

Cable tray

KRB-60-300 L=3000 XPG

Perforated cable trays are used in places where cables have to be protected underneath. Perforation enhances airflow and cools the cables installed on the tray. KRB-type trays are typically used in office- and commercial buildings, schools, hospitals and shopping centres but also in warehouses, parking halls and industrial buildings. To extend KRB cable trays joints RSS can be used. Joints RSS-40-100...500 have a special forming that allow to fasten these directly to wall or ceiling supports.
