

# Extra Challenge

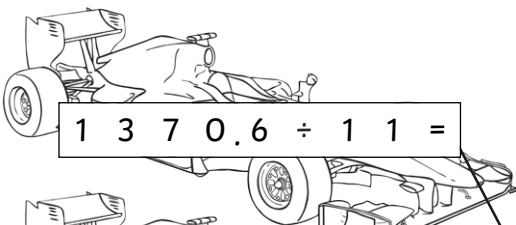

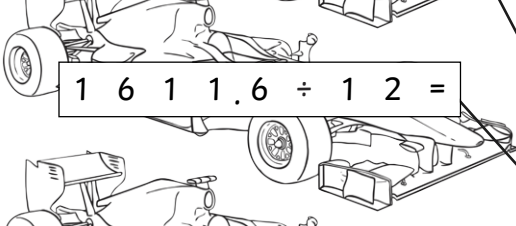

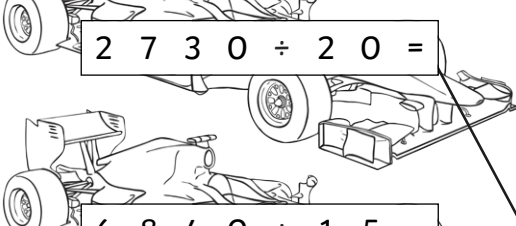

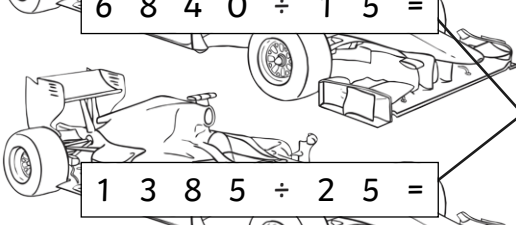

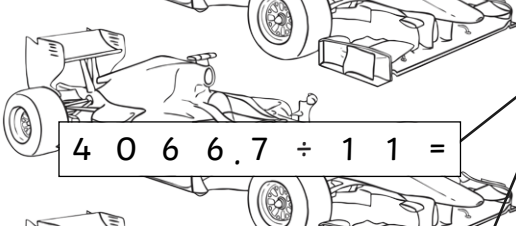

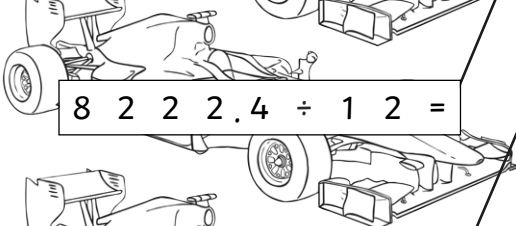

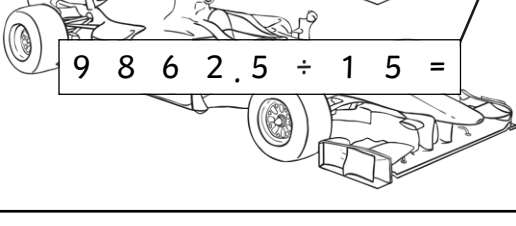

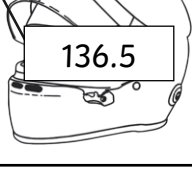

I can divide numbers by a two-digit number using short division.

Match the race car to the correct helmet.

# Extra Challenge Answers

Question	Answer
Match the race car to the correct helmet.	
 $1370.6 \div 11 =$	 685.2
 $1611.6 \div 12 =$	 657.5
 $2730 \div 20 =$	 55.4
 $6840 \div 15 =$	 369.7
 $1385 \div 25 =$	 134.3
 $4066.7 \div 11 =$	 124.6
 $8222.4 \div 12 =$	 456
 $9862.5 \div 15 =$	 136.5

1)

Course	Total Race Length (metres)	Number of Laps	Lap Length (metres)
Goldrock	9375	5	1875
Badcopse	7612	11	692
Capse	8743	7	1249
Toby's Tor	9711	13	747

- 2) 343 bus journeys – 342 will be full and one will hold 6 fans.  
 3) 36 race weekends with 8 tyres left over.

- 1) Accept an explanation that shows that Fernando has incorrectly divided 21 (hundreds) by 11 to equal 2 with one remainder. He then exchanged a remainder of 1 (hundreds) into 10 (tens) and regrouped this in the tens column. The correct answer should be 196.  
 2) Accept any correct explanation that shows that Daniel is incorrect. For example,  $3000 \div 14 = 214 \text{ r}4$ . As there is a remainder of 4, this means that he has completed 214 full laps and he will be four minutes (out of 14) into his next lap at the end of the 50 hours. Daniel has incorrectly rounded his answer up to the next whole number. His answer should be 214 as he did not complete the 215th lap.

- 1) Prediction reasoning might include spotting multiples of 5 or 10, or identifying odd and even numbers.

$1440 \div 11 = 130\text{r}10$	$1606 \div 11 = 146$	$3000 \div 11 = 272\text{r}7$	$4200 \div 11 = 381\text{r}8$	$7925 \div 11 = 720\text{r}5$
$1440 \div 12 = 120$	$1606 \div 12 = 133\text{r}10$	$3000 \div 12 = 250$	$4200 \div 12 = 350$	$7925 \div 12 = 660\text{r}5$
$1440 \div 15 = 96$	$1606 \div 15 = 107\text{r}1$	$3000 \div 15 = 200$	$4200 \div 15 = 280$	$7925 \div 15 = 528\text{r}5$
$1440 \div 20 = 72$	$1606 \div 20 = 80\text{r}6$	$3000 \div 20 = 150$	$4200 \div 20 = 210$	$7925 \div 20 = 396\text{r}5$
$1440 \div 25 = 57\text{r}15$	$1606 \div 25 = 64\text{r}6$	$3000 \div 25 = 120$	$4200 \div 25 = 168$	$7925 \div 25 = 317$

2)

	=	846 seconds
	=	282 seconds
	=	47 seconds

- 1) Felicity has carried out this short division to calculate the number of seats per row in Capse Grandstand. There are 2156 seats in eleven rows. She did not expect his answer to have a remainder so thinks that she might have made a mistake. Explain Felicity's error and work out the correct answer.

$$\begin{array}{r}
 214 \text{ r}2 \\
 \hline
 11 \overline{) 2156} \\
 \underline{22} \phantom{00} \\
 15 \phantom{0} \\
 \underline{15} \phantom{0} \\
 6
 \end{array}$$

- 2) Daniel is working out how many full laps of Goldrock Circuit he could complete in 50 hours. Each lap takes him 14 minutes to complete. He has correctly worked out that 50 hours is 3000 minutes.

I can complete 215 full laps in 50 hours.

Do you agree? Explain your answer.

1) Organisers for a race must decide how to organise the seats. Organise the seats in three different ways choosing a number of rows (divisor) and a number of seats (dividend) from the lists. Predict whether your answer will have a remainder or not. Can you explain your reasons? Finally, calculate how many seats will be in each row.

Number of Rows	Number of Seats
11	1440
12	1606
15	3000
20	4200
25	7925

Number of Rows	Number of Seats	Remainder Prediction	Final Calculation

2) The information below shows some times for different vehicles completing laps of Bashmound Circuit. If one vehicle equates to one lap, can you work out the lap time for each vehicle?

	=	9306 seconds
	=	
	=	
	=	
	=	
	=	

- 1) Use short division to calculate the length of one lap in each race.

Course	Total Race Length (metres)	Number of Laps	Lap Length (metres)
Goldrock	9375	5	
Badcopse	7612	11	
Capse	8743	7	
Toby's Tor	9711	13	

- 2) Race fans are transported from the car park to the circuit by minibus. The minibus seats 12 people. How many journeys will the bus need to make if 4110 fans use the car park?

- 3) A team uses forty tyres each race weekend. The team has ordered 1448 tyres. How many race weekends can they attend? Will there be any tyres left over?

- 1) Use short division to calculate the length of one lap in each race.

Course	Total Race Length (metres)	Number of Laps	Lap Length (metres)
Goldrock	9375	5	
Badcopse	7612	11	
Capse	8743	7	
Toby's Tor	9711	13

# Engines Ready Game

I can divide numbers by a two-digit number using short division.

Place your race cars on the start square. Taking turns, roll the dice and move the desired number of spaces. Complete the calculation that you land on using the Short Division Record Sheet. Once you have completed the calculation, ask your partner to check the calculation using a calculator. If you have the incorrect answer, you will need to move your race car back to where you began your turn. The first race car to the end of the track wins.

# Race Track Game

I can divide numbers by a two-digit number using short division.

Place your race cars anywhere on the track. Take turns to roll the dice and move your race car the desired number of spaces on the track. After, select a card to form a division calculation, e.g.  $4534 \div 12$ . Complete the calculation. Remember, some of the calculations may have a remainder. Once you have finished the calculation, get your partner to check your answer. If your answer is correct, you score one track point. Repeat the process. The player with the most track points at the end of the game wins.

Racer One Track Point Score	Racer Two Track Point Score
