2)

Snow Story MMXIII	**2013**
Lion Prince MCMXCIV	**1994**
Twinkl Adventure MCMLXXXII	**1982**
Animal Story MMII	**2002**

1) **Peter's Roman numeral is 2075. He's forgotten to include the place value zero to show there are no hundreds. Roman numerals don't use place value.**

Jamil's Roman numeral is 3982. He has counted the CM as 1000 + 100, but it actually should be 1000 – 100 = 900.

2) **Peter is mistaken. Twinkl Pets was released in 2016 which has 5 Roman numerals and Toy Adventure was released in 1999 which has 7 Roman numerals. 2016 is a greater number but has less Roman numerals. Children might also use other examples, e.g. that 1000 is represented by M, which is one Roman numeral.**

1) **There are many possibilities, such as the following. Children should notice there are certain hundreds numbers that cannot be represented with three Roman numerals due to the number of symbols required.**

102 = CII
104 = CIV
106 = CVI
109 = CIX
151 = CLI
506 = DVI
601 = DCI
901 = CMI

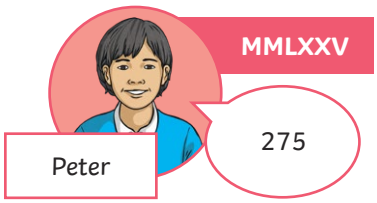
1) Each centurion has their number on their shield. Correctly match the Roman numerals to the number.

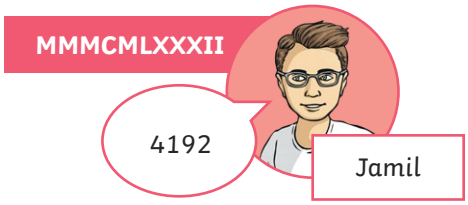
1015	3823	1154	2075	1647

2) What year was each film released? Read the Roman numerals to find out.

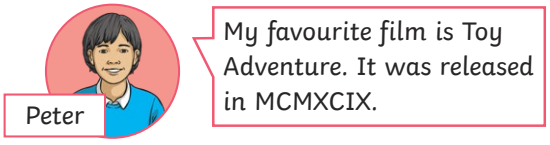
Snow Story MMXIII	
Lion Prince MCMXCIV	
Twinkl Adventure MCMLXXXII	
Animal Story MMII	

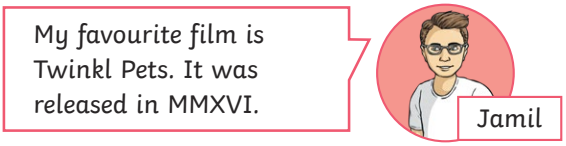
1) Jamil and Peter are practising reading Roman numerals. They have both made a mistake. Can you explain their mistake and correct their answers?





2) Jamil and Peter are talking about which year their favourite film was released.





Peter thinks that Toy Adventure was released most recently because the year has the most letter symbols. Do you agree? Explain your reasoning.
