

INFORMED CONSENT TERM (2 copies)

I, \_\_\_\_\_, RG \_\_\_\_\_, agree to participate and authorize my inclusion in the study "EFFECT OF DEXAMETHASONE, ONDANSETRONE, OR PLACEBO ON THE QUALITY OF RECOVERY AFTER THE ADMINISTRATION OF INTRATECAL MORPHINE IN PATIENTS SUBMITTED TO SURGICAL CORRECTION OF FRACTURES OF INFERIOR MEMBERS". The aim of the study was to evaluate whether or not the quality of anesthesia recovery improved after administration of dexamethasone (anti-inflammatory) or ondansetron (against vomiting). These medications are already used in other surgeries performed under general anesthesia. We want to know if it would also be helpful to improve recovery after spinal anesthesia, which is the anesthetic proposed for your surgery. It is my knowledge that my name will remain confidential and will not be publicly displayed. It has also been clarified that I will not have any cost related to any stage of the research. I am aware that I may suspend my consent if you feel impaired in any way without prejudice to my treatment of this service. Any doubts or problems that may occur should be referred to Professor Eduardo Toshiyuki Moro in the Department of Anesthesiology of the Center of Medical and Biological Sciences of Sorocaba (CCMB / PUC-SP), telephone (15) 3212 9900.

Sorocaba, \_\_\_\_\_ of \_\_\_\_\_.
