- Using the fact box in the article, explain what a nudibranch is in your own words.
Accept any response which correctly identifies what a nudibranch is, e.g. It is a sea slug.
- Look at the sentence beginning: **A rare sea slug has been spotted...** Find and copy a word which is similar in meaning to 'rare'.
uncommon
- Using information from the article, fill in the missing words to complete the sentence.
The 'Babakina anadoni' was found/spotted/seen by Allen Murray who is a volunteer for the Cornwall Wildlife Trust.
- Find **one** piece of evidence from the article which gives you the impression that sea slugs are not easy to find.
Accept any of the following: the article calls them rare/uncommon; there are only a few recorded sightings; they are only 2cm long.
- Why has the author chosen to include the following sentence: **Who knows what they will 'sea' next?**
Accept any response which identifies that the alternative homophone spelling has been used here to add some humour or that it relates to the subject of the article, e.g. I think they did this to be funny because 'sea' and 'see' sound the same but are spelt differently.
- Tick to show whether the statement is true or false according to the article.

	True	False
