Winter 2024-2025 Review

1. What was your utility's experience with 2024-2025 winter operations?  
GCREC experience with the 2024-25 winter went pretty well and was good, as we had no problems.
2. Did your utility experience any difficulty procuring generation fuel or any significant increases in purchased generation fuel prices?  
GCREC did not have any issues with our fuel prices and or getting fuel.
3. Did your utility experience any unique event(s) that distinguished this winter's operations compared to prior winters?  
GCREC did not have anything happen to cause any problems in our operations.
4. Did your utility experience higher or lower locational marginal prices (LMPs) compared to last winter? What will be the potential impact of the LMPs to ratepayers?  
GCREC had no impact to our ratepayers stayed level.

Summer 2025 Preparedness

5. Is your utility ready to reliably serve peak load for summer 2025? Provide details.  
Yes, we are always reliable and ready to serve peak load.
6. What steps has your utility taken in preparation to reliably serve peak load for summer 2025? GCREC are in the process of building 2 new substation on our system.
7. Are there any significant changes that have occurred over the last year that have caused revisions to your summer preparedness strategies?  
GCREC has no changes to our preparedness strategies.
8. Are there any new hazards, threats, or vulnerabilities that you are concerned may affect your utility's ability to reliably serve load on peak usage days?  
GCREC is not aware of any hazards, threats, or vulnerabilities that may be of concerns.
9. Does your utility have any updates to its plans for initiating and managing a systemwide load shed to protect the bulk electric system in the event of an imbalance of electricity supply and demand? If so, what are the updates?  
GCREC will plan to use the same plan that we have in place at this time. No new updates.
10. Does your utility foresee any supply chain constraints affecting natural gas or coal availability? If so, what are those constraints?  
GCREC has no foreseen supply chain constraints that will effect availabilities at this time.
11. What can the Iowa Utilities Commission or the State of Iowa do to support the reliability and resiliency of your system? None at this time.
12. North American Electric Reliability Corporation (NERC) issued its 2024 Long-Term Reliability Assessment, how do you view their concerns on energy shortfalls in the MISO region? None at this time.
13. How do these energy shortfall issues impact your decisions on long term generation planning? None at this time.
