

Measurement and Geometry: Location and Transformation: Drawing Reflected Shapes

Australian Curriculum

This lesson plan could be used to support the teaching and learning of the following Content Description from the Australian Curriculum.

Y5 – Measurement and Geometry

Describe translations, reflections and rotations of two-dimensional shapes. Identify line and rotational symmetries (ACMMG114)

Child-Friendly Aim: I can draw the position of a shape following a reflection.	Success Criteria: I know that when reflected, a shape keeps the same dimensions. I can count how far each point is from the mirror line.	Resources: Lesson Pack Mirrors
	Key/New Words: Coordinate, translation, reflection.	Preparation: Differentiated Drawing Reflected Shapes Activity Sheets – one per child Candy Reflection Game – one per group

Prior Learning: It will be helpful if children have had practise at drawing symmetrical patterns and recognising line symmetry in a variety of diagrams.

Learning Sequence

	Is It a Reflection? Using the images shown on the Lesson Presentation , the children have to decide whether the diagram shown is an accurate reflection.				
	Reflecting Shapes in a Mirror Line: Use the information and images on the Lesson Presentation to explain that in geometry, a reflection describes a movement where a shape or object is flipped over a mirror line, without changing the size, and every point of the shape or object remains the same distance from the mirror line.				
	Drawing a Reflected Shape: Use the information and images on the Lesson Presentation to demonstrate how to accurately draw a reflected shape, ensuring that each point of the shape is translated equally.				
	Drawing Reflected Shapes: Children complete the differentiated Drawing Reflected Shapes Activity Sheets to demonstrate they can represent the position of a shape following a reflection. <table border="0" style="width: 100%; text-align: center;"> <tr> <td> Draw simple 2D shapes after reflections over a horizontal or vertical mirror line where there is no space between the shape and mirror line.</td> <td> Draw 2D shapes after reflections over a horizontal or vertical mirror line.</td> <td> Draw more complex 2D shapes after reflections over a horizontal or vertical mirror line.</td> </tr> </table>	 Draw simple 2D shapes after reflections over a horizontal or vertical mirror line where there is no space between the shape and mirror line.	 Draw 2D shapes after reflections over a horizontal or vertical mirror line.	 Draw more complex 2D shapes after reflections over a horizontal or vertical mirror line.	
 Draw simple 2D shapes after reflections over a horizontal or vertical mirror line where there is no space between the shape and mirror line.	 Draw 2D shapes after reflections over a horizontal or vertical mirror line.	 Draw more complex 2D shapes after reflections over a horizontal or vertical mirror line.			
	Candy Reflection: Using the Candy Reflection Game and mirrors, the children play as a group. First, a card is drawn from the deck and placed onto the game board. The card displays several different candies which are worth different numbers of points. Each player decides a different mirror line to place the mirror on – a player cannot choose a mirror line that another player has chosen. Once all the players have made a selection, the mirror is placed onto each mirror line in turn. On each placement of the mirror, the player who chose the mirror line wins the number of points on the reflected sweets. The player with the most points wins.				

Masterit

Reflectit: Using a large mirror on a table, investigate the reflective symmetry of different objects placed upon it.

Gymit: Develop complex paired gymnastic sequences which show reflection.

Investigateit: Investigate reflective symmetry in the alphabet, flags, road signs etc.

Mathematics

Measurement and Geometry

Drawing Reflected Shapes

Aim

- I can draw the position of a shape following a reflection.

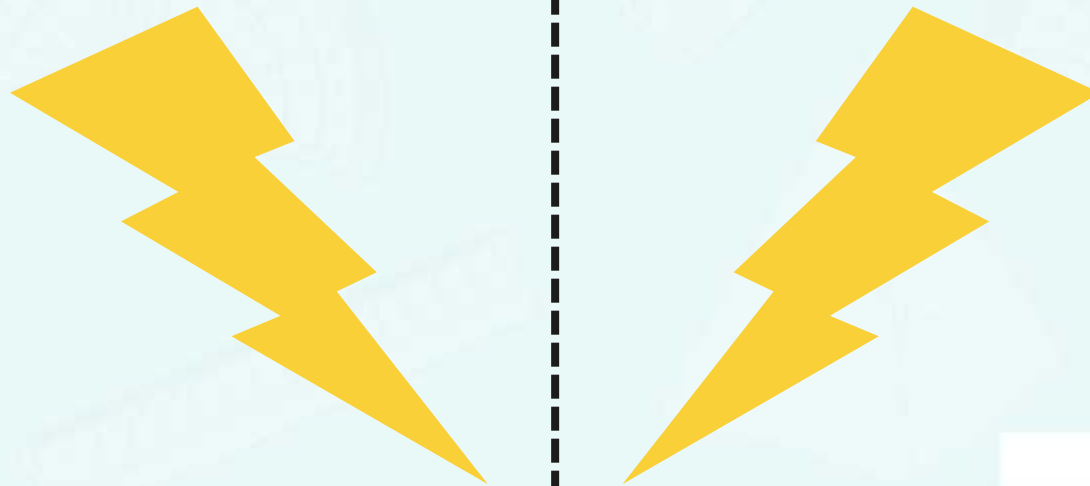

Success Criteria

- I know that when reflected, a shape keeps the same dimensions.
- I can count how far each point is from the mirror line.

Reflecting Shapes in a Mirror Line

The reflected image is congruent to the original. This means that the measurements of the sides and angles have not changed.

Drawing a Reflected Shape

When asked to draw the new position of a 2D shape after a reflection, we have to make sure that each corner of the reflected shape is the same distance from the mirror line.

First identify the distance of a corner from the mirror line on the original shape.

Then apply this to the opposite side of the mirror line.

Repeat this process with each corner.

Candy Reflection

A game for partners or a small group.

- Choose one of the game boards.
- Choose a mirror line to place your mirror along.
- One by one, place the mirror along the mirror line and calculate the score of the reflected candy.
- The person with the greatest score wins the round.

Game Board 1

Aim

- I can draw the position of a shape following a reflection.

Success Criteria

- I know that when reflected, a shape keeps the same dimensions.
- I can count how far each point is from the mirror line.
