**CABLES, CABLES, CABLES**

# What is Fast Charge PD ?

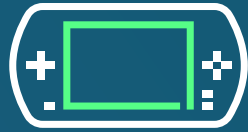

It seems like every new phone promises faster charging, but what do the different standards mean, and are they equally speedy? We break it all down for you. Being able to quickly charge your phone or tablet can mean the difference between hours of care-free use or scrambling to find the nearest coffee shop for a power outlet.

Fast charging is an increasingly popular feature that allows you to power up your device in just a fraction of the time it takes to do it the old-fashioned way. But not all products use the same type of fast charging and not all chargers support the various standards.

# About Ocean Plastic.

As part of our commitment to reduce the carbon impact of our products and operations, we are continually seeking to use new materials in the manufacture of our products that either utilise fabrics or recycled, biodegradable or recyclable plastics.

Our aim is to supply customers with over 50,000 products in 2023, to prevent 250,000 plastic bottles from our oceans or 5,000 kg of waste.

Together we can promote your brand on a valuable promotional product and promote a message of hope for our ocean's health with positive action.

## HOW IT WORKS.

### STEP 1

Plastic waste is recovered from areas that would lead plastic to end up in the Ocean (upto 30 miles)

### STEP 2

Specialist processing plants recycle the materials into blank pellets.

### STEP 3

The new material is used to manufacture new products.

# Ocean Octopus

- All in one USB charging cable, charges all types of smart phones
- Dual plug
- Recycled ocean bound plastic

**NEW**

## Allure

- USB-C & USB-A
- Fast charge cable (PD)
