

“reserving judgements is the matter
of infinite **hope**”

-the great gatsby-

hello,
my name is CLEO :)
i'm from Saigon,
Vietnam.

i enjoy creating art
n designs.

saigon in my heart

to me, **art** is more than
just a piece of work,
or clothing ...

it is also a **character**,
a form of **expression**,
and a **statement**.

my goal is to discover more on
technology potentials in the
future craftsmanship of
fashion.

my work

“the bad artist imitate, the great artist steal”

~~picasso~~

BANKSY

Behind the designs - the Viet folktales

*children of
the dragon*
folklore bodysuit

100% cotton
digital print

clay pearls
necklace,
resin top coat

@colab

*the most
useless purse
in the world /
the two
lizards*
folk song

entropy resin
acrylic
broken glass
metal chain

Created with intentions to express the beauty of different skins, bodies and sizes;

the way we perceive beauty is the same way we perceive flowers, either we nurture it, or we destroy it.

made from **entropy resin**, a bio-based material.

@some_other_paintings

Growing up in a Vietnamese-Chinese household, the duality of cultural heritages and traditions have strongly influenced my passion for art. Subsequently, I tend to discover a deeper perspective of the culture through stigmas and moral values.

i want to change the view on
fashion to be more **inclusive**,
ethical and **sustainable**.

from personal to social,
from retailers to users, and in
all sizes.

fashion industries are now facing the challenge of unsolving waste.

and one of the major problems revolves around the missing link in manufacturing: **conflicting between what consumers want, and what retailers know.**

target consumers' experience through AI technology

create platforms where consumers
can be able to see themselves in the
products **virtually due to their
physique.**

by creating a vision for the
consumers:

these platforms can encourage
people to shop in a more
responsible way,

as reducing the waste stocks
among fashion industry.

furthermore,

AI tech can support retailers in analyzing data to design and adjust their products based on demands.
