

Wrist angle in a natural position!

This is the leather brace for children with the problems of strong muscle tonus caused by Cerebral palsy. It keeps a thumb out and prevent from holding it inside, and keeps wrist straight and prevent from bending unnaturally.

Using this brace on a daily basis, it helps maintaining the good condition and contributes to the rehabilitation. The appropriate rehabilitation is the most important and effective to the problems. I recommend you using this brace as the assistance for that.

It is not easy for parents to control the thumb position and the wrist angle of children for 24 hours.

Actually I invented this brace to improve the situation of my son, and the situation has been improved much with it. And I've made and sent the braces to children with the same problem in Japan for years. I will keep on brushing up this brace with the feedbacks and help more children.

Thank you.
