

ANIMAL ADAPTATIONS

Over time, through a process known as natural selection, animals change and adapt to be better suited for their habitat. Look at the following animals from the African savannah, and try to see if you can figure out how those traits helped the animal survive in that habitat.

What traits do you see?

How would these traits help this animal survive?

What traits do you see?

How would these traits help this animal survive?

What traits do you see?

How would these traits help this animal survive?

Draw the perfect animal for the African Savannah. Be sure to include all the traits you can to help your animal survive. Then tell how each trait you chose helps them to survive.

What have you learned about the grasslands habitat by looking at the animals who live there?
