

The Direction of Light

Light travels through the air in straight lines.

TRY THIS!

Get three index cards. Punch a hole near the top, going through all three cards at once to make sure the holes line up later. Tape the cards to blocks or other small objects to make them stand upright. Set the three cards up in a row and shine a flashlight through them.

What do you notice? _____

Now, move one of the cards slightly out of line. What happens?
