

# Extra Challenge

I can explore the order of operations using brackets.

Use the numbers 4, 5, 6 and 7 to create as many number calculations using BODMAS as possible, e.g.  $(6 - 4) \times 7 + 5 = 19$

Were there any number sentences that gave the same answer?

List them here:

Don't forget  
your BODMAS order:  
Brackets  
Order (exponents)  
Division and Multiplication  
Addition and Subtraction
