

'ge' and 'dge' Four in a Row

Level 6

You will need:

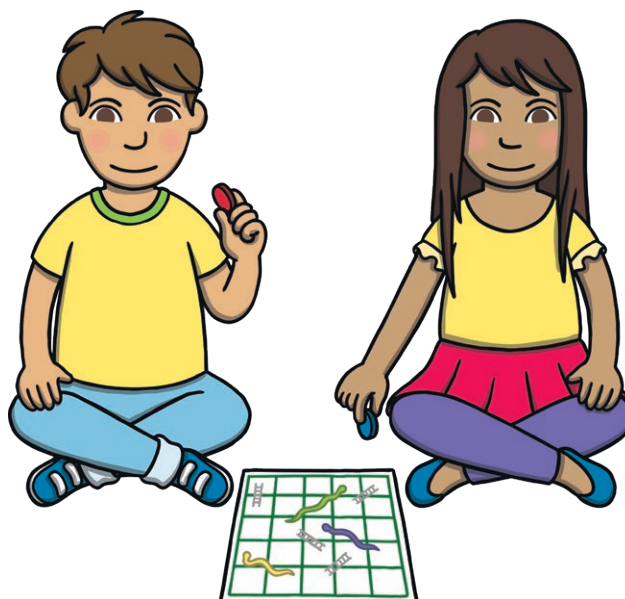

- 2 players
- 1 board
- 30 counters - 15 of one colour, 15 of another colour

How to Play:

1. One player goes first and picks a square. The player must read the 'ge' or 'dge' word.
2. If the player can read the word, they may put their counter on that square. If they cannot read the word, the square stays empty.
3. The other player picks a different square and reads the word on that square. If they can read the word, they may put their counter on that square.
4. The winner is the person who gets four of their counters in a row either vertically, horizontally or diagonally. The aim of the game is to block the other player while trying to achieve four in a row yourself.

Evidence Gathering

This game could also be played by circling the words with a coloured pencil. Each player would need a different coloured pen or pencil.

Four in a Row

Try to get four of your counters in a row. They can go vertically, horizontally or diagonally.
