

DeepScan

CFD[®] for Dogs

Proactive insights. Effective care. Improved health outcomes.

What is CFD

CFD helps detect diseases even before any symptoms appear. A simple blood test measuring cell destruction can reveal early signs of a wide variety of health issues, such as bone and joint disease, chronic inflammation, organ damage and cancers.

CFD and wellness checks

Many hidden illnesses begin to emerge in dogs between ages 4 and 7. From this moment on, adding CFD to your dog's regular wellness checks helps you stay a step ahead. Your dog's CFD score can be used as a personal baseline for future comparison.

Key Benefits

Proactive care

Helps you stay ahead of potential health concerns

Comprehensive detection

Catches a wide range of health-impacting diseases

Informed decisions

Supports earlier insights and better health outcomes

Trackable health marker

A personal baseline makes it easy to spot changes over time
