

Rocks: Types of Rocks

Aim:

Compare different kinds of rocks based on their appearance in the context of understanding the difference between natural and human-made rocks.

I can compare different types of rocks.

Success Criteria:

I can name the three different types of

I can explain the difference between natural and human-made rocks.

I can use the appearance of rocks to group and compare them.

Key/New Words: Preparation:

Rocks, igneous, sedimentary, metamorphic, form, formation, volcano, sea, seabed, changes, compare, types, natural, human-made, strata, anthropic.

to show the formation of igneous, sedimentary and metamorphic rocks.

You may wish to source video clips

Lesson Pack

metamorphic rocks

Natural or Human-made Rocks Activity Sheet - 1 per child

Natural or Human-made Rocks Picture Sheet - as required

Prior Learning: It will be helpful if children are learning this unit alongside a geography unit which includes volcano formation.

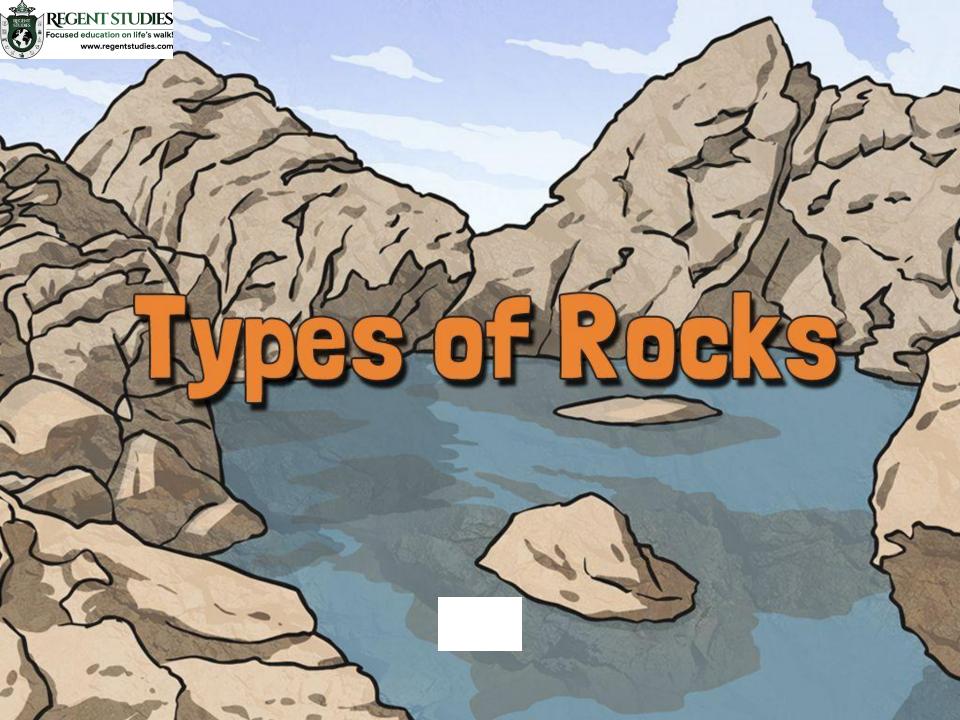

Taskit

Drawit: Children to make close drawings of the rocks and label them.

Aim

• I can compare different types of rocks.

Success Criteria

- I can name the three different types of rocks.
- I can explain the difference between natural and human-made rocks.
- I can use the appearance of rocks to group and compare them.

Rocks

What are rocks?

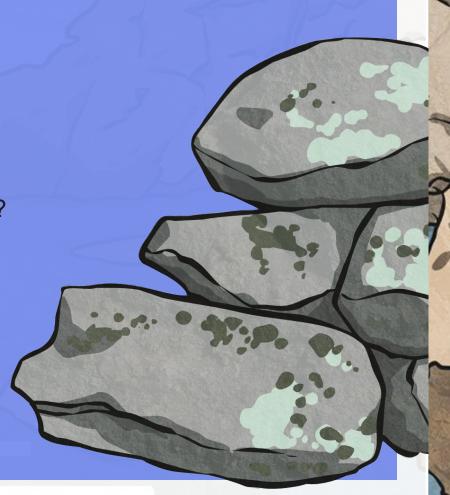

What do you already know about rocks?

Are rocks alive? How do you know?

Why are there rocks everywhere?

How do rocks form?

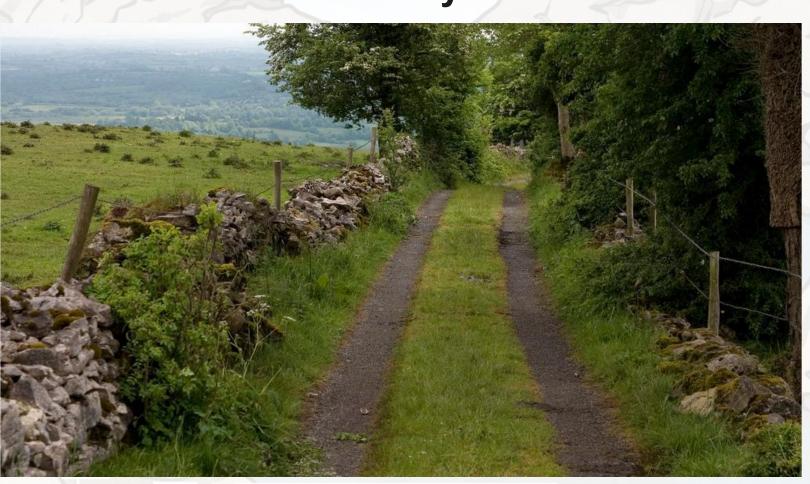

Look carefully at the photographs on following slides and spot the rocks.

Spot the Rocks Countryside

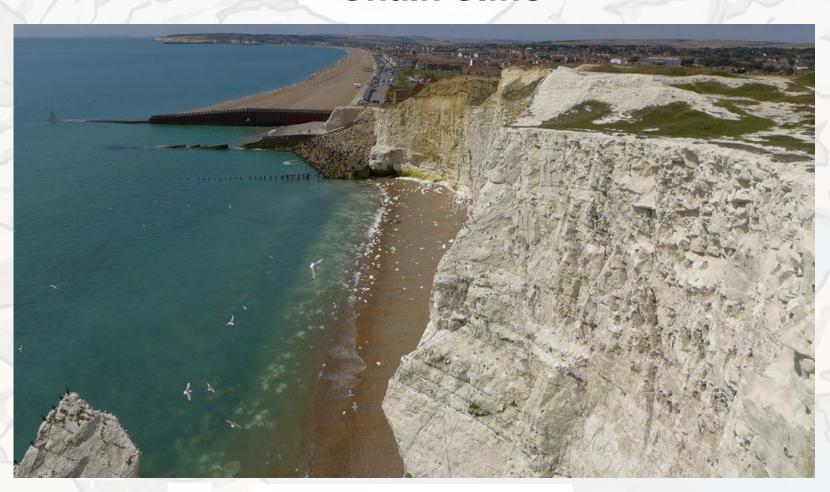

Spot the Rocks Chalk Cliffs

Spot the Rocks Muddy Fields

Spot the Rocks Town Centre

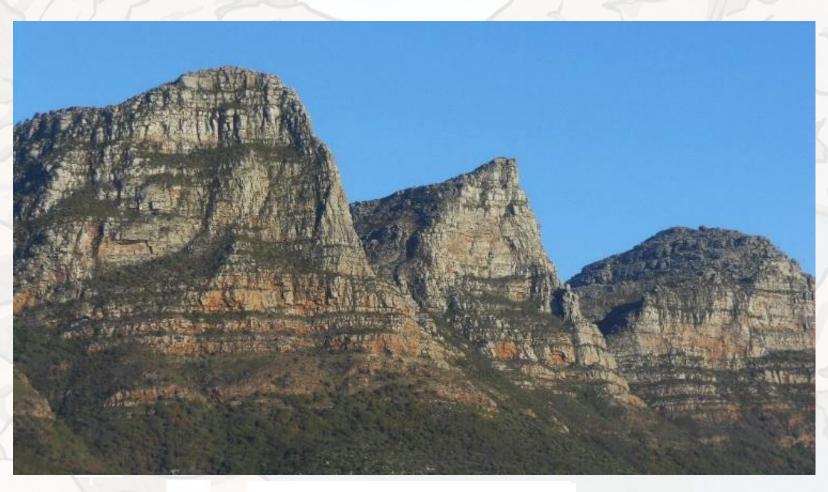

Spot the Rocks Granite Peak

Spot the Rocks Volcano

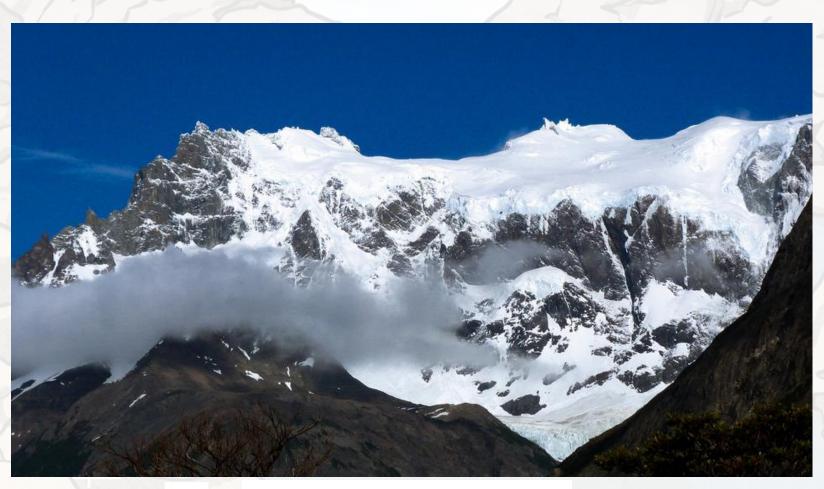

Spot the Rocks Mountain

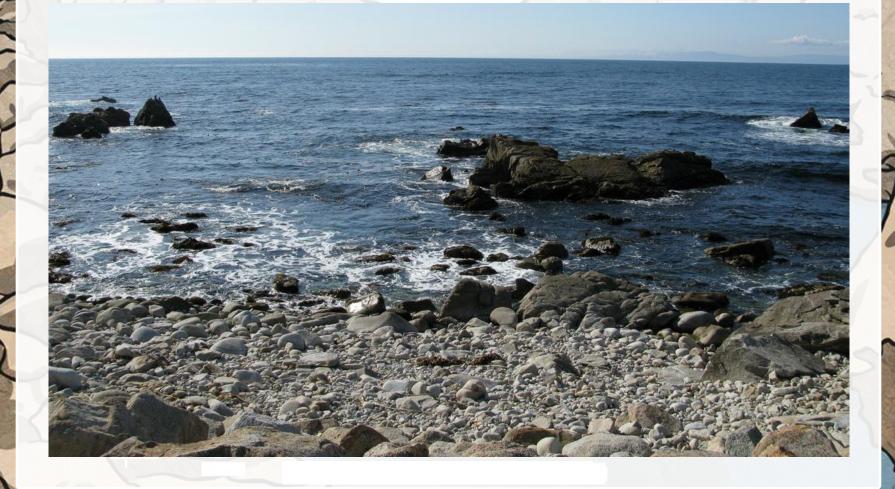

Spot the Rocks Pebble Beach

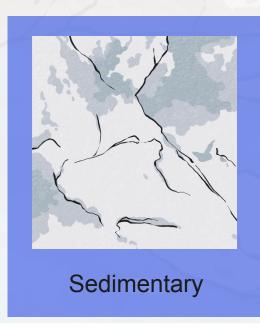

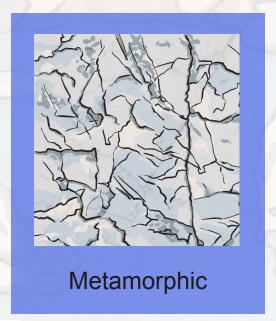

Natural Rocks

There are three types of naturally occurring rocks.

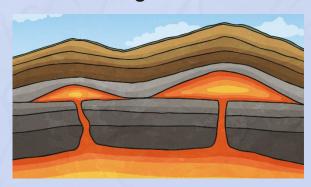

Natural Rocks Igneous Rock

Far under the ground, the temperature is hot enough to melt the rock into a liquid. This is called molten rock. Igneous rocks are formed from this molten rock in two ways.

Intrusive Igneous Rocks:

Molten rock that remains underground is called magma. When magma cools and hardens it becomes a type of intrusive igneous rock.

(Intrusive = internal = inside)

Extrusive Igneous Rocks:

Molten rock that comes out of the ground is called lava. When lava cools and hardens it becomes a type of extrusive igneous rock.

(Extrusive = external = outside)

Natural Rocks Sedimentary Rock

Sedimentary rock forms under the sea. The following illustrates the process:

- 1) As a result of weathering and erosion, bits of rock end up in lakes and rivers. Rivers transport bits of rock and deposit them on the bottom of the sea.

 This process is called **Sedimentation**.
- 2) With time, more layers (strata) pile up and press down on the lower layers of rock. This process is called **compaction**.
- 3) Over time, water is pushed out from these layers and the process of **Cementation** occurs. This is when salt compounds glue or cement the bits of rock together so they form a solid layer.

Natural Rocks Metamorphic Rock

Metamorphic rocks don't just form from being near magma they can also be formed from Earth movements which can cause rocks to be deeply buried or squeezed. This means the rocks are heated and put under immense pressure which causes the minerals they contain to be changed chemically. Collision of tectonic plates can also result in the formation of metamorphic rock too.

This illustration shows how the igneous rock near magma is being heated and changed.

This illustration shows how the sedimentary rock near magma is being heated and changed.

Human-Made Rocks

The scientific name for human-made rocks is **anthropic** rocks. Anthropic rocks are made, modified or moved by humans.

Concrete

The Romans first invented **CONCrete**, although the type of concrete we use today dates from 1756.

Concrete is a mixture of water, aggregate (either sand, rock or gravel) and cement (a mixture of chalk and clay).

Human-Made Rocks

Mock Rock

Victorians created rock gardens and surfaces that looked like rock from Mock rock. Types of mock rock include pulhamite, which looked like gritty sandstone.

James Pulham, who invented it, took the exact recipe for it to the grave! Coade stone (made from grog, flint, quartz, soda lime glass and clay) is another type of mock rock.

Bricks

Bricks have been around for a long time. The first bricks come from a place called Tell Aswad in modern day Syria. That was in 7500 BC! However, bricks were used to build in most of the ancient civilisations and are still used today. Bricks are usually made of clay soil, sand and lime or concrete materials. They can be air dried or fire-hardened.

Natural or Human-Made?

You will be looking at a selection of rocks in groups and will need to decide if these rocks are natural or human-made.

Some of you will also have to further group the rocks that you think are natural into the three rock types.

Natural or Human-Made

Natural Rocks

Human-Made Rocks

Igneous

Sedimentary

Metamorphic

Obsidian

Chalk

Marble

Granite

Sandstone

Quartzite

Slate

LBC

Concrete

Coade Stone

Basalt

Limestone

Fact or Fiction?

Igneous rock is formed by magma and lava.	Fact	Fiction
	1 - 2	
Metamorphic rock changes when cooled.	Fact	Fiction
Sedimentary rock forms near water sources.	Fact	Fiction
There are two types of igneous rock.	Fact	Fiction
Chalk is a type of human-made rock.	Fact	Fiction
Human-made rocks do contain natural rocks as well.	Fact	Fiction
The man who invented pulhamite took the recipe to the grave.	Fact	Fiction

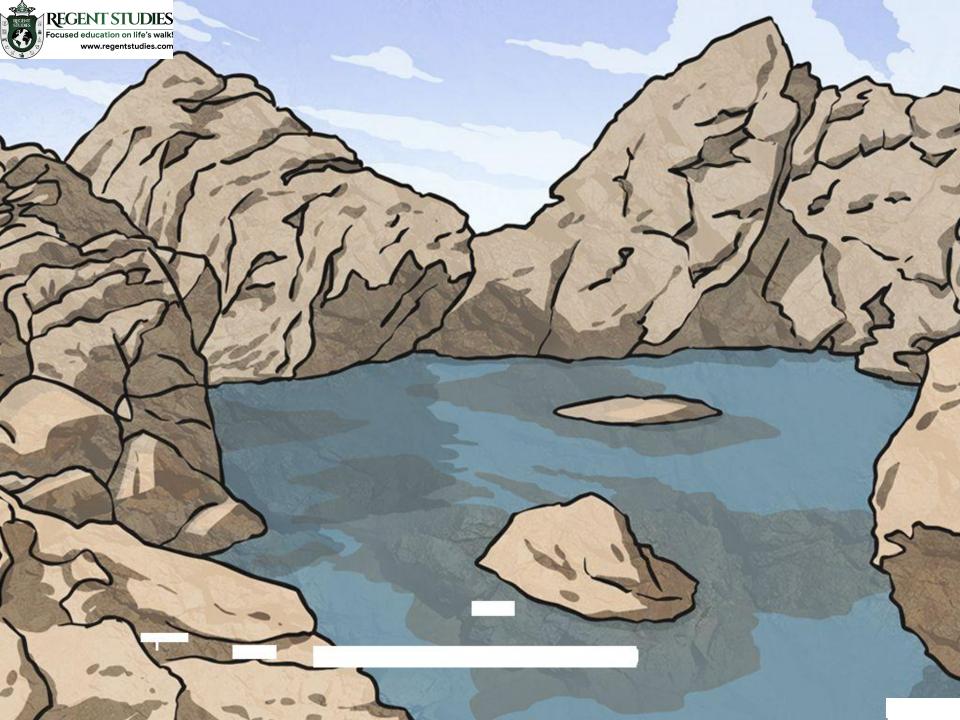

Aim

• I can compare different types of rocks.

Success Criteria

- I can name the three different types of rocks.
- I can explain the difference between natural and human-made rocks.
- I can use the appearance of rocks to group and compare them.
