

# Fractions of Money Differentiated Treasure Hunt Activity

## Instructions

In this differentiated game, students work in teams to find the answer to fractions of money questions displayed around the classroom. The answer will then lead the group to the next question poster. The first team to visit and answer all question poster is the winner!

### Set Up

- Print a set of of the 'Treasure Hunt Posters' to display around the classroom - they need to be accessible so the teams can stand nearby while they discuss the answer. Choose either the Silver posters, or the Gold posters for an additional challenge. Alternatively, you could display both to allow the children to choose the version they feel most comfortable with.
- Give each team their own 'Treasure Hunt Map' sheet to guide them around the classroom.
- Start each team at a different poster - the order they complete the circuit in doesn't matter as the winners are the first team to visit all 10.
- Once a team has determined an answer, they write it on the first space of their map and look around the room for the question poster with the matching answer in the top left corner.
