

# Properties of Shapes: Measuring Angles in Degrees

<p><b>Aim</b> Know angles are measured in degrees: estimate and compare acute, obtuse and reflex angles. Draw given angles, and measure them in degrees (°).</p> <p><b>DfE Ready-to-Progress Criteria</b> Compare angles, estimate and measure angles in degrees (°) and draw angles of a given size (5G–1) To measure angles of a turn in degrees.</p>	<p><b>Success Criteria</b> I can describe an angle as a turn. I can identify right, acute, obtuse and reflex angles as an angle of a turn. I can describe angles of a turn in degrees.</p> <p><b>Key/New Words</b> Angle, turn, degrees, acute, right, obtuse, reflex, quarter-turn, half turn, three-quarter turn, full turn, clockwise, anticlockwise.</p>	<p><b>Resources</b> Lesson Pack</p> <p><b>Preparation</b> Differentiated <a href="#">Measuring Angles in Degrees Activity Sheets</a> – one per child <a href="#">Diving into Mastery Activity Sheets</a> – as required</p>
---	--	--

<b>Prior Learning</b>	It will be helpful if children can revisit acute, right and obtuse angles and recap how to identify them. This is covered in this <a href="#">Types of Angles</a> lesson.
-----------------------	---

## Learning Sequence

	<p><b>Remember It:</b> Using the corresponding slide on the <a href="#">Lesson Presentation</a>, the children will sort angles on to a table based on whether they are acute, right-angled or obtuse. This activity is intended to recap prior learning in year 4. To extend learning further, children can draw three more angles for each section of the table.</p>	
	<p><b>Key Vocabulary:</b> Using the corresponding slides on the <a href="#">Lesson Presentation</a>, the children recap the keywords 'clockwise' and 'anticlockwise'. These words occur within the lesson, so it is important that children are familiar with the terms and can apply them when discussing directions of turns.</p>	
	<p><b>Measuring Turns in Degrees:</b> Using the corresponding slides on the <a href="#">Lesson Presentation</a>, the children learn how to describe turns in terms of quarter-turns, half turns, three-quarter turns and full turns. Children will learn the measurements of these turns using degrees and shown how to calculate them correctly. Children will be introduced to reflex angles within this section of the lesson. <b>Can the children describe an angle as a turn? Can the children identify right and reflex angles as an angle of a turn? Can the children describe angles of a turn in degrees?</b></p>	
	<p><b>Turning Anticlockwise:</b> Using the corresponding slides on the <a href="#">Lesson Presentation</a>, the children engage in a talk task where they describe Charlie's anticlockwise turns using key vocabulary. They describe his turns using measurements in degrees and state the fraction of a turn that he turns through. <b>Can the children describe an angle as a turn? Can the children identify right and reflex angles as an angle of a turn? Can the children describe angles of a turn in degrees?</b></p>	
	<p><b>Acute, Obtuse and Reflex Angles:</b> Using the corresponding slides on the <a href="#">Lesson Presentation</a>, the children engage in new learning involving turns around a compass. Children will learn that each turn on the compass measures 45° and use this knowledge to measure any turn on the compass. Children will be encouraged to add values around the compass to find the total. Following this, children will engage in a talk task where they describe turns involving eight points and will use key vocabulary alongside measurements in degrees. <b>Can the children describe an angle as a turn? Can the children identify right, acute, obtuse and reflex angles as an angle of a turn? Can the children describe angles of a turn in degrees?</b></p>	

	<p><b>Measuring Angles in Degrees:</b> Using the differentiated <a href="#">Measuring Angles in Degrees Activity Sheets</a>, the children complete tasks that provide them with opportunities to practise measuring angles in degrees..</p> <div style="display: flex; justify-content: space-between;"> <div data-bbox="245 192 587 629">  <p>To support children working towards expected level, there is a talk task provided which enables children to discuss angles as turns using key vocabulary. Sentence stems are provided to scaffold discussions. Children will be able to practise describing angles in terms of direction, fractions and measurements in degrees.</p> </div> <div data-bbox="627 192 968 600">  <p>Children working at expected level will engage in a talk task where they discuss angles as turns using key vocabulary. Children will be able to apply new learning on acute, obtuse and reflex angles and describe angles in terms of direction, fractions and measurements in degrees.</p> </div> <div data-bbox="1008 192 1350 824">  <p>To challenge children working at greater depth there is a task provided which allows the application of new learning. Children will complete an information table linked to finding angles around a compass. Children will draw a child's bedroom based on a set of instructions, then create their own instruction list for designing a zoo. This will provide children with an opportunity to apply the key vocabulary linked to measuring angles in degrees.</p> </div> </div>	
	<p><b>Diving into Mastery:</b> Schools using a mastery approach may prefer to use the following as an alternative activity. These sheets might not necessarily be used in a linear way. Some children might begin at the 'Deeper' section and in fact, others may 'dive straight in' to the 'Deepest' section if they have already mastered the skill and are applying this to show their depth of understanding.</p> <div style="margin-top: 10px;">  <p>Children complete fluency questions related to measuring angles in degrees.</p> </div> <div style="margin-top: 10px;">  <p>Children answer reasoning questions related to measuring angles in degrees.</p> </div> <div style="margin-top: 10px;">  <p>Children work individually or collaboratively on problem-solving questions related to measuring angles in degrees.</p> </div>	

**Exploreit**

**Showit:** Children can create a large-scale version of an activity to show turns around a point. They can place objects at different compass points and then stand in a position in the middle. They can turn around the point and have their partner describe their measurement of turn in degrees.

**Drawit:** Children can create a drawing of their bedroom and describe the positioning of items in their room in terms of degrees.

**Learnit:** Children will find this superb [Knowledge Organiser](#) helpful to learn about measuring in degrees.

# DISCLAIMER

We hope you find the information on our website and resources useful.

## Displaying the Presentation

To ensure this presentation displays correctly: If you are a Mac user, the presentation may open in 'slide master' mode - to see all the content, click 'close slide master' and the presentation should display correctly. If you are using Google Drive, the presentation won't display correctly if you open it in Google Slides. If you have opened it in Google Slides, you will need to download it again from the Twinkl website and this time open it from your computer.

## Animations

This resource has been designed with animations to make it as fun and engaging as possible. To view the content in the correct formatting, please view the PowerPoint in 'slide show mode'. This takes you from desktop to presentation mode. If you view the slides out of 'slide show mode', you may find that some of the text and images overlap each other and/or are difficult to read.

To enter slide show mode, go to the **slide show menu tab** and select either **from beginning** or **from current slide**.

You may wish to delete this slide before beginning the presentation.

# Maths

## Properties of Shapes

# Measuring Angles in Degrees

## **Aim**

- To measure angles of a turn in degrees.

## **Success Criteria**

- I can describe an angle as a turn.
- I can identify right, acute, obtuse and reflex angles as an angle of a turn.
- I can describe angles of a turn in degrees.

## Remember It

Sort the angles into the table below. Are they acute, right or obtuse?  
Can you explain your reasoning?

Acute	Right	Obtuse
<b>a d i</b>	<b>c g j</b>	<b>b e f h</b>

Ready for a challenge?  
Draw three more angles for each part of the table!

## Key Vocabulary

To describe turns, we use the phrases **clockwise** and **anticlockwise**.

Which arrows are showing clockwise turns?

Why do you think the term **clockwise** is used?

Which arrows are showing anticlockwise turns?

Why do you think the term **anticlockwise** is used?

A and C show clockwise turns.

The movement is in the same direction as the hands on the clock and the numbers are going around the clock face.

B and D show anticlockwise turns.

They move in the opposite direction to the clock hands and numbers.

## Measuring Turns in Degrees

Charlie has turned 90 degrees. He is facing the swings. He has turned 90 degrees. He is facing the slide. He has turned 90 degrees. He is facing the seesaw. He has turned 90 degrees. He is facing the monkey bars.

## Measuring Turns in Degrees

Charlie has turned through two right angles. A right angle is  $90^\circ$ , so we can multiply  $90$  by  $2$  to calculate half a turn.  $90^\circ \times 2 = 180^\circ$ . Where is he facing after the turn? How many degrees has he turned in total? An angle that measures exactly  $180^\circ$  is called a **straight line angle**.

You can use your knowledge of multiples of 9 to help!

## Measuring Turns in Degrees

Charlie has turned through three right angles. A right angle is  $90^\circ$  so we can turn up to  $90^\circ$  by three different turns each time. Charlie has moved three quarters of a full turn (angle) and is now facing the opposite direction. This type of angle is called a reflex angle.

## Measuring Turns in Degrees

Charlie is facing the swings again. He turns through a full turn clockwise. A full turn is the same as four right angles. A right angle is  $90^\circ$  so we can multiply  $90$  by  $4$  to calculate a full turn.  $90^\circ \times 4 = 360^\circ$ .  
Charlie has moved where he is facing after the turn, facing the swings.  
How many degrees has he turned in total?

## Turning Anticlockwise

Charlie is facing the swings again. Discuss with a partner what would happen if Charlie turned **one quarter-turn anticlockwise**?

Charlie starts facing the swings.

He turns through  $\frac{1}{4}$  turn.

Charlie is now facing the **climbing frame**

He has turned **90°**

This is called a **right** angle.

## Turning Anticlockwise

Charlie is facing the swing again. He now moves **half a turn anticlockwise**.

Charlie starts facing the swings.

He turns through  $\frac{1}{2}$  turn.

Charlie is now facing the **seesaw**

He has turned **180°**

This is called a **straight line** angle.

## Turning Anticlockwise

Charlie is facing the swing again.  
He now moves **three-quarters of a turn anticlockwise**.

Charlie starts facing the swings.

He turns through  $\frac{3}{4}$  turn.

Charlie is now facing the **slide**

He has turned **270°**

This is called a **reflex** angle.

## Turning Anticlockwise

Charlie is facing the swings again.  
He finally moves a **full turn anticlockwise**.

Charlie starts facing the swings.

Charlie is now facing the **swings**

He has turned **360°**

This is called a **full** angle.

## Acute, Obtuse and Reflex Angles

We can use a compass to draw an angle. How many degrees is this angle?

## Acute, Obtuse and Reflex Angles

The difference between North and East is  $90^\circ$ . By measuring points from North to East, we can see that the angle is  $45^\circ$ . We can use our knowledge of quarter-turns to help us calculate this angle. We can use this to help us find angles that are more than  $90^\circ$  or less than  $90^\circ$ .

## Acute, Obtuse and Reflex Angles

How can we calculate the number of degrees this turn is?

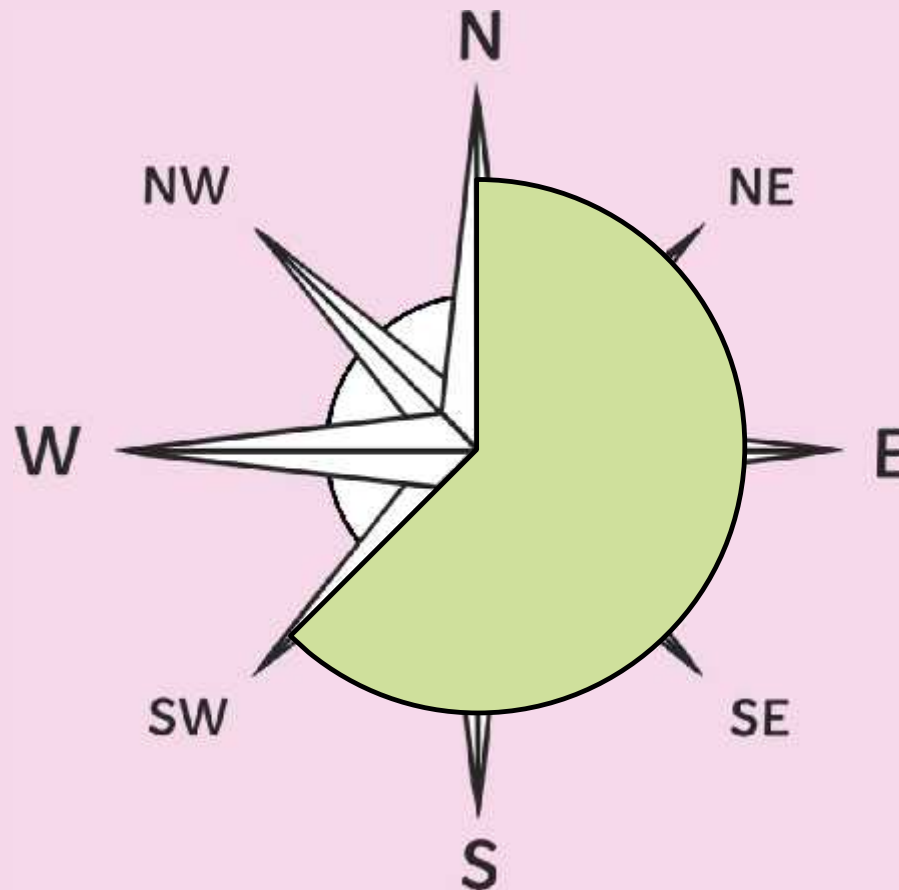

## Acute, Obtuse and Reflex Angles

The measurement from N to E is  $90^\circ$ .  
The measurement from E to SE is  $45^\circ$ .  
 $135^\circ$  is an **obtuse angle** as it is greater than  $90^\circ$  but less than  $180^\circ$ .  
So,  $90^\circ + 45^\circ = 135^\circ$ .

## Acute, Obtuse and Reflex Angles

How can we check at the turn in degrees this turn is?

## Acute, Obtuse and Reflex Angles

The measurement from N to E is  $90^\circ$ .  
The measurement from E to S is  $90^\circ$ .  
 $225^\circ$  is a **reflex** angle as it is greater than  $180^\circ$  but less than  $360^\circ$ .  
The measurement from S to SW is  $45^\circ$ .  
So,  $90^\circ + 90^\circ + 45^\circ = 225^\circ$ .

## Acute, Obtuse and Reflex Angles

Charlie is facing the school. Discuss with a partner, what would happen if Charlie turned through  $45^\circ$  clockwise?

Charlie starts facing the school.

Charlie is now facing the **fire station**.

He has turned through  **$45^\circ$** .

This is called **an acute** angle.

## Acute, Obtuse and Reflex Angles

Charlie is facing the cafe.  
What would he be facing if he turned  $135^\circ$  anticlockwise?

Charlie starts facing the cafe.

Charlie is now facing the **school**.

He has turned through  **$135^\circ$** .

This is called **an obtuse** angle.

## Acute, Obtuse and Reflex Angles

Charlie is facing the library.  
What would he be facing if he turned  $225^\circ$  clockwise?

Charlie starts facing the library.

Charlie is now facing the **supermarket**.

He has turned through  **$225^\circ$** .

This is called a **reflex** angle.

## Acute, Obtuse and Reflex Angles

Charlie is facing the hospital.  
What would he be facing if he turned  $315^\circ$  clockwise?

Charlie starts facing the hospital.

Charlie is now facing the **swimming pool**.

He has turned through  **$315^\circ$** .

This is called a **reflex** angle.

# Measuring Angles in Degrees

Charlie starts facing the  and ends facing the

Charlie has moved in a  direction.

Charlie has moved a  turn.

Charlie has turned a total of  degrees.

This is a  angle.

swimming pool	library	90°	45°	quarter	right	clockwise
school	hospital	180°	135°	half	straight line	anticlockwise
supermarket	city	270°	225°	three-quarter	reflex	about
park	fire station	360°	315°	full		

## Measuring Angles in Degrees

Turn these angles of a turn in degrees.

Use the compass to complete the table.

Turn	Type of angle	Angle measurement (°)	Fraction of a turn
north to east	right		
north-west to north-west clockwise			
west to east anticlockwise		180°	half
south-west to north-west anticlockwise		90°	

Follow the instructions to draw the items of furniture in Anika's bedroom.

- Anika is facing north and looking at her bed.
- She makes a 90° turn and is now facing her desk.
- She completes a 1/2 turn anticlockwise and is facing her wardrobe.
- She completes a 1/2 turn clockwise and is facing her toy chest.
- She turns 45° clockwise and reaches her drawers.

## Measuring Angles in Degrees

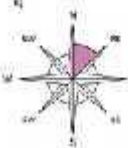

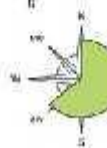

Write clear instructions to outline where the items are and angles in degrees. Draw your own diagram and place the markings in 45° turn clockwise.

## Diving into Mastery

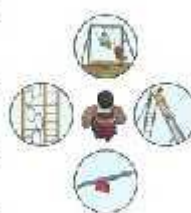

Dive in by completing your own activity!

28. With the measurement of sectors in degrees.

81	82	83
		
<input type="text"/>	<input type="text"/>	<input type="text"/>
84	85	86
		
<input type="text"/>	<input type="text"/>	<input type="text"/>

29. Calculate the total number of degrees that Charlie turned through.

87. Charlie is walking along the road. He turns clockwise to face the school and then anti-clockwise to face the bank of the river.	<input type="text"/>	
88. Charlie is walking along the road. He turns anti-clockwise to face the school and then clockwise to face the bank.	<input type="text"/>	
89. Charlie is walking along the road from the bank to face the school. He then turns clockwise to face the bank.	<input type="text"/>	

## **Aim**

- To measure angles of a turn in degrees.

## **Success Criteria**

- I can describe an angle as a turn.
- I can identify right, acute, obtuse and reflex angles as an angle of a turn.
- I can describe angles of a turn in degrees.

  - c) 540°

- 1)
- a) 135°             $\frac{1}{2}$  turn
  - b)  $\frac{3}{4}$  turn             $240^\circ + 20^\circ$
  - c)  $\frac{1}{4}$  turn             $120^\circ - 30^\circ$
  - d)  $320^\circ + 30^\circ$             a full turn

2) Sam is correct because this turn has a value of 225°

3)

Two right angles are the same amount of turn as a straight line angle.	<b>Always</b>
Angles greater than 90° are acute.	<b>Never</b>
The distance between two compass points will be obtuse.	<b>Sometimes</b>

1) Accept answers where the apple and the orange provide a total that equals 180°.

For example:  $100^\circ + 80^\circ = 180^\circ$

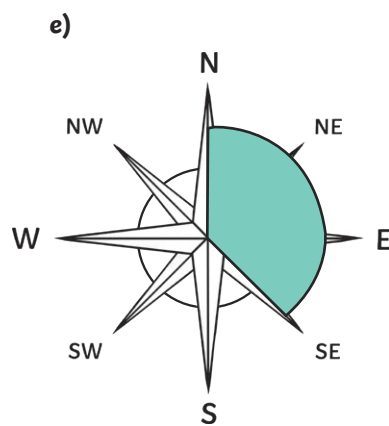

$170^\circ + 10^\circ = 180^\circ$

- 2)
- |   |    |    |   |
|---|----|----|---|
| E | SW | SE | N |
|---|----|----|---|

1) Write the measurement of each angle in degrees.

2) Calculate the total number of degrees that Charlie turns through.

a) Charlie starts facing the swings. He turns clockwise to face the seesaw and then anticlockwise to face the climbing frame.	<input type="text"/>
---	----------------------

b) Charlie starts facing the slide. He turns anticlockwise to face the climbing frame and then clockwise to face the swings.	<input type="text"/>
--	----------------------

c) Charlie starts facing the climbing frame. He does a full turn clockwise. He then turns anticlockwise to face the slide.	<input type="text"/>
--	----------------------

1) Insert  $<$ ,  $>$  or  $=$  to complete these statements.

- a)  $135^\circ$    $\frac{1}{2}$  turn
- b)  $\frac{3}{4}$  turn   $240^\circ + 20^\circ$
- c)  $\frac{1}{4}$  turn   $120^\circ - 30^\circ$
- d)  $320^\circ + 30^\circ$   a full turn

2)

My turn will be a reflex angle if I turn from north-east to west clockwise?

Is Sam correct? Explain your answer.

---

---

---

---

---

3) Label the statements with always, sometimes or never. Give reasons for your answers.

Two right angles are the same amount of turn as a straight line angle.	
Angles greater than $90^\circ$ are acute.	
The distance between two compass points will be obtuse.	

1) Complete the statement. Can you think of 5 different combinations?

1.	
2.	
3.	
4.	
5.	

2) Follow the instructions to work out the code to unlock the cookie jar.

Imagine you are facing N. Make a  $\frac{3}{4}$  turn anticlockwise.

Then turn  $\frac{3}{8}$  clockwise.

Next, turn  $90^\circ$  anticlockwise.

Finally, turn  $\frac{5}{8}$  clockwise.

# Measuring Angles in Degrees

To measure angles of a turn in degrees

## Instructions for adult guided task:

- 1) Organise children into pairs and have them decide who is child A and who is child B.
- 2) Children cut out Charlie and place him in the centre of the building diagram.
- 3) Child A decides where Charlie is facing. They then turn him so he carries out a turn of their choice. Encourage children to explore clockwise and anticlockwise movements.
- 4) Child B describes Charlie's movement by adding missing words to the sentence stems.
- 5) The children then swap roles.
- 6) If children are ready for a challenge, they can use the compass image to turn Charlie and describe his movements using different angles.
