

Do you need an AI copilot for your customer support:

the checklist

This checklist, we hope, will help you weigh the decision if you tend to move towards implementation of AI in your customer support. Tick options that correspond to your case:

- ☐ Is processing support requests in a timely manner, an issue for you at the moment?
- ☐ Are you looking for ways to speed up response times without compromising quality?
- ☐ Do your customers expect quick, personalized responses?
- ☐ Have you experienced limitations with basic chatbots delivering personalized customer service?
- ☐ Do you require a solution that can understand human intent more naturally and learn from interactions?
- ☐ Are the queries received by your customer support typically complex, requiring detailed and personalized responses?
- ☐ Do you need a system that can understand context, remember previous interactions, and adapt responses accordingly?
- ☐ Do you value an assistant who can continuously improve its responses through learning and data analysis?
- ☐ Is providing personalized support based on customers' purchase history and preferences a priority for your service?
- ☐ Is maintaining a consistent brand tone of voice and communication style across all channels important to your company?
