

# Industry-Leading Telemedicine Solution

## Telemedicine Gives Your Community A Competitive Advantage

Curavi telemedicine enables providers to virtually care for residents at the bedside. When providers are off-site nights and weekends, Curavi telemedicine can help improve patient outcomes, lower readmission rates, and control costs.

**Improve Clinical Care:**

- 98% treat-in-place rate
- 40% of consults result in an avoided hospitalization
- Communities improve clinical outcomes and get/stay in narrow networks with hospital partners and ACOs

By combining video technology and digital diagnostic tools with Curavi's network of highly trained physicians, doctors can quickly examine and treat residents virtually at their bedsides.

**Night, Weekend and Holiday Coverage:** Curavi provides a wide variety of solutions catered to the post-acute care environment.

**Seamless Care:** Timely communication with facility's care team and family members

**Highly Trained Physicians:** Small physician-only group dedicated to the community, specialized in Senior Care

**Client Service:** Dedicated support teams monitor operations and ensure program success
