

Zoo Classification Example

There are different ways to sort and group the animals. This is one example of how to get started. You may use it to help you classify the animals for your zoo.

Zoo Classification

You have been asked to classify the animals on the Zoo Animals List. The animals will be housed in enclosures near to each other. Start by deciding on two groups to use to split up the animals, then split each group into two more groups. Carry on until you have classified the individual animals, or cannot think of a way to split the group up any more. The first few boxes have been drawn for you. Add a title for each group to show your reasons for classifying the animals in this way.

Zoo Classification

You have been asked to classify the animals on the Zoo Animals List. The animals will be housed in enclosures near to each other. Start by deciding on two groups to use to split up the animals, then split each group into two more groups. Carry on until you have classified the individual animals or you cannot split up the animals any more. The boxes for the first two groups have been done for you. Add a title for each group to show your reasons for classifying the animals in this way.

Living Things and Their Habitats

Classifying Conundrums

Aim

- I can give reasons for classifying animals based on their similarities and differences.

Success Criteria

- I can sort and group animals based on their features.
- I can give reasons for the way I have classified animals.

What is Classification?

How many different species of living things are there on Earth?

Scientists believe that there could be as many as 10 million different species on Earth! It would be very hard to study the lives and behaviours of all these living things without grouping them together somehow.

Scientists sort and group living things according to their similarities and differences. This is called classification. Scientists who classify living things are called taxonomists.

Sorting and Grouping

Taxonomists classify living things by comparing them. Let's look at an example of how this works.

Look at the snacks on this table. How could we group them? Taxonomists would start by splitting them into two large groups. Can you think of two groups to use to split up the snacks?

There are several ways you could split these snacks into two groups. Share your ideas with the class.

Sorting and Grouping

Let's say you split them into 'Healthy' snacks and 'Unhealthy' snacks.

Now each group can be split into another two groups. Look at the 'Healthy' snacks. How could you split them into two smaller groups?

Sorting and Grouping

Again, there are several ways you could split these snacks into two groups.

They could be grouped into 'Fruits' and 'Vegetables'.

Sorting and Grouping

Now, the 'Vegetables' group can be split up into two smaller groups.

They could be split into 'Roots' and 'Florets', or even 'Carrots' and 'Broccoli'.

Sorting and Grouping

This is how taxonomists classify living things. They group similar things together, then split the groups again and again so they become smaller and smaller. Each group allows scientists to observe and understand their similarities and differences more clearly.

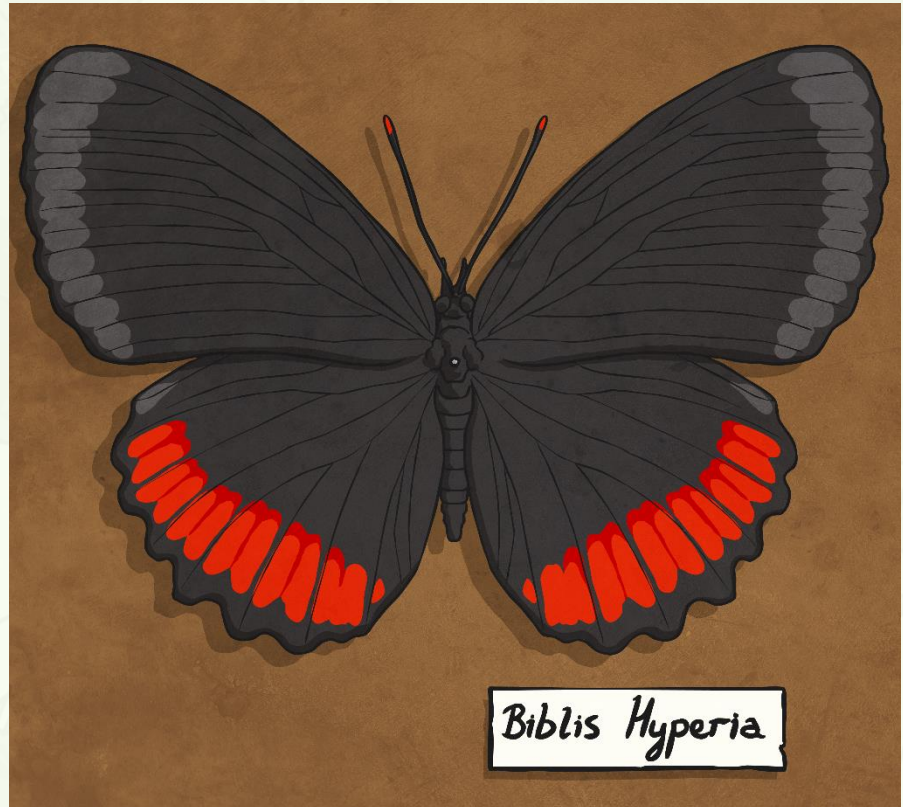

A Single Method?

Talk to other people in your group about how they classified the animals in their zoo. Did they sort and group the animals in the same way as you did?

Do you think taxonomists use different classification methods like you may have done? Is it important to use the same method of classification?

In your next lesson, you will find out about the standard method of classifying living things.

Aim

- I can give reasons for classifying animals based on their similarities and differences.

Success Criteria

- I can sort and group animals based on their features.
- I can give reasons for the way I have classified animals.

Zoo Animals List

These animals are going to live in a new zoo. You need to classify the animals so that similar species can be housed near to each other. Use the Zoo Classification Activity Sheet to classify the animals.

lion

chameleon

tarantula

lobster

hissing cockroach

giraffe

poison dart frog

macaw

chimpanzee

octopus

giant snail

komodo dragon

Galapagos penguin

spectacled bear

meerkat

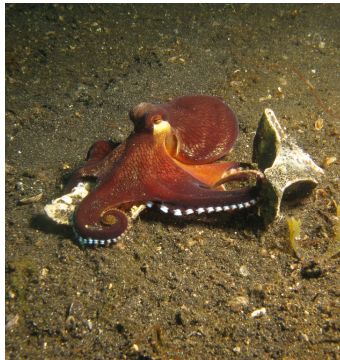

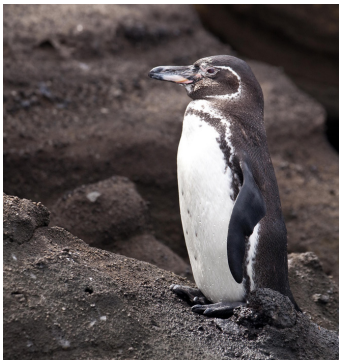

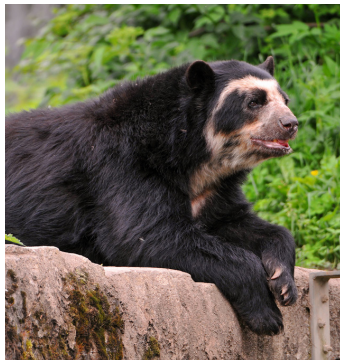

emu
