

# SLUDGE SILO

- The tank part of the silo is made up of welded steel plates.
- In the middle of the roof there is an inspection opening.
- There are 3 pipes with flange connections on the roof for the installation of measuring devices etc.
- A manhole in the side wall of the silo.
- The silo is equipped with shaft less screws. They are reinforced screws with a thickness of 25mm. The speed and the power are largely dimensioned to obtain the requested flow rate.
- Under the extraction screw there is a screw conveyor to bring the product to one point.
- The silo is mounted on a heavy galvanized supporting structure.

## Options:

- Handrails on the roof.
- Access ladders
- Maintenance platform under the motors.
