

Measurement: Area of Parallelograms

Aim: I can calculate the area of parallelograms and triangles. I can find the area of a parallelogram.	Success Criteria: I can find the area of a parallelogram by multiplying the length by the height. I can explain why the formula works for a parallelogram. I can solve problems involving calculating the area of parallelograms.	Resources: Lesson Pack
	Key/New Words: Area, parallelogram, length, height, right-angled triangle, formula.	Preparation: Differentiated Area of Parallelograms Activity Sheet – one per child

Prior Learning: It will be helpful if children can use a formula to calculate the area of rectangles.

Learning Sequence

	Match the Area: Children calculate the area of triangles shown on the Lesson Presentation and match the triangle to the correct area.	
	How to Calculate the Area of a Parallelogram: Use the Lesson Presentation to explain how to calculate the area of a parallelogram, by multiplying the length by the height. Explain why this formula works.	
	Find the Area of Parallelograms: Children calculate the area of the parallelograms shown on the Lesson Presentation . Work through the answers.	
	Parallelogram Problems: Children solve problems involving the calculation of the area of parallelograms. They match each clue to the parallelogram it describes.	
	Area of Parallelograms: Children complete the differentiated Area of Parallelograms Activity Sheet , calculating the area of parallelograms.	
	Children calculate the area of a variety of parallelograms, up to 150cm^2 . They explain how the formula for calculating the area of a parallelogram works. They answer a simple reasoning question.	
	Children calculate the area of a variety of parallelograms, up to 600cm^2 . They explain how the formula for calculating the area of a parallelogram works. They answer a reasoning question.	
	Children calculate the area of a variety of parallelograms, up to 3000cm^2 , including sides with half measurements. They explain how the formula for calculating the area of a parallelogram works. They answer a more complex reasoning question. An Extra Challenge Activity Sheet is also included.	

	<p>Diving into Mastery: Schools using a mastery approach may prefer to use the following as an alternative activity. These sheets might not necessarily be used in a linear way. Some children might begin at the 'Deeper' section and in fact, others may 'dive straight in' to the 'Deepest' section if they have already mastered the skill and are applying this to show their depth of understanding.</p> <p> Children complete fluency problems which involve finding the area of a range of parallelograms and calculating missing measures.</p> <p> Children explore answering reasoning problems which involve calculating the area of parallelograms to explain if the given statements are correct.</p> <p> Children use problem-solving skills in order to answer open ended-tasks that involve a greater depth of mathematical thinking. They explore possible dimensions of a parallelogram when given the area and calculate area of parallelograms in a real life context.</p>	
	<p>Calculate the Base and Height: Children are given the area and either the height or base of a parallelogram and they calculate the unknown measurement.</p>	

<p>Explore it</p> <p>Matchit: Children design a set of matching cards for the area of parallelograms. They swap cards with another pair.</p> <p>Designit: On squared paper, children draw and cut out squares and triangles. They rearrange the shapes to form another shape or object (like a tangram). They then calculate the area of the whole shape.</p>	
--	--

Maths

Measurement

Area of Parallelograms

Aim

I can find the area of a parallelogram.

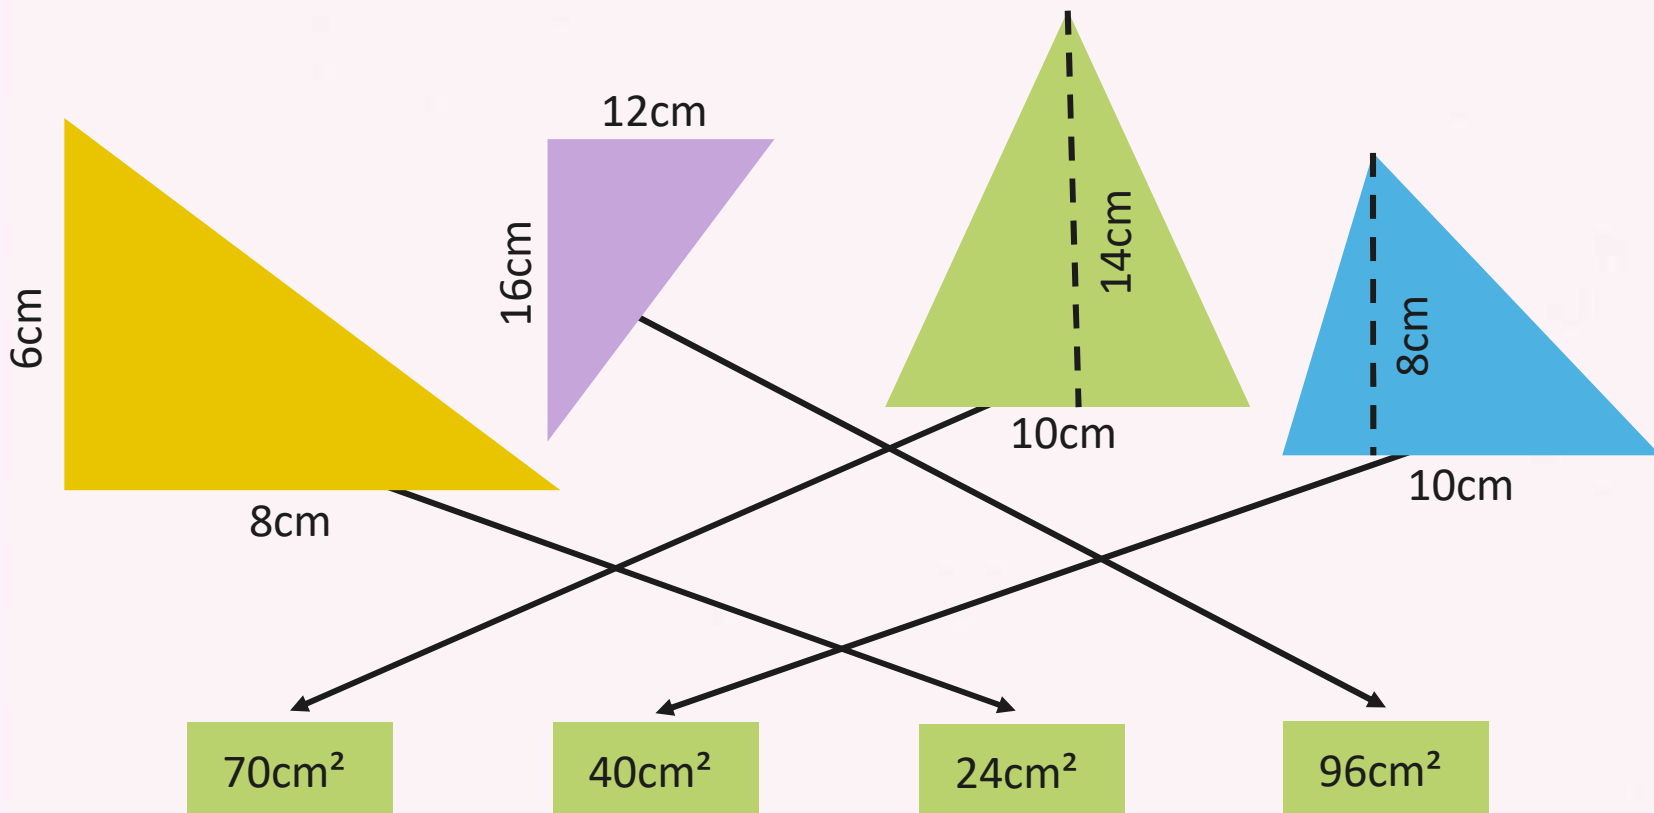

Success Criteria

- I can find the area of a parallelogram by multiplying the length by the height.
- I can explain why the formula works for a parallelogram.
- I can solve problems involving calculating the area of parallelograms.

Match the Area

Match these triangles to their areas:

How to Calculate the Area of a Parallelogram

To calculate the area of a parallelogram, you need to multiply the length of the parallelogram by the height (not the sides).

Here is a parallelogram:

$$9\text{cm} \times 3\text{cm} = 27\text{cm}^2$$

The area of this parallelogram is **27cm²**.

How to Calculate the Area of a Parallelogram

But why does this formula work when calculating the area of a parallelogram?

To calculate the area of a parallelogram, you need to multiply the length of the parallelogram by the height.

If we were to cut off a right angled-triangle from the end of the parallelogram...

and add it to the other end of the shape...

we would have a rectangle with the dimensions $3\text{cm} \times 9\text{cm}$, so the area would be **27cm^2** .

Find the Area of a Parallelogram

Find the area of these parallelograms:

126cm²

1200cm²

20cm²

Parallelogram Problem

Here are three parallelograms (not drawn to scale). Read each clue and work out which of the parallelograms is being described.

Clue	Parallelogram
This parallelogram has the greatest area.	B
This parallelogram is the only parallelogram which doesn't have a whole number area.	C
If both dimensions of this parallelogram were doubled, this parallelogram would have an area of 800cm^2 .	A
The combined area of these 2 parallelograms is greater than 500cm^2 , but less than 540cm^2 .	B and C

Area of Parallelograms Activity

Use your wonderful skills to complete these activity sheets:

Area of Parallelogram
Length of base of parallelogram: _____
Find the area of the parallelogram.

1. 15m (height), 24m (base)

2. 10m (height), 18m (base)

3. 12m (height), 25m (base)

Area of Parallelogram
Length of base of parallelogram: _____
Find the area of the parallelogram.

1. 7m (height), 8m (base)

2. 10m (height), 12m (base)

3. 14m (height), 20m (base)

Area of Parallelograms
Length of base of parallelogram: _____
Find the area of the parallelogram.

1. 5m (height), 10m (base)

2. 4m (height), 9m (base)

3. 6m (height), 10m (base)

4. 8m (height), 14m (base)

Diving into Mastery

Dive in by completing your own activity!

Two columns of math problems on grid paper, each starting with a question in Chinese and a 'Solve' icon.

Column 1:

- 1. Draw a parallelogram and a trapezoid on the grid.
- 2. Calculate the area of the parallelogram.
- 3. Calculate the area of the trapezoid.
- 4. Calculate the area of the parallelogram.
- 5. Calculate the area of the trapezoid.

Column 2:

- 1. Draw a parallelogram and a trapezoid on the grid.
- 2. Calculate the area of the parallelogram.
- 3. Calculate the area of the trapezoid.
- 4. Calculate the area of the parallelogram.
- 5. Calculate the area of the trapezoid.

On the right side of the grid paper, there are additional diagrams: a trapezoid with a dashed vertical line indicating its height, and a parallelogram with a dashed vertical line indicating its height.

Calculate the Base or Height

Here is a parallelogram. You are given the height and the area. How can you work out the base of the parallelogram?

Let's put the information we know into a calculation:

$$8 \times \square = 128\text{cm}^2$$

To find out what number will fit into the missing box, we can do an inverse operation:

$$128\text{cm}^2 \div 8 = \square$$

$$128 \div 8 = 16$$

$$\text{base} = 16\text{cm}$$

Let's check:

$$16 \times 8 = 128$$

Answer:

base = 16cm

Calculate the Base or Height

Here are 2 parallelograms. Calculate the base or the height of each.

Answer:

base = 15cm

Answer:

height = 6cm

Aim

I can find the area of a parallelogram.

Success Criteria

- I can find the area of a parallelogram by multiplying the length by the height.
- I can explain why the formula works for a parallelogram.
- I can solve problems involving calculating the area of parallelograms.

Area of Parallelograms

I can find the area of parallelograms.

Find the area of these parallelograms:

1.

2.

3.

4.

5.

6.

7.

8.

9. Explain why the area of a parallelogram is the length of the base multiplied by the height. Draw a diagram to help your explanation.

10. Change one of the measurements of this parallelogram so that it has an area of 40cm^2 .

Area of Parallelograms **Answers**

Question	Answer
1.	28cm^2
2.	30cm^2
3.	63cm^2
4.	6cm^2
5.	60cm^2
6.	96cm^2
7.	90cm^2
8.	128cm^2
9.	Explain why the area of a parallelogram is the length of the base multiplied by the height. Draw a diagram to help your explanation.
	<i>Explanation and drawings show an understanding that if you cut off a right-angled triangle from one side of the parallelogram and place it on the other side, you would have a rectangle and the area would be length \times height.</i>
10.	Change the one of the measurements of this parallelogram so that it has an area of 40cm^2 .
	<i>The new shape could be $4\text{cm} \times 10\text{cm}$ or $8\text{cm} \times 5\text{cm}$.</i>

Area of Parallelograms

I can find the area of parallelograms.

Find the area of these parallelograms:

1.

2.

3.

4.

5.

6.

7.

8.

9. Explain why the area of a parallelogram is the length of the base multiplied by the height. Draw a diagram to help your explanation.

10. Lena and Trishna have each drawn a parallelogram. Lena's parallelogram has a base of 18cm and height 9cm. Trishna's parallelogram has a base of 12cm and height 11cm.

My parallelogram has the greatest area. It is more than 25cm^2 bigger than Trishna's parallelogram.

Is Lena correct?

Area of Parallelograms **Answers**

Question	Answer
1.	40cm^2
2.	135cm^2
3.	240cm^2
4.	96cm^2
5.	52cm^2
6.	126cm^2
7.	540cm^2
8.	325cm^2
9.	Explain why the area of a parallelogram is the length of the base multiplied by the height. Draw a diagram to help your explanation.
	<i>Explanation and drawings show an understanding that if you cut off a right-angled triangle from one side of the parallelogram and place it on the other side, you would have a rectangle and the area would be length \times height.</i>
10.	Lena and Trishna have each drawn a parallelogram. Lena's parallelogram has a base of 18cm and height 9cm. Trishna's parallelogram has a base of 12cm and height 11cm. Is Lena correct?
	<i>Lena's parallelogram has an area of 162cm^2. Trishna's parallelogram has an area of 132cm^2. The difference between the areas of the two parallelograms is 30cm^2. This is greater than 25cm^2. Lena is correct.</i>

Area of Parallelograms

I can find the area of parallelograms.

Find the area of these parallelograms:

1.

2.

3.

4.

5.

6.

7.

8.

9. Explain why the area of a parallelogram is the length of the base multiplied by the height. Draw a diagram to help your explanation.

10. Katie says, "I have drawn a parallelogram which has a base of 12cm and height 8cm. If I doubled either the base or the height, the area would be double the area of my first parallelogram." Is Katie correct? Show how you know.

Area of Parallelograms **Answers**

Question	Answer
1.	768cm^2
2.	864cm^2
3.	2881cm^2
4.	1875cm^2
5.	22.5cm^2
6.	156cm^2
7.	19.25cm^2
8.	33.75cm^2
9.	Explain why the area of a parallelogram is the length of the base multiplied by the height. Draw a diagram to help your explanation.
	<i>Explanation and drawings show an understanding that if you cut off a right-angled triangle from one side of the parallelogram and place it on the other side, you would have a rectangle and the area would be length \times height.</i>
10.	Katie says 'I have drawn a parallelogram which has a base of 12cm and height 8cm. If I doubled either the base or the height, the area would be double the area of my first parallelogram.' Is Katie correct? Show how you know.
	<i>Katie is correct. The original parallelogram has an area of 96cm^2 ($12\text{cm} \times 8\text{cm}$). If you doubled the base, the area would be $24\text{cm} \times 8\text{cm} = 192\text{cm}^2$. If you doubled the height, the area would be $12\text{cm} \times 16\text{cm} = 192\text{cm}^2$. 192cm^2 is double 96cm^2.</i>

- 1) a) $4 \times 2 = 8\text{cm}^2$
 b) $5 \times 3 = 15\text{cm}^2$
- 2) a) $14\text{cm} \times 6\text{cm} = 84\text{cm}^2$
 b) $7\text{cm} \times 5\text{cm} = 35\text{cm}^2$
- 3) a) 80mm
 b) 7cm

- 1) Ania is incorrect. Using the formula $\text{base} \times \text{perpendicular height}$ to calculate the area of both the rectangle and the parallelogram will show Ania that both shapes actually have the same area of 32cm^2 .
- 2) No. Although Hamish has correctly calculated that the first parallelogram has an area of 42cm^2 , in the second parallelogram he has multiplied the base by a side length, rather than the perpendicular height. The correct area of the second parallelogram is $7\text{cm} \times 5\text{cm} = 35\text{cm}^2$ so both of these parallelograms do not have an area of 42cm^2 .

- 1) The parallelogram has an area of 84cm^2 so it could have the following dimensions:

$\text{base} = b$ and $\text{height} = h$

$b = 3\text{cm}$ and $h = 28\text{cm}$

$b = 4\text{cm}$ and $h = 21\text{cm}$

$b = 6\text{cm}$ and $h = 14\text{cm}$

$b = 7\text{cm}$ and $h = 12\text{cm}$

- a) Each tile has an area of 240cm^2 .

$$4800 \div 240 = 20$$

DIY Dan needs 20 tiles for this wall.

- b) $\pounds 175 \div \pounds 3.50 = 50$

Dan used 50 more tiles to decorate the rest of his bathroom.

Use the formula **base × height** to calculate the area of a parallelogram.

1) Find the area of each parallelogram.

_____ cm²

_____ cm²

2) Calculate the area of each parallelogram.

_____ cm²

_____ cm²

3) Calculate the missing measurements for these parallelograms.

Use the formula **base × height** to calculate the area of a parallelogram.

1) Ania has been counting squares to find the area of these shapes.

I think that the parallelogram has a larger area than the rectangle.

Is Ania correct? Explain to Ania how to check if she is correct by using a calculation.

2) Hamish has worked out that each parallelogram has an area of 42cm^2 .

Do you agree with Hamish? Explain why.

Use the formula **base × height** to calculate the area of a parallelogram.

1) Find the area of each parallelogram.

a)

b)

2) Calculate the area of each parallelogram.

a)

b)

3) Calculate the missing measurements for these parallelograms.

a)

b)

Use the formula **base × height** to calculate the area of a parallelogram.

1) Find the area of each parallelogram.

a)

b)

2) Calculate the area of each parallelogram.

a)

b)

3) Calculate the missing measurements for these parallelograms.

a)

b)

Use the formula **base × height** to calculate the area of a parallelogram.

- 1) Ania has been counting squares to find the area of these shapes.

I think that the parallelogram has a larger area than the rectangle.

Is Ania correct? Explain to Ania how to check if she is correct by using a calculation.

- 2) Hamish has worked out that each parallelogram has an area of 42cm^2 .

$$14\text{cm} \times 3\text{cm} = 42\text{cm}^2$$

$$7\text{cm} \times 6\text{cm} = 42\text{cm}^2$$

Do you agree with Hamish? Explain why.

Use the formula **base × height** to calculate the area of a parallelogram.

- 1) Ania has been counting squares to find the area of these shapes.

I think that the parallelogram has a larger area than the rectangle.

Is Ania correct? Explain to Ania how to check if she is correct by using a calculation.

- 2) Hamish has worked out that each parallelogram has an area of 42cm^2 .

$$14\text{cm} \times 3\text{cm} = 42\text{cm}^2$$

$$7\text{cm} \times 6\text{cm} = 42\text{cm}^2$$

Do you agree with Hamish? Explain why.

Use the formula **base × height** to calculate the area of a parallelogram.

- 1) I am thinking of a parallelogram with side lengths that are whole numbers.

It has an area of 84cm^2 .
Its height measures between 10cm and 30cm.
Its base measures between 2cm and 10cm.

Give the dimensions of all the possible parallelograms I could be thinking of.

- 2) DIY Dan is decorating his bathroom with these tiles:

One wall of his bathroom has an area of 4800cm^2 .

- a) How many tiles will DIY Dan need to decorate this wall?
b) DIY Dan spends another £175 decorating the rest of his bathroom with tiles. How many more tiles did DIY Dan use?

Use the formula **base × height** to calculate the area of a parallelogram.

- 1) I am thinking of a parallelogram with side lengths that are whole numbers.

It has an area of 84cm^2 .
Its height measures between 10cm and 30cm.
Its base measures between 2cm and 10cm.

Give the dimensions of all the possible parallelograms I could be thinking of.

- 2) DIY Dan is decorating his bathroom with these tiles:

- a) How many tiles will DIY Dan need to decorate this wall?
b) DIY Dan spends another £175 decorating the rest of his bathroom with tiles. How many more tiles did DIY Dan use?

Find the Dimensions

I can find the area of parallelograms.

Calculate the area of each parallelogram, then give the possible dimensions of two other parallelograms which have the same area. You may use fractional measurements, for example 3.5cm.

a) **Shape 1**

Area =

	Length	Height
Shape 2		
Shape 3		

b) **Shape 1**

Area =

	Length	Height
Shape 2		
Shape 3		

c) **Shape 1**

Area =

	Length	Height
Shape 2		
Shape 3		

d) **Shape 1**

Area =

	Length	Height
Shape 2		
Shape 3		

Find the Dimensions Answers

- a) Shape area = 24cm^2
Other 2 shapes have dimensions which give an area of 24cm^2 when multiplied together. Allow half unit measurements, e.g. $1\text{cm} \times 24\text{cm}$, $1.5\text{cm} \times 16\text{cm}$, $2\text{cm} \times 12\text{cm}$, $4\text{cm} \times 6\text{cm}$.
- b) Shape area = 70cm^2
Other 2 shapes have dimensions which give an area of 70cm^2 when multiplied together. Allow half unit measurements, $1\text{cm} \times 70\text{cm}$, $2\text{cm} \times 35\text{cm}$, $2.5\text{cm} \times 28\text{cm}$, $5\text{cm} \times 14\text{cm}$, $3.5\text{cm} \times 20\text{cm}$.
- c) Shape area = 25cm^2
Other 2 shapes have dimensions which give an area of 25cm^2 when multiplied together. Allow half unit measurements, $1\text{cm} \times 25\text{cm}$, $2\text{cm} \times 12.5\text{cm}$, $2.5\text{cm} \times 10\text{cm}$.
- d) Shape area = 48cm^2
Other 2 shapes have dimensions which give an area of 48cm^2 when multiplied together. Allow half unit measurements, $1\text{cm} \times 48\text{cm}$, $1.5\text{cm} \times 32\text{cm}$, $2\text{cm} \times 24\text{cm}$, $3\text{cm} \times 16\text{cm}$, $6\text{cm} \times 8\text{cm}$.
