Living Things and Their Habitats

Challenge Cards

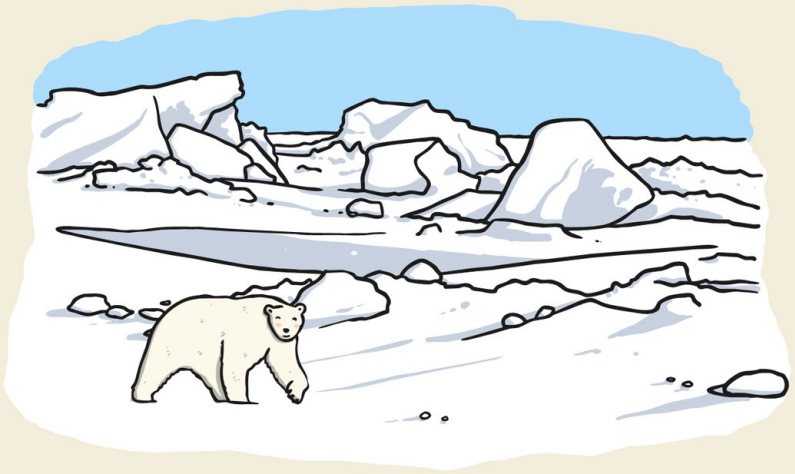
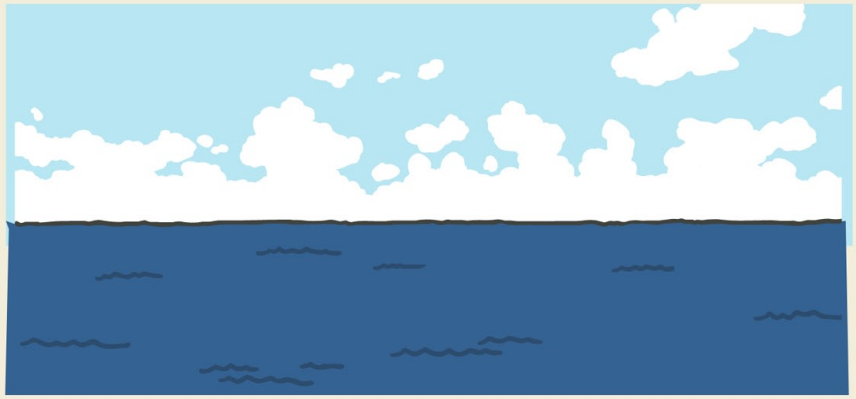
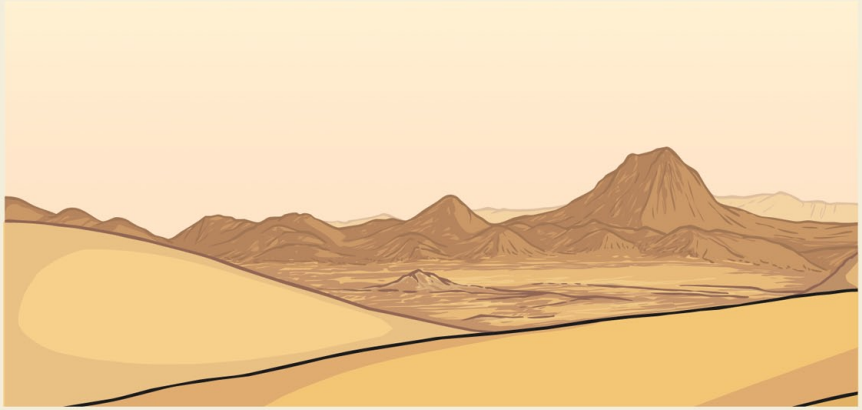
Draw an arctic habitat and five living things that live there.



Draw an ocean habitat and five living things that live there.

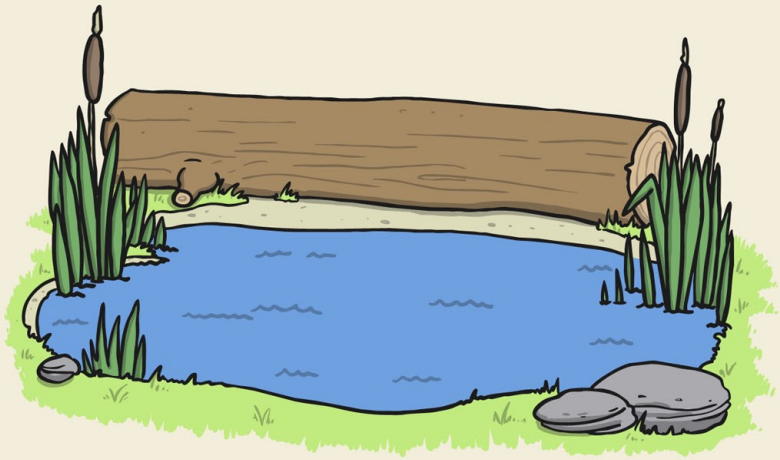


Draw a desert habitat and five living things that live there.



Draw a tropical habitat and five living things that live there.

Draw a pond habitat and five living things that live there.



Draw a woodland habitat and five living things that live there.

Draw an urban habitat and five living things that live there.

Draw a coastal habitat and five living things that live there.

Fact Cards

Living Things and Their Habitats

Fact Cards

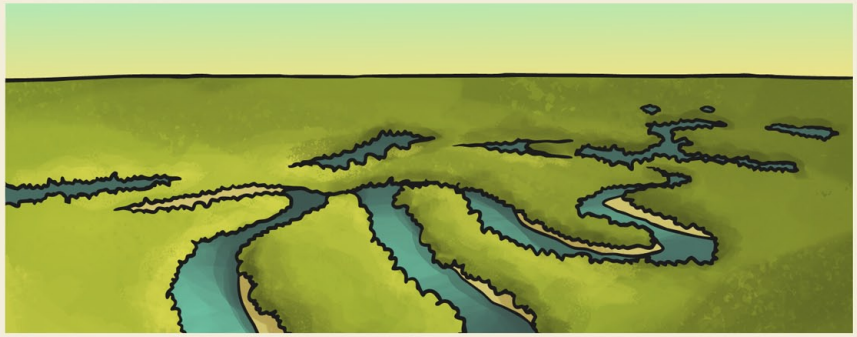
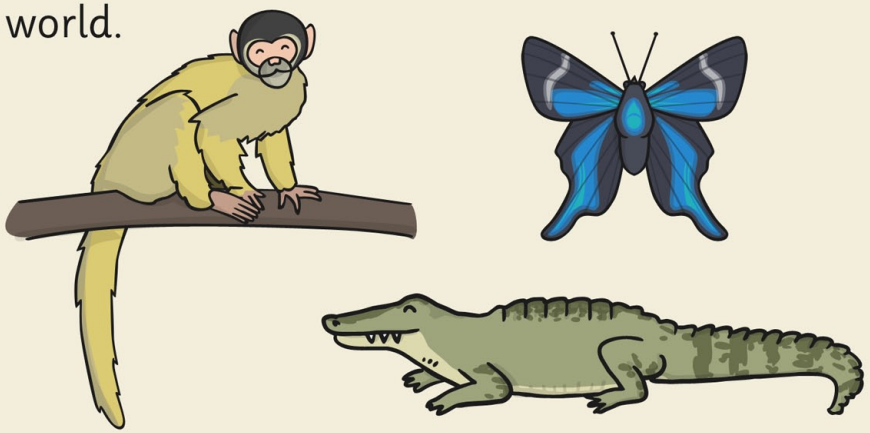
Forest habitats cover 1/3 of all the land on Earth. There are several kinds of forest habitats, including rainforest, boreal forests, and temperate forests.

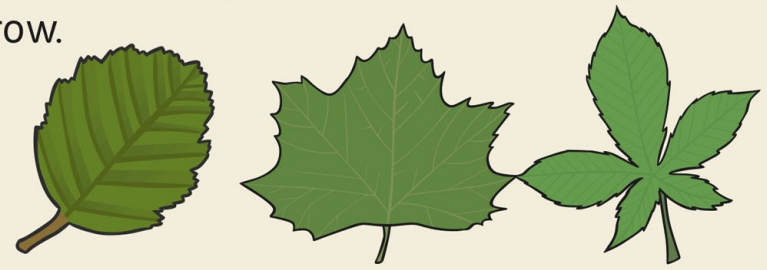
Rainforests occur where there is a lot of rain. In tropical rainforests, the weather is very hot.



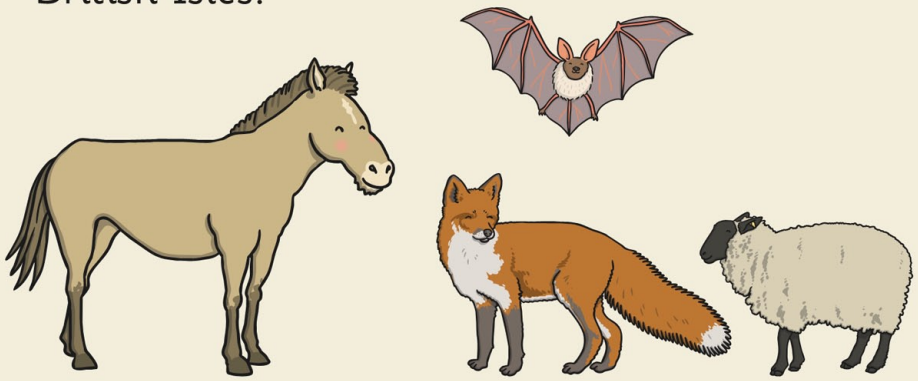
Tropical rainforests are home to more living things than any other land habitat in the world.



Most forests in the UK are temperate, because we have warm summers and mild winters. The trees lose their leaves in the winter. When these rot into the soil they provide lots of nutrients for other plants to grow.

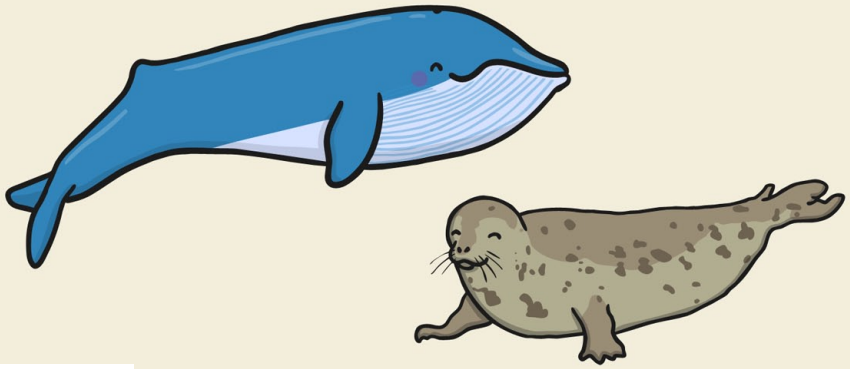


There are 101 species of wild mammal that live in or regularly visit the habitats in the British Isles.



There are 21 species of bats living in or visiting the British Isles. Bats are the only species of flying mammal in the world.

23 of the mammal species regularly seen in and around the British Isles are whales, dolphins or porpoises, and 7 are seals.

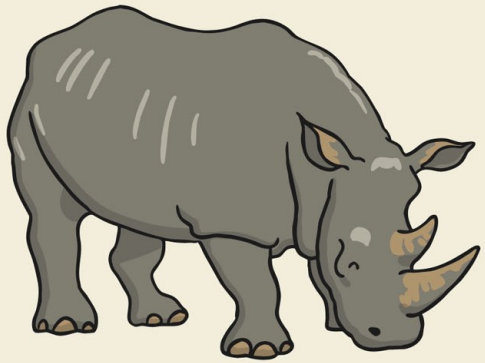


There are 21000 different kinds of insect in the British Isles, and 598 kinds of birds.

New species of living thing are being discovered all the time. In 2014, more than 18 000 new plants and animals were discovered for the first time.

Many living things in the world are endangered because they are hunted by people or their habitats are being destroyed.

One of the rarest living things is the Javan rhinoceros. Scientists think there are only about 60 of these creatures left in the whole world.



One fascinating species found only in the Arctic is the narwhal, often referred to as the 'unicorn of the sea'. Male narwhals have a tusk on the front of their heads that can grow to over 3m long.
