Farms Under Threat: The State of the States mapped agricultural land conversion and evaluated state policy responses. The spatial analysis identified the extent, diversity, and quality of each state’s agricultural land—and where this land has been converted to both urban and highly developed (UHD) and low-density residential (LDR) land uses.

### Illinois

**Conversion of non-federal farmland to UHD and LDR land uses from 2001-2016.** The threat to working farms and ranches is pervasive, often claiming the most productive, versatile, and resilient lands.

- **RELATIVE CONVERSION THREAT**
  - **MEDIUM**
  - Illinois scored in the middle of all states for the conversion of agricultural land to urban and highly developed (UHD) and low-density residential (LDR) uses.

- **RELATIVE POLICY RESPONSE**
  - **LOW**
  - Illinois scored among the lowest states for policies and programs that protect agricultural land from development, promote farm viability, and facilitate the transfer of agricultural land.

- **HOW IS THIS STATE DOING?**
  - Illinois is in an orange box because its conversion threat is higher than its policy response, relative to other states. Learn more at [www.farmland.org/farmsunderthreat](http://www.farmland.org/farmsunderthreat)

**Farmland** that is:
- Above state median PVR**
- Below state median PVR
- Urban areas
- Federal, forest, and other lands

*Farmland is composed of cropland, pastureland, and woodland associated with farms.

**Our productivity, versatility, and resiliency (PVR) index helps identify high-quality agricultural land (see page 2).
DEVELOPMENT THREATENS ILLINOIS’ AGRICULTURAL LAND

From 2001-2016, 244,300 acres of agricultural land were developed or compromised.

Illinois’ farmland and ranchland was converted to:
- **Urban and highly developed (UHD)** land use, including commercial, industrial, and moderate-to-high-density residential areas.
- **Low-density residential (LDR)** land use, where scattered large lot development fragments the agricultural land base and limits production, marketing, and management options for the working farms and ranches that remain.

40 TIMES MORE LIKELY to be converted to UHD by 2016, compared to other agricultural land.

ILLINOIS’ BEST AGRICULTURAL LAND IS UNDER THREAT

We used our unique **PVR index**, which quantifies the productivity, versatility, and resiliency of agricultural land, to identify:

1. **Illinois’ best land**, which has PVR values above the state median, and
2. **Nationally Significant land**, which is the country’s best land for long-term production of food and other crops. 84% of Illinois’ agricultural land, or **23,084,100 acres**, falls in this category.*

Protecting high-PVR land is critical for the long-term sustainability of agriculture, yet from 2001-2016:

- **125,600 acres** of Illinois’ best land were converted to UHD and LDR uses.
- **176,800 acres** of Illinois’ Nationally Significant land were converted.

*These two categories overlap and the same land may be included in both.

What’s at stake?

- **27,381,000 acres of agricultural land remain**
- **$17.0 billion earned from cash receipts in 2017**
  - **$165.7 million from local food**
  - **$8.2 billion from agricultural exports**
- **244,300 acres were converted—enough land to generate $152 million in annual revenue**
- **Illinois’ top 3 agricultural products**
  - Corn: $7.4 billion
  - Soybeans: $5.7 billion
  - Hogs: $1.7 billion
- **118,100 producers and 57,400 farm laborers on 72,700 farms**
- **4 times as many producers over 65 as under 35 years old**

Farms Under Threat is American Farmland Trust’s multi-year initiative to document the status of and threats to U.S. farmland and ranchland and to identify policy solutions to ensure the protection and conservation of America’s diverse agricultural landscape.
