

RIGIDCORE™ TECHNOLOGY

HIGH-STRENGTH, FOAM-FILLED LID

ENHANCED
STRENGTH.

SMOOTH
OPERATION.

EXCLUSIVE
DESIGN.

RigidCore™ is a patented lid technology used in most UWS boxes. We fill the lids of our boxes with a hardening, expanding foam material, sandwiched between two durable aluminum plates.

Hidden from view, RigidCore™ technology greatly enhances the strength of the lid, far beyond that of a standard tool box.

Advantages of RigidCore™

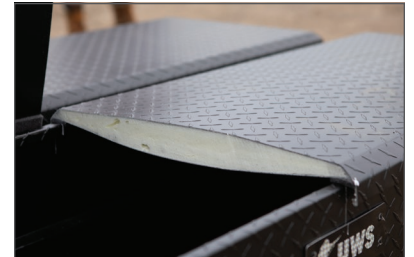

The foam-filled lid greatly enhances strength and overall structural integrity. It also helps prevent warping.

Because of its rigidity, the lid is highly resistant to binding, ensuring smooth opening and closing of the box.

Undetectable from the outside, the foam-filled lid is completely integrated with the box and hidden from view.

Unique, patented design offers more protection and durability than standard tool boxes.
