Since limited subsurface data exists to the west of the 3000 East Imperial Highway property, considerable uncertainty remains with respect to the environmental condition of the northwestern and central portion of the Site where industrial operations have been
located.

Unknown Fill Materials. A pile of fill material of unknown origin comprising approximately 25 cubic yards was observed immediately adjacent and to the east of the Metro substation building in the southwestern portion of the Project Area.

Former Gasoline Service Station. An apparent former gasoline service station (currently an automobile repair shop) is located hydraulically upgradient of the Project Area at the intersection of Imperial Highway and State Street. No records were identified as to the regulatory status of the service station. Based on observations, this service station may pre-date the time period of routine agency inspections and recordkeeping. The presence of this facility in close proximity to, and hydraulically upgradient of the Property Area presents a REC and is considered to have the potential to adversely impact soil and groundwater beneath the Property Area.

Parts Cleaners and Chlorinated Solvent Usage. A part cleaning station was observed at the Alfa Carburetor located at 2918 East Imperial Highway. In addition, Tomas Polishing, located at 2905 Beechwood Avenue, was listed by EDR as generator of waste containing chlorinated solvents. Historical operations involving manufacturing and maintenance operations associated with long-term automotive or industrial businesses are expected to have a high likelihood of having used and
disposed of chlorinated solvents. As such, there is a significant potential for spills of chlorinated VOCs to have occurred on these properties.

Former Railroad Right-of-Way. The former Southern Pacific Railroad Right-of-Way is located on-site along the southern property boundary. Rail right-of-ways often contain elevated concentrations of heavy metals, total petroleum hydrocarbons and chlorinated herbicides.

The impacts from the 3000 E Imperial Highway are currently being addressed by Robertshaw Controls Company under DTSC oversight. The fill material has been removed by the City. Accordingly, the proposed investigation will focus on the remaining RECs listed above.

The Subsurface Investigation Data Report (December 31, 2011) provided the results of sampling and included a brief discussion of the results but no recommendations for further investigation or cleanup.

A total of sixteen contaminants were detected in the soil vapor samples collected during the subsurface investigation. Four contaminants were detected above their respective residential CHHSLs, including vinyl chloride, PCE, TCE, and benzene. Vinyl chloride is a known breakdown product of PCE and TCE. Since groundwater samples where vinyl chloride was detected also contained detections of TCE and PCE, the vinyl chloride concentrations are most likely associated with the TCE or PCE subsurface impacts. PCE was primarily detected in both the 5-foot and 15-foot soil gas samples in the area west of the 3000 East Imperial Highway property.

The deliverables for this project were added to the Plaza Mexico operable unit for the City of Lynwood Master Redevelopment Project (Envirostor Id; 60001308).

Potential Contamin of Concern:

BENZENE, CHROMIUM III, LEAD, POLYCHLORINATED BIPHENYLS (PCBS), TETRACHLOROETHYLENE (PCE)

Site History:

The Site was first developed by Grayson Heat Control, a manufacturer of heat control devices during the 1930s. Grayson was acquired by RobertShaw-Fulton Controls, Co. during the late 1930s or early1940s. Following Grayson/RobertShaw-Fulton, Whittaker WM R Co. acquired the Site in 1955. The property was subsequently listed in the 1960 City Directory under the names Telecomputing Services, Telecomputing Corp Whittaker Controls Division, and Whittaker Controls Div. of Telecomputing Corp. Manufacturing. The Site was subsequently purchased by the Kanowsky family in 1963, which owned the property until it was acquired by Gold Realty Company in 1970. Allied Industrial Components and Allied upholstery Manufacturing, Inc is listed as the Se occupant in 1970 and Brea Datsun and K&K Office Furniture in 1985. Regent Officeworks, Inc. purchased the K&K business in 2004 and continues to operate the Site as a furniture manufacturing operation. The Site is listed under the current ownership of 3000 E Imperial, LLC.

3000 E Imperial LLC (The Proponent) entered into a CLRRA Agreement in July 2007 and completed a Site assessment by November 2007. The Proponent proposed to redevelop the property with commercial use in the ground/first floor with residential units on the second and higher floors. DTSC approved the Response Plan by June 2011 and was implemented soon thereafter. The Response Plan proposed to soil vapor extraction to remove contamination in soil, in-situ treatment of contaminated groundwater, soil excavation and offsite disposal to address limited pockets of metals contamination and to file a land use restriction to monitor residual concentrations of the contaminants of concern in soil and groundwater. In 2012 pilot study was proposed and approved by DTSC to use electric resistance heating to accelerate the cleanup.

A Removal Action Completion Report (RACR) for Area 2 was approved by DTSC in April 2013. A site wide RACR was approved by DTSC in April 2015.

DRAFT

DTSC determined that the property in its present condition is suitable for commercial use on the ground/first floor provided that the final building(s) design are provided to DTSC for review.

Sub Area:
Sub Area Link:
Document Type: Monitoring Report
Date Completed: 1/24/2013
Comments: The report's primary purpose is to satisfy Water Board monitoring requirements associated with the WDR permits. The report presents detailed summaries of groundwater conditions and remediation system operation. It appears that the system has worked well in reducing TCE concentrations, especially in Area 1 where the ERH system was operating. DTSC concurs with the conclusion that the remediation has progressed to the point where it appears that the NAPL has been remediated and that ERH has been effective in cleaning up Area 1. The document is accepted.

Document Type: Monitoring Report
Date Completed: 4/21/2014
Comments: Document accepted. Consultants are planning to conduct a 3-day UVOST investigation to delineate the vertical and lateral extents of the pale oil observed in some of the SVE wells. There appears to be some VOCs dissolved in the pale oil which may be why we still have the concentrations in vapor that are being detected. As such, may need to excavate the area with the pale oil, but before it is decided on doing this, the exact location of the pale oil needs to be located. Therefore, a UVOST investigation will be conducted. The investigation will be focused in the vicinity of SVE-24 in the southwest corner of the site. Borings may be advanced on the adjoining Gonzales property as well but will coordinate with them beforehand so as not to disturb their operations

DRAFT

Past Use that Caused Contam: DRY CLEANING, FUEL - VEHICLE STORAGE/ REFUELING, VEHICLE MAINTENANCE
Potential Media Affected: AQUIFER USED FOR DRINKING WATER SUPPLY AFFECTED, INDOOR AIR, SOIL, SOIL VAPOR, UNDER INVESTIGATION

Site History:

The Site is comprised of the commercial property located at 11600-11618 Long Beach Boulevard (Figure 2) between Lynwood Road and Louise Street, fronting Long Beach Boulevard. The northern portion of the Site is currently occupied by an active gasoline service station operated by US Royal Oil, Inc. (d.b.a. USA Royal Oil). Other businesses including a coin laundromat, pet shop and flower shop occupy the remainder of the Site. A general site plan, depicting the Site, vicinity property features, and locations of existing exploratory borings, is presented in Figure 2. The Site is located within a designated redevelopment area of the City of Lynwood known as the "Lynwood Springs" Redevelopment Area. The "Project Area", defined as the area currently under investigation, is bounded on the north by I-105, to the east by a generally extending Olive Street, to the south by Virginia Street and on the west by a boundary approximately 300 feet west of the eastern curb of Long Beach Boulevard (Figure 2). The adjacent commercial properties to the south of the Site, occupied by the U-Haul self storage facility and Acosta's Restaurant, as well as residential properties to the southeast and east of the subject property, are included in the Project Area.

Tetra Tech, Inc. conducted a Phase I Environmental Site Assessment (ESA) on behalf of Northgate Gonzalez RE, LLC of the real estate parcels comprising the proposed development footprint of the Site. This report identified no RECs attributable to any on-Site activities. This Phase I ESA revealed the RECs in connection with the surrounding properties such as gasoline service station, dry cleaning facility, U-Haul facility, several historical gasoline stations and/or auto repair facilities. This Phase I ESA also revealed environmental concerns associated with suspect asbestos-containing materials and lead-based paint within interior and exterior building materials.

Potential Contamin of Concern:

LEAD, PETROLEUM, VOLATILE ORGANICS (8260B VOCS)

Status: ACTIVE
A2 Program Type: VOLUNTARY CLEANUP

DRAFT

Past Use that Caused Contam: MAINTENANCE / CLEANING, MANUFACTURING - INDUSTRIAL MACHINERY, MANUFACTURING - OTHER, METAL FINISHING
Potential Media Affected: CONTAMINATED SURFACE / STRUCTURE, OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL VAPOR
Potential Contamin of Concern:

METALS, PETROLEUM, POLYCHLORINATED BIPHENYLS (PCBS), POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS), TRICHLOROETHYLENE (TCE)

Site History:

The Alameda Triangle Project Area (Site) is Phase I of the City of Lynwood's master redevelopment poject. The Site is currently proposed for redevelopment as a single family residential development, as outlined in the Disposition and Development Agreement (DDA) between the RDA and Casa Grande Development, LLC dated October 27, 2005. The Alameda Triangle is a priority redevelopment project for the RDA and City of Lynwood due to the significant blight and crime issues associated with the property and the need to promote economic activity, which will provide an enhanced tax base to the City in the immediate future. Furthermore, being located immediately adjacent to the City's Plaza Mexico shopping center, the redevelopment project will serve as a catalyst for economic growth to drive the expansion of the commercial base in and around the Plaza Mexico shopping center. The City wishes to redevelop the Project Area by 2012. It is located in the northeast corner of Imperial Highway and Alameda Street in Lynwood, California. The Site is triangular in shape and bounded by Imperial Highway to the south, South Alameda Street to the west, and Fernwood Avenue to the north. The Site is comprised of numerous commercial and industrial properties primarily occupied by automobile dismantling and repair businesses, along with some vacant land. The surrounding area consists of mixed-use commercial/industrial properties and residential neighborhoods. The I-105 Freeway is located approximately 100 feet to the south of the Site. The nearest surface water body to the Site is Compton Creek, located approximately one mile to the west.

A Site Characterization Work Plan (June 16, 2010) was approved by DTSC in August 2010. The Work Plan proposed to investigate for contaminants of potential concern (COPCs) to be investigated include volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), total petroleum hydrocarbons in the gasoline, diesel and heavy oil range (TPH), light non-aqueous phase liquid (LNAPL), and heavy metals in multiple media, including soil, soil vapor, and groundwater.

Potential Contamin of Concern:

ARSENIC

Site History:

This site consists of a long vacant narrow strip of land along Fernwood Avenue, between Imperial Hwy and Alameda. It is part of an area known as the Alameda Triangle. A PEA was done to evaluate potential contamination on this property and to verify one area of arsenic at the adjacent 11410 South Alameda Avenue, Coco's Auto Dismantling. Sampling showed that elevated levels of arsenic exist throughout the near surface soils in the Fernwood property, and at the one area in question at Coco's. Further action is required.

Status: INACTIVE - ACTION REQUIRED

Potential Media Affected: SOIL
Site History:

A PEA was done on 3 properties within the Alameda Triangle. These properties were 400, 410, 420 South Alameda Avenue, and operated by Lynwood Auto Parts, Coco's Auto Dismantling, and Henry's Rack Repair respectively. One property (Coco's) had one area with elevated Arsenic (12 ppm) in near surface soils. Step out samples confirmed that elevated levels of arsenic exist in one area at Coco's. This one area is the reason for the Further Action required.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Mar 26, 2020

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Dec 30, 2020

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Dec 30, 2020

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Dec 30, 2020

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Oct 28, 2020

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

DRAFT

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Oct 28, 2020

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Oct 19, 2020

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Oct 19, 2020

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Oct 19, 2020

DRAFT

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Oct 19, 2020

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Oct 19, 2020

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Oct 19, 2020

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Aug 26, 2020

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Aug 26, 2020

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 9, 2020

DRAFT

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 6, 2021

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Apr 28, 2020

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Oct 28, 2020

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Sep 22, 2020

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Jan 13, 2021

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Jan 13, 2021

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Jan 13, 2021

Solid Waste Information System (SWIS): SWF/LF

DRAFT

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.
Government Publication Date: Oct 15, 2020

EnviroStor Hazardous Waste Facilities: HWP
A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.
Government Publication Date: Jan 13, 2021

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT
In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.
Government Publication Date: Dec 31, 1995

Land Disposal Sites: LDS
Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.
Government Publication Date: Nov 16, 2020

Leaking Underground Fuel Tank Reports: LUST
List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.
Government Publication Date: Nov 16, 2020

Delisted Leaking Storage Tanks: DELISTED LST
List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.
Government Publication Date: Nov 16, 2020

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF
This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.
Government Publication Date: Sep 20, 2006

Permitted Underground Storage Tank (UST) in GeoTracker: UST
List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).
Government Publication Date: Nov 16, 2020

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE
List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.
Government Publication Date: Oct 7, 2020

Historical Hazardous Substance Storage Information Database: HHSS
The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.
Government Publication Date: Aug 27, 2015

DRAFT

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks: AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Dec 3, 2020

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Dec 3, 2020

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 26, 2020

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Jan 13, 2021

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Oct 16, 2020

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 16, 2020

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Jan 13, 2021

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 16, 2020

PROFILE

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Jan 25, 2021

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Oct 26, 2020

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2020

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Apr 8, 2020

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Apr 14, 2020

County

Los Angeles County - Site Mitigation List: LA SML

A Site Mitigation List in the County of Los Angeles. The list is made available by Los Angeles County Fire Department. Site mitigation is handled by the Site Mitigation Unit (SMU) which facilitates completion of site clean-up projects of contaminated sites in an expeditious manner in all cities of the Los Angeles County except El Segundo, Glendale, Long Beach, Santa Fe Springs, and Vernon.

Government Publication Date: Jul 20, 2020

Los Angeles County - Solid Waste Sites: LA SWF

List of permitted solid waste facilities, closed landfills, historical dumpsites and other solid waste sites in Los Angeles County, made available by the Department of Public Works in Los Angeles County.

Government Publication Date: Sep 2, 2020

Los Angeles County - CUPA Program Records: LA COUNTY CUPA

A list of inspection and enforcement records for active and inactive CUPA Program facilities, made available by the Health Hazardous Materials Division (HHMD) of the County of Los Angeles Fire Department. Includes Hazardous Materials Business Plan (HMBP), California Accidental Release Prevention Plan (CalARP), Hazardous Waste Generator (HWG), and the Aboveground Petroleum Storage Act Programs (APSA). Inactive programs include facilities that are out of business or no longer regulated by the HHMD.

Government Publication Date: Mar 25, 2020

DRAFT

Los Angeles County - HMS List: LA HMS

List of sites in the Los Angeles County Department of Public Works Hazardous Materials System (HMS) Database which have or have had permits for Industrial Waste, Underground Storage Tanks, or Stormwater in the county of Los Angeles.

Government Publication Date: Nov 5, 2020

Los Angeles County - Santa Fe Springs Underground Storage Tank: UST SANTAFESP

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Fe Springs. This list is made available by Santa Fe Springs Department of Fire-Rescue.

Government Publication Date: Dec 17, 2020

Los Angeles County - Long Beach UST List: UST LONGB

List of registered Underground Storage Tanks (USTs) in the City of Long Beach, Los Angeles County, made available by the Long Beach Certified Unified Program Agency (CUPA). The Long Beach CUPA operates under oversight shared by the Long Beach Fire Department and Health Department.

Government Publication Date: Jul 9, 2018

Los Angeles County - Burbank City CUPA List: BURBANK CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Burbank. This list is made available by the City of Burbank Fire Department.

Government Publication Date: Aug 21, 2019

Los Angeles County - El Segundo City Underground Storage Tanks List: UST ELSEGUNDO

List of registered Underground Storage Tanks (USTs) in the City of El Segundo of Los Angeles County, made available by El Segundo City Fire Department.

Government Publication Date: Jan 17, 2017

Los Angeles County - Santa Monica City Underground Storage Tank List: UST SANTA MONICA

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Monica made available by Santa Monica Fire Prevention Division.

Government Publication Date: Dec 3, 2020

Los Angeles County - Santa Monica City Aboveground Storage Tank List: SANTAMON AST

List of registered Aboveground Storage Tanks (ASTs) made available by the Santa Monica Fire Department in the City of Santa Monica of Los Angeles County, California.

Government Publication Date: Dec 3, 2020

Los Angeles County - Santa Monica City CUPA Facilities List: SANTAMON CUPA

The Santa Monica Fire Department's office maintains a list of CUPA Facilities located in Santa Monica city.

Government Publication Date: Dec 3, 2020

Los Angeles County - Torrance City Underground Storage Tanks: UST TORRANCE

A list of registered Underground Storage Tank (UST) sites in Torrance City of Los Angeles County. This list is made available by Torrance City Office of Clerk.

Government Publication Date: Aug 12, 2020

Los Angeles County - Vernon City UST List: UST VERNON

A list of Underground Storage Tanks (UST) in Vernon City provided by the Vernon City Fire Department.

Government Publication Date: Dec 14, 2020

Los Angeles County - Vernon City CUPA List: VERNON CUPA

The Vernon City Fire Department's office maintains a list of CUPA Facilities located in Vernon city.

Government Publication Date: Dec 14, 2020

Los Angeles County - City of Los Angeles UST List: UST LA CITY

A list of active and inactive underground storage tank facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

DRAFT

Los Angeles County - City of Los Angeles AST List: AST LA CITY

A list of active and inactive above ground petroleum storage tanks made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Los Angeles County - City of Los Angeles Hazardous Materials Facilities: LA CITY HAZMAT

A list of active and inactive hazardous materials facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites: PFAS NPL

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Nov 18, 2020

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Oct 5, 2020

DRAFT

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Dec 30, 2020

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Aug 24, 2020

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Jan 20, 2020

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Jan 20, 2020

DRAFT

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Jan 28, 2020

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Aug 5, 2020

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 3, 2020

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jan 18, 2021

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 31, 2020

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 19, 2020

State

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

DRAFT

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

List of sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 16, 2020

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Oct 22, 2020

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Oct 7, 2020

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Jan 13, 2021

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Oct 12, 2020

Hazardous Waste Manifest Data: HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

DRAFT

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Oct 26, 2020

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Nov 16, 2020

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 16, 2020

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2018

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jun 30, 2018

Tribal

No Tribal additional environmental record sources available for this State.

County

Los Angeles County - Santa Monica City Hazardous Materials Facilities: SANTAMON HAZ

A list of Hazardous Materials Facilities in the City of Santa Monica, Los Angeles county. This list is made available by Santa Monica Fire Prevention Division which has been designated as the CUPA for the City.

Government Publication Date: Mar 12, 2020

Los Angeles County - Santa Monica City Hazardous Waste Facilities: SANTAMON HW

A list of Hazardous Waste Facilities in Los Angeles County, City of Santa Monica. This list is made available by Santa Monica Fire Prevention Division.

Government Publication Date: Jul 19, 2019

DRAFT

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix....174
Liability Notice....176

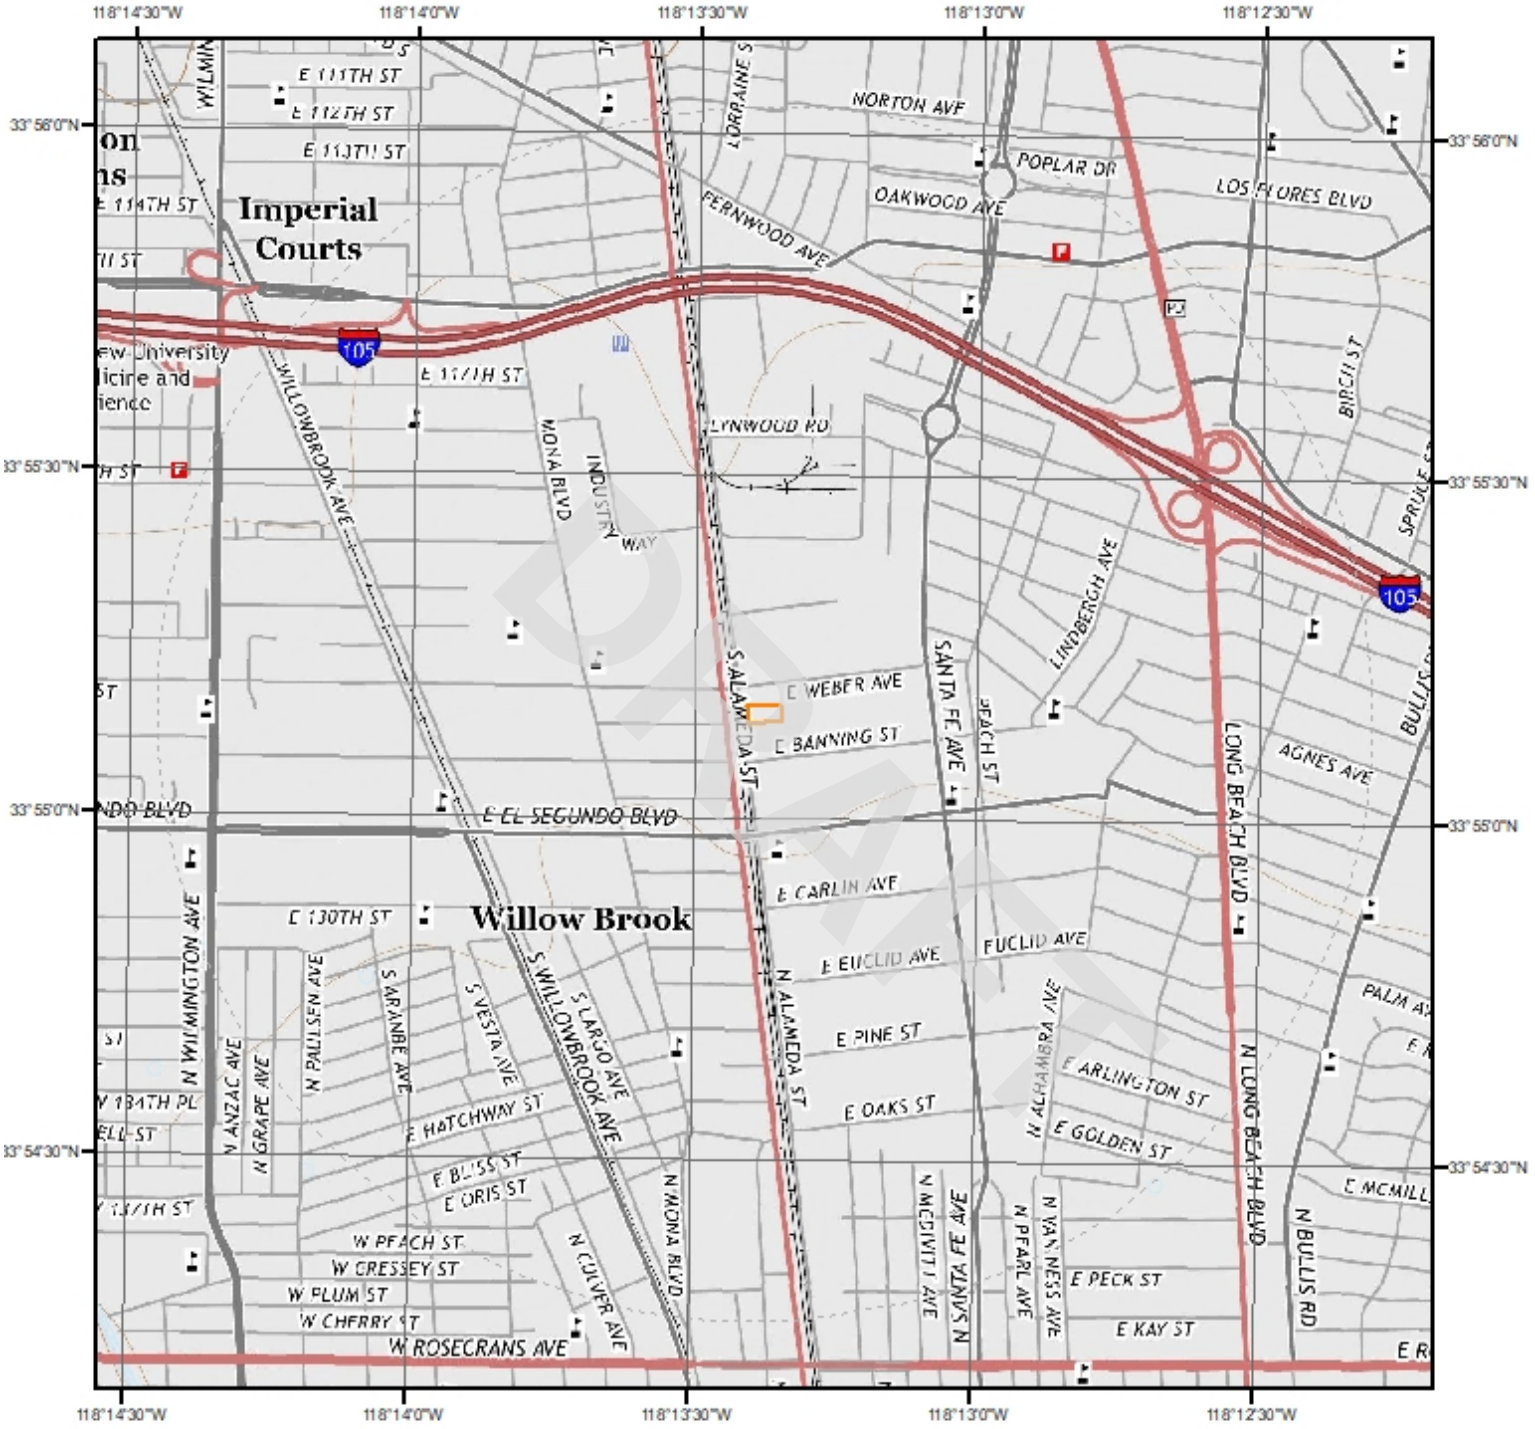
The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information



Current USGS Topo (2015)

Quadrangle(s): South Gate,CA

Source: USGS 7.5 Minute Topographic Map

Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells — **OGW**

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of

DRAFT

Appendix

Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations **MONITOR WELLS**

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

Well Completion Reports **WATER WELLS**

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

Proposed Detention System Hydrograph Analysis

SECTION I Introduction

The Public Storage Compton Project Site comprises approximately 1.99 acres of existing industrial development located at the southeast corner of N. Alameda Street and E. Weber Avenue in Compton, California. The Site is located approximately 0.7 miles south of CA Interstate 105. Improvements to the Site include the demolition and removal of all existing buildings, paved parking areas and paved drive aisles; and the construction of a new building, sidewalks landscaping, paved parking areas, paved drive aisles, a new underground storm drain system and installation of new underground utilities.

A total of 1.99 acres of area will be analyzed in this Hydrology report and will be referred to as "Site" throughout this report. This report has been prepared to compare the pre-construction (Existing Condition) and post-construction (Proposed Condition) hydrology conditions for peak storm water runoff rates within the 1.99-acre Site.

SECTION II Discussion

Existing Site Conditions: In the Existing Condition, the Site is relatively flat and generally surface drains from northeast to southwest, offsite and into the easterly existing curb and gutter within the public right-of-way of N. Alameda Street. Stormwater drains southerly along N. Alameda Street into a Los Angeles County Flood Control District (LACFCD) curb opening catch basin located approximately 1,000 feet south of the Project Site. The catch basin is connected to an existing LACFCD owned and maintained underground storm drain system that eventually discharges into the Compton Creek concrete-lined open channel.

Proposed Site Condition: The Proposed Project Site was designed to mitigate runoff from a 25-year frequency design storm event to satisfy the Urban Flood level of protection based on Section 4.3 of Los Angeles County Department of Public Works (LADPW) Hydrology Manual (January 2006 edition). The Project Site was designed so that the Proposed Peak Flow Rate, Q (cfs) discharging offsite does not exceed the Existing Peak Flow Rate, Q (cfs) in the 25-year storm event.

In the Proposed Condition, the Site drainage pattern will remain relatively the same. Paved areas will be graded to drain into proposed concrete gutters that convey flow into proposed grate inlet catch basins throughout the Site. Stormwater is conveyed toward a proposed proprietary biofiltration system (MWS Unit) designed to meet Low Impact Development (LID) Storm Water Quality Design Volume (SWQDv) requirements. From there, stormwater will flow into a proposed sump pump located at the west side of the Project Site. The sump pump will be designed to pump stormwater up to the surface and to flow westerly through a parkway drain offsite into the existing easterly curb & gutter on N. Alameda Street.

For stormwater flows generated during a 25-year storm event, it is anticipated that the proposed MWS Unit will become full and the full flow rate cannot pass through. The Site is designed such that stormwater will overflow from the southerly onsite grate inlet catch basins. This will create a situation in which temporary above-ground ponding will occur along the southerly proposed onsite curb & gutter. This pond acts as an above-ground detention system that is required in order to prevent the Proposed Peak Flow Rate from exceeding the Existing Peak Flow Rate in the 25-year storm event. The Site is graded so that the pond may overflow offsite from a proposed grate inlet at the west side of the Project Site into N. Alameda Street via parkway drain. Ultimately, the stormwater flows generated in the Proposed Condition drain to N. Alameda Street, similar to the drainage pattern in the Existing Condition.

SECTION III Hydrologic Analysis

The hydrology calculations for the project are based on the LADPW Hydrology. Precipitation values and soil values have been interpolated from the LADPW's website (http://dpw.lacounty.gov/wrd/hydrologygis/) and can be found in Appendix A of this report. Proposed site conditions are analyzed using the LA County HydroCalc software to compute pre-construction and post-construction flow rates for the 25-Year storm event. See Attachment C for output of the calculations.

The 25-Year storm event was analyzed as the design storm in accordance with LA County Hydrology Manual Urban Flood Protection requirements. The Proposed Project Site has a soil type of 006, and a 50-Year Isohyet of 6.0 inches of rainfall. The 25-year storm event on the Proposed Project Site was modeled with Autodesk Civil3D "Hydraflow" software. HydroCalc software was used to generate the 25-year, 24-hour storm event hydrograph for the overall Proposed Site.

The Project Site features onsite ponding for detention. The total ponding volume is based on the high point at the southwest corner of the Site and the outlet point at the west side of the Site. This volume is equal to 466 cubic-feet and was calculated with a volume comparison surface in Autodesk Civil3D software. The detention pond was modeled in Hydraflow.

The Project Site features a catch basin that is designed to overflow into a parkway drain that will be 3-inches in height and 48-inches in width. The parkway drain was modeled as an outlet orifice for the detention pond in Hydraflow. The catch basin includes a sump pump that is designed to pump stormwater generated from lower flows offsite. This was modeled as a 3-inch diameter outlet orifice in Hydraflow.

After modeling the 25-year, 24-hour storm, the detention pond, and the outlet orifice, Hydraflow is able to calculate the Peak flow runoff for the Project Site. Results are shown in the following pages.

Existing (Pre-Construction) Conditions: The Existing Project Site area can be analyzed as one (1) drainage area. The longest existing flow path of the drainage area was selected and an average slope of the path calculated. The Hydrocalc results of the drainage area calculations are shown in Attachment C of this report and are summarized in Table A below.

TABLE A: Existing Condition Hydrocalc Drainage Summary

Existing Condition							
Drainage Subarea	Area	Pervious Area		Impervious Area		25-year Storm	
	acres	acres	% Subarea	acres	% Subarea	Q (cfs)	Vol (cu-ft)
Project Site	1.99	0.000	0.00%	1.99	100.00%	5.167	33,966

Proposed (Post-Construction) Conditions: The Proposed Project Site area can be analyzed as one (1) drainage area. The longest existing flow path of the drainage area was selected and an average slope of the path calculated. The Hydrocalc results of the drainage area calculations are shown in Attachment C of this report and are summarized in Table B below.

TABLE B: Proposed Condition Hydrocalc Drainage Summary

Proposed Condition							
Drainage Subarea	Area	Pervious Area		Impervious Area		25-year Storm	
	acres	acres	% Subarea	acres	% Subarea	Q (cfs)	Vol (cu-ft)
Project Site	1.99	0.292	14.68%	1.70	85.32%	5.566	30,005

The Proposed Project Site was designed so that the Peak Flow Rate, Q (cfs) in the Proposed Condition does not exceed Q (cfs) in the existing condition. Therefore, the Site features an underground storm drain system, a sump pump to discharge smaller flows, an overflow catch basin with parkway drain to discharge peak flows, and onsite grading that allows for temporary above-ground ponding. The features listed above were modeled in Hydraflow and the results are summarized in Table C below. Calculations are shown in Attachment C of this report.

TABLE C: Proposed Condition Hydraflow Results (with Detention)

Proposed Condition with Detention				
Drainage Subarea	Calculated Peak Flow Q (cfs)	Max Ponding Depth (ft)	Storage Provided (cu-ft)	Storage Used (cu-ft)
Project Site	4.284	0.86	466	423

SECTION IV Conclusions

A hydrology study was completed to satisfy the Urban Flood level of protection for the Project Site. In the pre-construction (Existing) condition, the Site discharges stormwater into the existing easterly curb & gutter on N. Alameda Street. In the post-construction (Proposed) condition, the Project Site is designed so that the calculated peak flow discharge from does not exceed peak flow discharge in the Existing Condition for the 25-year, 24-hour storm event. In order to satisfy this requirement, the Project Site is designed to implement an underground storm drain system, a proposed proprietary biofiltration unit to meet LID requirements, a sump pump to discharge smaller flows, an onsite grading design that allows for temporary above-ground ponding and an overflow catch basin with parkway drain to discharge peak flows.

TABLE C: Proposed Condition Hydraflow Results (with Detention)

Proposed Condition with Detention				
Drainage Subarea	**Calculated Peak Flow Q (cfs)**	**Max Ponding Depth (ft)**	**Storage Provided (cu-ft)**	**Storage Used (cu-ft)**
Project Site	4.284	0.86	466	423

TABLE D: Summary of Results

	25-year storm		
Drainage Subarea	**Existing Condition Q (cfs) [Hydrocalc]**	**Proposed Condition Q (cfs) [Hydrocalc]**	**Proposed Condition with Detention Q (cfs) [Hydraflow]**
Project Site	5.167	5.566	4.284

In conclusion, the Urban Flood level of protection is met by reducing the Proposed Condition peak discharge, Q (cfs) with the implementation of the underground storm drain system, an onsite above-ground temporary storage of 466 cubic feet and 3-inch tall by 48--inch wide parkway drain discharge outlet. The location of the proposed parkway drain discharge outlet is shown on Concept Utility Plan in Appendix B of this Hydrology Report. Los Angeles County Hydraflow calculations are shown in Appendix C; and Civil 3D Hydraflow Hydrograph calculations are shown in Appendix D of this Hydrology Report.

Section 1.0 Discretionary Permit(s) and Water Quality Conditions

1.1 Introduction

In accordance with the General Permit issued under the National Pollutant Discharge Elimination System (NPDES) and the municipal storm water NPDES Permit No. CAS004001 issued to Los Angeles County and 84 cities (Permittees) by the Los Angeles Regional Water Quality Control Board on December 13, 2001 under Order No. 01-182, this Low Impact Development has been developed to meet the objectives listed below. All pollutants and their sources, including sources of sediment associated with construction, construction site erosion and all other activities associated with construction activity are controlled.

- Identify pollutant sources that could affect the quality of storm water discharges.
- Identify non-storm water discharges.
- Identify, construct, and implement Best Management Practices (BMPs) to reduce pollutants in storm water discharges from the site after construction.
- Develop a maintenance schedule for BMPs designed to reduce or eliminate pollutants after construction is completed (post-construction BMPs).

On November 8, 2012, the Regional Water Board adopted Order No. R4-2012-0175 (2012 MS4 Permit), which replaced the 2001 MS4 Permit. The most significant difference between the two MS4 permits is that the 2012 MS4 Permit requires new development and redevelopment projects in general, to retain, on-site, a specified volume of stormwater runoff (the Stormwater Quality Design Volume [SWQDv]) from a design storm event.

Preparation of this Low Impact Development (LID) is required by the City of Compton and shall comply with the City of Compton Storm Water Program supplementing the Low Impact Development (LID) and the Report of Waste Discharge (ROWD) adopted by the County of City of Compton. The City of Compton County Storm Water Program, LID, and ROWD are part of a countywide storm water pollution control effort adopted to comply with the National Pollution Discharge Elimination System (NPDES) General Permit adopted by the California State Water Resources Control Board.

The objective of this LID is to identify pollutant sources associated with business operations that may affect the quality of discharges of storm water from the site and to specify storm water pollution prevention measures to reduce potential pollutant discharges. These prevention measures are referred to as Best Management Practices or BMPs. Non-structural BMPs include such practices as spill prevention, outdoor loading/unloading, waste handling and disposal, and drainage system maintenance. Structural BMPs may include underground infiltration basins, vortex separators, proprietary control measures, and similar mechanisms as deemed appropriate.

Section 2.0 Project Description

2.1 Project Information

Owner:	Public Storage
Site Address:	3010 N Alameda Street
	Compton, CA 90222
Project Area:	1.99 acres (Total Disturbed Area = 1.99 acres)
Proposed Use:	Industrial
SIC Codes:	4225
MS4 Project Type:	Industrial

2.2 Location

The proposed project is the Public Storage Compton located in Compton, CA, at 3010 N Alameda Street, as shown on the location map in Appendix A. The Project Site is located at the southeast corner of N. Alameda Street and E. Weber Avenue. On the east and south sides of the Site are developed industrial lots. The latitude and longitude of the Site are 33°55'10.14"N and 118°13'22.68"W.

2.3 Site Plan

The Proposed Project will disturb 100% of the Site and the proposed construction will include the removal of all existing buildings and pavement, and the construction of one (1) three-story self-storage facility with parking areas, drive aisles, landscape planters, an underground storm drain system and proposed Modular Wetland System Unit to meet LID stormwater treatment requirements.

Plants with similar and low irrigation requirements and/or California native plant species will be chosen for efficient irrigation purposes.

The Concept Grading Plan and Concept Utility Plan illustrating the Project Site can be found in Appendix A of this document.

A trash enclosure is proposed on the southeast corner of the Project Site. Per *Los Angeles County LID Manual* dated February 2014, a screen or wall around trash storage area should be installed to prevent off-site transport of loose trash and waterproof lids on bins/dumpsters should be used or a roof to cover storage area enclosure should be provided to prevent precipitation from entering containers. The trash enclosure will be graded to direct storm water away from the bins.

Typical wastes generated from a self-storage warehouse facility include paper, food waste, containers and packing material. The ordinary wastes will be picked up by local waste management company on a weekly basis.

Routinely conducted outdoor activities include the ground and landscape maintenance, loading and unloading of materials.

Materials or products will be loaded and unloaded only at the designated loading areas and will not be stored outdoors.

The storm water generated from the new parking areas, drive aisles and from the rooftop of the proposed building will drain into the proposed storm drain inlets that are connected to the proposed Underground Detention System.

The stencil approved by County of Los Angeles will be installed at the proposed inlets. An example of the approved stencil is included with the County of Los Angeles LID Fact Sheets for S-1 in Appendix C.

Refer to Section 5.0 of this LID for entities that will be responsible for implementing each BMP.

Section 3.0 Site Description

3.1 Watershed

Los Angeles River Watershed

RWQCB: Los Angeles Regional Water Quality Control Board
320 W. 4th Street, Suite 200, Los Angeles, CA 90013

3.2 Site Information

Site Address:	3010 N Alameda Street Compton, CA 90222
Existing Land Use:	Industrial
Proposed Land Use:	Industrial
Soil Types:	006
Hydrologic Concerns:	No
Receiving Waters:	Compton Creek, Los Angeles River Reach 1 (Estuary to Carson Street), Los Angeles River Estuary (Queensway Bay), San Pedro Bay Near/Off Shore Zones,

3.3 Drainage Pattern

The Project Site is located within the Los Angeles River Watershed.

3.3.1 Existing Condition

The Project Site is currently fully developed with multiple buildings, drive aisles and parking areas. The Site relatively flat and generally surface drains from northeast to southwest, offsite and into the easterly existing curb and gutter within the public right-of-way of N Alameda Street. Stormwater drains southerly along N Alameda Street into a Los Angeles County Flood Control District (LACFCD) curb opening catch basin located approximately 1,000 feet south of the Project Site. The catch basin is connected to an existing LACFCD 36-inch to 66-inch reinforced concrete pipe (RCP) storm drain system. The LACFCD RCP storm drain is connected to a series of reinforced concrete box (RCB) storm drains that discharges into the Compton Creek concrete-lined open channel.

3.3.2 Proposed Condition

In the developed condition, a new storm drain system will be constructed. Proposed grate inlet catch basins located in the paved areas within proposed concrete gutters will collect storm water. Stormwater will flow into a proposed underground storm drain system. The storm drain system will convey flows toward the proposed Modular Wetland System Unit

(MWS Unit) to meet Storm Water Quality Design Volume (SWQDv). From there, stormwater will flow into a proposed sump pump located at the west side of the Project Site. The sump pump will be designed to pump stormwater up to the surface and to flow westerly through a parkway drain offsite into the existing easterly curb & gutter on N Alameda Street.

For a higher flow condition generated from the 25-year storm event, it is anticipated that the proposed MWS Unit will become full and cannot mitigate the full flow rate. In this condition, the storm drain system and Project Site is designed so that the storm drain system will overflow from the southwesterly onsite grate inlet catch basin and drain westerly offsite into N. Alameda Street, maintaining the existing condition's drainage pattern.

Refer to the Concept Grading Plan and Concept Utility Plan in Appendix A for drainage patterns and calculations in Appendix D for more details.

3.4 Pollutants of Concern

3.4.1 Anticipated Pollutants

Anticipated pollutants associated with this development include suspended solid/sediments, nutrients, metals, pathogens, pesticides, oil and grease, organic compounds, trash and debris, oil and grease.

3.4.2 303(d) List of Water Quality Limited Segments

303(d) List & TMDL

Compton Creek

Chlordane (sediment) (TMDL completion 2019)
DDT (tissue & sediment) TMDL completion 2019)
PCBs (TMDL completion 2019)
Sediment Toxicity (TMDL completion 2009)

3.5 Hydrologic Conditions of Concern

The project is a redevelopment project that will result in replacing more than 5.000 square feet of impervious surface on a site that was previously developed with more than 10,000 square feet area. As described in Section 2 of the *County of Los Angeles Department of Public Works Low Impact Development Manual* adopted in February 2014, the project is a designated project.

The project is a "redevelopment of a previously developed site in an urbanized area" and the new layout will increase the landscape areas from the existing less than 1% to approximately 15% of the site. The project meets one of the LID manual Section 8.2 Exemptions to Hydromodification Requirements:

"*Redevelopment of a previously developed site in an urbanized area that does not increase the effective impervious area or decrease the infiltration capacity of pervious areas compared to the pre-project conditions.*"

Section 4.0 Best Management Practices (BMPs)

4.1 Source Control BMPs

The following tables show source control BMPs included in this project and those that were not included.

Source Control BMPs

BMP	Name	Included		If not applicable, state brief reason
		Yes	No	
S-1	Storm Drain Message and Signage	✓		
S-2	Outdoor Material Storage Area		✓	Not proposed
S-3	Outdoor Trash Storage / Waste Handling Area	✓		
S-4	Outdoor Loading / Unloading Dock Area		✓	Not proposed
S-5	Outdoor Vehicle / Equipment Repair / Maintenance Area		✓	Not proposed
S-6	Outdoor Vehicle / Equipment Accessory Wash Area		✓	Not proposed
S-7	Fuel & Maintenance Area		✓	Not proposed
S-8	Landscape Irrigation Practices	✓		
S-9	Building Materials Selection	✓		
S-10	Animal Care and Handling Facilities		✓	Not proposed
S-11	Outdoor Horticulture Areas		✓	Not proposed

- S-1 Storm Drain Messaged and Signage

  Phrase “No Dumping – Flows to Ocean” or equally effective phrase, as approved by the NPDES General Committee, is to be stenciled on catch basins to alert the public as to the destination of pollutants discharged into storm drains. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SD-13 fact sheets for more details. An example of the stenciling accepted by County of Los Angeles is included in Appendix C of this document.

- S-3 Outdoor Trash Storage / Waste Handling Area

  Trash container areas shall be screened or walled to prevent the transportation of trash offsite. The property owner is responsible for the maintenance of the trash container areas. Recycle materials whenever possible. Cover waste containers with leak proof lids or some other means. The waste containers must be covered except when in use. Check containers weekly for leaks and to ensure that lids are on tightly. Sweep and clean the storage area regularly and do not hose down the area to a storm drain. Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc. may not be disposed of in solid waste containers. Hazardous waste must be disposed of by a licensed hazardous waste hauler. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SC-34 and SD-32 fact sheets for more details.

- S-8 Landscape Irrigation Practices

  The irrigation system for the proposed landscape areas will be designed to minimize runoff of excess irrigation water by providing reducers or shutoff valves, using timing and application methods, using mulches in planter areas, selecting and grouping appropriate plant materials. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SD-12 fact sheets for more details.

- S-9 Building Materials Selection

  Promote the use of less harmful products and products that contain little or no TMDL pollutants. Refer to California Stormwater BMP Handbook, BMP SC-35 fact sheets, for details. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SC-35 and SD-21 fact sheets for more details.

4.2 Site Design BMPs

The following table shows site design BMPs that are included, if any, in this project. A description of each BMP to be included follows:

Site Design BMPs

Technique	Included?		Reason for Not Being Implemented
	Yes	No	
Site Planning	X		
Protect and Restore Natural Areas		X	The site is previously developed; no natural area to be protected
Minimize Land Disturbance		X	The entire site has been previously developed
Minimize Impervious Area	X		

- Site Planning

  Project applicants must implement a holistic approach to site design in order to develop a more hydraulically-functional site, help to maximize the effectiveness of on-site retention, and integrate stormwater management throughout the project site. Early project site planning can identify physical site constraints, reduce costs of downstream stormwater quality control measures, and prevent potential project site re-design. Distribute, if feasible, stormwater quality control measures throughout the project site.

- Minimize Impervious Area

  Landscaped areas are proposed to increase the pervious areas.

4.3 Stormwater Quality Control BMPs

The following table shows stormwater quality control BMPs that are included in this project.

BMP	Name	Included?		If not applicable, state brief reason
		Yes	No	
RET-1	Bioretention		X	Landscape areas are too narrow to provide retention
RET-2	Infiltration Basin		X	On-site infiltration tests showed next to zero infiltration rates
RET-3	Infiltration Trench		X	On-site infiltration tests showed next to zero infiltration rates
RET-4	Dry Well		X	On-site infiltration tests showed next to zero infiltration rates
RET-5	Permeable pavement without an Underdrain		X	The project is to construct loading docks and parking areas for semi-trailer trucks. The heavy loading of the trucks will likely damage permeable pavement and demolish the functionality of the pavement
RET-6	Rain Barrel / Cistern		X	To use rain barrel/cistern, a pump will need to be installed. The pump will require additional pipe lines and maintenance.
BIO-1	Biofiltration		x	On-site infiltration tests showed next to zero infiltration rates
VEG-1	Green Roof		X	No building is proposed
VEG-2	Stormwater Planter		X	Planters are proposed. However, due to the grading, the majority of the storm water will drain away from the planters that can be considered as stormwater planter
VEG-3	Tree-well Filter		X	Planters are proposed. However, due to the grading, the majority of the storm water will drain away from the planters that are large enough to be tree-well filters
VEG-4	Vegetated Swales		X	Landscape areas are too narrow to construct swales
VEG-5	Vegetated Filter Strip		X	Landscape areas are too narrow to construct filter strips
T-1	Sand Filter		X	Proprietary biofiltration will be used
T-2	Constructed Wetland		X	Landscape areas are too narrow to function as wetlands
T-3	Extended Detention Basin		X	Landscape areas are too narrow to function as basins
T-4	Wet Pond		X	Landscape areas are too narrow to function as ponds
T-5	Permeable Pavement with an Underdrain		X	The project is to construct loading docks and parking areas for semi-trailer trucks. The heavy loading of the trucks will likely damage permeable pavement and demolish the functionality of the pavement
T-6	Proprietary Treatment Control Measures	X		

- T-6 Proprietary Treatment Control Measures

Proprietary devices are commercial products that typically aim at providing stormwater treatment in space-limited applications, often using patented innovative technologies. The most common encountered classes of proprietary stormwater quality control measures include hydrodynamic separation, catch basin insert technologies, cartridge filter-type controls, and proprietary biotreatment devices.

Modular Wetland System (MWS) is a proprietary biotreatment with cartridges for pre-filtering. BioClean, the manufacturer of MWS units, lists MWS unit performance as follows:

- 66% removal of dissolved zinc
- 69% removal of total zinc
- 38% of dissolved copper
- 85% removal of TSS
- 100% removal of trash
- 45% removal of nitrogen
- 50% removal of total copper
- 95% removal of motor oil
- 67% removal of ortho phosphorus
- 64% removal of total phosphorus

Section 5.0 Inspection/Maintenance Responsibility for BMPs

5.1 Responsible Parties

The following entity is responsible for the implementation of this LID for the onsite areas, including the long-term inspection and maintenance of all structural source control BMPs and all treatment control BMPs:

Entity:	Public Storage
Address:	701 Western Avenue, Glendale, CA, 91201
Telephone:	(800) 688-8057

The owner may employ property managers to assist in implementing, monitoring and reporting the BMPs outlined in this LID for operating facilities to ensure compliance with the provisions of LID including storm water control permitting requirements for new developments. See Appendix B for the Master Covenant and Agreement.

5.2 Reporting

5.2.1 Inspection Records

The owner of the property shall be responsible for completing and maintaining inspection reports that include the date of the inspection, the name of the person who performed the inspection, the observations made, and any actions taken. Records shall be maintained for five years. The records shall be available for inspection upon request of the city engineer, Regional Water Control Board, or the designated city representative.

See the BMP Maintenance Responsibility/Frequency Matrix in this section for details on the party responsible for each BMP and the frequency of action with respect to that BMP.

5.2.2 Maintenance Requirements

Maintenance and cleaning of the proprietary treatment control BMPs shall be in accordance with the manufacturer's recommendations. At a minimum, the proprietary treatment control BMPs shall be inspected and maintained once prior to the rainy season, once during the rainy season, and once after the rainy season (generally accepted as October 1st through April 30th). All BMPs shall be inspected and maintained according to the Maintenance Responsibility/Frequency Matrix below.

POST CONSTRUCTION BMPS MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX			
BMP	**TITLE**	**INSPECTION FREQUENCY (ALL CONTROLS)**	**MAINTENANCE / REPAIR PROGRAM**
S-1	Storm Drain Message and Signage	Inspect for legibility a minimum of once per year.	Responsible Party: Public Storage Re-label/re-stencil as needed to clearly depict signage. Refer to *LA County LID Manual* S-1 and CASQA BMP SD-13 for additional information.
S-3	Outdoor Trash Storage / Waste Handling Area	Inspect the trash compactor area and trash storage areas on a daily basis for trash/debris, spills, broken containers, etc. and that the lids are closed. Inspect the trash dumpster areas monthly for leaks and other structural damage and repair as necessary. Inspect the trash enclosures used for food waste daily for leaks and signs of vectors.	Responsible Party: Public Storage Pick up any trash off the ground and place in appropriate containers. Trash dumpster pickup shall be once per week, at minimum. Refer to *LA County LID Manual* S-3 and CASQA BMP SC-34 and SD-32 for additional information.
S-8	Landscape Irrigation Practices	Inspect irrigation equipment on a monthly basis for proper operation. Check water sensors, irrigation heads, and timing.	Responsible Party: Public Storage Adjust irrigation heads and timers as necessary Repair or replace damaged irrigation equipment and make other repairs or adjustments as necessary. Landscape maintenance will be conducted on a weekly basis. Refer to *LA County LID Manual* S-8 and CASQA BMP SD-12 for additional information.

POST CONSTRUCTION BMPS MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX			
BMP	**TITLE**	**INSPECTION FREQUENCY (ALL CONTROLS)**	**MAINTENANCE / REPAIR PROGRAM**
T-6	Proprietary Devices – Modular Wetland System (MWS)	Inspect annually or per manufacturer's requirements whichever is more stringent.	Responsible Party: Public Storage ***Maintenance will occur as per manufacturer's instructions included in Section E of this document.*** Remove trash/debris as necessary. Replace cartridge and drain down filter media. Trim vegetation. Unit maintenance as required by manufacturer.

5.2.3 Revisions to the LID

Revisions to the LID in the event of a substantial change to the project due to construction modifications or uses at the site will be the responsibility of Public Storage. Modifications to the LID may be necessary if project changes result in a potential increase in pollutant discharge to storm water or if inspection and monitoring indicates that existing BMPs are ineffective. Public Storage shall secure the services of the firm that prepared the original LID or other qualified persons to make any appropriate changes, additions or deletions. Any revisions shall require approval by the local government that has jurisdiction over the subject property.

Section 6.0 Funding

6.1 Funding

The property owner will be responsible for the funding of post construction BMPs and proposed annual operating budget:

Public Storage
701 Western Avenue
Glendale, CA 91201

Mark Kennedy, Senior Vice President
(800) 688-8057

Annual budget for BMP maintenance is to be determined. A copy of annual budget for Public Storage Compton will be included in this section once available.

- After the Storm – A Citizen's Guide to Understanding Stormwater
- Protecting Water Quality from Urban Runoff
- Preventing Pollution through Efficient Water Use
- Gardening Tips
- Pesticide Tips
- Recycling Tips
- County of Los Angeles LID Fact Sheets
  - S-1 – Storm Drain Message and Signage
  - S-3 – Outdoor Trash Storage / Waste Handling Area
  - S-8 – Landscape Irrigation Practices
  - S-9 – Building Materials Selection
  - T-6 – Proprietary Devices

AFTER THE STORM – A CITIZEN'S GUIDE TO UNDERSTANDING STORMWATER

After the Storm

A Citizen's Guide to Understanding Stormwater

WHEN IT RAINS IT DRAINS

What is stormwater runoff?

Stormwater runoff occurs when precipitation from rain or snowmelt flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater from naturally soaking into the ground.

Why is stormwater runoff a problem?

Stormwater can pick up debris, chemicals, dirt, and other pollutants and flow into a storm sewer system or directly to a lake, stream, river, wetland, or coastal water. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing, and providing drinking water.

The effects of pollution

Polluted stormwater runoff can have many adverse effects on plants, fish, animals, and people.

- Sediment can cloud the water and make it difficult or impossible for aquatic plants to grow. Sediment also can destroy aquatic habitats.
- Excess nutrients can cause algae blooms. When algae die, they sink to the bottom and decompose in a process that removes oxygen from the water. Fish and other aquatic organisms can't exist in water with low dissolved oxygen levels.
- Bacteria and other pathogens can wash into swimming areas and create health hazards, often making beach closures necessary.

- Debris—plastic bags, six-pack rings, bottles, and cigarette butts—washed into waterbodies can choke, suffocate, or disable aquatic life like ducks, fish, turtles, and birds.
- Household hazardous wastes like insecticides, pesticides, paint, solvents, used motor oil, and other auto fluids can poison aquatic life. Land animals and people can become sick or die from eating diseased fish and shellfish or ingesting polluted water.
- Polluted stormwater often affects drinking water sources. This, in turn, can affect human health and increase drinking water treatment costs.

Stormwater Pollution Solutions

Residential

Recycle or properly dispose of household products that contain chemicals, such as insecticides, pesticides, paint, solvents, and used motor oil and other auto fluids. Don't pour them onto the ground or into storm drains.

Lawn care

Excess fertilizers and pesticides applied to lawns and gardens wash off and pollute streams. In addition, yard clippings and leaves can wash into storm drains and contribute nutrients and organic matter to streams.

- Don't overwater your lawn. Consider using a soaker hose instead of a sprinkler.
- Use pesticides and fertilizers sparingly. When use is necessary, use these chemicals in the recommended amounts. Use organic mulch or safer pest control methods whenever possible.
- Compost or mulch yard waste. Don't leave it in the street or sweep it into storm drains or streams.
- Cover piles of dirt or mulch being used in landscaping projects.

Auto care

Washing your car and degreasing auto parts at home can send detergents and other contaminants through the storm sewer system. Dumping automotive fluids into storm drains has the same result as dumping the materials directly into a waterbody.

- Use a commercial car wash that treats or recycles its wastewater, or wash your car on your yard so the water infiltrates into the ground.
- Repair leaks and dispose of used auto fluids and batteries at designated drop-off or recycling locations.

Septic systems

Leaking and poorly maintained septic systems release nutrients and pathogens (bacteria and viruses) that can be picked up by stormwater and discharged into nearby waterbodies. Pathogens can cause public health problems and environmental concerns.

- Inspect your system every 3 years and pump your tank as necessary (every 3 to 5 years).
- Don't dispose of household hazardous waste in sinks or toilets.

Pet waste

Pet waste can be a major source of bacteria and excess nutrients in local waters.

- When walking your pet, remember to pick up the waste and dispose of it properly. Flushing pet waste is the best disposal method. Leaving pet waste on the ground increases public health risks by allowing harmful bacteria and nutrients to wash into the storm drain and eventually into local waterbodies.

Education is essential to changing people's behavior. Signs and markers near storm drains warn residents that pollutants entering the drains will be carried untreated into a local waterbody.

Residential landscaping

Permeable Pavement—Traditional concrete and asphalt don't allow water to soak into the ground. Instead these surfaces rely on storm drains to divert unwanted water. Permeable pavement systems allow rain and snowmelt to soak through, decreasing stormwater runoff.

Rain Barrels—You can collect rainwater from rooftops in mosquito-proof containers. The water can be used later on lawn or garden areas.

Rain Gardens and Grassy Swales—Specially designed areas planted with native plants can provide natural places for rainwater to collect and soak into the ground. Rain from rooftop areas or paved areas can be diverted into these areas rather than into storm drains.

Vegetated Filter Strips—Filter strips are areas of native grass or plants created along roadways or streams. They trap the pollutants stormwater picks up as it flows across driveways and streets.

Commercial

Dirt, oil, and debris that collect in parking lots and paved areas can be washed into the storm sewer system and eventually enter local waterbodies.

- Sweep up litter and debris from sidewalks, driveways and parking lots, especially around storm drains.
- Cover grease storage and dumpsters and keep them clean to avoid leaks.
- Report any chemical spill to the local hazardous waste cleanup team. They'll know the best way to keep spills from harming the environment.

Erosion controls that aren't maintained can cause excessive amounts of sediment and debris to be carried into the stormwater system. Construction vehicles can leak fuel, oil, and other harmful fluids that can be picked up by stormwater and deposited into local waterbodies.

- Divert stormwater away from disturbed or exposed areas of the construction site.
- Install silt fences, vehicle mud removal areas, vegetative cover, and other sediment and erosion controls and properly maintain them, especially after rainstorms.
- Prevent soil erosion by minimizing disturbed areas during construction projects, and seed and mulch bare areas as soon as possible.

Construction

Agriculture

Lack of vegetation on streambanks can lead to erosion. Overgrazed pastures can also contribute excessive amounts of sediment to local waterbodies. Excess fertilizers and pesticides can poison aquatic animals and lead to destructive algae blooms. Livestock in streams can contaminate waterways with bacteria, making them unsafe for human contact.

- Keep livestock away from streambanks and provide them a water source away from waterbodies.
- Store and apply manure away from waterbodies and in accordance with a nutrient management plan.
- Vegetate riparian areas along waterways.
- Rotate animal grazing to prevent soil erosion in fields.
- Apply fertilizers and pesticides according to label instructions to save money and minimize pollution.

Forestry

Improperly managed logging operations can result in erosion and sedimentation.

- Conduct preharvest planning to prevent erosion and lower costs.
- Use logging methods and equipment that minimize soil disturbance.
- Plan and design skid trails, yard areas, and truck access roads to minimize stream crossings and avoid disturbing the forest floor.
- Construct stream crossings so that they minimize erosion and physical changes to streams.
- Expedite revegetation of cleared areas.

Automotive Facilities

Uncovered fueling stations allow spills to be washed into storm drains. Cars waiting to be repaired can leak fuel, oil, and other harmful fluids that can be picked up by stormwater.

- Clean up spills immediately and properly dispose of cleanup materials.
- Provide cover over fueling stations and design or retrofit facilities for spill containment.
- Properly maintain fleet vehicles to prevent oil, gas, and other discharges from being washed into local waterbodies.
- Install and maintain oil/water separators.

Environmental Protection
Agency

EPA 841-F-03-003

Protecting Water Quality *from* URBAN RUNOFF

Clean Water Is Everybody's Business

In urban and suburban areas, much of the land surface is covered by buildings and pavement, which do not allow rain and snowmelt to soak into the ground. Instead, most developed areas rely on storm drains to carry large amounts of runoff from roofs and paved areas to nearby waterways. The stormwater runoff carries pollutants such as oil, dirt, chemicals, and lawn fertilizers directly to streams and rivers, where they seriously harm water quality. To protect surface water quality and groundwater resources, development should be designed and built to minimize increases in runoff.

The most recent National Water Quality Inventory reports that runoff from urbanized areas is the leading source of water quality impairments to surveyed estuaries and the third-largest source of impairments to surveyed lakes.

Did you know that because of impervious surfaces like pavement and rooftops, a typical city block generates more than 5 times more runoff than a woodland area of the same size?

How Urbanized Areas Affect Water Quality

Increased Runoff

The porous and varied terrain of natural landscapes like forests, wetlands, and grasslands traps rainwater and snowmelt and allows them to filter slowly into the ground. In contrast, impervious (nonporous) surfaces like roads, parking lots, and rooftops prevent rain and snowmelt from infiltrating, or soaking, into the ground. Most of the rainfall and snowmelt remains above the surface, where it runs off rapidly in unnaturally large amounts.

Storm sewer systems concentrate runoff into smooth, straight conduits. This runoff gathers speed and erosional power as it travels underground. When this runoff leaves the storm drains and empties into a stream, its excessive volume and power blast out streambanks, damaging streamside vegetation and wiping out aquatic habitat. These increased storm flows carry sediment loads from construction sites and other denuded surfaces and eroded streambanks. They often carry higher water temperatures from streets, roof tops, and parking lots, which are harmful to the health and reproduction of aquatic life.

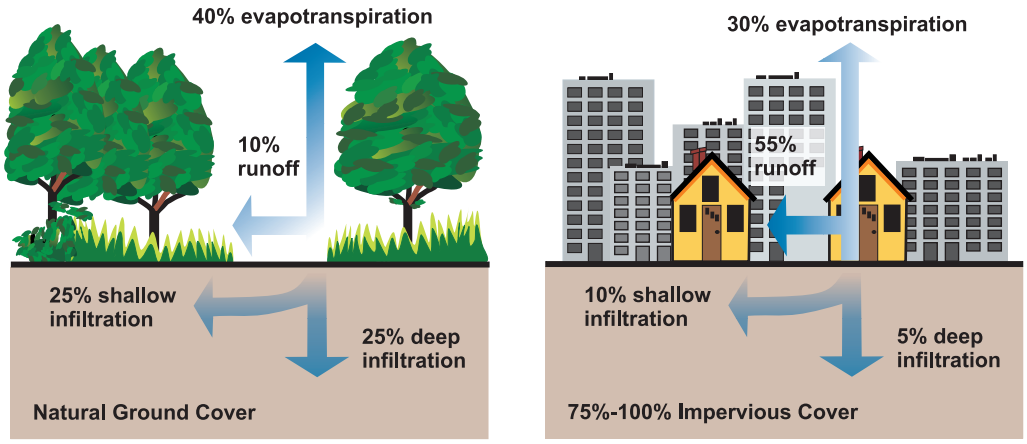
The loss of infiltration from urbanization may also cause profound groundwater changes. Although urbanization leads to great increases in flooding during and immediately after wet weather, in many instances it results in lower stream flows during dry weather. Many native fish and other aquatic life cannot survive when these conditions prevail.

Increased Pollutant Loads

Urbanization increases the variety and amount of pollutants carried into streams, rivers, and lakes. The pollutants include:

- Sediment
- Oil, grease, and toxic chemicals from motor vehicles
- Pesticides and nutrients from lawns and gardens
- Viruses, bacteria, and nutrients from pet waste and failing septic systems
- Road salts
- Heavy metals from roof shingles, motor vehicles, and other sources
- Thermal pollution from dark impervious surfaces such as streets and rooftops

These pollutants can harm fish and wildlife populations, kill native vegetation, foul drinking water supplies, and make recreational areas unsafe and unpleasant.



Relationship between impervious cover and surface runoff. Impervious cover in a watershed results in increased surface ruunoff. As little as 10 percent impervious cover in a watershed can result in stream degradation.

Managing Urban Runoff

What Homeowners Can Do

To decrease polluted runoff from paved surfaces, households can develop alternatives to areas traditionally covered by impervious surfaces. Porous pavement materials are available for driveways and sidewalks, and native vegetation and mulch can replace high maintenance grass lawns. Homeowners can use fertilizers sparingly and sweep driveways, sidewalks, and roads instead of using a hose. Instead of disposing of yard waste, they can use the materials to start a compost pile. And homeowners can learn to use Integrated Pest Management (IPM) to reduce dependence on harmful pesticides.

In addition, households can prevent polluted runoff by picking up after pets and using, storing, and disposing of chemicals properly. Drivers should check their cars for leaks and recycle their motor oil and antifreeze when these fluids are changed. Drivers can also avoid impacts from car wash runoff (e.g., detergents, grime, etc.) by using car wash facilities that do not generate runoff. Households served by septic systems should have them professionally inspected and pumped every 3 to 5 years. They should also practice water conservation measures to extend the life of their septic systems.

Controlling Impacts from New Development

Developers and city planners should attempt to control the volume of runoff from new development by using low impact development, structural controls, and pollution prevention strategies. Low impact development includes measures that conserve natural areas (particularly sensitive hydrologic areas like riparian buffers and infiltrable soils); reduce development impacts; and reduce site runoff rates by maximizing surface roughness, infiltration opportunities, and flow paths.

Controlling Impacts from Existing Development

Controlling runoff from existing urban areas is often more costly than controlling runoff from new developments. Economic efficiencies are often realized through approaches that target "hot spots" of runoff pollution or have multiple benefits, such as high-efficiency street sweeping (which addresses aesthetics, road safety, and water quality). Urban planners and others responsible for managing urban and suburban areas can first identify and implement pollution prevention strategies and examine source control opportunities. They should seek out priority pollutant reduction opportunities, then protect natural areas that help control runoff, and finally begin ecological restoration and retrofit activities to clean up degraded water bodies. Local governments are encouraged to take lead roles in public education efforts through public signage, storm drain marking, pollution prevention outreach campaigns, and partnerships with citizen groups and businesses. Citizens can help prioritize the clean-up strategies, volunteer to become involved in restoration efforts, and mark storm drains with approved "don't dump" messages.

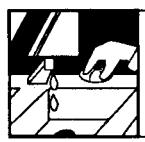
How Efficient Water Use Helps Prevent Pollution



Other Reasons to Use Water Wisely

What Individuals Can Do

What Communities Can Do

What Communities Can Do

A water supplier or wastewater system operator (public or private) has cost-effective options to process and deliver water more efficiently. A community can do the same, and can foster ways to use water wisely.

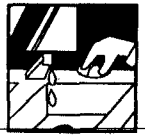
Not all of these steps are expensive. The best choices vary by region and by community; start by asking if these are appropriate where you live and work.

A Water Supplier or Wastewater Processor Can:

- ☞ Identify who uses water, and reduce unaccounted-for water use.
- ☞ Find and repair leaking pipes.
- ☞ Consider a new pricing scheme which encourages conservation.
- ☞ Reduce excess pressure in water lines.
- ☞ Explore the reuse of treated wastewater for uses other than drinking water.
- ☞ Charge hookup fees which encourage more efficient water use in new buildings.
- ☞ Build water efficiency into future demand projections, facility planning, and drought planning.

A Community Can:

- ☞ Adopt plumbing and building codes that require water-efficient equipment and practices.
- ☞ Adopt a water-efficient landscaping ordinance to reduce the water used for golf courses and commercial landscapes.
- ☞ Retrofit older buildings with water-efficient equipment, starting with public buildings.
- ☞ Reduce municipal water use for landscaping and other uses.
- ☞ Conduct a public education campaign.
- ☞ Require developers to build in water efficiency measures.



Other Reasons to Use Water Wisely

Preventing pollution is only one reason why using water efficiently makes sense. Here are a few more:

Money Saved

- Less water use results in fewer pumping and treatment costs.
- Saving money on water and wastewater operations frees money for meeting water quality, public health and water treatment goals.
- Water saved is also energy, and money, saved for you and your community.

Improved Reliability

- Water conservation provides a hedge against drought impacts.
- Improving water efficiency may be quicker and cheaper than developing a new supply.
- Reduced water use may extend the life of your water or wastewater facility.
- Reduced water use may increase the efficiency of wastewater treatment, and reduce overflows during storms.
- Communities which use water efficiently are better prepared to cope with effects of possible future climate change.

What Individuals Can Do

More efficient water use begins with individuals, in the home and place of work. Taking these and other steps, and encouraging others to do so, makes good economic as well as environmental sense.

In The Home

- Install a toilet dam or plastic bottle in your toilet tank.
- Install a water-efficient showerhead (2.5 gallons or less per minute).
- When you buy a new toilet, purchase a low flow model (1.6 gallons or less per flush).

Outdoors

- Water in the morning or evening, to minimize evaporation.
- Install a drip-irrigation watering system for valuable plants.
- Use drought-tolerant plants and grasses for landscaping, and reduce grass-covered areas.

At Work or School

- Adopt the same water-saving habits that are effective at home.
- Ask about installing water-efficient equipment and reducing outdoor water use.
- Encourage employers to explore the use of recycled "gray-water" or reclaimed wastewater.

How Efficient Water Use Helps Prevent Pollution

Using water more efficiently can help prevent pollution as well as protect and conserve our finite water resources. More efficient water use by you and your community has many other benefits.

Fewer Pollutants

- Using less water reduces the amount of wastewater discharged into our lakes, streams, rivers, and marine waters.
- The amount of pollutants wastewater carries can also be reduced, as treatment efficiency improves.
- Recycled process water can reduce pollutants from industry.
- More efficient irrigation can minimize runoff of agricultural pollutants and reduce the use of fertilizers and pesticides.

Protection of Aquatic Habitats

- Building fewer and smaller new water projects can help preserve wetlands, which naturally treat pollutants.
- Diverting less water preserves more streamflow to maintain a healthy aquatic environment.

Protection of Drinking Water Sources

- Less pumping of groundwater lowers the chance that pollutants will be drawn into a water supply well.
- With less water use, septic system performance can improve, reducing the risk of groundwater contamination.
- Highest quality water sources are preserved for drinking water by using treated wastewater for other uses.

Energy Conservation

- Efficient water use means less power needed to pump and treat water and wastewater.
- Less water use reduces the amount of energy required for heating hot water.
- Less energy demand results in fewer harmful by-products from power plants.

GARDENING TIPS

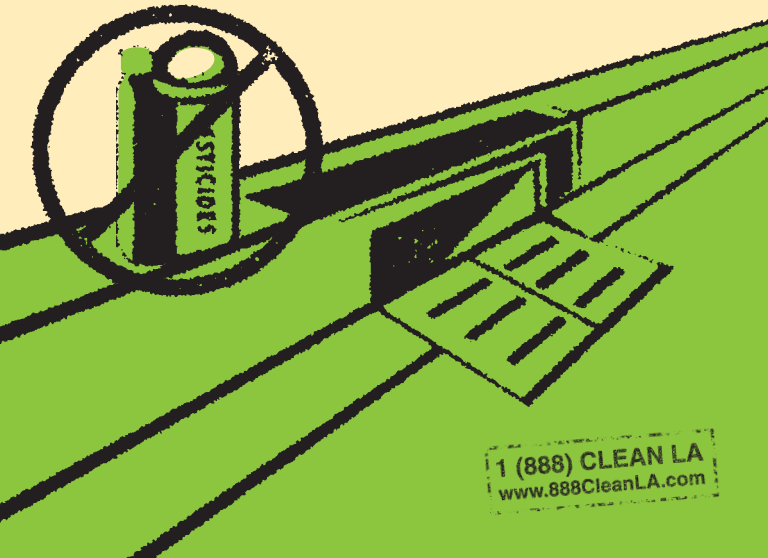
A Yard is a Terrible Thing to Waste!

Storm drains are for rain…**not yard waste.**

Residential yard waste represents about **13 percent** of the total waste generated in L.A. County.

Pesticides, fertilizer and yard waste such as leaves and mowed grass wash from the ground and streets into storm drains and flow straight to the ocean — **untreated**.

Remember to use pesticides and fertilizer wisely and pick-up yard waste.



Tips For Yard Care:

L.A. County residents can help solve the stormwater pollution problem by taking these easy steps…

- Do not over-fertilize and do not use fertilizer or pesticides near ditches, gutters or storm drains.
- Do not use fertilizer or pesticides before a rain.
- Follow the directions on the label carefully.
- Use pesticides sparingly — more is not better. "Spot" apply, rather than "blanket" apply.
- When watering your lawn, use the least amount of water possible so it doesn't run into the street carrying pesticides and other chemicals with it.
- Use non-toxic products for your garden and lawn whenever possible.
- If you must store pesticides or fertilizer, make sure they are in a sealed, water-proof container in a covered area to prevent runoff.
- Do not blow, sweep, hose or rake leaves or other yard trimmings into the street, gutter or storm drain.

PROJECT Pollution PREVENTION

A message from the County of Los Angeles Department of Public Works.
Printed on recycled paper.

PESTICIDE TIPS

Storm Drains are for Rain...

More than 200,000 times each month, lawns and gardens throughout LA County are sprayed with pesticides. Overwatering or rain causes pesticides on leaves and grass to flow into the storm drain and to the ocean — untreated.

Please use pesticides wisely, not before a rain, and water carefully.

...not pesticides.

1(888)CLEAN LA
www.888CleanLA.com

Pesticide Tips:

You can keep your lawn and garden green and at the same time solve the pollution problem by taking these easy steps...

- Never dispose of lawn or garden chemicals in storm drains. This is called illegal dumping. Take them to a household hazardous waste roundup. Call 1(888)CLEAN LA or visit www.888CleanLA.com to locate a roundup or collection facility near you.
- More is not better. Use pesticides sparingly. "Spot" apply, rather than "blanket" apply.
- Read labels! Use only as directed.
- Use non-toxic products for your garden and lawn whenever possible.
- If you must store pesticides, make sure they are in a sealed, water-proof container that cannot leak.
- When watering your lawn, use the least amount of water possible so it doesn't run into the street and carry pesticide chemicals with it. Don't use pesticides before a rain storm. You will not only lose the pesticide, but also will be harming the environment.

PROJECT Pollution PREVENTION

PROJECT Pollution PREVENTION

Printed on recycled paper

RECYCLING TIPS

Storm Drains are for Rain...

More than 50% of the automotive oil sold to do-it-yourself oil changers is not recycled. There are more than 600 State-certified used oil collection centers within Los Angeles County.

Never dispose of automotive fluids, recyclable products, or household hazardous wastes into the street or gutter. Take them to your local auto repair station, recycling center or a household hazardous waste roundup.

...they're not recycling centers.

1(888)CLEAN LA
www.888CleanLA.com

Recycling Tips:

You can help keep your community clean, protect our area waterways and make the beaches safe for ocean swimmers by putting recyclable materials where they belong — at a recycling center or household hazardous waste roundup. Never throw or pour anything into the streets or gutters...

- When changing vehicle fluids – transmission, hydraulic and motor oil, brake and radiator fluid – drain them into a drip pan to avoid spills. Do not combine these fluids. Do not dispose of them in the street, gutter or in the garbage. It is illegal.
- Recycle all used vehicle fluids. Call 1(888)CLEAN LA or visit www.888CleanLA.com for the location of a center that recycles these fluids, or for the location of a local household hazardous waste Roundup.
- Other materials that should be taken to a household hazardous waste Roundup are: paint and paint-related materials, household cleaners, batteries, pesticides and fertilizers, pool chemicals, and aerosol products.
- Aluminum, glass, plastic and newspapers should be placed in your curbside recycling bin or taken to a local recycling center.

PROJECT Pollution PREVENTION

Storm Drains are for Rain...

More than 50% of the automotive oil sold to do-it-yourself oil changers is not recycled. There are more than 600 State-certified used oil collection centers within Los Angeles County.

Never dispose of automotive fluids, recyclable products, or household hazardous wastes into the street or gutter. Take them to your local auto repair station, recycling center or a household hazardous waste roundup.

...they're not recycling centers.

1(888)CLEAN LA
www.888CleanLA.com

Recycling Tips:

You can help keep your community clean, protect our area waterways and make the beaches safe for ocean swimmers by putting recyclable materials where they belong — at a recycling center or household hazardous waste roundup. Never throw or pour anything into the streets or gutters...

- When changing vehicle fluids – transmission, hydraulic and motor oil, brake and radiator fluid – drain them into a drip pan to avoid spills. Do not combine these fluids. Do not dispose of them in the street, gutter or in the garbage. It is illegal.
- Recycle all used vehicle fluids. Call 1(888)CLEAN LA or visit www.888CleanLA.com for the location of a center that recycles these fluids, or for the location of a local household hazardous waste Roundup.

PROJECT Pollution PREVENTION

COUNTY OF LOS ANGELES LID FACT SHEETS

S-1: Storm Drain Message and Signage

Purpose

Waste material dumped into storm drain inlets can adversely impact surface and ground waters. In fact, any material discharged into the storm drain system has the potential to significantly impact downstream receiving waters. Storm drain messages have become a popular method of alerting and reminding the public about the effects of and the prohibitions against waste disposal into the storm drain system. The signs are typically stenciled or affixed near the storm drain inlet or catch basin. The message simply informs the public that dumping of wastes into storm drain inlets is prohibited and/or that the drain ultimately discharges into receiving waters.

General Guidance

- The signs must be placed so they are easily visible to the public.
- Be aware that signs placed on sidewalk will be worn by foot traffic.

Design Specifications

- Signs with language and/or graphical icons that prohibit illegal dumping, must be posted at designated public access points along channels and streams within the project area. Consult with Los Angeles County Department of Public Works (LACDPW) staff to determine specific signage requirements for channels and streams.
- Storm drain message markers, placards, concrete stamps, or stenciled language/icons (e.g., “No Dumping – Drains to the Ocean”) are required at all storm drain inlets and catch basins within the project area to discourage illegal or inadvertent dumping. Signs should be placed in clear sight facing anyone approaching the storm drain inlet or catch basin from either side (see Figure D-1 and Figure D-2). LACDPW staff should be contacted to determine specific requirements for types of signs and methods of application. A stencil can be purchased for a nominal fee from LACDPW Building and Safety Office by calling (626) 458-3171. All storm drain inlet and catch basin locations must be identified on the project site map.

Maintenance Requirements

Legibility and visibility of markers and signs should be maintained (e.g., signs should be repainted or replaced as necessary). If required by LACDPW, the owner/operator or homeowner’s association shall enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards and signs.

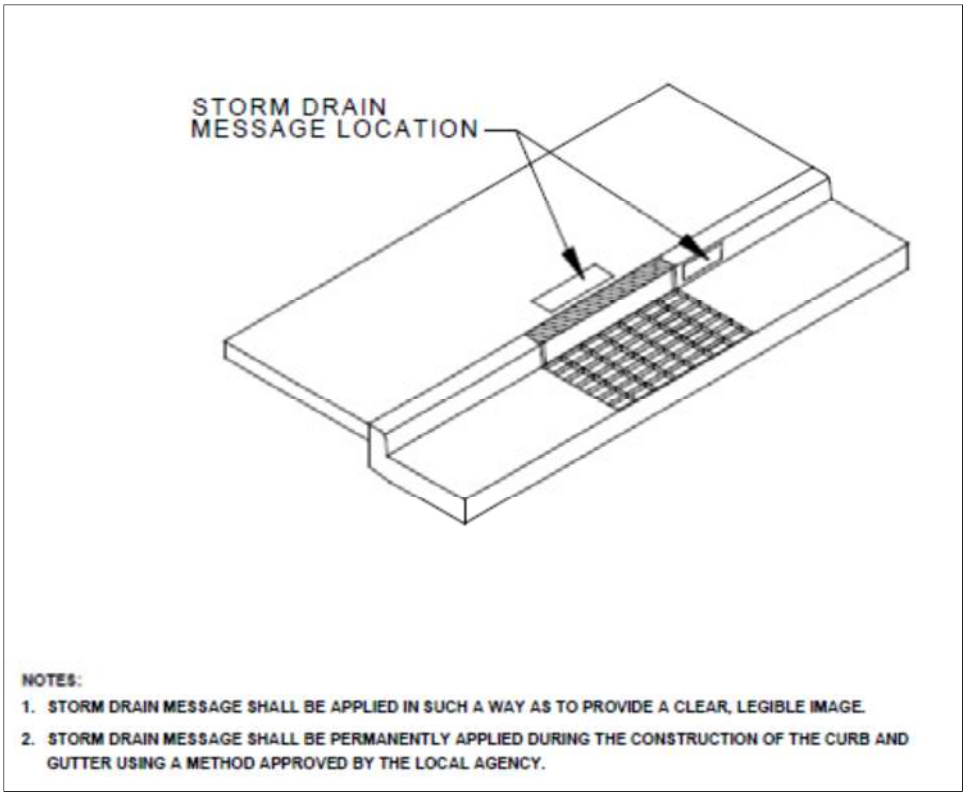

Figure D-1. Storm Drain Message Location – Curb Type Inlet

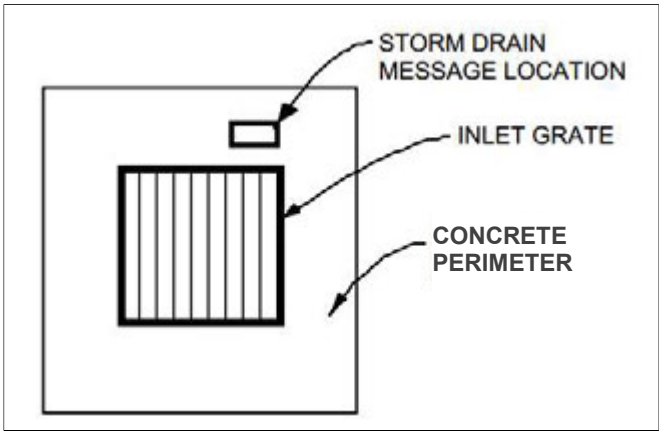

Figure D-2. Storm Drain Message Location – Catch Basin/Area Type Inlet

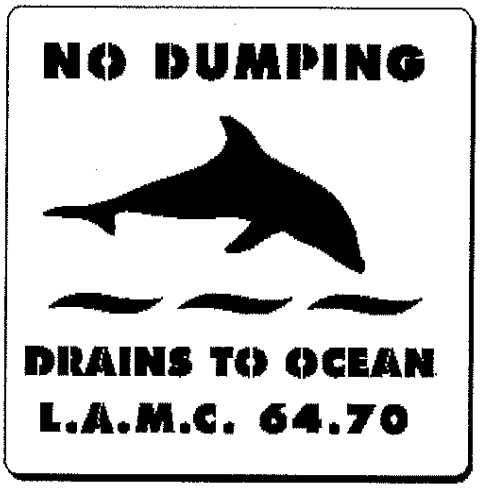
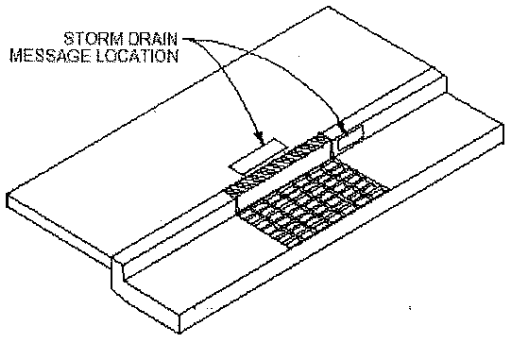
Storm Drain Signage Sample and Signage location

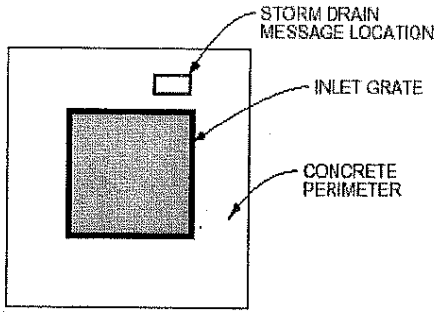


OR

Stencil or signage is required at all drainage inlets



CURB TYPE INLET



AREA TYPE INLET

NOTES:

1. STORM DRAIN MESSAGE SHALL BE APPLIED IN SUCH A WAY AS TO PROVIDE A CLEAR, LEGIBLE IMAGE.
2. STORM DRAIN MESSAGE SHALL BE PERMANENTLY APPLIED DURING THE CONSTRUCTION OF THE CURB AND GUTTER USING A METHOD APPROVED BY THE LOCAL AGENCY.

Storm Drain Message / Stencil Location

S-3: Outdoor Trash Storage and Waste Handling Area

Purpose

Stormwater runoff from areas where trash is stored or handled can be polluted. Loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or receiving waters. Waste handling operations (i.e., dumpsters, litter control, waste piles) may be sources of stormwater pollution.

Design Specifications

Wastes from commercial and industrial sites are typically hauled away for disposal by either public or commercial carriers that may have design or access requirements for waste storage areas. Design specifications for waste handling areas are regulated by local building and fire codes and by current County ordinances and zoning requirements. The design specifications, listed below in Table D-3, are recommendations and are not intended to conflict with requirements established by the waste hauler. The design specifications are intended to enhance local codes and ordinances while addressing stormwater runoff concerns. The waste hauler should be contacted prior to the design of trash storage and collection areas to determine established and accepted guidelines for designing trash collection areas. All hazardous waste must be handled in accordance with the legal requirements established in Title 22 of the California Code of Regulations. Conflicts or issues should be discussed with LACDPW staff.

Table D-3. Design Specifications for Outdoor Trash Storage and Waste Handling Area

Design Feature	Design Specifications
Surfacing	• Construct/pave outdoor trash storage and waste handling area with Portland cement concrete or an equivalent impervious surface.
Screens/Covers	• Install a screen or wall around trash storage area to prevent off-site transport of loose trash. • Use lined bins or dumpsters to reduce leaking of liquid wastes. • Use waterproof lids on bins/dumpsters or provide a roof to cover storage area enclosure (LACDPW discretion) to prevent precipitation from entering containers.
Grading/Drainage	• Berm and/or grade waste handling area to prevent stormwater run-on. • Locate waste handling area at least 35 feet from storm drains. • Divert drainage from adjoining roofs and pavement away from adjacent trash storage areas.
Signs	• Post signs on all dumpsters and/or inside enclosures prohibiting disposal of liquids and hazardous materials in accordance with any waste disposal ordinance.

Accumulated Water

Stormwater runoff, non-stormwater runoff, and spills will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and regulations, and cannot be discharged directly to the storm drain or sanitary sewer system without appropriate permitting. Contact LACDPW (1-888-CLEAN-LA) for information regarding discharge of contaminated accumulated water.

Maintenance Requirements

The integrity of structural elements that are subject to damage (e.g., screens, covers, signs) must be maintained by the owner/operator as required by local codes and ordinances. Outdoor trash storage and waste handling areas must be checked periodically to ensure containment of accumulated water and prevention of stormwater run-on. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

S-4: Outdoor Loading/Unloading Dock Area

Purpose

Materials spilled, leaked, or lost during loading or unloading may collect on impervious surfaces or in the soil and be carried away by stormwater runoff or when the area is cleaned. Precipitation may also wash pollutants from machinery used to load or unload materials. In particular, loading docks have the potential to contribute heavy metals, nutrients, suspended solids, oils, and grease to stormwater runoff due to the heavy truck traffic and loading and unloading activities. Depressed loading docks (e.g., truck wells) are contained areas that can also accumulate water.

Design Specifications

Design specifications for outdoor loading/unloading dock areas are regulated by local building and fire codes and by current County ordinances and zoning requirements. Additionally, individual businesses may have their own design or access requirements for loading docks. Design specifications presented in this fact sheet are intended to enhance and be consistent with these code and ordinance requirements while addressing stormwater runoff concerns. The design specifications presented in Table D-4 are not intended to conflict with requirements established by individual businesses, but should be followed to the maximum extent practicable.

Accumulated Water

Stormwater runoff, non-stormwater runoff, and spills will accumulate in containment areas and sumps with impervious surfaces, such as depressed loading docks. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without appropriate permitting. Contact LACDPW (1-888-CLEAN-LA) for information regarding discharge of contaminated accumulated water.

Maintenance Requirements

The integrity of structural elements that are subject to damage (e.g., covers, signs) must be maintained by the owner/operator as required by local codes and ordinances. If a water quality inlet or infiltration system is installed, it must be maintained as indicated by the manufacturer or installer. Outdoor loading/unloading dock areas must be checked periodically to ensure containment of accumulated water and prevention of stormwater run-on. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

Table D-4. Design Specifications for Outdoor Loading/Unloading Dock Area

Design Feature	Design Specifications
Surfacing	• Construct/pave outdoor loading/unloading dock areas with Portland cement concrete or an equivalent impervious surface. Ensure that the surfacing material is chemically-resistant to materials being handled in the loading/unloading dock area.
Covers	• Cover outdoor loading/unloading dock areas to a distance of at least 10 feet beyond the loading dock or building face if there is no raised dock. If the cover or roof structure does not include sidewalls, then the roof overhang must extend beyond the grade break. The overhang must extend a minimum of 20 percent of the roof height. • For interior transfer bays, provide a minimum 10-foot "No Obstruction Zone" to allow trucks or trailers to extend at least 5 feet inside the building. Identify "No Obstruction Zone" clearly on site plans and paint zone with high visibility floor paint. • If covers or interior transfer bays are not feasible, install a seal or door skirt and provide a cover to shield all material transfers between trailers and building. • LACDPW may grant waivers for covers on a case-by-case basis.
Hydraulic Isolation/Drainage	• For outdoor loading/unloading dock areas, hydraulically-isolate the first six feet of paved area measured from the building or dock face with grading, berms, or drains to prevent stormwater run-on from surrounding areas or roof drains. Direct stormwater runoff (e.g., from downspouts/roofs) and drainage from surrounding areas away from hydraulically-isolated areas to a stormwater runoff discharge point that meets all applicable LID Standards Manual requirements. • For interior transfer bays or bay doors, prevent stormwater runoff from surrounding areas from entering the building with grading or drains. Do not install interior floor drains in the "No Obstruction Zone". Hydraulically-isolate the "No Obstruction Zone" from any interior floor drains. • Do not install direct connections to storm drains from depressed loading docks. Connect drains or direct drainage from hydraulically-isolated loading/unloading dock area to an approved sediment/oil/water separator system connected a discharge location as determined by LACDPW. Provide a manual emergency spill diversion valve upstream of separator system to direct flow, in the event of a spill, to an approved spill containment vault sized to contain a volume equal to 125% of largest container handled at the facility. Provide additional emergency means, such as drain plugs or drain covers, to prevent spills or contaminated stormwater runoff from entering the storm drain system.

S-8: Landscape Irrigation Practices

Purpose

Irrigation runoff provides a pathway for pollutants (i.e., nutrients, bacteria, organics, sediment) to enter the storm drain system. By effectively irrigating, less runoff is produced resulting in less potential for pollutants to enter the storm drain system.

General Guidance

- Do not allow irrigation runoff from the landscaped area to drain directly to storm drain system.
- Minimize use of fertilizer, pesticides, and herbicides on landscaped areas.
- Plan sites with sufficient landscaped area and dispersal capacity (e.g., ability to receive irrigation water without generating runoff).
- Consult a landscape professional regarding appropriate plants, fertilizer, mulching applications, and irrigation requirements (if any) to ensure healthy vegetation growth.

Design Specifications

- Choose plants that minimize the need for fertilizer and pesticides.
- Group plants with similar water requirements and water accordingly.
- Use mulch to minimize evaporation and erosion.
- Include a vegetative boundary around project site to act as a filter.
- Design the irrigation system to only water areas that need it.
- Install an approved subsurface drip, pop-up, or other irrigation system.[1] The irrigation system should employ effective energy dissipation and uniform flow spreading methods to prevent erosion and facilitate efficient dispersion.
- Install rain sensors to shut off the irrigation system during and after storm events.
- Include pressure sensors to shut off flow-through system in case of sudden pressure drop. A sudden pressure drop may indicate a broken irrigation head or water line.
- If the hydraulic conductivity in the soil is not sufficient for the necessary water application rate, implement soil amendments to avoid potential geotechnical hazards (i.e., liquefaction, landslide, collapsible soils, and expansive soils).

[1] If alternative distribution systems (e.g., spray irrigation) are approved, the County will establish guidelines to implement these new systems.

- For sites located on or within 50 feet of a steep slope (15% or greater), do not irrigate landscape within three days of a storm event to avoid potential geotechnical instability.[2]
- Implement Integrated Pest Management practices.

For additional guidelines and requirements, refer to the Los Angeles County Department of Health Services.

Maintenance Requirements

Maintain irrigation areas to remove trash and debris and loose vegetation. Rehabilitate areas of bare soil. If a rain or pressure sensor is installed, it should be checked periodically to ensure proper function. Inspect and maintain irrigation equipment and components to ensure proper functionality. Clean equipment as necessary to prevent algae growth and vector breeding. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

[2] As determined by the City of Los Angeles, Building and Safety Division

T-6: Proprietary Treatment Control Measures

Definition

The LID Standards Manual provided information for selecting and designing the more common treatment-based stormwater quality control measures for projects. The treatment-based stormwater quality control measures included in this appendix (T-1 to T-5) are non-proprietary (public domain) designs that have been reviewed and evaluated by LACDPW and determined generally acceptable.

Proprietary devices are commercial products that typically aim at providing stormwater treatment in space-limited applications, often using patented innovative technologies. The most commonly encountered classes of proprietary stormwater quality control measures include hydrodynamic separation, catch basin insert technologies, cartridge filter-type controls, and proprietary biotreatment devices.

Hydrodynamic separation devices (alternatively, swirl concentrators) are devices that remove trash, debris, and coarse sediment from incoming flows using screening, gravity settling, and centrifugal forces generated by forcing the influent into a circular motion. By having the water move in a circular fashion, rather than a straight line, it is possible to obtain significant removal of suspended sediments and attached pollutants with less space as compared to wet vaults and other settling devices. Hydrodynamic devices were originally developed for combined sewer overflows, where they were used primarily to remove coarse inorganic solids. Hydrodynamic separation has been adapted for stormwater treatment by several manufacturers and is currently used to remove trash, debris, and other coarse solids down to sand-sized particles. Several types of hydrodynamic separation devices are also designed to remove floating oils and grease using sorbent media.

Catch basin inserts are manufactured filters or fabric placed in a drop inlet to remove sediment and debris and may include sorbent media to remove floating oils and grease. There are a multitude of inserts of various shapes and configurations, typically falling into one of three groups: socks, boxes, and trays. The sock-type filters are typically constructed of a fabric, usually polypropylene. The fabric may be attached to a frame or the grate of the inlet may hold the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene “bag” is placed in the wire mesh box and the bag takes the form of the box. Most box products are one box; that is, settling and filtration through media occur in the same box. Other products consist of one or more trays or mesh grates. The trays may hold different types of media. Filtration media vary by manufacturer. Types include polypropylene, porous polymer, treated cellulose, and activated carbon. Inserts are an easy and inexpensive retrofitting option because drain inlets are already a component of most standard drainage systems. Inserts are usually only suitable for mitigating relatively small tributary areas (less than one acre) because they are limited by treatment capacity and influent flow rate.

Cartridge filter-type controls typically consist of a series of vertical filters contained in a vault or catch basin that provide treatment through filtration and sedimentation. The vault may be divided into multiple chambers where the first chamber acts as a pre-settling basin for removal of coarse sediment while another chamber acts as the filter bay and houses the filter cartridges. The performance and capacity of a cartridge filter installation depends on the properties of the media contained in the cartridges. Cartridge filter manufacturers often provide an array of media types each with varying properties, targeting various pollutants and a range of particle sizes. Commonly used media include media that target solids, such as perlite, and media that target both dissolved and non-dissolved constituents, such as compost leaf media, zeolite, and iron-infused polymers. Manufacturers try to distinguish their products through innovative designs that aim at providing self cleaning and draining, uniformly loaded, and clog resistant cartridges that functional properly over a wide range of hydraulic loadings and pollutant concentrations.

Proprietary biotreatment devices are devices that are manufactured to mimic natural systems such as wetlands by incorporating plants, soil, and microbes engineered to provide treatment at higher flow rates or higher volumes and with smaller footprints than their natural counterparts. Incoming flows are typically filtered through natural media (mulch, compost, soil, plants, microbes, etc) and either infiltrated or collected by an underdrain and delivered to the storm system. Tributary areas for biotreatment devices tend to be limited to 0.5 to 1.0 acres.

The vendors of the various proprietary stormwater quality control measures provide detailed documentation for device selection, sizing, and maintenance requirements. Tributary area sizes are limited to the capacities of the largest available model. The latest manufacturer supplied documentation must be used for sizing and selection of all proprietary devices. Links to the websites of a number of vendors of proprietary devices are provided at www.BMPLA.org. All proprietary devices proposed for use by a project applicant must be approved by LACDPW.

General Design Specifications

Proprietary stormwater quality control measure vendors are constantly updating and expanding their product lines, so refer to the latest design guidance from the vendors. General guidelines on the performance, sizing, and operation and maintenance of proprietary devices are provided through LACDPW Watershed Division.

Expected Performance

For hydrodynamic devices, it has been stated with respect to combined sewer overflows that the practical lower limit of hydrodynamic separation is a particle with a settling velocity of 12 to 16.5 ft/hr (0.10 to 0.14 cm/s). As such, the focus for hydrodynamic separation in combined sewer overflows has been with settleable solids generally 200 μm and larger, given the presence of the lighter organic solids. For inorganic sediment, the above settling velocity range represents a particle diameter of 50 to 100 μm. Thus, hydrodynamic separation devices are effective for removal of course sediment, trash,

and debris and useful for pretreatment in combination with other types of stormwater quality control measures that target smaller particle sizes.

Because there is a wide range of catch basin insert configurations, it is not possible to generalize the expected performance. Inserts should mainly be used for catching coarse sediments and floatable trash, and are effective for pretreatment in combination with other types of stormwater quality control measures. Trash and large objects can greatly reduce the effectiveness of catch basin inserts with respect to sediment and hydrocarbon capture. Frequent maintenance and the use of screens and grates to keep trash out may decrease the likelihood of clogging and prevent obstruction and bypass of incoming flows.

Cartridge filters have been proven to provide efficient removals for both dissolved and non-dissolved pollutants. However, cartridge filters are less adept at handling high flow rates when compared to catch basin inserts and hydrodynamic devices due to the enhanced treatment provided through the filtration mechanism.

Because proprietary biotreatment devices are relatively new compared to the other types of proprietary treatment devices included in the LID Standards Manual, there are fewer third party studies on proprietary biotreatment devices. The available performance information is mostly vendor-supplied. According to the vendors, like their natural counterparts, proprietary biotreatment devices are highly efficient at mitigating dissolved metals, nutrients, and suspended solids.

Sizing

Hydrodynamic devices, catch basin inserts, and cartridge filters are flow-based stormwater quality control measures, but can be sized to capture and treat the mitigation volume of the SWQDv with additional facilities to manage stormwater runoff flow. Proprietary biotreatment devices on the other hand include both volume-based and flow-based stormwater quality control measures. Volume-based proprietary devices should be sized to capture and treat the mitigation volume of the SWQDv if used as a standalone stormwater quality control measure.

Auxiliary components of proprietary devices such as sorbent media, screens, baffles, and sumps are selected based on site-specific conditions such as the expected loading and the desired frequency of maintenance. Sizing of proprietary devices is reduced to a simple process whereby a model can simply be selected from a table or a chart based on a few known quantities (tributary area, location, design flow rate, design volume, etc). Some manufacturers either size the devices for potential clients or offer calculators on their websites that simplify the design process even further and lessens the possibility of using obsolete design information. For the latest sizing guidelines, refer to the manufacturer's website.

Operation and Maintenance

Hydrodynamic Separation Devices

Hydrodynamic separators do not have moving parts and are not maintenance intensive. However, maintenance is important to ensure that the device operates as efficiently as possible. Proper maintenance involves frequent inspections throughout the first year of installation, especially after major storm events. The systems are considered full when the sediment level is within one foot from the top of the unit, at which point it must be cleaned out. Removal of sediment can be performed with a sump vacuum or vactor truck. Some hydrodynamic separator devices may contribute to mosquito breeding if they do not fully drain stormwater runoff between storm events. Refer to manufacturer's guidelines for inspection and maintenance activities.

Catch Basin Inserts

Catch basin inserts can be maintenance-intensive because of their susceptibility for accumulating trash and debris. Regular maintenance activities include the clean-up and removal of accumulated trash and sediment while major maintenance activities include replacing filter media (if used) and or repairing/replacing geomembrane fabrics. Refer to manufacturer's guidelines for inspection and maintenance activities.

Cartridge Filters

For cartridge filters, maintenance activities include periodically removing trash, debris, and sediment from the vault floor, typically twice per year depending on the accumulation rate, using a sump vacuum or vactor truck. The cartridges may need to be replaced when they become saturated, which will occur approximately every other year depending on the pollutant accumulation rate. The manufacturers of these devices typically provide contract operation and maintenance services.

All stormwater vaults that contain standing water can become a breeding area for vectors. Manufacturers have developed systems, such as a perforated pipe installed in the bottom of the vault that is encased in a filter sock to prevent clogging, to completely drain the vault.

Biotreatment Devices

Maintenance of biotreatment devices can be provided by the manufacturer and typically consists of routine inspection and hand removal of accumulated trash and debris. Vactor trucks or mechanical maintenance activities are not needed for biotreatment devices.

Appendix D LID Calculations

Design Criteria

- The *Los Angeles County Low Impact Development Standards Manual* (2014) indicates that the design storm to calculate the Stormwater Quality Design Volume (SWQDv) is to be the greater of the 0.75-inch, 24-hour rain event and the 85th percentile, 24-hour rain event as determined from the Los Angeles County 85th percentile precipitation isohyetal map. The isohyetal map indicates the 85th percentile, 24-hour rain event is 0.90 inches at the project site. Thus, the 85th percentile, 24-hour rain event has been analyzed for the project.
- As identified in the *Los Angeles County Department of Public Works (LACDPW) Hydrology Manual* (January 2006), the site is situated within hydrologic soil type "006" and impervious surface for the project site will be 85%. The Los Angeles County Department of Public Works "HydroCalc" computer program was used for the design of the treatment systems.

LA County LID Manual SWQDv Calculations:

SWQDv = Proposed 24-hour 85th percentile runoff volume (cfs) = **5,029 cfs** (Hydrocalc)

On-Site biofiltration treatment volume requirement = 1.5 x SWQDv = 1.5 x 5,029 cfs = **7,544 cfs**

Modular Wetland System Unit (MWS)
Model # MWS L-4-19 Treatment Capacity @ 48-Hour Drain Down = **10,345 cfs**

OPERATION AND MAINTENANCE PLAN

FOR

Public Storage Compton

3010 N Alameda Street, Compton, CA 90222

This Operation and Maintenance Plan (O&M Plan) has been prepared for Public Storage by DRC Engineering, Inc. for Public Storage Compton at 3010 N Alameda Street in the City of Compton, County of Los Angeles, State of California. The O&M Plan and a Covenant and Agreement are required to ensure optimum performance of the installed Best Management Practices.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the County's Manual for Low Impact Development (LID) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Los Angeles, Los Angeles County Flood Control District and the incorporated Cities of Los Angeles County within the Los Angeles Region Stormwater Runoff Management Program. Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the LID Plan and the Operation and Maintenance Plan. An appropriate number of approved and signed copies of this document shall be available on the subject site in perpetuity.

POST CONSTRUCTION BMPS ***MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX***			
BMP	**TITLE**	**INSPECTION FREQUENCY (ALL CONTROLS)**	**MAINTENANCE / REPAIR PROGRAM**
S-1	Storm Drain Message and Signage	Inspect for legibility a minimum of once per year.	Responsible Party: Public Storage Re-label/re-stencil as needed to clearly depict signage. Refer to *LA County LID Manual* S-1 and CASQA BMP SD-13 for additional information.
S-3	Outdoor Trash Storage / Waste Handling Area	Inspect the trash compactor area and trash storage areas on a daily basis for trash/debris, spills, broken containers, etc. and that the lids are closed. Inspect the trash dumpster areas monthly for leaks and other structural damage and repair as necessary. Inspect the trash enclosures used for food waste daily for leaks and signs of vectors.	Responsible Party: Public Storage Pick up any trash off the ground and place in appropriate containers. Trash dumpster pickup shall be once per week, at minimum. Refer to *LA County LID Manual* S-3 and CASQA BMP SC-34 and SD-32 for additional information.
S-8	Landscape Irrigation Practices	Inspect irrigation equipment on a monthly basis for proper operation. Check water sensors, irrigation heads, and timing.	Responsible Party: Public Storage Adjust irrigation heads and timers as necessary Repair or replace damaged irrigation equipment and make other repairs or adjustments as necessary. Landscape maintenance will be conducted on a weekly basis. Refer to *LA County LID Manual* S-8 and CASQA BMP SD-12 for additional information.

POST CONSTRUCTION BMPS MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX			
BMP	**TITLE**	**INSPECTION FREQUENCY (ALL CONTROLS)**	**MAINTENANCE / REPAIR PROGRAM**
T-6	Proprietary Devices – Modular Wetland System (MWS)	Inspect annually or per manufacturer's requirements whichever is more stringent.	Responsible Party: Public Storage ***Maintenance will occur as per manufacturer's instructions included in Section E of this document.*** Remove trash/debris as necessary. Replace cartridge and drain down filter media. Trim vegetation. Unit maintenance as required by manufacturer.

Phone: (800) 688-8057

2.2 BMP Specific Information

BMP Type: Contech CMP Infiltration System			
Model	Footprint	Location	Quantity
Modular Wetland System Unit Model No. MWS L-8-8	9'x9'	West side of the site	1 EA

2.3 Regular Inspection

The manufacturer recommends ongoing annual inspections of the accumulated sediment. Sediment deposition and transport may vary from year to year and inspections will help ensure that system is cleaned out at the appropriate time. Keep a record of each inspection.

System should be cleaned when inspection reveals that accumulated sediment or trash is clogging the discharge orifice. Should it be necessary to get inside the system to perform maintenance activities, all appropriate precautions regarding confined space entry and OSHA regulations should be followed. The site's maintenance manager can then revise the inspection schedule based on experience or local requirements.

2.4 Cleaning

Schedule the cleanout during dry weather. Accumulated sediment and trash can typically be evacuated through the manhole over the outlet orifice. If maintenance is not performed as recommended, sediment and trash may accumulate in front of the outlet orifice. Manhole covers should be securely seated following cleaning activities.

2.5 Maintenance Log

Keep a log of all inspections and maintenance performed on the CMP Retention system. The log should be kept on-site.

Modular Wetland System Unit Model No. MWS L-8-8 Inspection & Maintenance Log

Proposed Detention System Hydrograph Analysis

SECTION I Introduction

The Public Storage Compton Project Site comprises approximately 1.99 acres of existing industrial development located at the southeast corner of N. Alameda Street and E. Weber Avenue in Compton, California. The Site is located approximately 0.7 miles south of CA Interstate 105. Improvements to the Site include the demolition and removal of all existing buildings, paved parking areas and paved drive aisles; and the construction of a new building, sidewalks landscaping, paved parking areas, paved drive aisles, a new underground storm drain system and installation of new underground utilities.

A total of 1.99 acres of area will be analyzed in this Hydrology report and will be referred to as "Site" throughout this report. This report has been prepared to compare the pre-construction (Existing Condition) and post-construction (Proposed Condition) hydrology conditions for peak storm water runoff rates within the 1.99-acre Site.

SECTION II Discussion

Existing Site Conditions: In the Existing Condition, the Site is relatively flat and generally surface drains from northeast to southwest, offsite and into the easterly existing curb and gutter within the public right-of-way of N. Alameda Street. Stormwater drains southerly along N. Alameda Street into a Los Angeles County Flood Control District (LACFCD) curb opening catch basin located approximately 1,000 feet south of the Project Site. The catch basin is connected to an existing LACFCD owned and maintained underground storm drain system that eventually discharges into the Compton Creek concrete-lined open channel.

Proposed Site Condition: The Proposed Project Site was designed to mitigate runoff from a 25-year frequency design storm event to satisfy the Urban Flood level of protection based on Section 4.3 of Los Angeles County Department of Public Works (LADPW) Hydrology Manual (January 2006 edition). The Project Site was designed so that the Proposed Peak Flow Rate, Q (cfs) discharging offsite does not exceed the Existing Peak Flow Rate, Q (cfs) in the 25-year storm event.

In the Proposed Condition, the Site drainage pattern will remain relatively the same. Paved areas will be graded to drain into proposed concrete gutters that convey flow into proposed grate inlet catch basins throughout the Site. Stormwater is conveyed toward a proposed proprietary biofiltration system (MWS Unit) designed to meet Low Impact Development (LID) Storm Water Quality Design Volume (SWQDv) requirements. From there, stormwater will flow into a proposed sump pump located at the west side of the Project Site. The sump pump will be designed to pump stormwater up to the surface and to flow westerly through a parkway drain offsite into the existing easterly curb & gutter on N. Alameda Street.

For stormwater flows generated during a 25-year storm event, it is anticipated that the proposed MWS Unit will become full and the full flow rate cannot pass through. The Site is designed such that stormwater will overflow from the southerly onsite grate inlet catch basins. This will create a situation in which temporary above-ground ponding will occur along the southerly proposed onsite curb & gutter. This pond acts as an above-ground detention system that is required in order to prevent the Proposed Peak Flow Rate from exceeding the Existing Peak Flow Rate in the 25-year storm event. The Site is graded so that the pond may overflow offsite from a proposed grate inlet at the west side of the Project Site into N. Alameda Street via parkway drain. Ultimately, the stormwater flows generated in the Proposed Condition drain to N. Alameda Street, similar to the drainage pattern in the Existing Condition.

SECTION III Hydrologic Analysis

The hydrology calculations for the project are based on the LADPW Hydrology. Precipitation values and soil values have been interpolated from the LADPW's website (http://dpw.lacounty.gov/wrd/hydrologygis/) and can be found in Appendix A of this report. Proposed site conditions are analyzed using the LA County HydroCalc software to compute pre-construction and post-construction flow rates for the 25-Year storm event. See Attachment C for output of the calculations.

The 25-Year storm event was analyzed as the design storm in accordance with LA County Hydrology Manual Urban Flood Protection requirements. The Proposed Project Site has a soil type of 006, and a 50-Year Isohyet of 6.0 inches of rainfall. The 25-year storm event on the Proposed Project Site was modeled with Autodesk Civil3D "Hydraflow" software. HydroCalc software was used to generate the 25-year, 24-hour storm event hydrograph for the overall Proposed Site.

The Project Site features onsite ponding for detention. The total ponding volume is based on the high point at the southwest corner of the Site and the outlet point at the west side of the Site. This volume is equal to 466 cubic-feet and was calculated with a volume comparison surface in Autodesk Civil3D software. The detention pond was modeled in Hydraflow.

The Project Site features a catch basin that is designed to overflow into a parkway drain that will be 3-inches in height and 48-inches in width. The parkway drain was modeled as an outlet orifice for the detention pond in Hydraflow. The catch basin includes a sump pump that is designed to pump stormwater generated from lower flows offsite. This was modeled as a 3-inch diameter outlet orifice in Hydraflow.

After modeling the 25-year, 24-hour storm, the detention pond, and the outlet orifice, Hydraflow is able to calculate the Peak flow runoff for the Project Site. Results are shown in the following pages.

Existing (Pre-Construction) Conditions: The Existing Project Site area can be analyzed as one (1) drainage area. The longest existing flow path of the drainage area was selected and an average slope of the path calculated. The Hydrocalc results of the drainage area calculations are shown in Attachment C of this report and are summarized in Table A below.

TABLE A: Existing Condition Hydrocalc Drainage Summary

Existing Condition							
Drainage Subarea	Area	Pervious Area		Impervious Area		25-year Storm	
	acres	acres	% Subarea	acres	% Subarea	Q (cfs)	Vol (cu-ft)
Project Site	1.99	0.000	0.00%	1.99	100.00%	5.167	33,966

Proposed (Post-Construction) Conditions: The Proposed Project Site area can be analyzed as one (1) drainage area. The longest existing flow path of the drainage area was selected and an average slope of the path calculated. The Hydrocalc results of the drainage area calculations are shown in Attachment C of this report and are summarized in Table B below.

TABLE B: Proposed Condition Hydrocalc Drainage Summary

Proposed Condition							
Drainage Subarea	Area	Pervious Area		Impervious Area		25-year Storm	
	acres	acres	% Subarea	acres	% Subarea	Q (cfs)	Vol (cu-ft)
Project Site	1.99	0.292	14.68%	1.70	85.32%	5.566	30,005

The Proposed Project Site was designed so that the Peak Flow Rate, Q (cfs) in the Proposed Condition does not exceed Q (cfs) in the existing condition. Therefore, the Site features an underground storm drain system, a sump pump to discharge smaller flows, an overflow catch basin with parkway drain to discharge peak flows, and onsite grading that allows for temporary above-ground ponding. The features listed above were modeled in Hydraflow and the results are summarized in Table C below. Calculations are shown in Attachment C of this report.

TABLE C: Proposed Condition Hydraflow Results (with Detention)

Proposed Condition with Detention				
Drainage Subarea	Calculated Peak Flow Q (cfs)	Max Ponding Depth (ft)	Storage Provided (cu-ft)	Storage Used (cu-ft)
Project Site	4.284	0.86	466	423

SECTION IV Conclusions

A hydrology study was completed to satisfy the Urban Flood level of protection for the Project Site. In the pre-construction (Existing) condition, the Site discharges stormwater into the existing easterly curb & gutter on N. Alameda Street. In the post-construction (Proposed) condition, the Project Site is designed so that the calculated peak flow discharge from does not exceed peak flow discharge in the Existing Condition for the 25-year, 24-hour storm event. In order to satisfy this requirement, the Project Site is designed to implement an underground storm drain system, a proposed proprietary biofiltration unit to meet LID requirements, a sump pump to discharge smaller flows, an onsite grading design that allows for temporary above-ground ponding and an overflow catch basin with parkway drain to discharge peak flows.

TABLE C: Proposed Condition Hydraflow Results (with Detention)

Proposed Condition with Detention				
Drainage Subarea	**Calculated Peak Flow Q (cfs)**	**Max Ponding Depth (ft)**	**Storage Provided (cu-ft)**	**Storage Used (cu-ft)**
Project Site	4.284	0.86	466	423

TABLE D: Summary of Results

	25-year storm		
Drainage Subarea	**Existing Condition Q (cfs) [Hydrocalc]**	**Proposed Condition Q (cfs) [Hydrocalc]**	**Proposed Condition with Detention Q (cfs) [Hydraflow]**
Project Site	5.167	5.566	4.284

In conclusion, the Urban Flood level of protection is met by reducing the Proposed Condition peak discharge, Q (cfs) with the implementation of the underground storm drain system, an onsite above-ground temporary storage of 466 cubic feet and 3-inch tall by 48--inch wide parkway drain discharge outlet. The location of the proposed parkway drain discharge outlet is shown on Concept Utility Plan in Appendix B of this Hydrology Report. Los Angeles County Hydraflow calculations are shown in Appendix C; and Civil 3D Hydraflow Hydrograph calculations are shown in Appendix D of this Hydrology Report.

Section 1.0 Discretionary Permit(s) and Water Quality Conditions

1.1 Introduction

In accordance with the General Permit issued under the National Pollutant Discharge Elimination System (NPDES) and the municipal storm water NPDES Permit No. CAS004001 issued to Los Angeles County and 84 cities (Permittees) by the Los Angeles Regional Water Quality Control Board on December 13, 2001 under Order No. 01-182, this Low Impact Development has been developed to meet the objectives listed below. All pollutants and their sources, including sources of sediment associated with construction, construction site erosion and all other activities associated with construction activity are controlled.

- Identify pollutant sources that could affect the quality of storm water discharges.
- Identify non-storm water discharges.
- Identify, construct, and implement Best Management Practices (BMPs) to reduce pollutants in storm water discharges from the site after construction.
- Develop a maintenance schedule for BMPs designed to reduce or eliminate pollutants after construction is completed (post-construction BMPs).

On November 8, 2012, the Regional Water Board adopted Order No. R4-2012-0175 (2012 MS4 Permit), which replaced the 2001 MS4 Permit. The most significant difference between the two MS4 permits is that the 2012 MS4 Permit requires new development and redevelopment projects in general, to retain, on-site, a specified volume of stormwater runoff (the Stormwater Quality Design Volume [SWQDv]) from a design storm event.

Preparation of this Low Impact Development (LID) is required by the City of Compton and shall comply with the City of Compton Storm Water Program supplementing the Low Impact Development (LID) and the Report of Waste Discharge (ROWD) adopted by the County of City of Compton. The City of Compton County Storm Water Program, LID, and ROWD are part of a countywide storm water pollution control effort adopted to comply with the National Pollution Discharge Elimination System (NPDES) General Permit adopted by the California State Water Resources Control Board.

The objective of this LID is to identify pollutant sources associated with business operations that may affect the quality of discharges of storm water from the site and to specify storm water pollution prevention measures to reduce potential pollutant discharges. These prevention measures are referred to as Best Management Practices or BMPs. Non-structural BMPs include such practices as spill prevention, outdoor loading/unloading, waste handling and disposal, and drainage system maintenance. Structural BMPs may include underground infiltration basins, vortex separators, proprietary control measures, and similar mechanisms as deemed appropriate.

Section 2.0 Project Description

2.1 Project Information

Owner:	Public Storage
Site Address:	3010 N Alameda Street
	Compton, CA 90222
Project Area:	1.99 acres (Total Disturbed Area = 1.99 acres)
Proposed Use:	Industrial
SIC Codes:	4225
MS4 Project Type:	Industrial

2.2 Location

The proposed project is the Public Storage Compton located in Compton, CA, at 3010 N Alameda Street, as shown on the location map in Appendix A. The Project Site is located at the southeast corner of N. Alameda Street and E. Weber Avenue. On the east and south sides of the Site are developed industrial lots. The latitude and longitude of the Site are 33°55'10.14"N and 118°13'22.68"W.

2.3 Site Plan

The Proposed Project will disturb 100% of the Site and the proposed construction will include the removal of all existing buildings and pavement, and the construction of one (1) three-story self-storage facility with parking areas, drive aisles, landscape planters, an underground storm drain system and proposed Modular Wetland System Unit to meet LID stormwater treatment requirements.

Plants with similar and low irrigation requirements and/or California native plant species will be chosen for efficient irrigation purposes.

The Concept Grading Plan and Concept Utility Plan illustrating the Project Site can be found in Appendix A of this document.

A trash enclosure is proposed on the southeast corner of the Project Site. Per *Los Angeles County LID Manual* dated February 2014, a screen or wall around trash storage area should be installed to prevent off-site transport of loose trash and waterproof lids on bins/dumpsters should be used or a roof to cover storage area enclosure should be provided to prevent precipitation from entering containers. The trash enclosure will be graded to direct storm water away from the bins.

Typical wastes generated from a self-storage warehouse facility include paper, food waste, containers and packing material. The ordinary wastes will be picked up by local waste management company on a weekly basis.

Routinely conducted outdoor activities include the ground and landscape maintenance, loading and unloading of materials.

Materials or products will be loaded and unloaded only at the designated loading areas and will not be stored outdoors.

The storm water generated from the new parking areas, drive aisles and from the rooftop of the proposed building will drain into the proposed storm drain inlets that are connected to the proposed Underground Detention System.

The stencil approved by County of Los Angeles will be installed at the proposed inlets. An example of the approved stencil is included with the County of Los Angeles LID Fact Sheets for S-1 in Appendix C.

Refer to Section 5.0 of this LID for entities that will be responsible for implementing each BMP.

Section 3.0 Site Description

3.1 Watershed

Los Angeles River Watershed

RWQCB: Los Angeles Regional Water Quality Control Board
320 W. 4th Street, Suite 200, Los Angeles, CA 90013

3.2 Site Information

Site Address:	3010 N Alameda Street Compton, CA 90222
Existing Land Use:	Industrial
Proposed Land Use:	Industrial
Soil Types:	006
Hydrologic Concerns:	No
Receiving Waters:	Compton Creek, Los Angeles River Reach 1 (Estuary to Carson Street), Los Angeles River Estuary (Queensway Bay), San Pedro Bay Near/Off Shore Zones,

3.3 Drainage Pattern

The Project Site is located within the Los Angeles River Watershed.

3.3.1 Existing Condition

The Project Site is currently fully developed with multiple buildings, drive aisles and parking areas. The Site relatively flat and generally surface drains from northeast to southwest, offsite and into the easterly existing curb and gutter within the public right-of-way of N Alameda Street. Stormwater drains southerly along N Alameda Street into a Los Angeles County Flood Control District (LACFCD) curb opening catch basin located approximately 1,000 feet south of the Project Site. The catch basin is connected to an existing LACFCD 36-inch to 66-inch reinforced concrete pipe (RCP) storm drain system. The LACFCD RCP storm drain is connected to a series of reinforced concrete box (RCB) storm drains that discharges into the Compton Creek concrete-lined open channel.

3.3.2 Proposed Condition

In the developed condition, a new storm drain system will be constructed. Proposed grate inlet catch basins located in the paved areas within proposed concrete gutters will collect storm water. Stormwater will flow into a proposed underground storm drain system. The storm drain system will convey flows toward the proposed Modular Wetland System Unit

(MWS Unit) to meet Storm Water Quality Design Volume (SWQDv). From there, stormwater will flow into a proposed sump pump located at the west side of the Project Site. The sump pump will be designed to pump stormwater up to the surface and to flow westerly through a parkway drain offsite into the existing easterly curb & gutter on N Alameda Street.

For a higher flow condition generated from the 25-year storm event, it is anticipated that the proposed MWS Unit will become full and cannot mitigate the full flow rate. In this condition, the storm drain system and Project Site is designed so that the storm drain system will overflow from the southwesterly onsite grate inlet catch basin and drain westerly offsite into N. Alameda Street, maintaining the existing condition's drainage pattern.

Refer to the Concept Grading Plan and Concept Utility Plan in Appendix A for drainage patterns and calculations in Appendix D for more details.

3.4 Pollutants of Concern

3.4.1 Anticipated Pollutants

Anticipated pollutants associated with this development include suspended solid/sediments, nutrients, metals, pathogens, pesticides, oil and grease, organic compounds, trash and debris, oil and grease.

3.4.2 303(d) List of Water Quality Limited Segments

303(d) List & TMDL

Compton Creek

Benthic-Macroinvertebrate Bioassessments (TMDL completion 2021)
Coliform Bacteria (TMDL completion 2009)
Copper (TMDL approval 2005)
Lead (TMDL approval 2005)
pH (TMDL approval 2004)
Trash (TMDL approval 2008)

Los Angeles River Reach 1 (Estuary to Carson Street)

Ammonia (TMDL approval 2004)
Cadmium (TMDL approval 2005)
Coliform Bacteria (TMDL completion 2009)
Copper, Dissolved (TMDL approval 2005)
Cyanide (TMDL completion 2019)
Diazinon (TMDL completion 2019)
Lead (TMDL approval 2005)
Nutrients (Algae) (TMDL approval 2004)
pH (TMDL approval 2003)
Trash (TMDL approval 2008)
Zinc, Dissolved (TMDL approval 2005)

Los Angeles River Estuary (Queensway Bay)

Chlordane (sediment) (TMDL completion 2019)
DDT (sediment) TMDL completion 2019)
PCBs (TMDL completion 2019)
Sediment Toxicity (TMDL completion 2019)
Trash (TMDL approval 2008)

San Pedro Bay Near/Off Shore Zones

Chlordane (sediment) (TMDL completion 2019)
DDT (tissue & sediment) TMDL completion 2019)
PCBs (TMDL completion 2019)
Sediment Toxicity (TMDL completion 2009)

3.5 Hydrologic Conditions of Concern

The project is a redevelopment project that will result in replacing more than 5.000 square feet of impervious surface on a site that was previously developed with more than 10,000 square feet area. As described in Section 2 of the *County of Los Angeles Department of Public Works Low Impact Development Manual* adopted in February 2014, the project is a designated project.

The project is a "redevelopment of a previously developed site in an urbanized area" and the new layout will increase the landscape areas from the existing less than 1% to approximately 15% of the site. The project meets one of the LID manual Section 8.2 Exemptions to Hydromodification Requirements:

"*Redevelopment of a previously developed site in an urbanized area that does not increase the effective impervious area or decrease the infiltration capacity of pervious areas compared to the pre-project conditions.*"

Section 4.0 Best Management Practices (BMPs)

4.1 Source Control BMPs

The following tables show source control BMPs included in this project and those that were not included.

Source Control BMPs

BMP	Name	Included		If not applicable, state brief reason
		Yes	No	
S-1	Storm Drain Message and Signage	✓		
S-2	Outdoor Material Storage Area		✓	Not proposed
S-3	Outdoor Trash Storage / Waste Handling Area	✓		
S-4	Outdoor Loading / Unloading Dock Area		✓	Not proposed
S-5	Outdoor Vehicle / Equipment Repair / Maintenance Area		✓	Not proposed
S-6	Outdoor Vehicle / Equipment Accessory Wash Area		✓	Not proposed
S-7	Fuel & Maintenance Area		✓	Not proposed
S-8	Landscape Irrigation Practices	✓		
S-9	Building Materials Selection	✓		
S-10	Animal Care and Handling Facilities		✓	Not proposed
S-11	Outdoor Horticulture Areas		✓	Not proposed

- S-1 Storm Drain Messaged and Signage

  Phrase “No Dumping – Flows to Ocean” or equally effective phrase, as approved by the NPDES General Committee, is to be stenciled on catch basins to alert the public as to the destination of pollutants discharged into storm drains. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SD-13 fact sheets for more details. An example of the stenciling accepted by County of Los Angeles is included in Appendix C of this document.

- S-3 Outdoor Trash Storage / Waste Handling Area

  Trash container areas shall be screened or walled to prevent the transportation of trash offsite. The property owner is responsible for the maintenance of the trash container areas. Recycle materials whenever possible. Cover waste containers with leak proof lids or some other means. The waste containers must be covered except when in use. Check containers weekly for leaks and to ensure that lids are on tightly. Sweep and clean the storage area regularly and do not hose down the area to a storm drain. Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc. may not be disposed of in solid waste containers. Hazardous waste must be disposed of by a licensed hazardous waste hauler. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SC-34 and SD-32 fact sheets for more details.

- S-8 Landscape Irrigation Practices

  The irrigation system for the proposed landscape areas will be designed to minimize runoff of excess irrigation water by providing reducers or shutoff valves, using timing and application methods, using mulches in planter areas, selecting and grouping appropriate plant materials. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SD-12 fact sheets for more details.

- S-9 Building Materials Selection

  Promote the use of less harmful products and products that contain little or no TMDL pollutants. Refer to California Stormwater BMP Handbook, BMP SC-35 fact sheets, for details. Refer to fact sheets in Appendix D of the *County of Los Angeles Low Impact Development Standard Manual* and *California Stormwater BMP Handbook*, BMP SC-35 and SD-21 fact sheets for more details.

4.2 Site Design BMPs

The following table shows site design BMPs that are included, if any, in this project. A description of each BMP to be included follows:

Site Design BMPs

Technique	Included?		Reason for Not Being Implemented
	Yes	No	
Site Planning	X		
Protect and Restore Natural Areas		X	The site is previously developed; no natural area to be protected
Minimize Land Disturbance		X	The entire site has been previously developed
Minimize Impervious Area	X		

- Site Planning

  Project applicants must implement a holistic approach to site design in order to develop a more hydraulically-functional site, help to maximize the effectiveness of on-site retention, and integrate stormwater management throughout the project site. Early project site planning can identify physical site constraints, reduce costs of downstream stormwater quality control measures, and prevent potential project site re-design. Distribute, if feasible, stormwater quality control measures throughout the project site.

- Minimize Impervious Area

  Landscaped areas are proposed to increase the pervious areas.

4.3 Stormwater Quality Control BMPs

The following table shows stormwater quality control BMPs that are included in this project.

BMP	Name	Included?		If not applicable, state brief reason
		Yes	No	
RET-1	Bioretention		X	Landscape areas are too narrow to provide retention
RET-2	Infiltration Basin		X	On-site infiltration tests showed next to zero infiltration rates
RET-3	Infiltration Trench		X	On-site infiltration tests showed next to zero infiltration rates
RET-4	Dry Well		X	On-site infiltration tests showed next to zero infiltration rates
RET-5	Permeable pavement without an Underdrain		X	The project is to construct loading docks and parking areas for semi-trailer trucks. The heavy loading of the trucks will likely damage permeable pavement and demolish the functionality of the pavement
RET-6	Rain Barrel / Cistern		X	To use rain barrel/cistern, a pump will need to be installed. The pump will require additional pipe lines and maintenance.
BIO-1	Biofiltration		x	On-site infiltration tests showed next to zero infiltration rates
VEG-1	Green Roof		X	No building is proposed
VEG-2	Stormwater Planter		X	Planters are proposed. However, due to the grading, the majority of the storm water will drain away from the planters that can be considered as stormwater planter
VEG-3	Tree-well Filter		X	Planters are proposed. However, due to the grading, the majority of the storm water will drain away from the planters that are large enough to be tree-well filters
VEG-4	Vegetated Swales		X	Landscape areas are too narrow to construct swales
VEG-5	Vegetated Filter Strip		X	Landscape areas are too narrow to construct filter strips
T-1	Sand Filter		X	Proprietary biofiltration will be used
T-2	Constructed Wetland		X	Landscape areas are too narrow to function as wetlands
T-3	Extended Detention Basin		X	Landscape areas are too narrow to function as basins
T-4	Wet Pond		X	Landscape areas are too narrow to function as ponds
T-5	Permeable Pavement with an Underdrain		X	The project is to construct loading docks and parking areas for semi-trailer trucks. The heavy loading of the trucks will likely damage permeable pavement and demolish the functionality of the pavement
T-6	Proprietary Treatment Control Measures	X		

- T-6 Proprietary Treatment Control Measures

Proprietary devices are commercial products that typically aim at providing stormwater treatment in space-limited applications, often using patented innovative technologies. The most common encountered classes of proprietary stormwater quality control measures include hydrodynamic separation, catch basin insert technologies, cartridge filter-type controls, and proprietary biotreatment devices.

Modular Wetland System (MWS) is a proprietary biotreatment with cartridges for pre-filtering. BioClean, the manufacturer of MWS units, lists MWS unit performance as follows:

- 66% removal of dissolved zinc
- 69% removal of total zinc
- 38% of dissolved copper
- 85% removal of TSS
- 100% removal of trash
- 45% removal of nitrogen
- 50% removal of total copper
- 95% removal of motor oil
- 67% removal of ortho phosphorus
- 64% removal of total phosphorus

Section 5.0 Inspection/Maintenance Responsibility for BMPs

5.1 Responsible Parties

The following entity is responsible for the implementation of this LID for the onsite areas, including the long-term inspection and maintenance of all structural source control BMPs and all treatment control BMPs:

Entity:	Public Storage
Address:	701 Western Avenue, Glendale, CA, 91201
Telephone:	(800) 688-8057

The owner may employ property managers to assist in implementing, monitoring and reporting the BMPs outlined in this LID for operating facilities to ensure compliance with the provisions of LID including storm water control permitting requirements for new developments. See Appendix B for the Master Covenant and Agreement.

5.2 Reporting

5.2.1 Inspection Records

The owner of the property shall be responsible for completing and maintaining inspection reports that include the date of the inspection, the name of the person who performed the inspection, the observations made, and any actions taken. Records shall be maintained for five years. The records shall be available for inspection upon request of the city engineer, Regional Water Control Board, or the designated city representative.

See the BMP Maintenance Responsibility/Frequency Matrix in this section for details on the party responsible for each BMP and the frequency of action with respect to that BMP.

5.2.2 Maintenance Requirements

Maintenance and cleaning of the proprietary treatment control BMPs shall be in accordance with the manufacturer's recommendations. At a minimum, the proprietary treatment control BMPs shall be inspected and maintained once prior to the rainy season, once during the rainy season, and once after the rainy season (generally accepted as October 1st through April 30th). All BMPs shall be inspected and maintained according to the Maintenance Responsibility/Frequency Matrix below.

POST CONSTRUCTION BMPS MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX			
BMP	**TITLE**	**INSPECTION FREQUENCY (ALL CONTROLS)**	**MAINTENANCE / REPAIR PROGRAM**
S-1	Storm Drain Message and Signage	Inspect for legibility a minimum of once per year.	Responsible Party: Public Storage Re-label/re-stencil as needed to clearly depict signage. Refer to *LA County LID Manual* S-1 and CASQA BMP SD-13 for additional information.
S-3	Outdoor Trash Storage / Waste Handling Area	Inspect the trash compactor area and trash storage areas on a daily basis for trash/debris, spills, broken containers, etc. and that the lids are closed. Inspect the trash dumpster areas monthly for leaks and other structural damage and repair as necessary. Inspect the trash enclosures used for food waste daily for leaks and signs of vectors.	Responsible Party: Public Storage Pick up any trash off the ground and place in appropriate containers. Trash dumpster pickup shall be once per week, at minimum. Refer to *LA County LID Manual* S-3 and CASQA BMP SC-34 and SD-32 for additional information.
S-8	Landscape Irrigation Practices	Inspect irrigation equipment on a monthly basis for proper operation. Check water sensors, irrigation heads, and timing.	Responsible Party: Public Storage Adjust irrigation heads and timers as necessary Repair or replace damaged irrigation equipment and make other repairs or adjustments as necessary. Landscape maintenance will be conducted on a weekly basis. Refer to *LA County LID Manual* S-8 and CASQA BMP SD-12 for additional information.

POST CONSTRUCTION BMPS MAINTENANCE RESPONSIBILITY/FREQUENCY MATRIX			
BMP	**TITLE**	**INSPECTION FREQUENCY (ALL CONTROLS)**	**MAINTENANCE / REPAIR PROGRAM**
T-6	Proprietary Devices – Modular Wetland System (MWS)	Inspect annually or per manufacturer's requirements whichever is more stringent.	Responsible Party: Public Storage ***Maintenance will occur as per manufacturer's instructions included in Section E of this document.*** Remove trash/debris as necessary. Replace cartridge and drain down filter media. Trim vegetation. Unit maintenance as required by manufacturer.

5.2.3 Revisions to the LID

Revisions to the LID in the event of a substantial change to the project due to construction modifications or uses at the site will be the responsibility of Public Storage. Modifications to the LID may be necessary if project changes result in a potential increase in pollutant discharge to storm water or if inspection and monitoring indicates that existing BMPs are ineffective. Public Storage shall secure the services of the firm that prepared the original LID or other qualified persons to make any appropriate changes, additions or deletions. Any revisions shall require approval by the local government that has jurisdiction over the subject property.

Section 6.0 Funding

6.1 Funding

The property owner will be responsible for the funding of post construction BMPs and proposed annual operating budget:

Public Storage
701 Western Avenue
Glendale, CA 91201

Mark Kennedy, Senior Vice President
(800) 688-8057

Annual budget for BMP maintenance is to be determined. A copy of annual budget for Public Storage Compton will be included in this section once available.

  - S-9 – Building Materials Selection
  - T-6 – Proprietary Devices

AFTER THE STORM – A CITIZEN'S GUIDE TO UNDERSTANDING STORMWATER

After the Storm

A Citizen's Guide to Understanding Stormwater

WHEN IT RAINS IT DRAINS

What is stormwater runoff?

Stormwater runoff occurs when precipitation from rain or snowmelt flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater from naturally soaking into the ground.

Why is stormwater runoff a problem?

Stormwater can pick up debris, chemicals, dirt, and other pollutants and flow into a storm sewer system or directly to a lake, stream, river, wetland, or coastal water. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing, and providing drinking water.

The effects of pollution

Polluted stormwater runoff can have many adverse effects on plants, fish, animals, and people.

- Sediment can cloud the water and make it difficult or impossible for aquatic plants to grow. Sediment also can destroy aquatic habitats.
- Excess nutrients can cause algae blooms. When algae die, they sink to the bottom and decompose in a process that removes oxygen from the water. Fish and other aquatic organisms can't exist in water with low dissolved oxygen levels.
- Bacteria and other pathogens can wash into swimming areas and create health hazards, often making beach closures necessary.

- Debris—plastic bags, six-pack rings, bottles, and cigarette butts—washed into waterbodies can choke, suffocate, or disable aquatic life like ducks, fish, turtles, and birds.
- Household hazardous wastes like insecticides, pesticides, paint, solvents, used motor oil, and other auto fluids can poison aquatic life. Land animals and people can become sick or die from eating diseased fish and shellfish or ingesting polluted water.
- Polluted stormwater often affects drinking water sources. This, in turn, can affect human health and increase drinking water treatment costs.

Stormwater Pollution Solutions

Residential

Recycle or properly dispose of household products that contain chemicals, such as insecticides, pesticides, paint, solvents, and used motor oil and other auto fluids. Don't pour them onto the ground or into storm drains.

Lawn care

Excess fertilizers and pesticides applied to lawns and gardens wash off and pollute streams. In addition, yard clippings and leaves can wash into storm drains and contribute nutrients and organic matter to streams.

- Don't overwater your lawn. Consider using a soaker hose instead of a sprinkler.
- Use pesticides and fertilizers sparingly. When use is necessary, use these chemicals in the recommended amounts. Use organic mulch or safer pest control methods whenever possible.
- Compost or mulch yard waste. Don't leave it in the street or sweep it into storm drains or streams.
- Cover piles of dirt or mulch being used in landscaping projects.

Auto care

Washing your car and degreasing auto parts at home can send detergents and other contaminants through the storm sewer system. Dumping automotive fluids into storm drains has the same result as dumping the materials directly into a waterbody.

- Use a commercial car wash that treats or recycles its wastewater, or wash your car on your yard so the water infiltrates into the ground.
- Repair leaks and dispose of used auto fluids and batteries at designated drop-off or recycling locations.

Septic systems

Leaking and poorly maintained septic systems release nutrients and pathogens (bacteria and viruses) that can be picked up by stormwater and discharged into nearby waterbodies. Pathogens can cause public health problems and environmental concerns.

- Inspect your system every 3 years and pump your tank as necessary (every 3 to 5 years).
- Don't dispose of household hazardous waste in sinks or toilets.

Pet waste

Pet waste can be a major source of bacteria and excess nutrients in local waters.

- When walking your pet, remember to pick up the waste and dispose of it properly. Flushing pet waste is the best disposal method. Leaving pet waste on the ground increases public health risks by allowing harmful bacteria and nutrients to wash into the storm drain and eventually into local waterbodies.

Education is essential to changing people's behavior. Signs and markers near storm drains warn residents that pollutants entering the drains will be carried untreated into a local waterbody.

Residential landscaping

Permeable Pavement—Traditional concrete and asphalt don't allow water to soak into the ground. Instead these surfaces rely on storm drains to divert unwanted water. Permeable pavement systems allow rain and snowmelt to soak through, decreasing stormwater runoff.

Rain Barrels—You can collect rainwater from rooftops in mosquito-proof containers. The water can be used later on lawn or garden areas.

Rain Gardens and Grassy Swales—Specially designed areas planted with native plants can provide natural places for rainwater to collect and soak into the ground. Rain from rooftop areas or paved areas can be diverted into these areas rather than into storm drains.

Vegetated Filter Strips—Filter strips are areas of native grass or plants created along roadways or streams. They trap the pollutants stormwater picks up as it flows across driveways and streets.

Commercial

Dirt, oil, and debris that collect in parking lots and paved areas can be washed into the storm sewer system and eventually enter local waterbodies.

- Sweep up litter and debris from sidewalks, driveways and parking lots, especially around storm drains.
- Cover grease storage and dumpsters and keep them clean to avoid leaks.
- Report any chemical spill to the local hazardous waste cleanup team. They'll know the best way to keep spills from harming the environment.

Erosion controls that aren't maintained can cause excessive amounts of sediment and debris to be carried into the stormwater system. Construction vehicles can leak fuel, oil, and other harmful fluids that can be picked up by stormwater and deposited into local waterbodies.

- Divert stormwater away from disturbed or exposed areas of the construction site.
- Install silt fences, vehicle mud removal areas, vegetative cover, and other sediment and erosion controls and properly maintain them, especially after rainstorms.
- Prevent soil erosion by minimizing disturbed areas during construction projects, and seed and mulch bare areas as soon as possible.

Construction

Agriculture

Lack of vegetation on streambanks can lead to erosion. Overgrazed pastures can also contribute excessive amounts of sediment to local waterbodies. Excess fertilizers and pesticides can poison aquatic animals and lead to destructive algae blooms. Livestock in streams can contaminate waterways with bacteria, making them unsafe for human contact.

- Keep livestock away from streambanks and provide them a water source away from waterbodies.
- Store and apply manure away from waterbodies and in accordance with a nutrient management plan.
- Vegetate riparian areas along waterways.
- Rotate animal grazing to prevent soil erosion in fields.
- Apply fertilizers and pesticides according to label instructions to save money and minimize pollution.

Forestry

Improperly managed logging operations can result in erosion and sedimentation.

- Conduct preharvest planning to prevent erosion and lower costs.
- Use logging methods and equipment that minimize soil disturbance.
- Plan and design skid trails, yard areas, and truck access roads to minimize stream crossings and avoid disturbing the forest floor.
- Construct stream crossings so that they minimize erosion and physical changes to streams.
- Expedite revegetation of cleared areas.

Automotive Facilities

Uncovered fueling stations allow spills to be washed into storm drains. Cars waiting to be repaired can leak fuel, oil, and other harmful fluids that can be picked up by stormwater.

- Clean up spills immediately and properly dispose of cleanup materials.
- Provide cover over fueling stations and design or retrofit facilities for spill containment.
- Properly maintain fleet vehicles to prevent oil, gas, and other discharges from being washed into local waterbodies.
- Install and maintain oil/water separators.

Environmental Protection
Agency

EPA 841-F-03-003

Protecting Water Quality *from* URBAN RUNOFF

Clean Water Is Everybody's Business

In urban and suburban areas, much of the land surface is covered by buildings and pavement, which do not allow rain and snowmelt to soak into the ground. Instead, most developed areas rely on storm drains to carry large amounts of runoff from roofs and paved areas to nearby waterways. The stormwater runoff carries pollutants such as oil, dirt, chemicals, and lawn fertilizers directly to streams and rivers, where they seriously harm water quality. To protect surface water quality and groundwater resources, development should be designed and built to minimize increases in runoff.

The most recent National Water Quality Inventory reports that runoff from urbanized areas is the leading source of water quality impairments to surveyed estuaries and the third-largest source of impairments to surveyed lakes.

Did you know that because of impervious surfaces like pavement and rooftops, a typical city block generates more than 5 times more runoff than a woodland area of the same size?

How Urbanized Areas Affect Water Quality

Increased Runoff

The porous and varied terrain of natural landscapes like forests, wetlands, and grasslands traps rainwater and snowmelt and allows them to filter slowly into the ground. In contrast, impervious (nonporous) surfaces like roads, parking lots, and rooftops prevent rain and snowmelt from infiltrating, or soaking, into the ground. Most of the rainfall and snowmelt remains above the surface, where it runs off rapidly in unnaturally large amounts.

Storm sewer systems concentrate runoff into smooth, straight conduits. This runoff gathers speed and erosional power as it travels underground. When this runoff leaves the storm drains and empties into a stream, its excessive volume and power blast out streambanks, damaging streamside vegetation and wiping out aquatic habitat. These increased storm flows carry sediment loads from construction sites and other denuded surfaces and eroded streambanks. They often carry higher water temperatures from streets, roof tops, and parking lots, which are harmful to the health and reproduction of aquatic life.

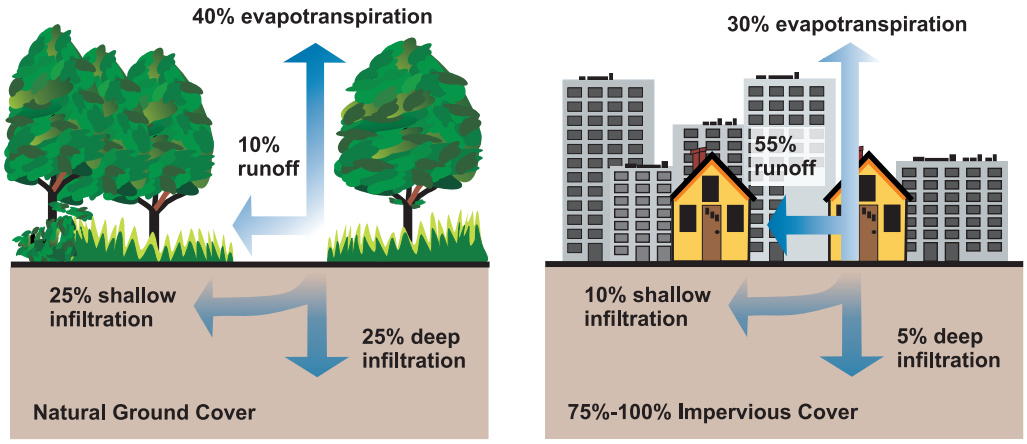
The loss of infiltration from urbanization may also cause profound groundwater changes. Although urbanization leads to great increases in flooding during and immediately after wet weather, in many instances it results in lower stream flows during dry weather. Many native fish and other aquatic life cannot survive when these conditions prevail.

Increased Pollutant Loads

Urbanization increases the variety and amount of pollutants carried into streams, rivers, and lakes. The pollutants include:

- Sediment
- Oil, grease, and toxic chemicals from motor vehicles
- Pesticides and nutrients from lawns and gardens
- Viruses, bacteria, and nutrients from pet waste and failing septic systems
- Road salts
- Heavy metals from roof shingles, motor vehicles, and other sources
- Thermal pollution from dark impervious surfaces such as streets and rooftops

These pollutants can harm fish and wildlife populations, kill native vegetation, foul drinking water supplies, and make recreational areas unsafe and unpleasant.



Relationship between impervious cover and surface runoff. Impervious cover in a watershed results in increased surface ruunoff. As little as 10 percent impervious cover in a watershed can result in stream degradation.

Managing Urban Runoff

What Homeowners Can Do

To decrease polluted runoff from paved surfaces, households can develop alternatives to areas traditionally covered by impervious surfaces. Porous pavement materials are available for driveways and sidewalks, and native vegetation and mulch can replace high maintenance grass lawns. Homeowners can use fertilizers sparingly and sweep driveways, sidewalks, and roads instead of using a hose. Instead of disposing of yard waste, they can use the materials to start a compost pile. And homeowners can learn to use Integrated Pest Management (IPM) to reduce dependence on harmful pesticides.

In addition, households can prevent polluted runoff by picking up after pets and using, storing, and disposing of chemicals properly. Drivers should check their cars for leaks and recycle their motor oil and antifreeze when these fluids are changed. Drivers can also avoid impacts from car wash runoff (e.g., detergents, grime, etc.) by using car wash facilities that do not generate runoff. Households served by septic systems should have them professionally inspected and pumped every 3 to 5 years. They should also practice water conservation measures to extend the life of their septic systems.

Controlling Impacts from New Development

Developers and city planners should attempt to control the volume of runoff from new development by using low impact development, structural controls, and pollution prevention strategies. Low impact development includes measures that conserve natural areas (particularly sensitive hydrologic areas like riparian buffers and infiltrable soils); reduce development impacts; and reduce site runoff rates by maximizing surface roughness, infiltration opportunities, and flow paths.

Controlling Impacts from Existing Development

Controlling runoff from existing urban areas is often more costly than controlling runoff from new developments. Economic efficiencies are often realized through approaches that target "hot spots" of runoff pollution or have multiple benefits, such as high-efficiency street sweeping (which addresses aesthetics, road safety, and water quality). Urban planners and others responsible for managing urban and suburban areas can first identify and implement pollution prevention strategies and examine source control opportunities. They should seek out priority pollutant reduction opportunities, then protect natural areas that help control runoff, and finally begin ecological restoration and retrofit activities to clean up degraded water bodies. Local governments are encouraged to take lead roles in public education efforts through public signage, storm drain marking, pollution prevention outreach campaigns, and partnerships with citizen groups and businesses. Citizens can help prioritize the clean-up strategies, volunteer to become involved in restoration efforts, and mark storm drains with approved "don't dump" messages.

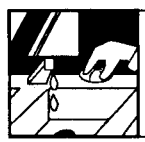
How Efficient Water Use Helps Prevent Pollution



Other Reasons to Use Water Wisely

What Individuals Can Do

What Communities Can Do

What Communities Can Do

A water supplier or wastewater system operator (public or private) has cost-effective options to process and deliver water more efficiently. A community can do the same, and can foster ways to use water wisely.

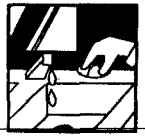
Not all of these steps are expensive. The best choices vary by region and by community; start by asking if these are appropriate where you live and work.

A Water Supplier or Wastewater Processor Can:

- ☞ Identify who uses water, and reduce unaccounted-for water use.
- ☞ Find and repair leaking pipes.
- ☞ Consider a new pricing scheme which encourages conservation.
- ☞ Reduce excess pressure in water lines.
- ☞ Explore the reuse of treated wastewater for uses other than drinking water.
- ☞ Charge hookup fees which encourage more efficient water use in new buildings.
- ☞ Build water efficiency into future demand projections, facility planning, and drought planning.

A Community Can:

- ☞ Adopt plumbing and building codes that require water-efficient equipment and practices.
- ☞ Adopt a water-efficient landscaping ordinance to reduce the water used for golf courses and commercial landscapes.
- ☞ Retrofit older buildings with water-efficient equipment, starting with public buildings.
- ☞ Reduce municipal water use for landscaping and other uses.
- ☞ Conduct a public education campaign.
- ☞ Require developers to build in water efficiency measures.



Other Reasons to Use Water Wisely

Preventing pollution is only one reason why using water efficiently makes sense. Here are a few more:

Money Saved

- Less water use results in fewer pumping and treatment costs.
- Saving money on water and wastewater operations frees money for meeting water quality, public health and water treatment goals.
- Water saved is also energy, and money, saved for you and your community.

Improved Reliability

- Water conservation provides a hedge against drought impacts.
- Improving water efficiency may be quicker and cheaper than developing a new supply.
- Reduced water use may extend the life of your water or wastewater facility.
- Reduced water use may increase the efficiency of wastewater treatment, and reduce overflows during storms.
- Communities which use water efficiently are better prepared to cope with effects of possible future climate change.

What Individuals Can Do

More efficient water use begins with individuals, in the home and place of work. Taking these and other steps, and encouraging others to do so, makes good economic as well as environmental sense.

In The Home

- Install a toilet dam or plastic bottle in your toilet tank.
- Install a water-efficient showerhead (2.5 gallons or less per minute).
- When you buy a new toilet, purchase a low flow model (1.6 gallons or less per flush).

Outdoors

- Water in the morning or evening, to minimize evaporation.
- Install a drip-irrigation watering system for valuable plants.
- Use drought-tolerant plants and grasses for landscaping, and reduce grass-covered areas.

At Work or School

- Adopt the same water-saving habits that are effective at home.
- Ask about installing water-efficient equipment and reducing outdoor water use.
- Encourage employers to explore the use of recycled "gray-water" or reclaimed wastewater.

How Efficient Water Use Helps Prevent Pollution

Using water more efficiently can help prevent pollution as well as protect and conserve our finite water resources. More efficient water use by you and your community has many other benefits.

Fewer Pollutants

- Using less water reduces the amount of wastewater discharged into our lakes, streams, rivers, and marine waters.
- The amount of pollutants wastewater carries can also be reduced, as treatment efficiency improves.
- Recycled process water can reduce pollutants from industry.
- More efficient irrigation can minimize runoff of agricultural pollutants and reduce the use of fertilizers and pesticides.

Protection of Aquatic Habitats

- Building fewer and smaller new water projects can help preserve wetlands, which naturally treat pollutants.
- Diverting less water preserves more streamflow to maintain a healthy aquatic environment.

Protection of Drinking Water Sources

- Less pumping of groundwater lowers the chance that pollutants will be drawn into a water supply well.
- With less water use, septic system performance can improve, reducing the risk of groundwater contamination.
- Highest quality water sources are preserved for drinking water by using treated wastewater for other uses.

Energy Conservation

- Efficient water use means less power needed to pump and treat water and wastewater.
- Less water use reduces the amount of energy required for heating hot water.
- Less energy demand results in fewer harmful by-products from power plants.

GARDENING TIPS

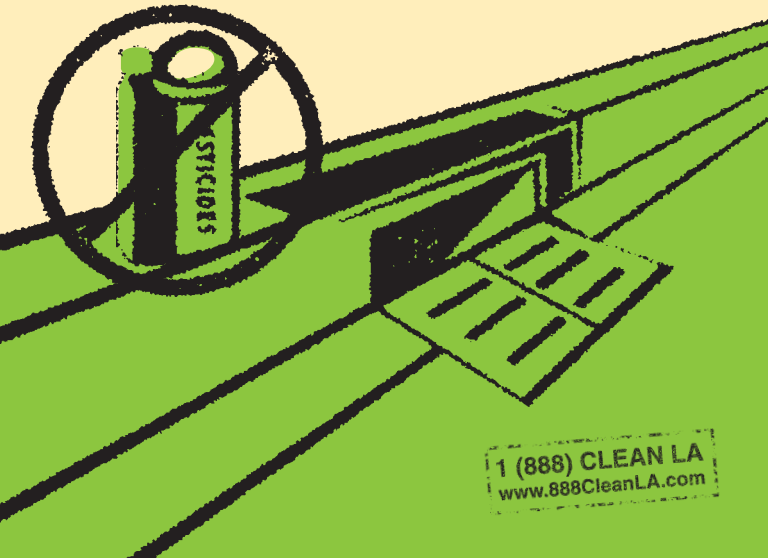
A Yard is a Terrible Thing to Waste!

Storm drains are for rain…**not yard waste.**

Residential yard waste represents about **13 percent** of the total waste generated in L.A. County.

Pesticides, fertilizer and yard waste such as leaves and mowed grass wash from the ground and streets into storm drains and flow straight to the ocean — **untreated**.

Remember to use pesticides and fertilizer wisely and pick-up yard waste.



Tips For Yard Care:

L.A. County residents can help solve the stormwater pollution problem by taking these easy steps…

- Do not over-fertilize and do not use fertilizer or pesticides near ditches, gutters or storm drains.
- Do not use fertilizer or pesticides before a rain.
- Follow the directions on the label carefully.
- Use pesticides sparingly — more is not better. "Spot" apply, rather than "blanket" apply.
- When watering your lawn, use the least amount of water possible so it doesn't run into the street carrying pesticides and other chemicals with it.
- Use non-toxic products for your garden and lawn whenever possible.
- If you must store pesticides or fertilizer, make sure they are in a sealed, water-proof container in a covered area to prevent runoff.
- Do not blow, sweep, hose or rake leaves or other yard trimmings into the street, gutter or storm drain.

PROJECT Pollution PREVENTION

A message from the County of Los Angeles Department of Public Works.
Printed on recycled paper.

PESTICIDE TIPS

Storm Drains are for Rain...

More than 200,000 times each month, lawns and gardens throughout LA County are sprayed with pesticides. Overwatering or rain causes pesticides on leaves and grass to flow into the storm drain and to the ocean — untreated.

Please use pesticides wisely, not before a rain, and water carefully.

...not pesticides.

1(888)CLEAN LA
www.888CleanLA.com

Pesticide Tips:

You can keep your lawn and garden green and at the same time solve the pollution problem by taking these easy steps...

- Never dispose of lawn or garden chemicals in storm drains. This is called illegal dumping. Take them to a household hazardous waste roundup. Call 1(888)CLEAN LA or visit www.888CleanLA.com to locate a roundup or collection facility near you.
- More is not better. Use pesticides sparingly. "Spot" apply, rather than "blanket" apply.
- Read labels! Use only as directed.
- Use non-toxic products for your garden and lawn whenever possible.
- If you must store pesticides, make sure they are in a sealed, water-proof container that cannot leak.
- When watering your lawn, use the least amount of water possible so it doesn't run into the street and carry pesticide chemicals with it. Don't use pesticides before a rain storm. You will not only lose the pesticide, but also will be harming the environment.

PROJECT Pollution PREVENTION

Printed on recycled paper

RECYCLING TIPS

Storm Drains are for Rain...

More than 50% of the automotive oil sold to do-it-yourself oil changers is not recycled. There are more than 600 State-certified used oil collection centers within Los Angeles County.

Never dispose of automotive fluids, recyclable products, or household hazardous wastes into the street or gutter. Take them to your local auto repair station, recycling center or a household hazardous waste roundup.

...they're not recycling centers.

1(888)CLEAN LA
www.888CleanLA.com

Recycling Tips:

You can help keep your community clean, protect our area waterways and make the beaches safe for ocean swimmers by putting recyclable materials where they belong — at a recycling center or household hazardous waste roundup. Never throw or pour anything into the streets or gutters...

- When changing vehicle fluids – transmission, hydraulic and motor oil, brake and radiator fluid – drain them into a drip pan to avoid spills. Do not combine these fluids. Do not dispose of them in the street, gutter or in the garbage. It is illegal.
- Recycle all used vehicle fluids. Call 1(888)CLEAN LA or visit www.888CleanLA.com for the location of a center that recycles these fluids, or for the location of a local household hazardous waste Roundup.
- Other materials that should be taken to a household hazardous waste Roundup are: paint and paint-related materials, household cleaners, batteries, pesticides and fertilizers, pool chemicals, and aerosol products.
- Aluminum, glass, plastic and newspapers should be placed in your curbside recycling bin or taken to a local recycling center.

PROJECT Pollution PREVENTION

COUNTY OF LOS ANGELES LID FACT SHEETS

S-1: Storm Drain Message and Signage

Purpose

Waste material dumped into storm drain inlets can adversely impact surface and ground waters. In fact, any material discharged into the storm drain system has the potential to significantly impact downstream receiving waters. Storm drain messages have become a popular method of alerting and reminding the public about the effects of and the prohibitions against waste disposal into the storm drain system. The signs are typically stenciled or affixed near the storm drain inlet or catch basin. The message simply informs the public that dumping of wastes into storm drain inlets is prohibited and/or that the drain ultimately discharges into receiving waters.

General Guidance

- The signs must be placed so they are easily visible to the public.
- Be aware that signs placed on sidewalk will be worn by foot traffic.

Design Specifications

- Signs with language and/or graphical icons that prohibit illegal dumping, must be posted at designated public access points along channels and streams within the project area. Consult with Los Angeles County Department of Public Works (LACDPW) staff to determine specific signage requirements for channels and streams.
- Storm drain message markers, placards, concrete stamps, or stenciled language/icons (e.g., “No Dumping – Drains to the Ocean”) are required at all storm drain inlets and catch basins within the project area to discourage illegal or inadvertent dumping. Signs should be placed in clear sight facing anyone approaching the storm drain inlet or catch basin from either side (see Figure D-1 and Figure D-2). LACDPW staff should be contacted to determine specific requirements for types of signs and methods of application. A stencil can be purchased for a nominal fee from LACDPW Building and Safety Office by calling (626) 458-3171. All storm drain inlet and catch basin locations must be identified on the project site map.

Maintenance Requirements

Legibility and visibility of markers and signs should be maintained (e.g., signs should be repainted or replaced as necessary). If required by LACDPW, the owner/operator or homeowner’s association shall enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards and signs.

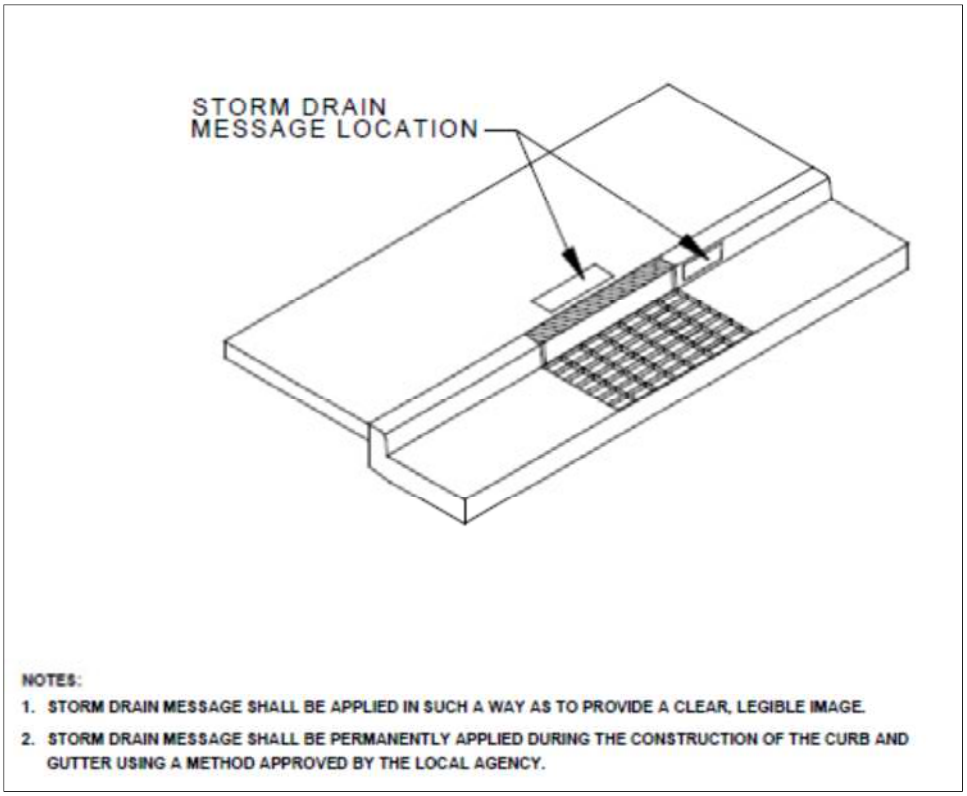

Figure D-1. Storm Drain Message Location – Curb Type Inlet

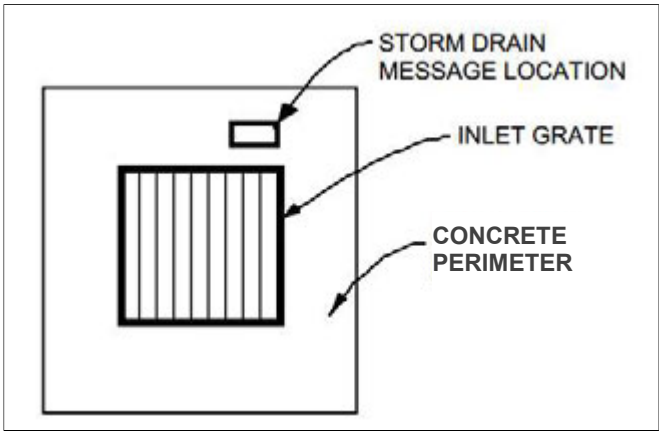

Figure D-2. Storm Drain Message Location – Catch Basin/Area Type Inlet

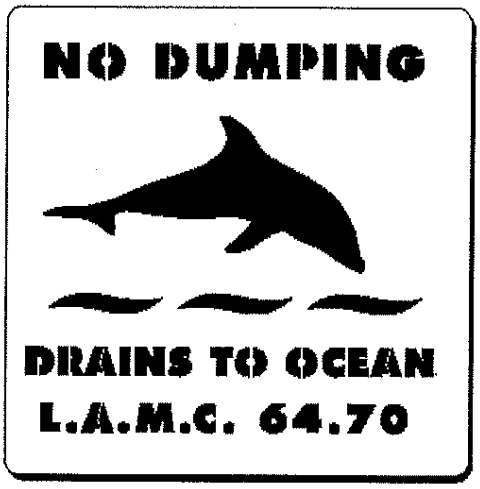
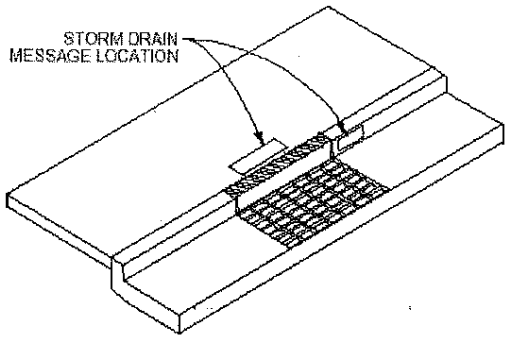
Storm Drain Signage Sample and Signage location

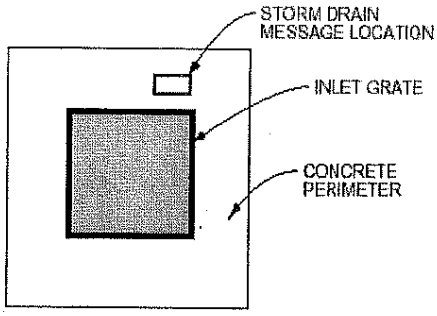


OR

Stencil or signage is required at all drainage inlets



CURB TYPE INLET



AREA TYPE INLET

NOTES:

1. STORM DRAIN MESSAGE SHALL BE APPLIED IN SUCH A WAY AS TO PROVIDE A CLEAR, LEGIBLE IMAGE.
2. STORM DRAIN MESSAGE SHALL BE PERMANENTLY APPLIED DURING THE CONSTRUCTION OF THE CURB AND GUTTER USING A METHOD APPROVED BY THE LOCAL AGENCY.

Storm Drain Message / Stencil Location

S-3: Outdoor Trash Storage and Waste Handling Area

Purpose

Stormwater runoff from areas where trash is stored or handled can be polluted. Loose trash and debris can be easily transported by water or wind into nearby storm drain inlets, channels, and/or receiving waters. Waste handling operations (i.e., dumpsters, litter control, waste piles) may be sources of stormwater pollution.

Design Specifications

Wastes from commercial and industrial sites are typically hauled away for disposal by either public or commercial carriers that may have design or access requirements for waste storage areas. Design specifications for waste handling areas are regulated by local building and fire codes and by current County ordinances and zoning requirements. The design specifications, listed below in Table D-3, are recommendations and are not intended to conflict with requirements established by the waste hauler. The design specifications are intended to enhance local codes and ordinances while addressing stormwater runoff concerns. The waste hauler should be contacted prior to the design of trash storage and collection areas to determine established and accepted guidelines for designing trash collection areas. All hazardous waste must be handled in accordance with the legal requirements established in Title 22 of the California Code of Regulations. Conflicts or issues should be discussed with LACDPW staff.

Table D-3. Design Specifications for Outdoor Trash Storage and Waste Handling Area

Design Feature	Design Specifications
Surfacing	• Construct/pave outdoor trash storage and waste handling area with Portland cement concrete or an equivalent impervious surface.
Screens/Covers	• Install a screen or wall around trash storage area to prevent off-site transport of loose trash. • Use lined bins or dumpsters to reduce leaking of liquid wastes. • Use waterproof lids on bins/dumpsters or provide a roof to cover storage area enclosure (LACDPW discretion) to prevent precipitation from entering containers.
Grading/Drainage	• Berm and/or grade waste handling area to prevent stormwater run-on. • Locate waste handling area at least 35 feet from storm drains. • Divert drainage from adjoining roofs and pavement away from adjacent trash storage areas.
Signs	• Post signs on all dumpsters and/or inside enclosures prohibiting disposal of liquids and hazardous materials in accordance with any waste disposal ordinance.

Accumulated Water

Stormwater runoff, non-stormwater runoff, and spills will accumulate in containment areas and sumps with impervious surfaces. Contaminated accumulated water must be disposed of in accordance with applicable laws and regulations, and cannot be discharged directly to the storm drain or sanitary sewer system without appropriate permitting. Contact LACDPW (1-888-CLEAN-LA) for information regarding discharge of contaminated accumulated water.

Maintenance Requirements

The integrity of structural elements that are subject to damage (e.g., screens, covers, signs) must be maintained by the owner/operator as required by local codes and ordinances. Outdoor trash storage and waste handling areas must be checked periodically to ensure containment of accumulated water and prevention of stormwater run-on. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

S-4: Outdoor Loading/Unloading Dock Area

Purpose

Materials spilled, leaked, or lost during loading or unloading may collect on impervious surfaces or in the soil and be carried away by stormwater runoff or when the area is cleaned. Precipitation may also wash pollutants from machinery used to load or unload materials. In particular, loading docks have the potential to contribute heavy metals, nutrients, suspended solids, oils, and grease to stormwater runoff due to the heavy truck traffic and loading and unloading activities. Depressed loading docks (e.g., truck wells) are contained areas that can also accumulate water.

Design Specifications

Design specifications for outdoor loading/unloading dock areas are regulated by local building and fire codes and by current County ordinances and zoning requirements. Additionally, individual businesses may have their own design or access requirements for loading docks. Design specifications presented in this fact sheet are intended to enhance and be consistent with these code and ordinance requirements while addressing stormwater runoff concerns. The design specifications presented in Table D-4 are not intended to conflict with requirements established by individual businesses, but should be followed to the maximum extent practicable.

Accumulated Water

Stormwater runoff, non-stormwater runoff, and spills will accumulate in containment areas and sumps with impervious surfaces, such as depressed loading docks. Contaminated accumulated water must be disposed of in accordance with applicable laws and cannot be discharged directly to the storm drain or sanitary sewer system without appropriate permitting. Contact LACDPW (1-888-CLEAN-LA) for information regarding discharge of contaminated accumulated water.

Maintenance Requirements

The integrity of structural elements that are subject to damage (e.g., covers, signs) must be maintained by the owner/operator as required by local codes and ordinances. If a water quality inlet or infiltration system is installed, it must be maintained as indicated by the manufacturer or installer. Outdoor loading/unloading dock areas must be checked periodically to ensure containment of accumulated water and prevention of stormwater run-on. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

Table D-4. Design Specifications for Outdoor Loading/Unloading Dock Area

Design Feature	Design Specifications
Surfacing	• Construct/pave outdoor loading/unloading dock areas with Portland cement concrete or an equivalent impervious surface. Ensure that the surfacing material is chemically-resistant to materials being handled in the loading/unloading dock area.
Covers	• Cover outdoor loading/unloading dock areas to a distance of at least 10 feet beyond the loading dock or building face if there is no raised dock. If the cover or roof structure does not include sidewalls, then the roof overhang must extend beyond the grade break. The overhang must extend a minimum of 20 percent of the roof height. • For interior transfer bays, provide a minimum 10-foot "No Obstruction Zone" to allow trucks or trailers to extend at least 5 feet inside the building. Identify "No Obstruction Zone" clearly on site plans and paint zone with high visibility floor paint. • If covers or interior transfer bays are not feasible, install a seal or door skirt and provide a cover to shield all material transfers between trailers and building. • LACDPW may grant waivers for covers on a case-by-case basis.
Hydraulic Isolation/Drainage	• For outdoor loading/unloading dock areas, hydraulically-isolate the first six feet of paved area measured from the building or dock face with grading, berms, or drains to prevent stormwater run-on from surrounding areas or roof drains. Direct stormwater runoff (e.g., from downspouts/roofs) and drainage from surrounding areas away from hydraulically-isolated areas to a stormwater runoff discharge point that meets all applicable LID Standards Manual requirements. • For interior transfer bays or bay doors, prevent stormwater runoff from surrounding areas from entering the building with grading or drains. Do not install interior floor drains in the "No Obstruction Zone". Hydraulically-isolate the "No Obstruction Zone" from any interior floor drains. • Do not install direct connections to storm drains from depressed loading docks. Connect drains or direct drainage from hydraulically-isolated loading/unloading dock area to an approved sediment/oil/water separator system connected a discharge location as determined by LACDPW. Provide a manual emergency spill diversion valve upstream of separator system to direct flow, in the event of a spill, to an approved spill containment vault sized to contain a volume equal to 125% of largest container handled at the facility. Provide additional emergency means, such as drain plugs or drain covers, to prevent spills or contaminated stormwater runoff from entering the storm drain system.

S-8: Landscape Irrigation Practices

Purpose

Irrigation runoff provides a pathway for pollutants (i.e., nutrients, bacteria, organics, sediment) to enter the storm drain system. By effectively irrigating, less runoff is produced resulting in less potential for pollutants to enter the storm drain system.

General Guidance

- Do not allow irrigation runoff from the landscaped area to drain directly to storm drain system.
- Minimize use of fertilizer, pesticides, and herbicides on landscaped areas.
- Plan sites with sufficient landscaped area and dispersal capacity (e.g., ability to receive irrigation water without generating runoff).
- Consult a landscape professional regarding appropriate plants, fertilizer, mulching applications, and irrigation requirements (if any) to ensure healthy vegetation growth.

Design Specifications

- Choose plants that minimize the need for fertilizer and pesticides.
- Group plants with similar water requirements and water accordingly.
- Use mulch to minimize evaporation and erosion.
- Include a vegetative boundary around project site to act as a filter.
- Design the irrigation system to only water areas that need it.
- Install an approved subsurface drip, pop-up, or other irrigation system.[1] The irrigation system should employ effective energy dissipation and uniform flow spreading methods to prevent erosion and facilitate efficient dispersion.
- Install rain sensors to shut off the irrigation system during and after storm events.
- Include pressure sensors to shut off flow-through system in case of sudden pressure drop. A sudden pressure drop may indicate a broken irrigation head or water line.
- If the hydraulic conductivity in the soil is not sufficient for the necessary water application rate, implement soil amendments to avoid potential geotechnical hazards (i.e., liquefaction, landslide, collapsible soils, and expansive soils).

[1] If alternative distribution systems (e.g., spray irrigation) are approved, the County will establish guidelines to implement these new systems.

- For sites located on or within 50 feet of a steep slope (15% or greater), do not irrigate landscape within three days of a storm event to avoid potential geotechnical instability.[2]
- Implement Integrated Pest Management practices.

For additional guidelines and requirements, refer to the Los Angeles County Department of Health Services.

Maintenance Requirements

Maintain irrigation areas to remove trash and debris and loose vegetation. Rehabilitate areas of bare soil. If a rain or pressure sensor is installed, it should be checked periodically to ensure proper function. Inspect and maintain irrigation equipment and components to ensure proper functionality. Clean equipment as necessary to prevent algae growth and vector breeding. Maintenance agreements between LACDPW and the owner/operator may be required. Failure to properly maintain building and property may subject the property owner to citation.

[2] As determined by the City of Los Angeles, Building and Safety Division

T-6: Proprietary Treatment Control Measures

Definition

The LID Standards Manual provided information for selecting and designing the more common treatment-based stormwater quality control measures for projects. The treatment-based stormwater quality control measures included in this appendix (T-1 to T-5) are non-proprietary (public domain) designs that have been reviewed and evaluated by LACDPW and determined generally acceptable.

Proprietary devices are commercial products that typically aim at providing stormwater treatment in space-limited applications, often using patented innovative technologies. The most commonly encountered classes of proprietary stormwater quality control measures include hydrodynamic separation, catch basin insert technologies, cartridge filter-type controls, and proprietary biotreatment devices.

Hydrodynamic separation devices (alternatively, swirl concentrators) are devices that remove trash, debris, and coarse sediment from incoming flows using screening, gravity settling, and centrifugal forces generated by forcing the influent into a circular motion. By having the water move in a circular fashion, rather than a straight line, it is possible to obtain significant removal of suspended sediments and attached pollutants with less space as compared to wet vaults and other settling devices. Hydrodynamic devices were originally developed for combined sewer overflows, where they were used primarily to remove coarse inorganic solids. Hydrodynamic separation has been adapted for stormwater treatment by several manufacturers and is currently used to remove trash, debris, and other coarse solids down to sand-sized particles. Several types of hydrodynamic separation devices are also designed to remove floating oils and grease using sorbent media.

Catch basin inserts are manufactured filters or fabric placed in a drop inlet to remove sediment and debris and may include sorbent media to remove floating oils and grease. There are a multitude of inserts of various shapes and configurations, typically falling into one of three groups: socks, boxes, and trays. The sock-type filters are typically constructed of a fabric, usually polypropylene. The fabric may be attached to a frame or the grate of the inlet may hold the sock. Socks are meant for vertical (drop) inlets. Boxes are constructed of plastic or wire mesh. Typically a polypropylene “bag” is placed in the wire mesh box and the bag takes the form of the box. Most box products are one box; that is, settling and filtration through media occur in the same box. Other products consist of one or more trays or mesh grates. The trays may hold different types of media. Filtration media vary by manufacturer. Types include polypropylene, porous polymer, treated cellulose, and activated carbon. Inserts are an easy and inexpensive retrofitting option because drain inlets are already a component of most standard drainage systems. Inserts are usually only suitable for mitigating relatively small tributary areas (less than one acre) because they are limited by treatment capacity and influent flow rate.

Cartridge filter-type controls typically consist of a series of vertical filters contained in a vault or catch basin that provide treatment through filtration and sedimentation. The vault may be divided into multiple chambers where the first chamber acts as a pre-settling basin for removal of coarse sediment while another chamber acts as the filter bay and houses the filter cartridges. The performance and capacity of a cartridge filter installation depends on the properties of the media contained in the cartridges. Cartridge filter manufacturers often provide an array of media types each with varying properties, targeting various pollutants and a range of particle sizes. Commonly used media include media that target solids, such as perlite, and media that target both dissolved and non-dissolved constituents, such as compost leaf media, zeolite, and iron-infused polymers. Manufacturers try to distinguish their products through innovative designs that aim at providing self cleaning and draining, uniformly loaded, and clog resistant cartridges that functional properly over a wide range of hydraulic loadings and pollutant concentrations.

Proprietary biotreatment devices are devices that are manufactured to mimic natural systems such as wetlands by incorporating plants, soil, and microbes engineered to provide treatment at higher flow rates or higher volumes and with smaller footprints than their natural counterparts. Incoming flows are typically filtered through natural media (mulch, compost, soil, plants, microbes, etc) and either infiltrated or collected by an underdrain and delivered to the storm system. Tributary areas for biotreatment devices tend to be limited to 0.5 to 1.0 acres.

The vendors of the various proprietary stormwater quality control measures provide detailed documentation for device selection, sizing, and maintenance requirements. Tributary area sizes are limited to the capacities of the largest available model. The latest manufacturer supplied documentation must be used for sizing and selection of all proprietary devices. Links to the websites of a number of vendors of proprietary devices are provided at www.BMPLA.org. All proprietary devices proposed for use by a project applicant must be approved by LACDPW.

General Design Specifications

Proprietary stormwater quality control measure vendors are constantly updating and expanding their product lines, so refer to the latest design guidance from the vendors. General guidelines on the performance, sizing, and operation and maintenance of proprietary devices are provided through LACDPW Watershed Division.

Expected Performance

For hydrodynamic devices, it has been stated with respect to combined sewer overflows that the practical lower limit of hydrodynamic separation is a particle with a settling velocity of 12 to 16.5 ft/hr (0.10 to 0.14 cm/s). As such, the focus for hydrodynamic separation in combined sewer overflows has been with settleable solids generally 200 μm and larger, given the presence of the lighter organic solids. For inorganic sediment, the above settling velocity range represents a particle diameter of 50 to 100 μm. Thus, hydrodynamic separation devices are effective for removal of course sediment, trash,

and debris and useful for pretreatment in combination with other types of stormwater quality control measures that target smaller particle sizes.

Because there is a wide range of catch basin insert configurations, it is not possible to generalize the expected performance. Inserts should mainly be used for catching coarse sediments and floatable trash, and are effective for pretreatment in combination with other types of stormwater quality control measures. Trash and large objects can greatly reduce the effectiveness of catch basin inserts with respect to sediment and hydrocarbon capture. Frequent maintenance and the use of screens and grates to keep trash out may decrease the likelihood of clogging and prevent obstruction and bypass of incoming flows.

Cartridge filters have been proven to provide efficient removals for both dissolved and non-dissolved pollutants. However, cartridge filters are less adept at handling high flow rates when compared to catch basin inserts and hydrodynamic devices due to the enhanced treatment provided through the filtration mechanism.

Because proprietary biotreatment devices are relatively new compared to the other types of proprietary treatment devices included in the LID Standards Manual, there are fewer third party studies on proprietary biotreatment devices. The available performance information is mostly vendor-supplied. According to the vendors, like their natural counterparts, proprietary biotreatment devices are highly efficient at mitigating dissolved metals, nutrients, and suspended solids.

Sizing

Hydrodynamic devices, catch basin inserts, and cartridge filters are flow-based stormwater quality control measures, but can be sized to capture and treat the mitigation volume of the SWQDv with additional facilities to manage stormwater runoff flow. Proprietary biotreatment devices on the other hand include both volume-based and flow-based stormwater quality control measures. Volume-based proprietary devices should be sized to capture and treat the mitigation volume of the SWQDv if used as a standalone stormwater quality control measure.

Auxiliary components of proprietary devices such as sorbent media, screens, baffles, and sumps are selected based on site-specific conditions such as the expected loading and the desired frequency of maintenance. Sizing of proprietary devices is reduced to a simple process whereby a model can simply be selected from a table or a chart based on a few known quantities (tributary area, location, design flow rate, design volume, etc). Some manufacturers either size the devices for potential clients or offer calculators on their websites that simplify the design process even further and lessens the possibility of using obsolete design information. For the latest sizing guidelines, refer to the manufacturer's website.

Operation and Maintenance

Hydrodynamic Separation Devices

Hydrodynamic separators do not have moving parts and are not maintenance intensive. However, maintenance is important to ensure that the device operates as efficiently as possible. Proper maintenance involves frequent inspections throughout the first year of installation, especially after major storm events. The systems are considered full when the sediment level is within one foot from the top of the unit, at which point it must be cleaned out. Removal of sediment can be performed with a sump vacuum or vactor truck. Some hydrodynamic separator devices may contribute to mosquito breeding if they do not fully drain stormwater runoff between storm events. Refer to manufacturer's guidelines for inspection and maintenance activities.

Catch Basin Inserts

Catch basin inserts can be maintenance-intensive because of their susceptibility for accumulating trash and debris. Regular maintenance activities include the clean-up and removal of accumulated trash and sediment while major maintenance activities include replacing filter media (if used) and or repairing/replacing geomembrane fabrics. Refer to manufacturer's guidelines for inspection and maintenance activities.

Cartridge Filters

For cartridge filters, maintenance activities include periodically removing trash, debris, and sediment from the vault floor, typically twice per year depending on the accumulation rate, using a sump vacuum or vactor truck. The cartridges may need to be replaced when they become saturated, which will occur approximately every other year depending on the pollutant accumulation rate. The manufacturers of these devices typically provide contract operation and maintenance services.

All stormwater vaults that contain standing water can become a breeding area for vectors. Manufacturers have developed systems, such as a perforated pipe installed in the bottom of the vault that is encased in a filter sock to prevent clogging, to completely drain the vault.

Biotreatment Devices

Maintenance of biotreatment devices can be provided by the manufacturer and typically consists of routine inspection and hand removal of accumulated trash and debris. Vactor trucks or mechanical maintenance activities are not needed for biotreatment devices.

Appendix D LID Calculations

Design Criteria

- The *Los Angeles County Low Impact Development Standards Manual* (2014) indicates that the design storm to calculate the Stormwater Quality Design Volume (SWQDv) is to be the greater of the 0.75-inch, 24-hour rain event and the 85th percentile, 24-hour rain event as determined from the Los Angeles County 85th percentile precipitation isohyetal map. The isohyetal map indicates the 85th percentile, 24-hour rain event is 0.90 inches at the project site. Thus, the 85th percentile, 24-hour rain event has been analyzed for the project.
- As identified in the *Los Angeles County Department of Public Works (LACDPW) Hydrology Manual* (January 2006), the site is situated within hydrologic soil type "006" and impervious surface for the project site will be 85%. The Los Angeles County Department of Public Works "HydroCalc" computer program was used for the design of the treatment systems.

LA County LID Manual SWQDv Calculations:

SWQDv = Proposed 24-hour 85th percentile runoff volume (cfs) = **5,029 cfs** (Hydrocalc)

On-Site biofiltration treatment volume requirement = 1.5 x SWQDv = 1.5 x 5,029 cfs = **7,544 cfs**

Modular Wetland System Unit (MWS)
Model # MWS L-4-19 Treatment Capacity @ 48-Hour Drain Down = **10,345 cfs**

OPERATION AND MAINTENANCE PLAN

FOR

Public Storage Compton

3010 N Alameda Street, Compton, CA 90222

This Operation and Maintenance Plan (O&M Plan) has been prepared for Public Storage by DRC Engineering, Inc. for Public Storage Compton at 3010 N Alameda Street in the City of Compton, County of Los Angeles, State of California. The O&M Plan and a Covenant and Agreement are required to ensure optimum performance of the installed Best Management Practices.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the County's Manual for Low Impact Development (LID) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Los Angeles, Los Angeles County Flood Control District and the incorporated Cities of Los Angeles County within the Los Angeles Region Stormwater Runoff Management Program. Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the LID Plan and the Operation and Maintenance Plan. An appropriate number of approved and signed copies of this document shall be available on the subject site in perpetuity.

BMP	**TITLE**	**INSPECTION FREQUENCY (ALL CONTROLS)**	**MAINTENANCE / REPAIR PROGRAM**
S-1	Storm Drain Message and Signage	Inspect for legibility a minimum of once per year.	Responsible Party: Public Storage Re-label/re-stencil as needed to clearly depict signage. Refer to *LA County LID Manual* S-1 and CASQA BMP SD-13 for additional information.
S-3	Outdoor Trash Storage / Waste Handling Area	Inspect the trash compactor area and trash storage areas on a daily basis for trash/debris, spills, broken containers, etc. and that the lids are closed. Inspect the trash dumpster areas monthly for leaks and other structural damage and repair as necessary. Inspect the trash enclosures used for food waste daily for leaks and signs of vectors.	Responsible Party: Public Storage Pick up any trash off the ground and place in appropriate containers. Trash dumpster pickup shall be once per week, at minimum. Refer to *LA County LID Manual* S-3 and CASQA BMP SC-34 and SD-32 for additional information.
S-8	Landscape Irrigation Practices	Inspect irrigation equipment on a monthly basis for proper operation. Check water sensors, irrigation heads, and timing.	Responsible Party: Public Storage Adjust irrigation heads and timers as necessary Repair or replace damaged irrigation equipment and make other repairs or adjustments as necessary. Landscape maintenance will be conducted on a weekly basis. Refer to *LA County LID Manual* S-8 and CASQA BMP SD-12 for additional information.

BMP Type: Contech CMP Infiltration System			
Model	Footprint	Location	Quantity
Modular Wetland System Unit Model No. MWS L-8-8	9'x9'	West side of the site	1 EA

2.3 Regular Inspection

The manufacturer recommends ongoing annual inspections of the accumulated sediment. Sediment deposition and transport may vary from year to year and inspections will help ensure that system is cleaned out at the appropriate time. Keep a record of each inspection.

System should be cleaned when inspection reveals that accumulated sediment or trash is clogging the discharge orifice. Should it be necessary to get inside the system to perform maintenance activities, all appropriate precautions regarding confined space entry and OSHA regulations should be followed. The site's maintenance manager can then revise the inspection schedule based on experience or local requirements.

2.4 Cleaning

Schedule the cleanout during dry weather. Accumulated sediment and trash can typically be evacuated through the manhole over the outlet orifice. If maintenance is not performed as recommended, sediment and trash may accumulate in front of the outlet orifice. Manhole covers should be securely seated following cleaning activities.

2.5 Maintenance Log

Keep a log of all inspections and maintenance performed on the CMP Retention system. The log should be kept on-site.

EXECUTIVE SUMMARY

Public Storage proposes to demolish all existing buildings and site improvements, and construct one, three-story self-storage building with related site improvements.

In accordance with requirements under the California Environmental Quality Act (CEQA), this Noise Study estimates future noise and vibration levels at surrounding land uses resulting from construction and operation of the Project. The report includes the categories and types of noise and vibration sources resulting from the Project, the calculation procedures used in the analysis, and any assumptions or limitations.

This report summarizes the potential for the Project to generate a substantial temporary or permanent increase in ambient noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies; generate excessive groundborne vibration or groundborne noise levels; or expose people residing or working in the project area to excessive noise levels.

The findings of the analyses are as follows:

- Construction activities would not result in short-term and temporary noise impacts to nearby noise-sensitive receptors due to on-site construction equipment and activities. Compliance with the City's Nosie Ordinance and standards established in the local general plan would ensure implementation of noise-attenuation techniques and placement of the construction-staging area and earthmoving equipment away from noise-sensitive sites to reduce construction noise levels below the significance threshold.
- Construction of the Project would generate sporadic, temporary vibration effects adjacent to the Project area but would not be expected to exceed the significance thresholds.
- Noise associated with cumulative construction activities would be reduced to the degree reasonably and technically feasible through proposed recommended measures for each individual project and compliance with locally adopted and enforced noise ordinances. Given that construction activities would be required to comply with the City's allowable hours and would be temporary, construction-related noise would not be significant.
- Noise associated with cumulative operational sources would not be significant.
- Due to the rapid attenuation characteristics of ground-borne vibration and the distance of the cumulative projects to the Project site, no potential exists for cumulative construction- or operational-related impacts with respect to ground-borne vibration.

PROJECT DESCRIPTION

Public Storage is under contract to purchase the property located on 3010 N. Alameda Street (APN 6169-021-032 and 6169-021-038) within the City of Compton (City). The property is approximately 92,143 square feet (2.12 acres) and is currently developed with a variety of industrial and auto related uses, totaling of 33,602 square feet among the seven existing buildings. East Weber Avenue is adjacent to the property on the north side, North Alameda Street and the Alameda Train Corridor is to the west, a metal recycling yard is to the south, and an unknown industrial use is to the east. The site and abutting properties are Zoned MH (Heavy Manufacturing) with a small portion of B (Buffer zone) to the east. The site is designated Industrial in the General Plan. Surrounding uses to the Project site include a metal recycling yard to the south, an industrial use to the east, the Alameda Train Corridor to the west, and a recycling center to the north.

The Project proposes to demolish the existing uses and site improvements to construction one, three-story self-storage building and related improvements. The proposed development would be 131,028 square feet in size and would include a 940 square foot rental office. Access to the site will be provided by one driveway along E. Weber Avenue and another driveway along N. Alameda St. Customers will access the new building and their storage spaces through secured lobbies, using an access code. The site and storage spaces will be accessible to customers from 6:00 AM to 9:00 PM seven days a week. The rental office will be open from 9:00 AM to 6:00 PM seven days a week.

NOISE DESCRIPTORS

Fundamentals of Sound

Because the human ear does not respond uniformly to sounds at all frequencies, sound-pressure level alone is not a reliable indicator of loudness. For example, the human ear is less sensitive to low and high frequencies than to the medium frequencies that more closely correspond to human speech. In response to the sensitivity of the human ear to certain sound frequencies, the A-weighted noise level, referenced in units of dBA, was developed to better correspond with people's subjective judgment of sound levels. To support assessing a community reaction to noise, scales have been developed that average sound-pressure levels over time and quantify the result in terms of a single numerical descriptor. Several scales have been developed that address community noise levels. The equivalent sound level (Leq) is the average A-weighted sound level measured over a given time interval. Leq can be measured over any period but is typically measured for 1-minute, 15-minute, 1-hour, or 24-hour periods.

Table 1: Noise Descriptors identifies various noise descriptors developed to measure sound levels over different periods of time.

TABLE 1 NOISE DESCRIPTORS	
Term	**Definition**
Decibel (dB)	The unit for measuring the volume of sound equal to 10 times the logarithm (base 10) of the ratio of the pressure of a measure sound to a reference pressure.
A-weighted decibel (dBA)	A sound measurement scale that adjusts the pressure of individual frequencies according to human sensitivities. The scale accounts for the fact that the region of highest sensitivity for the human ear is between 2,000 and 4,000 cycles per second (hertz).
Hertz (Hz)	The frequency of the pressure vibration, which is measured in cycles per second.
Kilo hertz (kHz)	One thousand cycles per second.
Equivalent sound level (Leq)	The sound level containing the same total energy as a time varying signal over a given time period. The Leq is the value that expresses the time averaged total energy of a fluctuating sound level. Leq can be measured over any time period, but is typically measured for 1-minute, 15-minute, 1-hour, or 24-hour periods.
Community noise equivalent level (CNEL)	A rating of community noise exposure to all sources of sound that differentiates between daytime, evening, and nighttime noise exposure. These adjustments add 5 dBA for the evening, 7:00 PM to 10:00 PM, and add 10 dBA for the night, 10:00 PM to 7:00 AM. The 5- and 10-dB penalties are applied to account for increased noise sensitivity during the evening and nighttime hours. The logarithmic effect of adding these penalties to the 1-hour Leq measurements typically results in a CNEL measurement that is within approximately 3 dBA of the peak-hour Lean[a]
Nighttime (Lights)	Lights is the average noise exposure during the hourly periods from 10:00 PM to 7:00 AM.
Sound pressure level	The sound pressure is the force of sound on a surface area perpendicular to the direction of the sound. The sound pressure level is expressed in dB.
Ambient noise	The level of noise that is all encompassing within a given environment, being usually a composite of sounds from many and varied sources near to and far from the observer. No specific source is identified in the ambient environment.

[a] *California Department of Transportation*, Technical Noise Supplement; A Technical Supplement to the Traffic Noise Analysis Protocol, *(Sacramento, California: November 2009), pp. N51-N54.*

A doubling of sound energy results in a 3 dBA increase in sound, which means that a doubling of sound wave energy (e.g., doubling the volume of traffic on a roadway) would result in a barely perceptible change in sound level. In general, changes in a noise level of less than 3 dBA are not noticed by the human ear.[1] Changes from 3 to 5 dBA may be noticed by some individuals who are extremely sensitive to changes in noise. An increase of greater than 5 dBA is readily noticeable, while the human ear perceives a 10 dBA increase in sound level to be a doubling of sound volume.

1 US Department of Transportation, Federal Highway Administration (USDOT FHWA), Fundamentals and Abatement of Highway Traffic Noise (Springfield, VA: Author, September 1980), 81.

Noise sources can generally be categorized in two types: (1) point sources, such as stationary equipment; and (2) line sources, such as a roadway. Sound generated by a point source typically diminishes (attenuates) at a rate of 6 dBA for each doubling of distance from the source to the receptor at acoustically hard sites, and at a rate of 7.5 dBA at acoustically soft sites.[2] A hard or reflective site consists of asphalt, concrete, or very hard-packed soil, which does not provide any excess ground-effect attenuation. An acoustically soft or absorptive site is characteristic of normal earth and most ground with vegetation. As an example, a 60-dBA noise level measured at 50 feet from a point source at an acoustically hard site would be 54 dBA at 100 feet from the source and 48 dBA at 200 feet from the source. Noise from the same point source at an acoustically soft site would be 52.5 dBA at 100 feet and 45 dBA at 200 feet from the source. Sound generated by a line source typically attenuates at a rate of 3 dBA and 4.5 dBA per doubling of distance from the source to the receptor for hard and soft sites, respectively.[3] In addition, man-made or natural barriers can also attenuate sound levels.

Fundamentals of Vibration

Vibration is commonly defined as an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. The peak particle velocity (PPV) or root-mean-square (RMS) velocity is typically used to describe vibration amplitudes. PPV is defined as the maximum instantaneous peak of the vibration signal, while RMS is defined as the square root of the average of the squared amplitude of the signal. PPV is typically used for evaluating potential building damage, whereas RMS is typically more suitable for evaluating human response to ground-borne vibration. The RMS vibration velocity level can be presented in inches per second (ips) or in VdB (a decibel unit referenced to 1 microinch per second). Commonly, ground-borne vibration generated by man-made activities (i.e., road traffic, construction) attenuates rapidly with distance from the source of the vibration.

The vibration velocity level threshold of perception for humans is approximately 65 VdB. A vibration velocity of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels for many people. Most perceptible indoor vibration is caused by sources within buildings such as the operation of mechanical equipment, the movement of people, or the slamming of doors. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration from traffic is barely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration velocity, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings.

REGULATORY SETTING

City of Compton General Plan Noise Element

The City's 1991 General Plan Noise Element includes a series of goals and polices to achieve and maintain noise levels compatible with various types of land uses. Goals and policies relevant to the proposed Project include:[4]

Goal 2: Incorporate noise considerations into land use planning decisions.

- **Policy 2.1**: Establish acceptable limits of noise for various land uses throughout the community, in accordance with Table 2 (see below).
- **Policy 2.4**: Require noise reduction techniques in site and architectural design and construction where noise reduction is necessary.

Goal 3: Minimize noise spillover from commercial and industrial uses into nearby residential neighborhoods.

- **Policy 3.1**: Enforce the State standard of 65 dbA for exterior noise levels for all commercial uses.

Goal 5: Develop measures to control non-transportation noise impacts.

- **Policy 5.1**: Adopt an updated comprehensive City Noise Ordinance to control excessive noise from lawn blowers, trimmers, machinery, or other disturbances.
- **Policy 5.2**: Reduce noise generated by construction activities by requiring sound attenuation devices on construction equipment.
- **Policy 5.3**: Establish and maintain coordination among the agencies involved in noise abatement.

Guidelines for Noise-Compatible Land Uses

The City's General Plan Noise Element establishes noise criteria for the various land uses throughout the City.[5] **Table 2: Noise/Land Use Compatibility Matrix**, identifies the acceptable limit of noise exposure for various land-use categories within the City.

4 City of Compton, *Compton General Plan 1991,* Noise Element, December 1991.

5 City of Compton, *Compton General Plan 1991,* Noise Element, December 1991.

TABLE 2
NOISE/LAND USE COMPATIBILITY MATRIX

Land Use Categories	Community Noise Equivalent Level (CNEL)						
	55	60	65	70	75	80	
Residential – Single-Family, Duplex, Multiple-Family							
Residential – Mobile Homes							
Commercial – Hotel, Motel, Other Lodging							
Commercial – Commercial Retail, Bank, Restaurant, Movie Theater							
Commercial - Office Building, Research and Development, Professional Offices, City Office Building							
Amphitheater, Concert Hall Auditorium, Meeting hall							
Children's Amusement Park, Miniature Golf Course, Go-cart Track, Equestrian Center, Sports Club							
Automobile, Service Station, Auto Dealership, Manufacturing, Warehousing, Wholesale, Utilities							
Hospital, Church, Library, Schools' Classroom							
Parks							
Golf Course, Cemeteries, nature Centers, Wildlife Habitat							
Agriculture							

Clearly Compatible: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

Normally Compatible: New construction or development should be undertaken only after detailed analysis of the noise reduction requirements are made and needed noise insulation features in the design are determined. Conventional construction, with closed windows and fresh supply systems or air conditioning, will normally suffice.

Normally Incompatible: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly incompatible: New construction or development should generally not be undertaken.

Source: City of Compton, General Plan, Noise Element (1991).

Noise exposure for industrial warehouse uses is "clearly compatible" when the CNEL at exterior commercial locations is equal to or below 70 dBA, and "normally compatible" when the CNEL exceeds

70 dBA. Noise exposure for single and multi-family residential uses is "clearly compatible" when the CNEL at exterior residential locations is equal to or below 60 dBA, "normally compatible" when the CNEL is between 60 to 70 dBA, "normally incompatible" when the CNEL is between 70 to 75 dBA, and "clearly incompatible" when the CNEL exceeds 75 dBA. These guidelines apply to noise sources such as vehicular traffic, aircraft, and rail movements.

City of Compton Noise Ordinance

Section 7-12 (Noise), of the Compton Municipal Code (CMC) establishes regulations and standards regarding the generation of noise. Section 7-12.11 of the CMC prohibits the use or operation of any machinery, equipment, pump, fan, air condition apparatus or other similar mechanical devices from exceeding the ambient noise level at the property line of any property by more than 5 dBA. Under Section 7-12.22 of the CMC, construction activities (including operation of any tools, equipment, impact devices, derricks or hoists used in construction, drilling, repair, alteration, demolition or earthwork) may only occur between the hours of 7:00 AM and 8:00 PM on weekdays and Saturday. No construction activities are permitted outside of these hours except with express written permission from a City Building Official.

EXISTING CONDITIONS

Ambient Noise Levels

Short-term sound monitoring was conducted at five (5) locations to measure the ambient sound environment in the Project vicinity. Measurements were taken over 15-minute intervals at each location between the hours of 1:48 PM and 3:19 PM on August 10, 2021. **Table 3: Ambient Noise Measurements**.

TABLE 3
AMBIENT NOISE MEASUREMENTS

	Location Number/Description	Nearest Use	Time Period	Noise Source	dBA Leq
1	West boundary of the Project site along N. Alameda Street	Project site	1:48 PM–1:03 PM	Vehicle traffic along N. Alameda Street	66.9
2	North boundary of the Project site along E. Weber Avenue	Project site	2:05 PM–2:20 PM	Vehicle traffic along E. Weber Avenue and N. Alameda Street	69.0
3	West of the Project site along E. 125th Street	Residential	2:25 PM–2:40 PM	Vehicle traffic along N. Alameda Street	63.2
4	South of the Project site along El Segundo Boulevard	School	2:45 PM–3:00 PM	Vehicle traffic along El Segundo Boulevard	70.1
5	East of the Project site along N. Santa Fe Avenue	Residential	3:04 PM–3:19 PM	Vehicle traffic along N. Santa Fe Avenue	68.6

*Source: Refer to **Attachment A** for noise monitoring data sheets.*
Notes: dBA = A-weighted decibels; Leq = average equivalent sound level.

As shown in **Table 3**, ambient noise levels ranged from a low of 63.2 dBA Leq west of the Project site along E. 125th Street (Site 3) to a high of 70.1 dBA Leq south of the Project site along El Segundo Boulevard (Site 4).

Sensitive Uses

The Project site is predominantly surrounded by light industrial uses. As mentioned previously, East Weber Avenue is adjacent to the property on the north side, North Alameda Street and the Alameda Train Corridor is to the west, a metal recycling yard is to the south, and an unknown industrial use is to the east. Surrounding uses to the Project site include a metal recycling yard to the south, an industrial use to the east, the Alameda Train Corridor to the west, and a recycling center to the north. Residential uses are located to the west of the Project site along E. 124th Street and E. 125th Street, and to the east along N. Santa Fe Avenue. Additionally, Willard Elementary School is located to the south along El Segundo Boulevard. An overview of the surrounding land uses relative to the noise monitoring locations provided in **Table 3** above is provided:

- Site 1: Located at the western boundary of the Project site along N. Alameda Street. There are no sensitive receptors within the vicinity of this noise monitoring location.
- Site 2: Located at the northern boundary of the Project site along E. Weber Avenue. There are no sensitive receptors within the vicinity of this noise monitoring location.
- Site 3: Located west of the Project site along E. 125th Street. Sensitive receptors include residential uses along E. 125th Street.
- Site 4: Located south of the Project site along El Segundo Boulevard. Sensitive receptors include Willard Elementary School at the corner of El Segundo Boulevard and N. Alameda Street.
- Site 5: Located east of the Project site along N. Santa Fe Avenue. Sensitive receptors include residential uses along N. Santa Fe Avenue.

Vibration Conditions

Based on field observations, the primary source of existing ground-borne vibration in the vicinity of the Project site is vehicle traffic on local roadways. According to the Federal Transit Administration,[6] typical road traffic–induced vibration levels are unlikely to be perceptible by people. Trucks and buses typically generate ground-borne vibration velocity levels of approximately 63 VdB (at a 50-foot distance), and these levels could reach 72 VdB when trucks and buses pass over bumps in the road. A vibration level of 72 VdB is above the 60 VdB level of perceptibility.

METHODOLOGY

Ambient Noise Measurements

Noise-level monitoring was conducted by Meridian Consultants in August, 2021, at five locations within the Project area vicinity. Noise-level monitoring was conducted for 15-minute intervals at each location

---

6 Federal Transit Administration, *Transit Noise and Vibration Impact Assessment,* FTA report no. 0123 (September 2018), https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf, accessed August 2021.

using a Larson Davis Model 831 sound-level meter. This meter satisfies the American National Standards Institute (ANSI) standard for general environmental noise measurement instrumentation. The ANSI specifies several types of sound-level meters according to their precision. Types 1, 2, and 3 are referred to as "precision," "general-purpose," and "survey" meters, respectively. Most measurements carefully taken with a Type 1 sound-level meter will have a margin of error not exceeding 1 dB.

The Larson Davis Model 831 is a Type 1 precision sound-level meter. This meter meets all requirements of ANSI S1.4-1983 and ANSI1.43-1997 Type 1 standards, as well as International Electrotechnical Commission (IEC) IEC61672-1 Ed. 1.0, IEC60651 Ed 1.2, and IEC60804 Type 1, Group X standards. The sound-level meter was located approximately 5 feet above ground and was covered with a Larson Davis windscreen. The sound-level meter was field calibrated with an external calibrator prior to operation.

Construction Scenario

Future dates represent approximations based on the general Project timeline and are subject to change pending unpredictable circumstances that may arise. As such, for purposes of this analysis, project construction is assumed to begin in January 2023 and is expected to last until December 2023. Construction would occur over five phases: (1) demolition; (2) grading; (3) building construction; (4) paving; and (5) architectural coating.

Each phase of construction would result in varying levels of intensity and a number of construction personnel. The construction workforce would consist of approximately 13 worker trips per day and 153 total hauling trips during demolition; 10 worker trips per day during grading; 55 worker trips per day and 21 vendor trip per day during building construction; 15 worker trip per day during paving; and 11 worker trips per day during architectural coating.

Ground-Borne Vibration

Ground-borne vibration impacts were evaluated by identifying potential vibration sources, estimating the distance between vibration sources and surrounding structure locations and surrounding structure locations and vibration sensitive receptors, and making a significance determination based on the significance thresholds.

The majority of the Project's operational-related vibration sources, such as mechanical and electrical equipment, would incorporate vibration attenuation mounts, as required by the particular equipment specifications. Therefore, operation of the Project would not increase the existing vibration levels in the immediate vicinity of the Project and, as such, vibration impacts associated with the Project would be minimal. Therefore, the ground borne vibration analysis is limited to Project-related construction activities.

THRESHOLDS OF SIGNIFICANCE

In accordance with Appendix G of the State CEQA Guidelines, a project would have a potentially significant impact related to noise and groundborne vibration if it would result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
- Generation of excessive groundborne vibration or groundborne noise levels?

Appendix G of the State CEQA Guidelines also includes:

- For a project located within the vicinity of a private airstrip or an airport land use plan or where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise?

The Project site is not located within an airport land use plan and is not located within two miles of public airport or public use airport or within the vicinity of a private airstrips. As such, the Project would result in no impacts to this screening criteria and no further analyses of this topic is necessary.

Construction Noise

As discussed previously, Section 7-12.11 of the CMC prohibits the use or operation of any machinery, equipment, pump, fan, air condition apparatus or other similar mechanical devices from exceeding the ambient noise level at the property line of any property by more than 5 dBA. As such, the proposed Project would result in a significant impact if construction noise levels exceed the ambient noise levels at nearby sensitive receptors by more than 5 dBA. Ambient noise levels at the nearest sensitive receptors are identified in **Table 3** above.

Operational Noise

Operational noise impacts are evaluated for Project-related off-site roadway traffic noise impacts and on-site stationary source noise from on-site activities and equipment.

- The Project would cause any ambient noise levels to increase by 5 dBA CNEL or more and the resulting noise falls on a noise-sensitive land use within an area categorized as either “clearly incompatible” or “normally incompatible” (see **Table 2** for description of these categories); or cause ambient noise levels to increase by 3 dBA CNEL or more and the resulting noise falls on a noise-sensitive land use within an area categorized as either “clearly incompatible” or “normally incompatible.”
- Project-related operational (i.e., nonroadway) noise sources such as outdoor activities, building mechanical/electrical equipment, etc., increase ambient noise level by 5 dBA, causing a violation of the City Noise Ordinance.

Ground-Borne Vibration

The City has not adopted a significance threshold to assess vibration impacts during construction. Thus, the Caltrans *Transportation and Construction Vibration Guidance Manual*[7] is used as a screening tool to assess the potential for adverse vibration effects related to structural damage. Impacts related to vibration would be considered significant if it exceeds the following standards:

- Project construction activities cause ground-borne vibration levels to exceed 0.5 PPV at the nearest off-site reinforced-concrete, steel, or timber building.
- Project construction activities cause ground-borne vibration levels to exceed 0.3 PPV at the nearest off-site engineered concrete and masonry building.
- Project construction activities cause ground-borne vibration levels to exceed 0.2 PPV at the nearest off-site nonengineered timber and masonry building.
- Project construction activities cause ground-borne vibration levels to exceed 0.12 PPV at buildings extremely susceptible to vibration damage, such as historic buildings.
- Short-term Project generated construction vibration levels exceed the FTA maximum acceptable vibration standard of 72 VdB at sensitive receiver locations.

NOISE ANALYSIS

Construction

Noise from Project construction activities would be affected by the amount of construction equipment, the location of this equipment, the timing and duration of construction activities, and the relative distance to noise-sensitive receptors. Construction activities that would occur during the construction phases would generate both steady-state and episodic noise that would be heard both on and off the Project Site. Each phase involves the use of different types of construction equipment and, therefore, has its own distinct noise characteristics. The Project would be constructed using typical construction techniques; no blasting or impact pile driving would be required.

On-Site Construction Noise

Individual pieces of construction equipment that would be used during construction produce maximum noise levels of 73 dBA to 90 dBA at a reference distance of 50 feet from the noise source, as shown in **Table 4: Typical Maximum Noise Levels for Project Construction Equipment**.

7 Caltrans, *Transportation and Construction Vibration Guidance Manual* (September 2013), https://cityofdavis.org/home/showdocument?id=4521, accessed August 2021.

TABLE 4
TYPICAL MAXIMUM NOISE LEVELS FOR PROJECT CONSTRUCTION EQUIPMENT

Equipment Description	Typical Duty Cycle (%)	Spec Lmax (dBA)	Actual Lmax (dBA)
Air Compressor	40	80.0	77.7
Backhoe	40	80.0	77.6
Concrete/Industrial saw	20	90.0	89.6
Crane	16	85.0	80.6
Dozer	40	85.0	81.7
Forklift	40	85.0	N/A
Front End Loader	40	80.0	79.1
Generator	50	82.0	80.6
Grader	40	85.0	N/A
Paver	50	85.0	77.2
Roller	20	85.0	80.0
Tractor	40	84.0	N/A
Welder	40	73.0	74.0

Source: FHWA Roadway Construction Noise Model (RCNM) version 1.1
Note: N/A = not available.

These construction equipment reference noise levels are based on measured noise data compiled by the FHWA and would occur when equipment is operating under full power conditions. However, equipment used on construction sites typically operate at less than full power. The acoustical usage factor is the percentage of time that each type of construction equipment is anticipated to be in full power operation during a typical construction day. These values are estimates and will vary based on the actual construction process and schedule.

Construction equipment operates at its noisiest levels for certain percentages of time during operation. It is important to note, equipment would operate at different percentages over the course of an hour.[8] During a construction day, the highest noise levels would be generated when multiple pieces of construction equipment are operated concurrently.

To characterize construction-period noise levels, the average (hourly Leq) noise level associated with each construction stage was calculated based on the quantity, type, and usage factors for each type of equipment that would be used during each construction stage. These noise levels are typically associated with multiple pieces of equipment operating simultaneously.

8 Federal Highway Administration, Traffic *Noise Model (2006)*.

The estimated construction noise levels were calculated for a scenario in which a reasonable number of construction equipment was assumed to be operating simultaneously, given the physical size of the Project Site and logistical limitations, and with the noise equipment located at the construction area nearest to the affected receptors to present a conservative impact analysis. This is considered a worst-case evaluation because construction of the Project would typically use fewer pieces of equipment simultaneously at any given time and, as such, would likely generate lower noise levels than reported herein.

Separate forecasts of construction noise levels from on-site construction at each of the noise monitoring sites within the immediate vicinity were completed. The forecast noise levels at the nearest sensitive uses to the Project Site from construction activity are shown in **Table 5: Construction Maximum Noise Estimates**. As discussed previously, there are no sensitive receptors within the vicinity of noise monitoring locations Site 1 and Site 2. Therefore, these sites were not included in the analysis below. As shown, average noise levels during construction would result in a maximum increase of 1.7 dBA above the significance threshold without implementation of noise reduction measures.

TABLE 5
CONSTRUCTION MAXIMUM NOISE ESTIMATES

Noise Monitoring Site	Nearest Off-Site Building Structures	Distance from Project Site (feet)	Max Leq	Ambient Noise Leq (dBA)	Significance Threshold (dBA)	Maximum Noise Increase over Significance Threshold without Noise Reduction Measures (dBA)
Site 3	Residential uses along E. 125th Street	320	69.9	63.2	68.2	+1.7
Site 4	School use along El Segundo Boulevard	1,030	59.7	70.1	75.1	0.0
Site 5	Residential uses along N. Santa Fe Avenue	1,360	57.3	68.6	73.6	0.0

Source: FHWA, RCNM, version. 1.1.
*Refer to **Attachment B** for Construction Noise Worksheets*

The proposed Project would implement common construction best management practices (BMP's) such as the use of optimal muffler systems for all equipment which would reduce construction noise levels by approximately 10 dB or more. Additionally, limiting the number of noise-generating heavy-duty construction equipment to two (2) pieces operating simultaneously would reduce construction noise levels by approximately 5 dB. With implementation of these common practices, construction noise levels would be reduced by a minimum of 15 dB.

Moreover, the Project would comply with Section 7-12.22 of the CMC by ensuring that the operation of sound-amplifying equipment would only occur between the hours of 7:00 AM and 8:00 PM on weekdays and Saturday. Compliance with the above practices would ensure construction noise levels would be below the significance threshold; thus, construction noise levels would not be considered significant.

Off-Site Construction Noise

Construction of the Project would require worker, haul, and vendor truck trips to and from the site to work on the site, export demolition debris, and deliver supplies to the site. Trucks traveling to and from the Project site would be required to travel along a haul route approved by the City. At the maximum approximately 153 total hauling trips would take place during the demolition phase, totaling to approximately 15 haul truck trips per work day. Haul truck traffic would take the most direct route to the freeway ramp, which includes the freeway ramp.

Noise associated with construction trips were estimated using the Caltrans FHWA Traffic Noise Model based on the maximum number of worker and hauling trips in a day. Project haul truck trips which includes medium- and heavy-duty trucks would generate noise levels of approximately 43.6 dBA and 50.6 dBA, respectively, measured at the nearest sensitive receptors along the haul route. As shown in **Table 3**, existing noise levels at the Project site ranged from 63.2 dBA to 70.1 dBA. The noise level increases from truck trips would be below the significance threshold of 5 dBA. As such, off-site construction noise impacts would not be considered significant.

Construction Vibration

Table 6: On-Site Construction Vibration Impacts-Building Damage and **Table 7: On-Site Construction Vibration Impacts-Human Annoyance** presents the construction vibration impacts associated with on-site construction in terms of building damage and human annoyance, respectively. It is important to note pile driving would not be required during construction. As shown in **Table 6**, the forecasted vibration levels due to on-site construction activities would not exceed the building damage significance threshold at the nearby sensitive receptors for vibratory rollers, large bulldozers, caisson drilling, loaded trucks, jackhammers, and small bulldozers. Due to the distance of the Project-identified sensitive receptors, changes in elevations, and intervening structures, such as buildings and walls, on-site construction vibration would not result in a significant vibration impact with regard to building damage. Impacts related to building damage from on-site construction vibration would not be considered significant.

As shown in **Table 7**, the forecasted vibration levels due to on-site construction activities would not exceed the human annoyance threshold for infrequent events of 72 VdB for the nearby sensitive receptors surrounding the Project area during construction. Due to the distance of the Project-identified sensitive receptors and intervening structures, such as buildings and walls, on-site construction vibration would not result in a significant vibration impact with regard to human annoyance. Impacts related to human annoyance from on-site construction vibration would not be considered significant.

Operation

Fixed Mechanical Equipment Noise

The Project would introduce various stationary noise sources, including heating, ventilation, and air conditioning systems, which would be located either on the roof, the side of a structure, or on the

ground. All Project mechanical equipment would be required to be designed with appropriate noise-control devices—such as sound attenuators, acoustics louvers, or sound screens/parapet walls—to comply with noise-limitation requirements provided in Section 7-12.11 of the CMC, which prohibits equipment from causing more than a 5 db increase in the ambient noise level. Therefore, operation of mechanical equipment on the Project building would not exceed the City's threshold of significance.

CUMULATIVE NOISE

For purposes of this analysis, development of the related projects will be considered to contribute to cumulative noise impacts. Noise, by definition, is a localized phenomenon and drastically reduces as distance from the source increases. As a result, only related projects and growth in the general area of the Project site (within 500 feet) would contribute to cumulative noise impacts. Cumulative construction-noise impacts have the potential to occur when multiple construction projects in the local area generate noise within the same time frame and contribute to the local ambient noise environment. It is expected that, as with the Project, the related projects would implement noise reduction techniques such as mufflers, shields, sound barriers, which would minimize any noise-related nuisances during construction. In addition, distance attenuation and intervening structures would further reduce construction noise levels and not result in noticeable increases. Therefore, the combined construction-noise impacts of related projects within 500 feet and the Project's contribution would not cause a significant cumulative impact.

With regard to stationary sources, cumulative significant noise impacts may result from cumulative development. Stationary sources of noise that could be introduced in the area by cumulative projects could include mechanical equipment, loading docks, and parking lots. Given that these projects would be required to adhere to the City's noise standards, all stationary sources would be required to have shielding or other noise-abatement measures so as not to cause a substantial increase in ambient noise levels. Moreover, due to distance, it is unlikely that noise from multiple cumulative projects would interact to create a significant combined noise impact. As such, it is not anticipated that a significant cumulative increase in permanent ambient noise levels would occur.

JULY 12, 2022

TO: **HONORABLE MAYOR AND COUNCIL MEMBERS**

FROM: **COMMUNITY DEVELOPMENT DEPARTMENT**

SUBJECT: **A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON UPHOLDING THE DECISION OF THE PLANNING COMMISSION AND NOT ADOPT MITIGATED NEGATIVE DECLARATION 950 AND MITIGATION MONITORING AND REPORTING PROGRAM (MMRP) AND DENY CONDITIONAL USE PERMIT CASE (CUP) NO. 21-011, AND CONDITIONAL USE PERMIT CASE (CUP) NO. 21-012 RELATING TO A REQUEST TO DEVELOP AND OPERATE A 131,028 SQUARE-FOOT, THREE-STORY, PERSONAL SELF-STORAGE FACILITY PROPOSED AT 3010 NORTH ALAMEDA STREET, COMPTON, IN THE HEAVY MANUFACTURING (M-H) ZONE**

SUMMARY

City Council will consider an appeal of Planning Commission's decision to not adopt Mitigated Negative Declaration (MND) No. 950 & Mitigation Monitoring and Reporting Program (MMRP) and denial of Conditional Use Permit (CUP) Case No. 21-011 and Conditional Use Permit (CUP) Case No. 21-012, a request of Public Storage to develop and operate a 131,028 square-foot, three-story, personal self-storage facility proposed at 3010 N. Alameda St., Compton, in the Heavy Manufacturing (M-H) zone. The Zoning Code requires that new buildings in excess of 50,000 square feet and self-storage facilities obtain a conditional use permit (CUP) in accordance with Section 30-26 of the Compton Municipal Code (CMC).

BACKGROUND

On April 13, 2022, the Planning Commission held a public hearing on the above-listed requests. After due consideration, the Planning Commission did not adopt Mitigated Negative Declaration (MND) No. 950 & Mitigation Monitoring and Reporting Program (MMRP) and denied Conditional Use Permit (CUP) Case No. 21-011 and Conditional Use Permit (CUP) Case No. 21-012 by the following vote: two 'yes' votes and two abstained. As a result, Public Storage (the applicant) has appealed that decision to City Council. Planning Commission appeals must be considered at a public hearing in accordance with Section 30-26 of the Compton Municipal Code.

PROJECT DESCRIPTION

The project would redevelop a 2.11 acre (92,143 sq. ft.) site comprised of two parcels (6169-021-032 AND 6169-021-038) which is located southeast corner of E. Weber Ave. and N. Alameda Street. The project site has approximately 300 linear feet of street frontage along N. Alameda Street and 307 linear feet of street frontage along E. Weber Avenue. The subject site is currently developed with a variety of industrial and auto related uses with a total existing building area of 33,602 SF among seven older industrial buildings, which would be demolished to accommodate the proposed project.

The proposed personal self-storage facility is comprised of a 3-story, 131,028 square-foot building which includes a 940 square-foot rental office with 27 on-site parking spaces. Access to the subject site will be from one driveway on E. Weber Avenue and one driveway on N. Alameda St. The remaining existing driveways on both streets will be removed. Parking will be provided on both the east and south sides of the proposed building for customers accessing the rental office and two loading lobbies. A security gate at each driveway will remain open during all customer access hours and closed and locked during closed hours.

The rental office will be open from 9am to 6pm seven days a week. Customers will visit the rental office to inquire about rental space, pay rent, or purchase packing supplies such as boxes or tape. One to two employees per shift will staff the facility. Based on market conditions, the office and facility hours may be revised after opening. Customers will access the new building and their storage spaces through secured lobbies, using an access code. The site, lobbies, and storage spaces will be accessible to customers from 6am to 9pm seven days a week. The proposed building will be climate-controlled, and all storage units will be accessible only from the inside of the building. Security cameras will be located inside and outside the building. The Security cameras will allow on site review from the property manager and staff, along with remote viewing capabilities for the security company that provides after hours detection and monitoring capability.

STATEMENT OF THE ISSUE

The following entitlements are required to facilitate this project:

- **Conditional Use Permit Case No. 21-011** – a request to develop a building in excess of 50,000 square feet in size;
- **Conditional Use Permit Case No. 21-012** – a request to develop and operate a personal self-storage facility; and
- **Mitigated Negative Declaration No. 950** – Adoption of the Mitigated Negative Declaration and mitigation monitoring and reporting program (MMRP) in accordance with the California Environmental Quality Act (CEQA).

The Conditional Use Permit (CUP) process gives the City an opportunity to thoroughly evaluate the each CUP request and determine if the proposed land use is compatible with the surrounding vicinity and manage/control potential negative impacts by the imposing conditions of approval on the project.

This project was routed to the various City Departments, responsible utility providers/public agencies for review and comment and no objections were received. The proposed project as designed, substantially complies with zoning development standards. The proposed personal self-storage facility, is an allowed use in the M-H zone, subject to approval of a conditional use permit and would be compatible with the existing surrounding commercial, light and heavy industrial land uses. The proposed project would visually/aesthetically enhance the subject site and the surrounding area and has the potential serve as a catalyst to revitalize this older industrial area of Compton.

FINANCIAL IMPACT

None.

RECOMMENDATION

Staff makes no recommendation regarding this appeal. Pursuant to Section 30-26.5(k) of the Compton Municipal Code, the City Council shall render its decision on the appeal within thirty (30) days after conclusion of the appeal hearing and has the power to:

- Affirm the decision of the Planning Commission; or
- Amend the decision of the Planning Commission; or
- Overturn the decision of the Planning Commission; or
- If in the opinion of the Council, the matter requires further consideration, refer the matter back to the Planning Commission for further consideration (without a decision by the Council) with any recommendations the Council may desire.

ROBERT DELGADILLO, SENIOR PLANNER
COMMUNITY DEVELOPMENT DEPARTMENT

APPROVED FOR FORWARDING:

THOMAS THOMAS
CITY MANAGER

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON UPHOLDING THE DECISION OF THE PLANNING COMMISSION AND NOT ADOPT MITIGATED NEGATIVE DECLARATION 950 AND MITIGATION MONITORING AND REPORTING PROGRAM (MMRP) AND DENY CONDITIONAL USE PERMIT CASE (CUP) NO. 21-011, AND CONDITIONAL USE PERMIT CASE (CUP) NO. 21-012 RELATING TO A REQUEST TO DEVELOP AND OPERATE A 131,028 SQUARE-FOOT, THREE-STORY, PERSONAL SELF-STORAGE FACILITY PROPOSED AT 3010 NORTH ALAMEDA STREET, COMPTON, IN THE HEAVY MANUFACTURING (M-H) ZONE

WHEREAS, Public Storage filed two conditional use permit applications in accordance with the Section 30-26 of the Compton Municipal Code for the use of certain real property situated in the City of Compton, in the County of Los Angeles, State of California, and legally described as follows:

LOTS, 1, 2, 3 & 4, BLOCK 3 OF BELLE VERNON ACRES, IN THE CITY OF COMPTON, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 9, PAGE 196 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY TOGETHER WITH THE BELLE VERNON ACRES ½ STREET VACATION ADJOINING SAID LOTS. (APNs: 6169-021-032 AND 6169-021-038)

proposed at 3010 N. Alameda St., Compton, California; and

WHEREAS, new building in excess of 50,000 square feet requires a conditional use permit (CUP) pursuant to Sections 30-15 and 30-26 of the Compton Municipal Code (CMC); and

WHEREAS, self-storage facilities requires a conditional use permit (CUP) pursuant to Sections 30-15 and 30-26 of the Compton Municipal Code (CMC); and

WHEREAS, an Initial Study and Mitigated Negative Declaration was prepared, processed and noticed in accordance with the California Environmental Quality Act (CEQA) (Public Resources Code, Division 13 §21000 et seq.); and

WHEREAS, a public hearing upon said mitigated negative declaration, and conditional use permits was held before the Planning Commission on April 13, 2022; and

WHEREAS, the Planning Commission, after due notice and public hearing as required by law, did not adopt Mitigated Negative Declaration (MND) No. 950 and denied Conditional Use Permit (CUP) Case No. 21-011, and Conditional Use Permit (CUP) Case No. 21-012, and adopted Resolution No. 4035; and

WHEREAS, an appeal was filed by the Public Storage, the project applicant; and

WHEREAS, the City Council appeal public hearing notice was published in the Compton Bulletin on May 25, 2022 and June 1, 2022, June 29, 2022; and

WHEREAS, the City Council, after due notice in accordance with Section 30-26 of the Compton Municipal Code (CMC), held and concluded a public hearing for said appeal on June 7, 2022; and

WHEREAS, the City Council has reviewed oral and documentary evidence, is fully advised of the matter at hand and has been submitted for decision.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF COMPTON DOES HEREBY RESOLVES:

Section 1. That the findings of the Planning Commission in its Resolution No. 4035 and the action of the Planning Commission in said Resolution No. 4035 is hereby affirmed, and that the appeal relative to the application, a request to a request to develop and operate a 131,028 square-foot, three-story, personal self-storage facility proposed at 3010 N. Alameda St., Compton, in the Heavy Manufacturing (M-H) zone, is denied, subject to findings found in Planning Commission Resolution No. 4035.

Section 2. That a copy of this Resolution shall be mailed to the applicant/appellant, and provided to Community Development Department (Planning Division).

Section 3. That the Mayor shall sign and the City Clerk shall attest to the adoption of this Resolution.

ADOPTED this _____ day of _____, 2022.

ABSENT: COUNCIL MEMBERS-

_____
CITY CLERK OF THE CITY OF COMPTON

July 12, 2022

TO: **HONORABLE MAYOR AND CITY COUNCIL MEMBERS**

FROM: **CITY MANAGER**

SUBJECT: **A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON AMENDING THE RECREATION DEPARTMENT 2022-2023 ANNUAL BUDGET TO ACCEPT AND APPROPRIATE A GRANT IN THE AMOUNT OF $43,500, AND AUTHORIZING THE CITY MANAGER TO ENTER INTO AN AGREEMENT WITH HAROLD JOHNSON AS THE DREAMTEAM COORDINATOR**

SUMMARY

This Resolution will amend the Recreation Department 2022-23 Fiscal Year annual budget and authorize the City Manager to enter into a letter of agreement with the Los Angeles Dodgers Foundation (LADF) to accept and appropriate grant funding in the amount of Forty-Three Thousand, Five Hundred and Zero Cents ($43,500.00) to be used for park field maintenance and youth umpire fees, in addition to other in-kind contributions, for the 2022 Dodgers Dreamteam program.

BACKGROUND

On January 31, 2022, the Recreation Department (‘Department”) applied for and was awarded grant funding in the amount of $43,500, as well as other in-kind contributions, from the Los Angeles Dodgers Foundation (LADF) through Dodgers Dreamteam Program. The grant funding will assist the Recreation Department in purchasing field preparation items, providing an allowance for the Dodger Dreamteam Coordinator's wages, and umpire fees to support this year's Dodgers Dreamteam Baseball League.

The Dodgers Dreamteam Program is a baseball and softball youth development program funded by the Los Angeles Dodgers Foundation (LADF). The program aims to increase participation in youth baseball while bringing awareness to education, literacy, health, wellness and recreational resources in the Community. The City’s Recreation Department is preparing to serve up to six hundred (600) Compton youth ages 5 through 18 during the 2022 Spring and Summer Baseball Seasons.

As an affiliate partner and grantee, the City of Compton Recreation Department will continue to facilitate the day to day operations of the Dodger Dreamteam Baseball League and receive the following:

- Uniforms for every player to include home and away jersey, pants, socks, hats/visors, and practice t-shirts
- Equipment kits for every team to include gloves, bats, tees, catcher's gear, baseballs, and softball
- Branded polo shirts for every coach
- Live workshops and skills training for all coaches
- Dodgers Dreamteam Coordinator Position
- Grants to offset umpire and field maintenance costs
- Marketing and recruitment support to include fliers and banners
- LADF staff support
- Access to education and health resources for youth and families, college tours, eye screenings/exams/glasses, financial literacy seminars, and fitness clinics
- Work with LADF to complete SEL surveys for program participants using Hello Insight pre- and post-surveys.
- Create a Parent Advisory Team (PAT) within your agency. This is a volunteer parent involvement group to support parent engagement.
- Promote and recruit participants for ongoing programs that LADF offers.
- Be accountable to providing data and information to LADF to support the implementation and growth of the program at City of Compton.

The Grant requires the City to hire a Dodger Dreamteam Coordinator who will assist in overseeing program logistics. Subsequently, the Grants Division conducted an RFP to select an individual to serve as the Dodgers Dreamteam Coordinator. As a result of this procurement process, the City received three really high quality proposals.

1) Mr. Harold Johnson submitted a bid that responded to all requirements and was the lowest bid at $15 per hour.
2) Mr. Don Buford was the second lowest bid proposing $50 per hour.
3) Mr. Gerald Pickens was the highest at $75 per hour.

Although, all proposals entailed great responses from very highly qualified and skilled applicants, the City selected the lowest bid received from Mr. Harold Johnson.

Mr. Harold Johnson served the City well through the Compton Little League Baseball team over the past thirty years. He was president of the league during the 90's and Vice President from 2000 until present. He volunteered for Parks and Recreation Department as a Coach for several years through the City's Parks and Recreation Department and coached championship teams in 2017 and 2018. He briefly worked with the Dodgers Urban Youth Academy at Compton college and has received accolades from Dodger Foundation staff members. Overall, Mr. Johnson has demonstrated his capacity through the RFP process as well as his volunteer efforts in the City.

As a contracted partner to the City of Compton, the Dreamteam Coordinator will assist in delivering a high quality program for youth to enjoy. The Dodgers Dreamteam Coordinator role is designed to work in partnership with the Los Angeles Dodgers Foundation, the local community, and the City of Compton staff to effectively deliver the Dodgers Dreamteam program. The Coordinator can be paid up to $30,000 to administer the following scope of work.

Scope of Work

- Recruit players/participants for the Dodgers Dreamteam program, resulting in full rosters for the City of Compton
- Recruit and assign coaches for all of the Dodgers Dreamteam programs at our site(s).
- Set goals and establish plans to continue to grow participation in the Dodgers Dreamteam program with a specific focus on girls, teens and all minority youth.
- Manage and coordinate Field Champions to maximize participation and engagement in the community. Field Champions are assigned to you by LADF through a partnership with Up2Us Sports.
- Serve as a liaison in your community to engage kids and families in the Dodgers Dreamteam program and educate them about what the program has to offer.
- Communicate directly with parents and families to help them understand the logistics of the program operations. This includes ongoing and frequent communications with parents.
- Serve as the primary point of contact for LADF staff with City of Compton. LADF staff will work with the Dodgers Dreamteam Coordinator to provide resources to support the implementation of the program, including equipment and uniforms.
- Manage all scheduling associated with the Dodgers Dreamteam program.
- Attend games and practices and be the visible point of contact for staff, coaches, volunteers and participants in the program.
- Schedule and secure umpires for all Dodgers Dreamteam program games.
- Maintain the use of LeagueApps for City of Compton ensuring that player and coach registrations are up-to-date, and all rosters are created and regularly maintained throughout the season.

The Recreation Department will oversee the Coordinator, record hours worked, ensure the aforementioned scope of work is conducted, and determine authorized hours of work. This partnership will ensure that the City provides excellent recreation programming to the residents of Compton.

STATEMENT OF ISSUE

City Management is recommending that Council accept and appropriate these grant funds from the Los Angeles Dodgers Foundation for the City of Compton's Dreamteam Youth Baseball League. The Grants Division is also requesting that Council authorize City Management to enter into an agreement with Mr. Harold Johnson. The Coordinator can be paid up to Thirty Thousand Dollars ($30,000) based on hours worked according to the scope of work listed above. Additionally, Thirteen Thousand Five Hundred Dollars ($13,500) is set aside for items necessary to operate the program such as equipment, maintenance of fields, events, etc.

FISCAL IMPACT

The adoption of this Resolution will amend the Recreation Department's 2022-2023 Fiscal Year annual budget to increase revenue and appropriate expenditures as follows:

Increase Revenue

Account Number	Description	Amount
2685-840-002-3581	Private Agency Grant	$43,500

Increase Expenditures

Account Number	Description	Amount
2685-840-002-4266	Other Contract Services	$30,000
2685-840-002-4238	Special Department Expense	$13,500

RECOMMENDATION

It is Staff's recommendation that the City Council adopt the attached Resolution.

THOMAS THOMAS
CITY MANAGER

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON AMENDING THE RECREATION DEPARTMENT 2022-2023 ANNUAL BUDGET TO ACCEPT AND APPROPRIATE A GRANT IN THE AMOUNT OF $43,500, AND AUTHORIZING THE CITY MANAGER TO ENTER INTO AN AGREEMENT WITH HAROLD JOHNSON AS THE DREAMTEAM COORDINATOR

WHEREAS, on January 31, 2022, the City applied for and was awarded grant funding in the amount of $43,500, as well as other in-kind contributions, from the Los Angeles Dodgers Foundation (LADF) through their Dodgers Dreamteam (Formerly Dodgers RBI) Program; and

WHEREAS, the grant funding will assist the Recreation Department in purchasing field preparation items, provide an allowance for the Dodgers Dreamteam Coordinator wages, and umpire fees in support of this year's Dodgers Dreamteam Baseball League; and

WHEREAS, the award of this grant will allow the Department serve up to six hundred (600) Compton youth ages 5 through 18 years during the 2022 Spring and Summer Baseball Season; and

WHEREAS, the Dodgers Dreamteam Program is a baseball and softball youth development program of the Los Angeles Dodgers Foundation (LADF). It aims to increase participation in youth baseball while brining awareness to education, literacy, health, wellness and recreational resources in the Community; and

WHEREAS, the Department desires to accept and appropriate a Grant from the Los Angeles Dodgers Foundation in the amount of $43,500 for the purpose of administering the City of Compton's Dodgers Dreamteam Youth Baseball League.

WHEREAS, the Grant requires that the City select a Dreamteam Coordinator to assist with oversight of the program; and

WHEREAS, The Grants Division conducted a Request for Proposal process to select an individual to serve as the Dreamteam Coordinator. The City received three bids from Gerald Pickens, Don Buford, and Harold Johnson. Mr. Harold Johnson submitted a bid that responded to all requirements and was the lowest bid; and

WHEREAS, the Department desires to enter into an Agreement with Mr. Harold Jonson to who was selected as the Dreamteam Coordinator to assist with program administration, coordination, and logistics associated to the Compton's Dodgers Dreamteam Youth Baseball League; and

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF COMPTON DOES HEREBY RESOLVE AS FOLLOWS:

Section 1. That the City Council hereby accepts the Los Angeles Dodgers Foundation grant in the amount of Forty-Three Thousand, Five Hundred Dollars ($43,500), as well as other in-kind contributions, from the Los Angeles Dodgers Foundation as part of their Dreamteam program.

Section 2. That the City Manager, with the advice and approval of the City Attorney, is hereby authorized to enter into an Agreement with Mr. Harold Johnson to assist with the administration of the Dodgers Dreamteam program.

Section 3. That the Recreation Department's 2022-2023 Fiscal Year annual budget is amended to increase revenue and appropriate expenditures as follows:

Increase Revenue

Account Number	Description	Amount
2685-840-002-3581	Private Agency Grant	$43,500

Increase Expenditures

Account Number	Description	Amount
2685-840-002-4266	Other Contract Services	$30,000
2685-840-002-4238	Special Department Expense	$13,500

Section 4. That a certified copy of this Resolution shall be filed in the offices of the City Manager, City Attorney, City Controller, City Clerk and the City of Compton Recreation Department.

Section 5. That the Mayor shall sign and the City Clerk shall attest to the adoption of this Resolution.

ADOPTED this _____ day of _____, 2022.

CITY CLERK OF THE CITY OF COMPTON

PROFESSIONAL SERVICES AGREEMENT
BETWEEN
CITY OF COMPTON
AND
HAROLD JOHNSON

This **AGREEMENT** is entered into by and between the **CITY OF COMPTON**, a municipal corporation of the State of California (hereinafter referred to as **"CITY"**) located at 205 South Willowbrook Avenue, Compton, California 90220 and HAROLD JOHNSON, (hereinafter referred to as **"COORDINATOR"**) (each a "Party" and collectively, the "Parties").

RECITALS:

WHEREAS, each year the City receives funding from the Los Angeles Dodger Foundation for the Dodger Dreamteam program; and

WHEREAS, the City plans to utilize these funds to enter into an agreement with a qualified individual who is knowledgeable about baseball, has demonstrated professional program development of youth programing; and

WHEREAS, as a result of receiving funding from the Dodgers, the City desires to engage the services of an experienced and qualified coordinator to assist the City with training, oversight, preparation and approval of Baseball practice along with games held at City of Compton Parks; and

WHEREAS, Coordinator warrants that he is specifically trained, experienced, competent and has the resources to provide such necessary services which will be required by this Agreement; and

WHEREAS, City desires to engage Consultant to provide these services by reason of its qualifications and experience in performing such services; and

WHEREAS, by Resolution No. _____ adopted on the _____, the City Council gave approval to award a contract to the Consultant to provide the services required; and

WHEREAS, Consultant is willing to render such professional services subject to the terms and conditions set forth in this Agreement.

NOW, THEREFORE, Consultant and City, for the consideration, terms and conditions herein described, mutually agree as follows:

Scope of Services to be Rendered by Consultant. It is the mutual understanding of the Parties that the Consultant shall assist the City's Grants Division and Recreation Department in the administration of the City's Dodger Dreamteam program by assisting the Recreation Department with program coordination and Grants Division with ensuring program is conducted as described by the Los Angeles Dodgers Foundation. As a contracted partner of the City of Compton, the Coordinator will assist with managing

several functions required to professionally deliver a high quality program to youth in our community. The Dodgers Dreamteam Coordinator role is designed to work in partnership with the Los Angeles Dodgers Foundation, the local community, and the City of Compton staff to effectively deliver the Dodgers Dreamteam program. The Scope of Services for this Agreement shall in general include, but not necessarily be limited to the Consultant performing the following services:

- Recruit players/participants for the Dodgers Dreamteam program, resulting in full rosters for the City of Compton
- Recruit and assign coaches for all of the Dodgers Dreamteam programs at our site(s).
- Set goals and establish plans to continue to grow participation in the Dodgers Dreamteam program with a specific focus on girls, teens and all minority youth.
- Manage and coordinate Field Champions to maximize participation and engagement in the community. Field Champions are assigned to you by LADF through a partnership with Up2Us Sports.
- Serve as a liaison in your community to engage kids and families in the Dodgers Dreamteam program and educate them about what the program has to offer.
- Communicate directly with parents and families to help them understand the logistics of the program operations. This includes ongoing and frequent communications with parents.
- Serve as the primary point of contact for LADF staff with City of Compton. LADF staff will work with the Dodgers Dreamteam Coordinator to provide resources to support the implementation of the program, including equipment and uniforms.
- Manage all scheduling associated with the Dodgers Dreamteam program.
- Attend games and practices and be the visible point of contact for staff, coaches, volunteers and participants in the program.
- Schedule and secure umpires for all Dodgers Dreamteam program games.
- Maintain the use of LeagueApps for City of Compton ensuring that player and coach registrations are up-to-date, and all rosters are created and regularly maintained throughout the season.
- Work with LADF to complete SEL surveys for program participants using Hello Insight pre- and post-surveys.
- Create a Parent Advisory Team (PAT) within your agency. This is a volunteer parent involvement group to support parent engagement.
- Promote and recruit participants for ongoing programs that LADF offers.
- Be accountable to providing data and information to LADF to support the implementation and growth of the program at City of Compton.

As such services are more fully discussed in the City's **Request for Proposals – "Baseball Coordinator Description RFP",** dated August 7, 2019, and the Consultant's **"Proposal – "Baseball Coordinator Description RFP",** dated September 3, 2019, 2020, both of which are incorporated herein.

Coordinator acknowledges that in entering into this Agreement the City is relying on Consultant's special skills and experience to do and perform the services in

accordance with generally accepted standards of professional practice. While performing the services, Consultant agrees to perform all the said services and furnish all the necessary materials at its own cost and expense necessary to complete said services in a manner consistent with that degree of care and skill ordinarily exercised by members of the same profession currently practicing under similar circumstances and to the reasonable satisfaction of the City.

Coordinator services hereunder shall be performed in good, workmanlike and professional manner. Consultant shall be responsible for correcting and completing all errors and omissions related to the services provided by the Consultant for this Agreement at no additional cost to the City. "Errors" and "Omissions" for purposes of this paragraph are defined to mean a failure by the Consultant to meet the standards of its profession as set forth in the preceding paragraph. The acceptance of the services by City does not release Consultant from these obligations.

Coordinator will be responsible for employing or engaging all persons necessary to perform the services. All of Consultant's staff will be qualified by training and experience to perform their assigned tasks. Consultant will give its personal attention to the fulfillment of the provisions of this Agreement by all of its employees and sub-contractors, if any, and will keep the services under its control. On request of City, if any employee or sub-contractor of Consultant fails or refuses to carry out the provisions of this Agreement or appears to be incompetent or to act in a disorderly or improper manner, Consultant will discharge said employee or sub-contractor from performing services pursuant to provisions of this Agreement.

Name, title of Coordinator shall be primarily responsible for representing Coordinator in performance of this Agreement.

Aubrey Relf, Grants Manager, is hereby designated as the City's Representative for this Project/Agreement.

2. Duration of Contract. The term of this Agreement shall commence on Notification to Proceed from the City to the Coordinator and shall terminate upon completion of the services to be performed (i.e. completion of Dodger DreamTeam Programs).

Coordinator will generally adhere to any schedule set forth by the City provided, that City will grant reasonable extensions of time for the performance of the services occasioned by unusually lengthy governmental reviews of Consultant's Work Product or other unavoidable delays occasioned by unforeseen circumstances; provided, further, that such unavoidable delay will not include strikes, lockouts, work stoppages, or other labor disturbances conducted by, or on behalf of, Consultant's officers or employees.

Coordinator acknowledges the importance to City of City's schedule and agrees to put forth its best professional efforts to perform the services in a manner consistent with that schedule. City understands, however, that Consultant's performance must be governed by sound practices. Consultant will work such overtime or engage such

personnel and equipment as necessary to maintain the schedule, without additional compensation.

3. Compensation. The method of payment for performance of all of the agreed services pursuant to this Agreement will be on an agreed time and material lump sum basis of a not-to-exceed amount of **Thirty Thousand Dollars ($30,000.00).** Unless otherwise agreed by the Parties in writing, the total price paid the Consultant will include compensation for all work, including travel, materials, supplies, vendor services, expenses and subcontracted work. No additional compensation will be paid to the Consultant, unless there is a change in the scope of the work or the scope of the project. In the instance of a change in the scope of work or scope of the project, adjustment to the total compensation will be negotiated between the Consultant and the City. Adjustment in the total compensation will not be effective until authorized and approved in writing by the Parties.

If Consultant fails to submit required deliverables according to schedule or as required by the Agreement, except for those amounts that are due and not reasonably in dispute, the City shall have the right to delay payment and/or terminate this Agreement in accordance with the provisions noted herein.

Consultant shall be reimbursed within thirty (30) days, or as promptly as fiscal procedures may permit, upon receipt by the City of itemized invoices for services completed. Invoices shall be submitted no later than 45 calendar days after the performance of services for which the Consultant is billing. Invoices shall detail the services performed. Invoices shall be delivered or mailed to the **Grants Manager** at the following address: **City of Compton, 205 South Willowbrook Avenue, Compton, California 90220.**

In the event of termination, the Consultant shall be entitled to compensation for the undisputed reasonable value of services performed to the effective date of termination, including any non-cancellable obligations incurred prior to termination; provided, however, that the City may condition payment of such compensation upon the Consultant's delivery to the City of any and all City property, documents, reports, records, materials and work product associated with the performance of this Agreement.

4. Ownership of Materials. All product produced by Consultant or its agents, employees, and subcontractors pursuant to this Agreement (the "Work Product") is the property of City, excluding proprietary and intellectual information, and program processes to be agreed upon on a case by case basis. In the event this Agreement is terminated, all Work Product produced by Consultant or its agents, employees and subcontractors pursuant to this Agreement will be delivered to City pursuant to the termination clause of this Agreement.

The Work Product may be used by City and its agents, employees, representatives, and assigns, in whole or in part, or in modified form, for all purposes City may deem advisable, without further employment of or payment of any compensation to Consultant; provided, however, that if this Agreement is terminated for any reason prior to completion of the Project and if under such circumstances City uses, or engages the

services of and directs another consultant to use the Work Product, City agrees to hold Consultant harmless from any and all liability, costs, and expenses relative to claims arising out of matters and/or events which occur subsequent to the termination of this Agreement as a result of causes other than the

fault or negligence of Consultant, or anyone for whose acts it is responsible, in preparation of the Work Product. Consultant will not be responsible for deficiencies attributable to modifications of the Work Product performed by others, or that arise from use of the Documents in connection with a project or site other than that shown in the Work Product.

5. Independent Contractor Status. Consultant, its officers, employees, subcontractors, agents and volunteers (collectively hereinafter the "Consultant"), is a wholly independent Consultant and not an officer, employee, subcontractor or agent of the City of Compton, and is not authorized to act on behalf of the City. Neither the City nor any of its officers, employees, agents or volunteers shall have any control over the conduct of the Consultant, except as expressly set forth in this Contract. Consultant expressly warrants that while engaged in carrying out and complying with any terms and conditions of this Contract that Consultant shall not at any time or in any manner, represent that Consultant is in any manner officers, employees, agents or volunteers, joint venture or partner of the City. Consultant shall obtain no rights to retirement, health care or any other benefit that accrue to City officials, officers, or employees. Consultant expressly waives any claim to such rights. Consultant will not be eligible for any employee benefits, nor will City make deductions from any amounts payable to Consultant of taxes or insurance. All payroll and employment taxes, insurance, and benefits shall be the sole responsibility of Consultant. Consultant retains the right to provide services for others during the term of this Contract.

The payment(s) made to Consultant pursuant to the Agreement will be the full and complete compensation to which Consultant is entitled. City will not make any federal or state tax withholdings on behalf of Consultant or its agents, employees or subcontractors. City will not pay any workers' compensation insurance, retirement contributions or unemployment contributions on behalf of Consultant or its employees or subcontractors. Consultant agrees to indemnify and pay City within thirty (30) days for any tax, retirement contribution, social security, overtime payment, unemployment payment or workers' compensation payment which City may be required to make on behalf of Consultant or any agent, employee, or Consultant of Consultant for work done under this Agreement. At the City's election, City may deduct the amounts paid pursuant to this Section, from any balance owing to Consultant.

6. Successors, Assignment and Delegation. City and the Consultant each binds themselves, their partners, successors, assigns and legal representatives to the other hereto and to partners, successors, assigns and legal representatives of such other party in respect to all covenants, agreements and obligations contained in this Agreement.

The expertise and experience of Consultant are material considerations for this Agreement. Consultant shall not assign or transfer any interest in this Agreement or the performance of any of Consultant's obligations under this Agreement without the prior

written consent of the City. Any attempted assignment or transfer of any of Consultant's rights, duties or obligations arising under this Agreement shall be null and void.

7. Nondiscriminatory Employment Practices. During the performance of this Agreement, the Consultant agrees not to discriminate against any employee or applicant for employment because of race, sex, creed, color, religion, age, sexual orientation, marital status, national origin, political affiliation, handicap or belief in accordance with requirements of City, State or Federal laws and regulations. Consultant will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, sex, creed, color, religion, age, sexual orientation, marital status, national origin, political affiliation, handicap or belief in accordance with requirements of City, State or Federal laws and regulations. Such actions shall include, but not be limited to the following: employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoffs or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Consultant agrees to post in conspicuous places, available to employees, applicants and subcontractors for employment, notices setting forth the provisions of this non-discrimination clause.

In the event of the Consultant's non-compliance with the non-discrimination clause of this Agreement, this Agreement may be immediately canceled, terminated or suspended in whole or in part.

8. Subcontracting. Consultant's services are unique and personal. Except as may be specified in Consultant's Proposal and agreed to by the City, Consultant will not subcontract any portion of the services without prior written approval of City Manager or his/her designee. If Consultant subcontracts any of the services, Consultant will be fully responsible to City for the negligent acts, errors and omissions of Consultant's subcontractor and of the persons either directly or indirectly employed by the subcontractor, as Consultant is for the negligent acts and omissions of persons directly employed by Consultant. Nothing contained in this Agreement will create any contractual relationship between any subcontractor of Consultant and City. Consultant will be responsible for payment of subcontractors. Consultant will bind every subcontractor and every subcontractor of a subcontractor by the terms of this Agreement applicable to Consultant's work unless specifically noted to the contrary in the subcontract and approved in writing by City.

9. Other Consultants. The City reserves the right to employ other consultants in connection with the services.

10. Indemnification. Consultant shall indemnify and save harmless the City, its officials, officers, employees, agents and volunteers (collectively hereinafter the "City"), against any and all damages to property or injuries to or death of any person or persons, including property and employees or agents of the City and shall indemnify and save the City from any and all liability and expense including reimbursement of reasonable defense costs and legal fees, and claims, demands, suits, actions or proceedings of any kind or nature, including Workers' Compensation claims, of or by anyone whomsoever to the extent resulting from or arising out of the negligent, reckless or willful misconduct for the

Consultant, its officers, employees, sub-consultants, subcontractors or agents in the performance of the duties undertaken by Consultant pursuant to this Agreement.

This indemnification and hold harmless obligation does not extend to claims arising out of the negligence or willful misconduct of the City.

11. Insurance. Without limiting the Consultant's indemnification of the City, Consultant shall obtain and maintain, at its cost and expense, for the duration of the Agreement and any and all amendments, insurance against claims for injuries to persons or damage to property which may arise out of or in connection with performance of the services by Consultant or Consultant's agents, representatives, employees or subcontractors. The insurance will be obtained from an insurance carrier admitted and authorized to do business in the State of California. Such evidence shall specifically identify this Agreement and shall contain express conditions that the City is to be given written notice at least thirty (30) days in advance of any termination or implementation of a reduction of limits or material change of insurance coverage as specified herein. ***Failure on the part of the Consultant to procure or maintain insurance shall constitute a material breach upon which the City may immediately terminate this Agreement***. All insurance required hereunder shall be primary with respect to any insurance maintained by the City.

Coverage's and Limits. Consultant will maintain the types of coverage's and minimum limits indicated below, unless the City Manager, in consultation with the City Attorney approves a lower amount. These minimum amounts of coverage will not constitute any limitations or cap on Consultant's indemnification obligations under this Agreement. City, its officers, agents, volunteers and employees make no representation that the limits of the insurance specified to be carried by Consultant pursuant to this Agreement are adequate to protect Consultant. The coverage will contain no special limitations on the scope of its protection to the below-designated insureds except for Workers Compensation and errors and omissions insurance. Consultant will obtain occurrence coverage, excluding Professional Liability, which will be written as claims-made coverage. If Consultant believes that any required insurance coverage is inadequate, Consultant will obtain such additional insurance coverage, as Consultant deems adequate, at Consultant's sole expense.

11.1 Commercial General Liability Insurance. $1,000,000 combined single-limit per occurrence for bodily injury, personal injury and property damage. If the submitted policies contain aggregate limits, general aggregate limits will apply separately to the work under this Agreement or the general aggregate will be twice the required per occurrence limit.

11.2 Workers' Compensation and Employer's Liability. Workers' Compensation limits as required by the California Labor Code and Employer's Liability limits of $1,000,000 per accident for bodily injury. Workers' Compensation and Employer's Liability insurance will not be required if Consultant has no employees and provides, to City's satisfaction, a declaration stating this.

11.3 Professional Liability. Errors and omissions liability appropriate to Consultant's profession with limits of not less than $1,000,000 per claim. The coverage shall also provide an extended two (2) year reporting period commencing upon termination or cancellation of this Agreement.

Endorsements. For Commercial General Liability Insurance, Consultant will ensure that the policies are endorsed to name the City of Compton and its respective elected and appointed officers, officials, employees, agents and volunteers as "additional insured's" with respect to liability arising out of the contractual activities of the Consultant. Any failure to comply with reporting provisions of the policies shall not affect coverage provided to the City. ***Prior to City's execution of this Agreement, Consultant will furnish certificates of insurance and endorsements to City.***

Waiver of Subrogation. The policies shall contain a waiver of subrogation for the benefit of City.

12. Permits and Licenses. Consultant, at its own expense, during the term of this Agreement, shall obtain and maintain all appropriate business and professional permits, licenses and certificates that may be required in connection with the performance of services by the Consultant. Upon execution of this Agreement, the Consultant shall show evidence of a business license permit in conformance with *Section 9-1.2* of the *Compton Municipal Code*.

13. Maintenance of Records. Consultant will maintain complete and accurate records with respect to costs incurred under this Agreement. All records will be clearly identifiable. Consultant will allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of records and any other documents created pursuant to this Agreement. Consultant will allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of three (3) years, or longer if required by law, from the date of final payment under this Agreement.

14. Warranties. Consultant represents (i) that Consultant has no obligations, legal or otherwise, inconsistent with the terms of this Agreement or with Consultant's undertaking this relationship with City, (ii) will exercise the professional standard of care in the performance of the services called for by this Agreement not violate any applicable law, rule or regulation or any proprietary or other right of any third party, (iii) that Consultant will not use in the performance of his responsibilities under this Agreement any confidential information or trade secrets of any other person or entity and (iv) that Consultant has not knowingly entered into or will enter into any agreement (whether oral or written) in conflict with this Agreement.

15. General Compliance with Laws. Consultant will keep fully informed of federal, state and local laws and ordinances and regulations which in any manner affect those employed by Consultant, or in any way affect the performance of the services by Consultant. Consultant will at all times observe and comply with these laws, ordinances, and regulations and will be responsible for the compliance of the services with all applicable laws, ordinances and regulations. In the event the Consultant encounters any

conflict between such laws and ordinances, Consultant shall notify the City in writing and the parties agree to work cooperatively to resolve the conflict.

16. Termination. In the event of the Consultant's failure to prosecute, deliver, or perform the services, after giving written notice of default and five (5) days to correct the same, then, in addition to any other remedies, City may terminate this Agreement for nonperformance by notifying Consultant in writing. Consultant has five (5) business days to deliver any documents owned by City and all work in progress to City address contained in this Agreement. City will make a determination of fact based upon the work product delivered to City and of the percentage of work that Consultant has performed which is usable and of worth to City in having the Agreement completed. Based upon that finding City will determine the final payment of the Agreement. In the event City elects to terminate, City will have the right to immediate

possession of all Work Product and work in progress prepared by Consultant, whether located at the project site, at Consultant's place of business, or at the offices of a sub-consultant.

The City's obligation is payable only from funds appropriated for the purpose of this Agreement. All funds for payments after the end of the current fiscal year are subject to the City's legislative appropriation for this purpose. In the event this Agreement extends into succeeding fiscal year periods and the City Council does not allocate sufficient funds for the next succeeding fiscal year payments, this Agreement shall terminate immediately upon written notice from the City.

Either Party, upon tendering ten (10) calendar days written notice to the other Party, may terminate this Agreement for convenience. In this event and upon request of City, Consultant will assemble the work product without charge and put it in order for proper filing and closing and deliver it to City. Consultant will be paid for work performed to the termination date; however, the total will not exceed the lump sum fee payable under this Agreement. City will make the final determination as to the portions of tasks completed and the compensation to be made.

17. Force Majeure. In the event that performance by either party is rendered impossible (permanently or temporarily) due to acts of war, acts of terrorism, fires, floods, epidemics, quarantine restrictions, or other natural occurrences, strikes, work slowdowns, lockouts (other than lockout by Consultant), or other similar acts to those described above or other causes beyond the reasonable control of such party, and without fault or negligence, said event shall excuse performance by such party, or in the case of temporary impossibility, shall excuse performance only for a period commensurate with the period of impossibility. Notwithstanding the foregoing, City shall have the right to terminate this Agreement upon any event that renders performance impossible. In such case, City shall be responsible for payment of compensation for the reasonable value of services rendered to the point at which this Agreement is terminated, but in no event to exceed the total lump sum fee payable under this Agreement.

18. Covenants Against Contingent Fees. Consultant warrants that Consultant has not employed or retained any company or person, other than a bona fide employee working for Consultant, to solicit or secure this Agreement, and that Consultant has not paid or agreed to pay any company or person, other than a bona fide employee, any fee, commission, percentage, brokerage fee, gift, or any other consideration contingent upon, or resulting from, the award or making of this Agreement. For breach or violation of this warranty, City will have the right to terminate this Agreement for nonperformance, or, in its discretion, to deduct from the Agreement price or consideration, or otherwise recover, the full amount of the fee, commission, percentage, brokerage fees, gift, or contingent fee.

19. Certifications. The Contractor, under penalty of perjury, certifies that, except as noted below, he/she/it or any other person associated therewith in the capacity of owner, partner, director, officer, manager:

.a Is not currently under suspension, debarment, voluntary exclusion, or determination of ineligibility by any Federal, State or local agency; and

.b Has not been suspended, debarred, voluntarily excluded or determined ineligible by any Federal, State or local agency within the past 3 years; and

.c Does not have a proposed debarment pending; and

.d Has not been indicted, convicted, or had a civil judgment rendered against him/her/it by a court of competent jurisdiction in any matter involving fraud or official misconduct in connection with obtaining, attempting to obtain, or performing a public (Federal, state or local) transaction or contract under a public transaction; violation of Federal or state antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property within the past 3 years; and

.e Are not presently indicted or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in the preceding paragraph; and

.f Have not had one or more public transactions (Federal, State or local) terminated for cause or default within the past 3 years.

If there are any exceptions to this certification, insert the exceptions in the following space.

[Supply exceptions on separate page]

For any exception noted above, indicate below to whom it applies, initiating agency, and dates of action.

[Attach separate page]

These certifications are a material representation of fact upon which reliance was placed when this transaction was made or entered into. The above certifications are part of this Contract. Signing this Contract on the signature portion thereof shall also constitute signature of the above Certifications.

Harold Johnson **Date**

20. Jurisdiction, Venue and Governing Law. Any action at law or in equity brought by either of the Parties for the purpose of enforcing a right or rights provided for by this Agreement will be tried in a court of competent jurisdiction in the County of Los Angeles, State of California, and the Parties waive all provisions of law providing for a change of venue in these proceedings to any other county. This agreement will be governed by the laws of the State of California.

21. Testimony. Consultant will testify at City's request if litigation is brought against City in connection with Consultant's services under this agreement. Unless the action is brought by Consultant, or is based upon Consultant's actual or alleged negligence or other wrongdoing, City, upon prior written agreement with Consultant will compensate Consultant for time spent in preparation for testimony, testimony, and travel at Consultant's standard hourly rates at the time of actual testimony.

22. Waivers. The waiver by either Party of any breach or violation of any term, covenant, or condition of this Agreement or of any applicable law will not be deemed to be a waiver of such term, covenant, condition or law or of any subsequent breach or violation of same or of any other term, covenant, condition or law. The acceptance by either Party of any fee or other payment which may become due under this Agreement will not be deemed to be a waiver of any preceding breach or violation by the other Party of any term, covenant, or condition of this Agreement or any applicable law.

23. Authority. The individuals executing this Agreement each represent and warrant that they have the legal power, right and actual authority to bind their respective Party to the terms and conditions of this Agreement.

24. Severability. If any term, provision, condition or covenant of this Agreement or its application to any party or circumstances shall be held, to any extent, invalid or unenforceable, the remainder of this Agreement, or the application of the term, provision, condition or covenant to persons or circumstances other than those as to whom or which it is held invalid or unenforceable, shall not be affected, and shall be valid and enforceable to the fullest extent permitted by law.

25. Confidentiality. All documents, reports, information, data, and exhibits prepared or assembled by Consultant in connection with the performance of the Services pursuant to the Agreement are confidential until released by the City to the public, and the Consultant will not make any of these documents or information available to any individual or organization not employed by the Consultant or the City without the written consent of the City before any such release.

26. Amendments. This Agreement may be modified or amended only be written document executed by both Consultant and City's City Manager and approved as to form by the City Attorney. Such document shall expressly state that it is intended by the parties to amend the terms and conditions of this Agreement.

27. Entire Agreement. This Agreement, together with any other written document referred to or contemplated by it embody the entire Agreement and understanding between the parties relating to the subject matter of it. The City Manager is authorized, in consultation with the City Attorney, to agree to non-material amendments to this Agreement. Neither this Agreement nor any of its provisions may be amended, modified, waived or discharged except in a writing signed by both parties.

28. Notices. Any notices required or permitted under this Agreement shall be effective when delivered in person; and effective one (1) business day after delivery by facsimile transmission; and effective five (5) days after mailing by U.S. Mail, postage prepaid and properly addressed as follows:

To Coordinator:	**Harold Johnson** **4935 ½ Hayter Avenue** **Lakewood, California 90712** **(323) 667-6395**
To City:	**City of Compton** **205 South Willowbrook Avenue** **Compton, California 90220** **Attn: Aubrey Relf, Grants Manager** **(310) 605-5500**

In the event of any change of address, the moving party is obligated to notify the other party of the change of address in writing. Each party may amend, supplement and update the notice list to add, delete or replace any listed individuals; however, the amendment must be in writing.

29. Miscellaneous. No provision of this Agreement is to be interpreted for or against either party because that party or that party's legal representative drafted such provision.

Should either party hereto, or any representative, successor or assign of either party hereto, resort to litigation to enforce the provisions of this Agreement, the party or parties prevailing in such litigation shall be entitled, in addition to such other relief as may be granted, to recover its or their reasonable attorney's fees and costs in such litigation from the party or parties against whom enforcement is sought.

IN WITNESS WHEREOF, CONSULTANT has executed this Agreement, and the **CITY**, by its City Manager, who is authorized to do so, has executed this Agreement.

July 12, 2022

TO: **HONORABLE MAYOR AND CITY COUNCIL**

FROM: **MUNICIPAL WATER DEPARTMENT**

SUBJECT: **A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON AUTHORIZING THE CITY MANAGER TO ISSUE A PURCHASE ORDER TO THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD TO REPAY UNSPENT MONEY FROM THE CALIFORNIA WATER AND WASTEWATER ARREARAGE PAYMENT PROGRAM GRANT IN THE AMOUNT OF ONE HUNDRED FIFTEEN THOUSAND EIGHT HUNDRED NINETY-THREE DOLLARS AND FIFTY-EIGHT CENTS ($115,893.58)**

SUMMARY

This resolution requests that City Council authorize the City Manager to issue a purchase order to the California State Water Resources Control Board (State Water Board) to repay unspent money from the California Water and Wastewater Arrearage Payment Program (Water Arrearages Program) grant in the amount of $115,893.58.

BACKGROUND

The COVID-19 pandemic made it difficult for many Californians to pay their bills due to job loss and other hardships. As a result, many water systems throughout California that provide water services to customers were financially impacted. The hardships suffered led to the State Water Board creating the California Water and Wastewater Arrearage Payment Program to provide financial relief to community water and wastewater systems for their customer's unpaid bills related to the pandemic, through $985,000,000 in federal funding, which was allocated by the State Legislature.

On September 21, 2021, the State Water Board adopted the final guidelines for the Water Arrearages Program, which came with strict stipulations on how the money was to be allocated to customer accounts. The stipulations also detailed that any amount that did not meet the final guidelines must be returned to the State Water Board. The funds were to be used to cover drinking water charges from residential and commercial customers accrued between March 4, 2020 and June 15, 2021, including both active and deleted accounts; the grant could also be used to cover the administrative costs that are associated with administering the program.

On October 11, 2021, the Municipal Water Department (Department) submitted the application for the Water Arrearages Program grant, and we were notified of an award in the amount of $704,973.91, on November 17, 2021. Ultimately, the City received the grant funds on November 29, 2021. The funds were accepted on December 21, 2021, when

City Council adopted Resolution No. 25,595; which amended the Department's 2021-2022 Fiscal Year Budget to accept and appropriate funds from the State Water Board in the amount of $704,973.91, and facilitated implementation of the Department's proposed activities for the funds.

STATEMENT OF THE ISSUE

The final program guidelines required that the Department allocate the funds towards eligible customer accounts within 60 days from the date the check was received (November 29, 2021). In order for a customer to be deemed eligible, per program guidelines, the customer had to have unpaid water debt that was accrued between March 4, 2020 and June 15, 2021 that remained unpaid as of December 22, 2021. If a customer made any payment(s) towards their outstanding balance, the amount of bill credit they received would be lowered or eliminated, depending on the customer's payment amount.

When the Department applied for grant funds in October 2021, we requested $684,440.69 for bill credits to residential and commercial customer accounts, and $20,533.22 in administrative costs for administering the program, because at that time that was the maximum amount we could request that was aligned with program guidelines.

The following table conveys the proposed use of funds:

	No. Of Accounts	Amount
Residential	1,245	$563,258.43
Commercial	98	$121,182.26
Subtotal	**1343**	**$684,440.69**
Administrative Costs (3%)		$20,533.22
Total		**$704,973.91**

The Department attempted to expend the funds as quickly as possible to ensure the funds were allocated to every account that continued to meet state guidelines. City Council accepted the funds on December 21, 2021, and the Department applied the funds in the form of bill credit to all eligible accounts on December 22, 2021 and December 23, 2021.

The following table conveys how grant funds were ultimately allocated:

	No. Of Accounts	Amount
Residential	993	$500,816.22
Commercial	82	$81,585.41
Subtotal	**1075**	**$582,401.63**
Administrative Costs		$6,678.70
Total		**$589,080.33**

The difference between the amount requested and the amount allocated to customer accounts is directly contributed to the fact that there were customers who paid their

delinquent water debt that was accumulated between March 4, 2020 and June 15, 2021, after we applied for grant funds, but before the funds could be allocated towards their accounts, which made them ineligible to receive the bill credit, per state guidelines.

ALTERNATIVES

There are no alternatives, unspent funds are required to be returned to the State Water Board.

FISCAL IMPACT

There is no fiscal impact associated with repayment of the Water Arrearages Program grant funds, as the funds are recorded in unearned revenue:

ACCOUNT NO.	DESCRIPTION	AMOUNT
2686-000-000-2093	Unearned Grant Revenue	$115,893.58

RECOMMENDATION

Staff recommends that City Council adopt the attached resolution, which authorizes the City Manager to issue a purchase order to the State Water Board to repay unspent money from the Water Arrearages Program grant in the amount of $115,893.58

DON NGUYEN
WATER DEPARTMENT GENERAL MANAGER

APPROVED FOR FORWARDING:

_____
CITY CLERK OF THE CITY OF COMPTON

July 12, 2022

TO: **MAYOR AND CITY COUNCIL MEMBERS**

FROM: **MUNICIPAL WATER DEPARTMENT**

SUBJECT: **A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON AUTHORIZING THE CITY MANAGER TO ISSUE A PURCHASE ORDER TO WATERLINE TECHNOLOGIES, INC. FOR THE FURNISHING AND DELIVERY OF CHLORINE CHEMICALS IN THE AMOUNT OF ONE HUNDRED FIFTY THOUSAND DOLLARS ($150,000.00)**

SUMMARY

Adoption of this resolution will authorize the City Manager to issue a purchase order to Waterline Technologies, Inc. in the amount of $150,000.00 annually, for the Furnishing and Delivery of Chlorine Chemicals for the following three (3) Fiscal Years, 2022-2023, 2023-2024, and 2024-2025.

BACKGROUND

The Municipal Water Department ("Department") is responsible for overseeing the City's utility services. The Water Operations and Production Divisions are responsible for constructing, inspecting, maintaining and repairing the City's water mains, gate valves, fire hydrants, and water services to provide adequate potable water to citizens and businesses of Compton.

The Department follows State and Federal Health Regulations for the disinfection of public water supplies. The disinfection step provides the required levels to ensure the adequate inactivation of viruses and bacteria in the source water supplies that are delivered to the public. Therefore, it is crucial to operations to acquire the furnishing and delivery of chlorine chemicals for the Department's water supply.

STATEMENT OF THE ISSUE

On March 28, 2022, the Department opened the Request for Proposal (RFP) process to solicit bids for the Furnishing and Delivery of Chlorine Chemicals. The Department attempted to solicit quotes from three (3) reputable chlorine chemical companies; however, upon the submission deadline of April 28, 2022, we were only able to garner responses from two (2) companies.

The companies and responses are listed below:

Vendor	Purchase Price
Waterline Technologies, Inc.	**$138,308.63**
Northstar Chemical	$250,250.00

After a thorough review of the submitted quotes, staff has determined that Waterline Technologies, Inc. was deemed the lowest responsive and responsible bidder. Furthermore, due to the nature of market conditions on the supply, the pricing for the term of the contract must reflect actual market conditions. Pricing will remain stable for at least 90 days, but may be subject to an increase at any time throughout the life of the agreement, depending solely upon the actual price per gallon of Sodium Hypochlorite. The current quote of $138,308.63 is based on the current price of Sodium Hypochlorite, which is $1.93 per gallon; this amount is not guaranteed to remain the same throughout this agreement. Therefore, the Department is including a request for an additional $11,691.37 to cover any fluctuations in the cost of Sodium Hypochlorite during the agreement, which bring the total amount to $150,000.00, per year.

ALTERNATIVES

Staff does not recommend any alternatives.

FISCAL IMPACT

Funds will be allocated annually during the budget development process in the Department's Chemical Purchases Account, upon adoption of those budgets.

Account No.	Account Description	Amount
5000-870-000-4340	Chemical Purchases	$150,000.00

RECOMMENDATION

Staff recommends that Council adopt the attached Resolution, which authorizes the City Manager to issue a purchase order to Waterline Technologies, Inc. in the amount of $150,000.00 annually for the Furnishing and Delivery of Chlorine Chemicals for the following three (3) Fiscal Years, 2022-2023, 2023-2024, and 2024-2025.

CITY CLERK OF THE CITY OF COMPTON

July 12, 2022

TO: **MAYOR AND CITY COUNCIL MEMBERS**

FROM: **MUNICIPAL WATER DEPARTMENT**

SUBJECT: **A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COMPTON AUTHORIZING THE CITY MANAGER TO ISSUE A PURCHASE ORDER TO FERGUSON WATERWORKS FOR THE DELIVERY OF STORE SUPPLIES FOR STOCKING OF THE WATER WAREHOUSE, RPM POLYMER CONSTRUCTION METER BOXES AND COVERS, LEAD FREE MULTI JET WATER METERS, FIRE HYDRANTS, AND GATE VALVES IN THE AMOUNT OF SIX HUNDRED NINETY-FOUR THOUSAND ONE HUNDRED TWENTY-THREE DOLLARS AND FOURTEEN CENTS ($694,123.14)**

SUMMARY

Adoption of this resolution will authorize the City Manager to issue a purchase order to Ferguson Waterworks in the amount of $694,123.14 annually for the Delivery of Store Supplies for Stocking of the Water Warehouse, RPM Polymer Construction Meter Boxes and Covers, Lead Free Multi Jet Water Meters, Fire Hydrants, and Gate Valves for the following three (3) Fiscal Years, 2022-2023, 2023-2024, and 2024-2025.

BACKGROUND

The Municipal Water Department (Department) is responsible for overseeing the City's utility services. The Water Operations and Production Divisions are responsible for constructing, inspecting, maintaining and repairing the City's water mains, gate valves, fire hydrants, and water services to provide adequate potable water to the citizens and businesses of Compton.

It is imperative that the Department maintain a reliable company that provides industrial supplies, such as meter boxes and covers, water meters, fire hydrants, and gate valves; which ensures the Water Operations and Production Divisions possess the adequate equipment needed to execute their daily tasks. Furthermore, by maintaining a company who provides the essentials needed to maintain our water system will enable us to continue delivering potable water to the citizens and businesses of Compton.

STATEMENT OF THE ISSUE

On March 28, 2022, the Department opened the Request for Proposal (RFP) process to solicit bids for the Delivery of Store Supplies for Stocking of the Water Warehouse, RPM

Polymer Construction Meter Boxes and Covers, Lead Free Multi Jet Water Meters, Fire Hydrants, and Gate Valves, which closed on April 28, 2022. The Department received quotes from four (4) industrial supply companies.

The companies and responses are listed below:

Vendor	**Purchase Price**
Core & Main	$705,369.14
Brandon Supply Corporation	$1,289,878.68
Ferguson Waterworks	**$694,123.14**
So. Cal. Compton Pipe Supply Co.	$515,834.14 (Incomplete Proposal)

After a thorough review of the quotes submitted, staff has determined that Ferguson Waterworks was deemed the lowest responsive and responsible bidder. Unfortunately, So. Cal. Compton Pipe Supply Co. did not submit a complete quote; therefore, they were unable to be considered for the project.

ALTERNATIVES

Staff does not recommend any alternatives.

FISCAL IMPACT

Funds in the amount of six hundred ninety-four thousand one hundred twenty-three dollars and fourteen cents ($694,123.14) will be allocated annually during the budget development process in the following accounts:

- Meter Exchange Expense Account
- Vault Maintenance Account
- Gate Valve Maintenance Account
- Maintenance/Repair-Hydrants Account
- Store Purchases (Inventory) Account

ACCOUNT NO.	**ACCOUNT DESCRIPTION**	**AMOUNT**
5000-860-000-4235	Store Purchases (Inventory)	$25,000.00
5000-870-000-4235	Store Purchases (Inventory)	$25,000.00
5000-880-000-4235	Store Purchases (Inventory)	$344,123.14
5000-880-000-4757	Maintenance/Repair-Hydrants	$100,000.00
5000-880-000-4762	Gate Valve Maintenance	$100,000.00
5000-880-000-4763	Vault Maintenance	$40,000.00
5000-880-000-4764	Meter Exchange Expense	$60,000.00

RECOMMENDATION

Staff recommends that Council adopt the attached Resolution, which authorizes the City Manager to issue a purchase order to Ferguson Waterworks in the amount of $694,123.14 annually for the Delivery of Store Supplies for Stocking of the Water Warehouse, RPM Polymer Construction Meter Boxes and Covers, Lead Free Multi Jet Water Meters, Fire Hydrants, and Gate Valves for the following three (3) Fiscal Years, 2022-2023, 2023-2024, and 2024-2025.
