SUMMARY

I am a Senior Front-end Engineer who loves to provide solutions to complex problems. With over 7 years of industry experience, I provide a combination of technical expertise, leadership and people skills. My expertise is focused on React, Vue, Typescript and Testing. Also, in my opinion, human skills are as important as technical skills, and that's why I try to apply them every day, I consider myself a team player.

PROFESSIONAL EXPERIENCE

Senior Front-end Engineer

Abacum 12/2021 - Ongoing Remote

As a Senior Front-end Engineer in a fintech startup, I apply my skills in application development with **React**, **Redux**, **Jest**, **Playwright** and **Typescript** to create a financial application with good usability, scalable, good code level and high performance that meet the needs of our customers. My daily tasks include:

- Developing and maintaining new features on the web platform using React and Redux
- Creating automated tests using Jest and Playwright to ensure reliable performance and user experience
- Continuous coordination with my Squad, working hand in hand with the Backend team, Squad Lead, Product Owner, and Design team
- Collaborating with cross-functional teams to ensure high-quality software delivery and customer satisfaction
- Review requirements and Pull Requests in GitHub in async
- Assisting the Squad Lead with organizational tasks
- Contributing ideas and improvements at a general level for all the Frontend team of the company

Senior Front-end Engineer (T-Shaped)

Angular 05/2018 - 12/2021 Madrid

Developer for internal projects at BBVA within the **Google Cloud Platform** architecture team. I used as main technology **Vue** and **Firebase** for the Front and occasionally developed with **Python3** parts of the Back. My tasks were:

- To define the architecture, libraries and components of the project, making sure they are reusable
- To maintain the quality of my code and work with my mates using Pull Request in BitBucket
- To interact with the design team to suggest changes and make sure they translate into real functionality

Front-end Engineer

Ingeniova Systems 02/2017 - 05/2018 Sevilla

- Design, accessibility, and usability of web applications with Angular 4
- Analyze and study always the client's requirements, applying clean code and best practices
- Responsible for the management of 3 corporate websites of the main client, developed with WordPress, PHP and Javascript.
