Re: Docket No.: [M-2025-3054271](#)

Thank you for the opportunity to comment on the Data Center (High Energy Demand Grid Development). I have several concerns – most of which are noted in other’s comments. One issue that I do not see noted is the potential for increased fossil fuel consumption.

Although Pennsylvania has a rich abundance of fossil fuels, burning these would cause more problems for our environment. The potential increase in fracking and burning of natural gas could cause great harm to our land, water and air. There may be a way to tie the use of data centers to using more green energy sources or to use some additional fees to allow for quicker growth of green energy sources.

Sincerely,
