

Subtracting Fractions with Different Denominators

Answers

$$1. \frac{3}{3} - \frac{2}{6} = \frac{6}{6} - \frac{2}{6} = \frac{4}{6} = \frac{2}{3}$$

$$2. \frac{7}{8} - \frac{2}{4} = \frac{7}{8} - \frac{4}{8} = \frac{3}{8}$$

$$3. \frac{9}{12} - \frac{2}{6} = \frac{9}{12} - \frac{4}{12} = \frac{5}{12}$$

$$4. \frac{18}{9} - \frac{2}{3} = \frac{18}{9} - \frac{6}{9} = \frac{12}{9} = 1 \frac{3}{9} = 1 \frac{1}{3}$$

$$5. \frac{16}{20} - \frac{3}{5} = \frac{16}{20} - \frac{12}{20} = \frac{4}{20} = \frac{1}{5}$$

$$6. \frac{9}{10} - \frac{4}{20} = \frac{18}{20} - \frac{4}{20} = \frac{14}{20} = \frac{7}{10}$$

$$7. \frac{12}{14} - \frac{3}{7} = \frac{12}{14} - \frac{6}{14} = \frac{6}{14} = \frac{3}{7}$$

$$8. \frac{13}{16} - \frac{5}{8} = \frac{13}{16} - \frac{10}{16} = \frac{3}{16}$$

$$9. \frac{10}{12} - \frac{4}{24} = \frac{20}{24} - \frac{4}{24} = \frac{16}{24} = \frac{4}{6} = \frac{2}{3}$$

$$10. \frac{7}{9} - \frac{2}{6} = \frac{14}{18} - \frac{6}{18} = \frac{8}{18} = \frac{4}{9}$$

$$11. \frac{10}{15} - \frac{3}{5} = \frac{10}{15} - \frac{9}{15} = \frac{1}{15}$$

$$12. \frac{9}{10} - \frac{10}{30} = \frac{27}{30} - \frac{10}{30} = \frac{17}{30}$$

$$13. \frac{6}{9} - \frac{1}{2} = \frac{12}{18} - \frac{9}{18} = \frac{3}{18} = \frac{1}{6}$$

$$14. \frac{4}{5} - \frac{3}{10} = \frac{8}{10} - \frac{3}{10} = \frac{5}{10} = \frac{1}{2}$$

$$15. \frac{18}{24} - \frac{5}{8} = \frac{18}{24} - \frac{15}{24} = \frac{3}{24} = \frac{1}{8}$$

$$16. \frac{24}{30} - \frac{1}{2} = \frac{24}{30} - \frac{15}{30} = \frac{9}{30} = \frac{3}{10}$$
