Elastic Cloud

The only Elasticsearch as a Service offering powered by the creators of the Elastic Stack

- Always runs on the latest software
- One-click to scale/upgrade with no downtime
- Free Kibana and backups every 30 minutes
- Dedicated, SLA-based support
- Easily add X-Pack features: security (Shield), alerting (Watcher), and monitoring (Marvel)
- Pricing starts at \$45 a month

Elastic Stack 5.0.0 Released

By Shay Banon

Share

In February of 2016, following Elastic{ON} 16, I wrote a post titled [Heya, Elastic Stack and X-Pack](#). Today, after almost a year of substantial effort, including 5 Alphas, 1 Beta, and 1 Release Candidate we are pleased to announce the GA release of the Elastic Stack.

And, importantly, it is available – today – on [Elastic Cloud](#). If you want hosted Elasticsearch and Kibana there is no other place to start with the most recent code. We are committed to making Elastic Cloud the best place to run

beats

**Beats are lightweight
shippers that collect and
ship all kinds of operational
data to Elasticsearch**

**Beats are lightweight
shippers** that collect and
ship all kinds of operational
data to Elasticsearch

Beats are lightweight
shippers that **collect and
ship all kinds of operational
data** to Elasticsearch

Examples of operational data

Diagram illustrating three types of operational data and the associated Elastic Beats:

- wire data** (Teal circle) associated with **Packetbeat** (light gray rectangle).
- system stats** (Yellow circle) associated with **Metricbeat** (light gray rectangle).
- logs** (Pink circle) associated with **Filebeat** and **Winlogbeat** (light gray rectangle).

```

Sniffing the network traffic

- Copy traffic at OS or hardware level
- Is completely passive
- ZERO latency overhead
- Not in the request/response path, cannot break your application

Packetbeat: Real-time application monitoring

It does all of these in real-time directly on the target servers.

Metricsbeat

Like the Unix **top** command but sends the output periodically to Elasticsearch. Also works on Windows.

Topbeat: Exported data

System wide

- system load
- total CPU usage
- CPU usage per core
- Swap, memory usage

Per process

- state
- name
- command line
- pid
- CPU usage
- memory usage

Disk usage

- available disks
- used, free space
- mounted points

Filebeat

Forwards log lines to
Elasticsearch

```

Filebeat: Never lose a log line

Filebeat: Parse logs with Logstash

Parse logs with Logstash

- Filebeat sends out unparsed log lines
- Use filters from Logstash to parse the log lines
- Flexible, with conditionals & custom filters
- Forward data to other systems using the Logstash output plugins

Filebeat: Parse logs with Ingest Node

Parse logs with Ingest node in Elasticsearch

- Filebeat sends out unparsed log lines directly to Elasticsearch
- Use Ingest Node processors (grok, geoip...) to parse the log lines
- Easier to setup

Winlogbeat

Forwards Windows Event logs
to Elasticsearch
