Bingo Instructions

Each child needs a bingo card. It doesn't matter if more than one child has the same card: it will just mean more winners!

Read out the questions below. If the children have the answer on their card, they can cross it off. Once they have crossed off all six of their numbers, they shout 'bingo' and have won!

1.	What is 4^2 ?
2.	Calculate seven lots of 3.
3.	What is the product of 9 and 8?
4.	49 is the answer to a square number calculation. What was the question?
5.	100 is which number squared?
6.	36 is the answer to a square number calculation. What was the question?
7.	What is 12^2 ?
8.	How many 8s are there in 64?
9.	10^2
10.	What is the product of 4 and 1?
11.	What is 1^2 ?
12.	How many 5s are there in 60?
13.	121 is the square of which number?
14.	8^2
15.	7^2

Find $\frac{2}{8}$
of 64.

Find $\frac{6}{7}$
of 70.

Find $\frac{3}{6}$
of 36.

Find $\frac{2}{3}$
of 90.

Find $\frac{4}{10}$
of 200.

Find $\frac{1}{2}$
of 70.

Find $\frac{3}{4}$
of 60.

Find $\frac{2}{9}$
of 81.

Find $\frac{2}{8}$
of 88.

Find $\frac{6}{7}$
of 91.

Find $\frac{3}{6}$
of 360.

Find $\frac{2}{3}$
of 42.

Find $\frac{4}{10}$
of 1000.

Find $\frac{1}{12}$
of 168.

Find $\frac{3}{4}$
of 500.

Find $\frac{2}{9}$
of 126.

Find $\frac{3}{9}$
of 99.

Find $\frac{2}{6}$
of 90.

Find $\frac{2}{8}$
of 888.

Find $\frac{6}{7}$
of 175.

Find $\frac{3}{6}$
of 3600.

Find $\frac{2}{3}$
of 195.

Find $\frac{4}{10}$
of
10 000.

Find $\frac{2}{12}$
of 168.

Find $\frac{3}{4}$
of 104.

Find $\frac{5}{9}$
of 126.

Find $\frac{4}{9}$
of 99.

Find $\frac{2}{6}$
of 504.

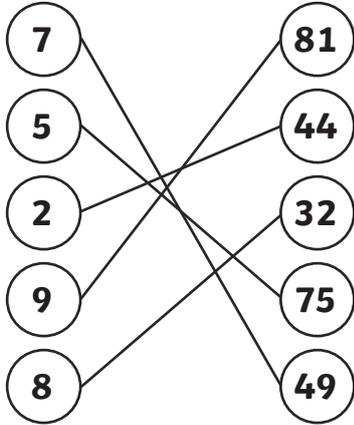

Fantastic Fractions! Answers

Question	Answer		
★	Find the fractions of these numbers:		
	Find $\frac{2}{8}$ of 64 = 16	Find $\frac{6}{7}$ of 70 = 60	Find $\frac{3}{6}$ of 36 = 18
	Find $\frac{2}{3}$ of 90 = 60	Find $\frac{4}{10}$ of 200 = 80	Find $\frac{1}{2}$ of 70 = 35
	Find $\frac{3}{4}$ of 60 = 45	Find $\frac{2}{9}$ of 81 = 18	
★★	Find the fractions of these numbers:		
	Find $\frac{2}{8}$ of 88 = 22	Find $\frac{6}{7}$ of 91 = 78	Find $\frac{3}{6}$ of 360 = 180
	Find $\frac{2}{3}$ of 42 = 28	Find $\frac{4}{10}$ of 1000 = 400	Find $\frac{1}{12}$ of 168 = 14
	Find $\frac{3}{4}$ of 500 = 375	Find $\frac{2}{9}$ of 126 = 28	Find $\frac{3}{9}$ of 99 = 33
	Find $\frac{2}{6}$ of 90 = 30		
★★★	Find the fractions of these numbers:		
	Find $\frac{2}{8}$ of 888 = 222	Find $\frac{6}{7}$ of 175 = 150	Find $\frac{3}{6}$ of 3600 = 1800
	Find $\frac{2}{3}$ of 195 = 130	Find $\frac{4}{10}$ of 10 000 = 4000	Find $\frac{2}{12}$ of 168 = 28
	Find $\frac{3}{4}$ of 104 = 78	Find $\frac{5}{9}$ of 126 = 70	Find $\frac{4}{9}$ of 99 = 44
	Find $\frac{2}{6}$ of 504 = 168		

- 1) a) 24, **28**, 32, 36, **40**, 44, **48**
 b) **7**, **14**, 21, 28, **35**, **42**, 49
 c) **102**, 96, **90**, 84, **78**, 72, 66

2)

- 3) a) 3, 6, 9, 12, 15, 18, 21, 24, 27, 30
 b) 6, 12, 18, 24, 30
 c) Various answers which may include:
 All multiples of 6 are also multiples of 3.
 The numbers in the 6 times table can also be found in the 3 times table.
 Every other number in the multiples of 3 is a multiple of 6.
 d) Yes

- 1) a) False. Even multiples of 9 include: 36, 54, 72, 90, 108...
 b) True.
 $4 + 6 + 2 = 12$
 12 is divisible by 3 so 462 is a multiple of 3
 c) False. 21 is a multiple of 3; 35 is a multiple of 5; 70 is a multiple of 10...
 2) Set A. 16 is the odd one out as it is not a multiple of 3.
 Set B. 12 is the odd one out as it is not a multiple of 8.
 Set C. 3 is the odd one out as it is not a multiple of 9.
 3) No. Some are multiples of three but some aren't.
 567 is. $5 + 6 + 7 = 18$; $18 \div 3 = 6$
 261 is. $2 + 6 + 1 = 9$; $9 \div 3 = 3$
 952 isn't. $9 + 5 + 2 = 16$ 16 is not divisible by 3
 257 isn't. $2 + 5 + 7 = 14$ 14 is not divisible by 3

- 1) **Two possible answers: 72 and 96**
- 2) **54**
- 3)
 - a) **150, 153, 156, 159, 162, 165, 168, 171, 174, 177, 180, 183, 186, 189, 192, 195, 198**
 - b) **152, 156, 160, 164, 168, 172, 176, 180, 184, 188, 192, 196, 200**
 - c) **156, 168, 180, 192**
 - d) **The common multiples follow a pattern of adding 12 each time as $3 \times 4 = 12$.**
 - e) **204 because $192 + 12 = 204$**

1) Complete the following sequences of multiples:

a) 24, , 32, 36, , 44,

b) , , 21, 28, , , 49

c) , 96, , 84, , 72, 66

2) Match each number to its multiple.

Each number should only be matched once.

3) a) List all of the multiples of 3 up to 30.

b) List all of the multiples of 6 up to 30.

c) What do you notice about both of the lists?

d) Will 54 be a multiple of 3 and 6?

1) Are these statements true or false? Explain how you know.

	Statement	True or False?	Explanation
a)	All multiples of 9 are odd except 18.		
b)	462 is a multiple of 3.		
c)	Multiples of 7 are not common multiples in any other times table.		

2) Circle the odd number out in each set of numbers. Explain your reasoning.

Set A	Set B	Set C
12	16	36
42	12	81
27	48	9
33	88	3
16	72	27
21	32	108

3) Lucas says that these 3-digit numbers are all multiples of 3. Do you agree? Prove how you know.

 257
952

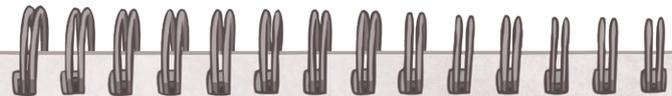

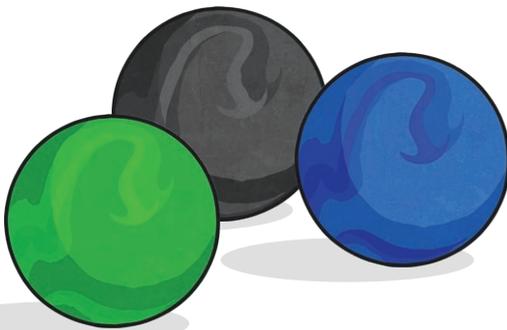

1) James is thinking of a number. What could his number be? Is there more than one answer?

My number is:

- A multiple of 6 and 8.
- Greater than 50 but less than 100.

2) How many marbles does Eva have in her collection?

- The total is a multiple of 6 and 9.
- She has between 30 and 60 marbles.
- The number of marbles is also a multiple of 3 and 2.
- The second digit of the number of marbles is lower than the first digit.

3) a) List the multiples of 3 between 150 and 200.

b) List the multiples of 4 between 150 and 200.

c) Identify the common multiples of 3 and 4 between 150 and 200.

d) What do you notice about these common multiples? Is there a pattern you can identify?

e) What would the next common multiple of 3 and 4 be if you continued this pattern?

1) Complete the following sequences of multiples:

- a) 24, , 32, 36, , 44,
- b) , , 21, 28, , , 49
- c) , 96, , 84, , 72, 6

2) Match each number to its multiple.
Each number should only be matched once.

Factors Treasure Hunt Cards

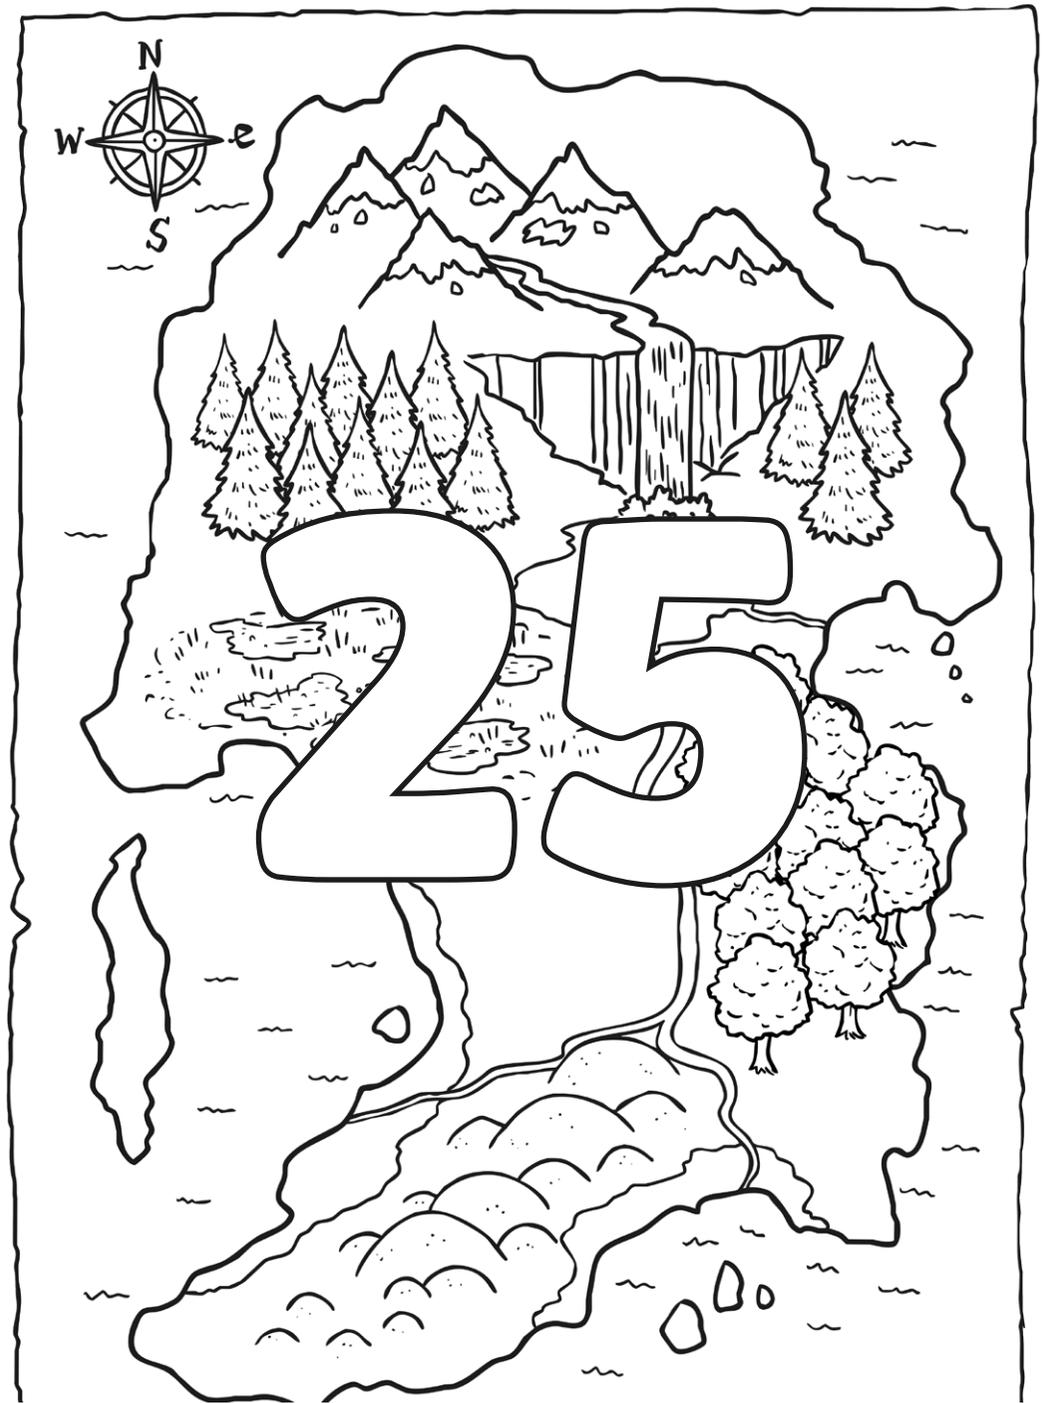

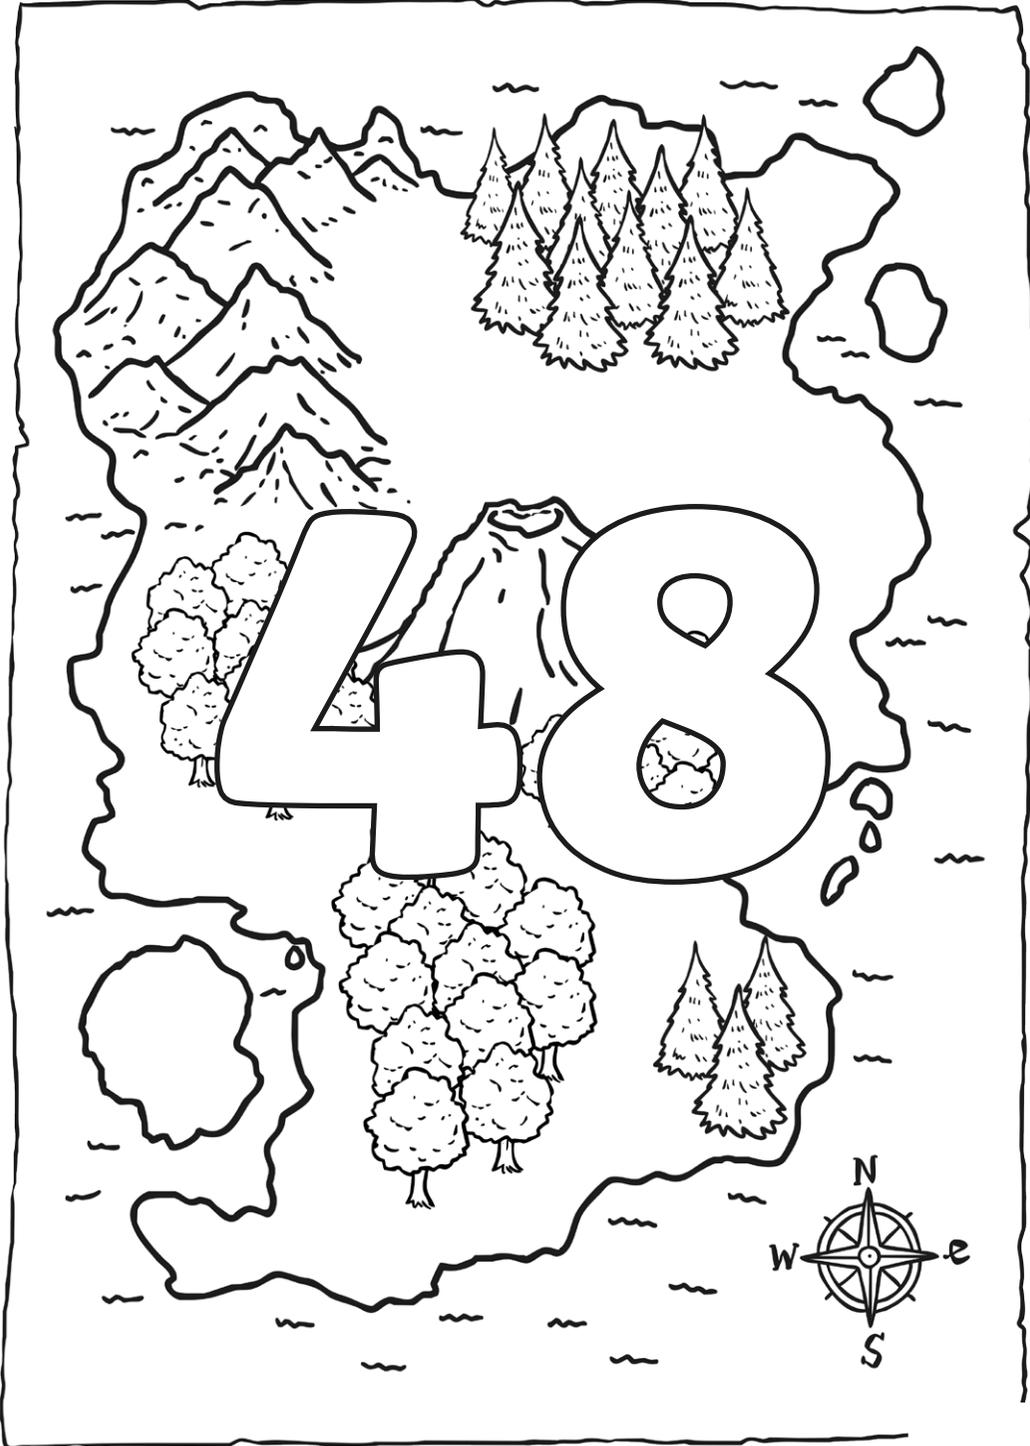

Teacher note:

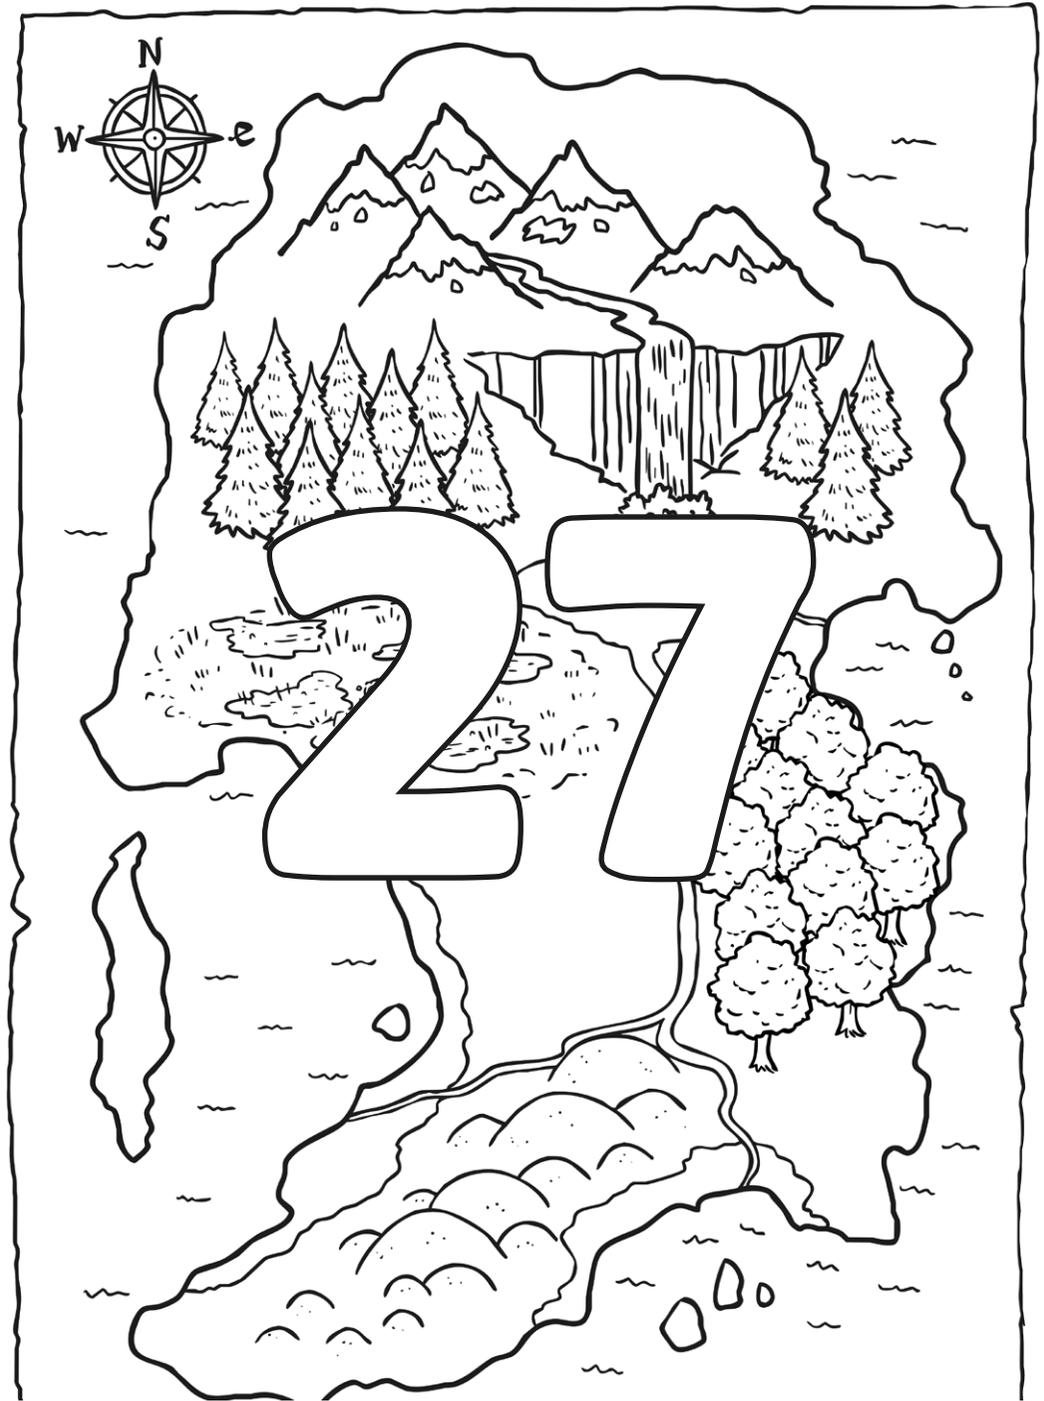

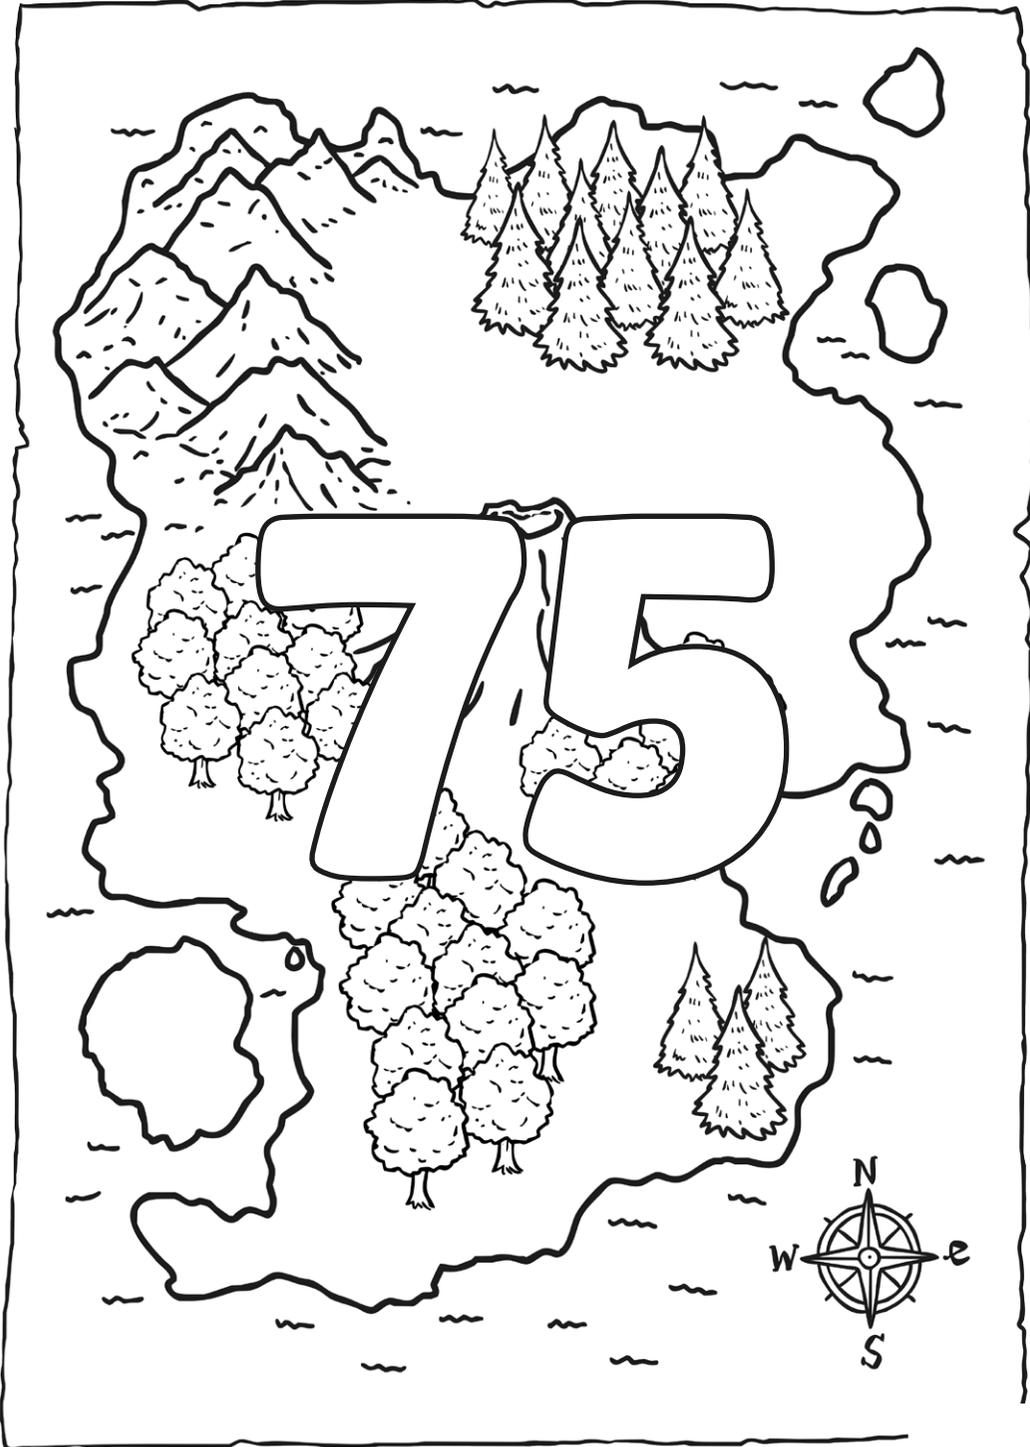

Print these pages out and stick them up or hide them for the children to find.

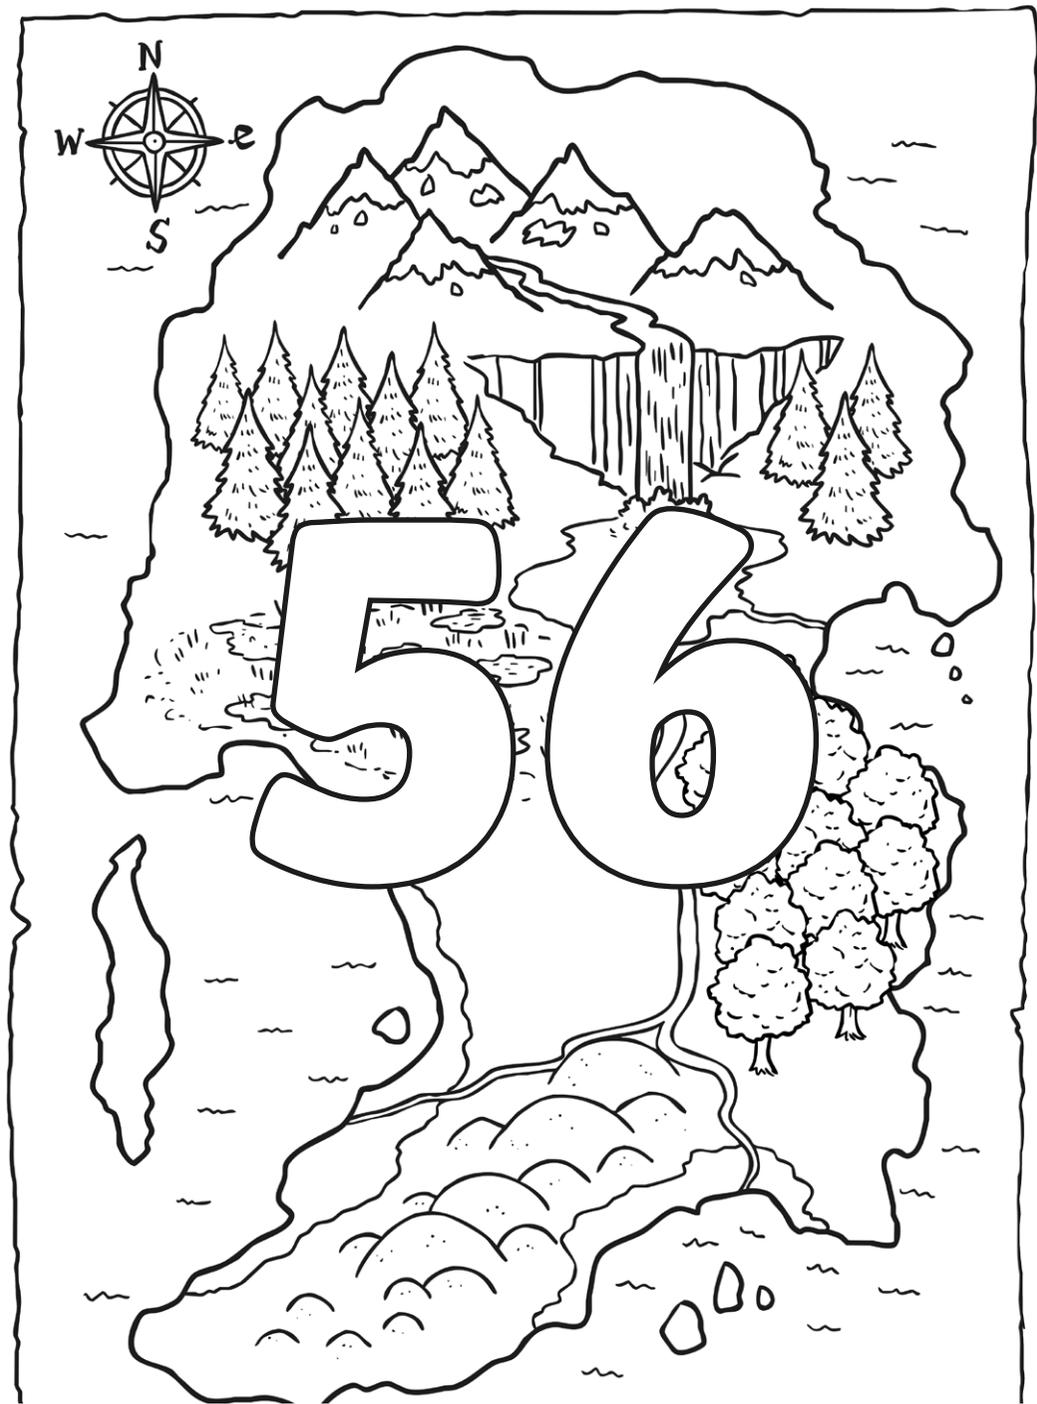

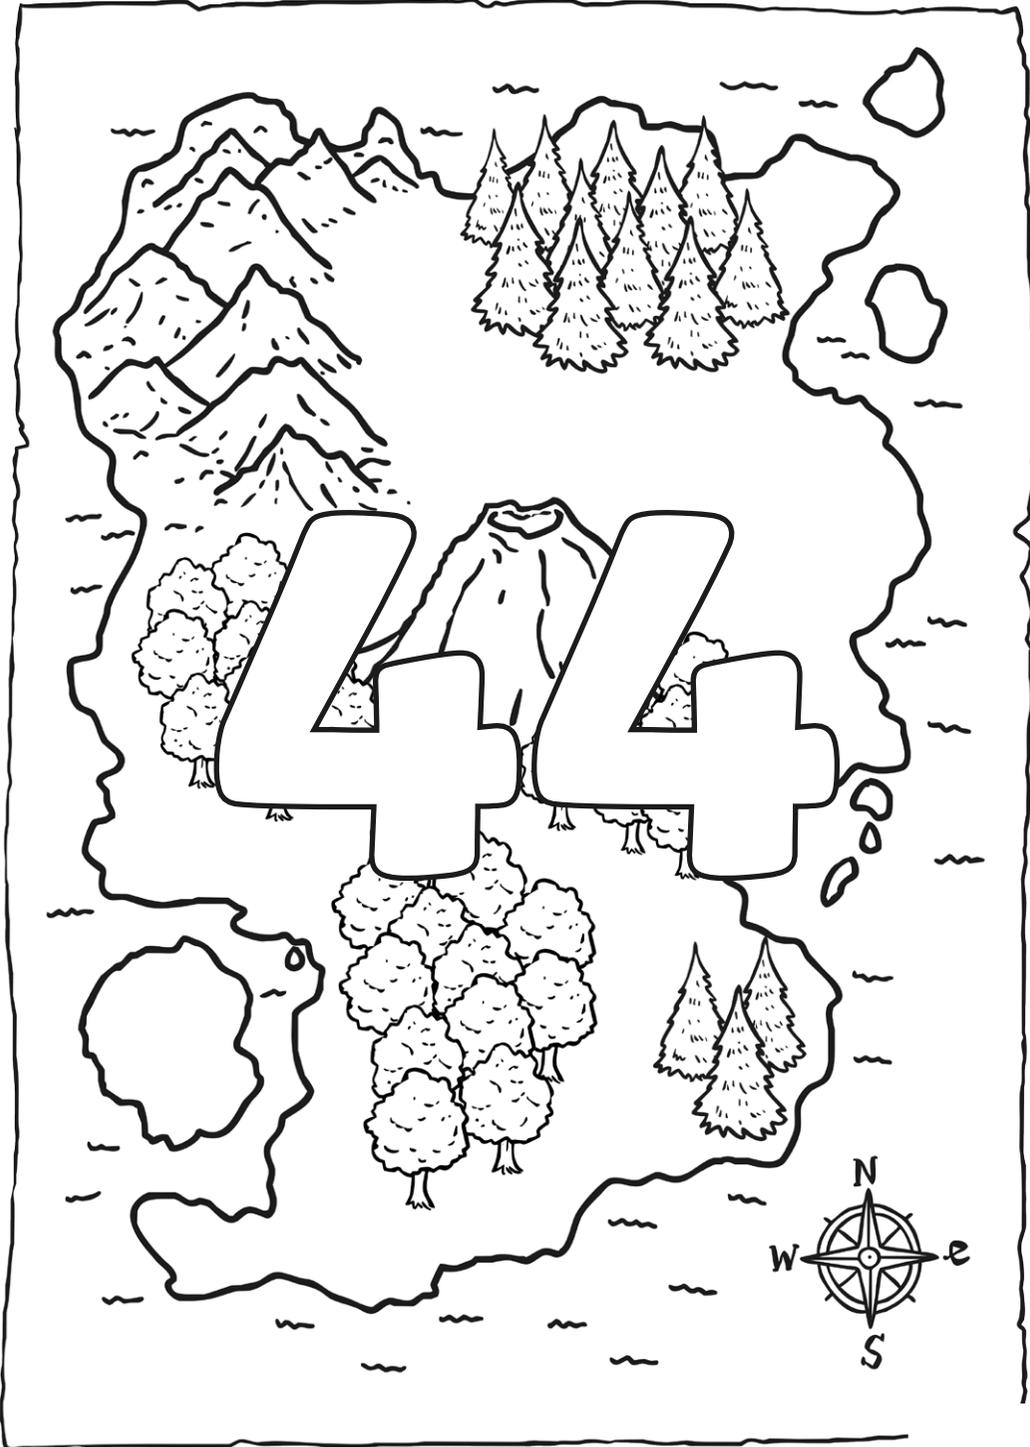

They record their answers on their Factors Treasure Hunt Sheets.

Factors Treasure Hunt

I can say whether numbers are prime or composite.

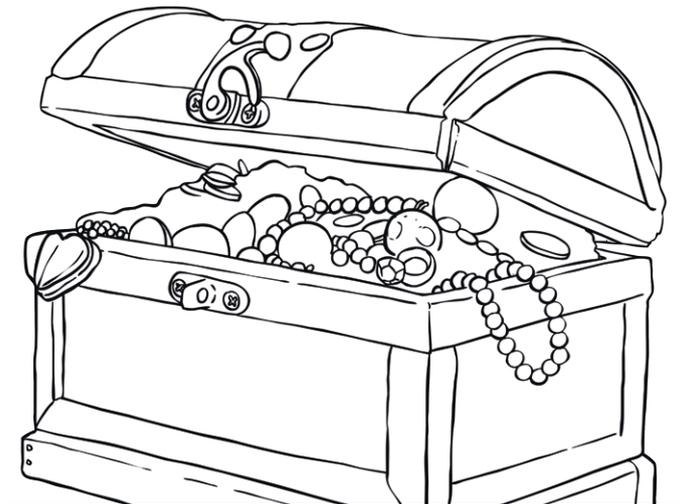

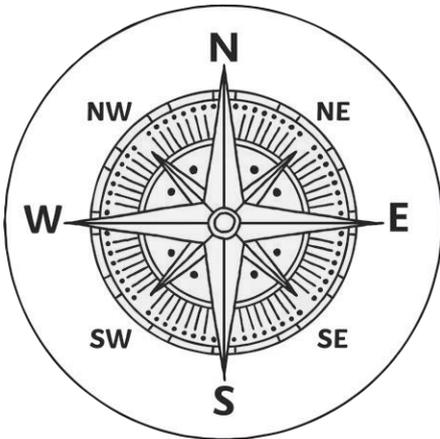

Look at your factors below.

Search for numbers that are multiples of your factor. For example, if your factor is 5 then it matches with 20, 65 and 35 because they are multiples of 5. In other words, 5 is a factor of those numbers. Write those numbers next to your factor below.

How many can you find?

Happy hunting!

Masterful Multiplication Game

Instructions

To create these game boards, you must utilise the duplex function on your school photocopier to print double-sided pages.

The solid grey lines are cut lines.

The dashed grey lines are valley fold lines.

The dotted grey lines are mountain fold lines.

Play in groups of 3 or 4.

1. Roll a dice.
2. Open any flap with that number on it.
3. Multiply the number on the flap by the number under the flap. Use paper or a whiteboard to write down a calculation and work it out if you need to.
4. The winner of each round is the person with the answer closest to 100.

Multiples

To identify multiples of numbers.

- 1) Colour a stripe of the number balloons below according to each number they are a multiple of.

Multiple of:	Colour
2	yellow
3	red
4	orange
5	blue
10	green

- 2) Which balloons have been coloured more than one colour?

- 3) What is the term used to describe these numbers?

- 4) Which of the balloons have only been coloured once?

Multiples

To identify multiples of numbers.

1) Match the number to the rule. The first one has been done for you.

2 ●

3 ●

4 ●

5 ●

6 ●

8 ●

10 ●

● The last two digits form a number divisible by 4.

● The last digit can be divided by 2 and the total of the digits can be divided by 3.

● The last three digits form a number divisible by 8.

● The sum of its digits is divisible by 3.

● The last digit is 0.

● The last digit is even (2, 4, 6, 8, 0).

● The last digit is 5 or 0.

2) Fill in the table below with five possible multiples greater than 50 for each number.

Times Table	Multiple				
3					
4					
6					
8					

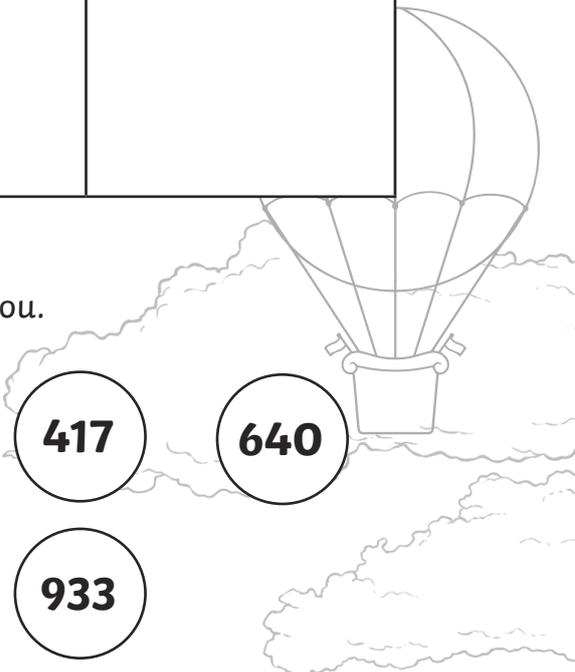

3) a) Sort your answers from question 2 into the correct column.

Hint: Some numbers might appear in more than one column.

Multiples of 3	Multiples of 4	Multiples of 6	Multiples of 9

a) Sort the 3-digit numbers below into the correct column.

You may want to use the rules from question 1 to help you.

144
246
276
378
417
640

720
852
888
933

4) Which of the common multiples in the table above can be found in all 4 columns?

5) Can you find any other numbers which are common multiples of 3, 4, 6 and 8?

Multiples

To identify multiples of numbers.

1) Match the number to the rule. The first one has been done for you.

- 2 ●
- 3 ●
- 4 ●
- 5 ●
- 6 ●
- 7 ●
- 8 ●
- 9 ●
- 10 ●

- Multiply the last digit by 2. Then subtract the product from the remaining digits. This new number should be divisible by 7.
- The sum of all the digits is divisible by 9.
- The last two digits form a number divisible by 4.
- The last digit can be divided by 2 and the total of the digits can be divided by 3.
- The last three digits form a number divisible by 8.
- The sum of its digits is divisible by 3.
- The last digit is 0.
- The last digit is even (2, 4, 6, 8, 0).
- The last digit is 5 or 0.

2) Fill in the table below with five possible 3-digit multiples for each number.

Times Table	Multiple				
3					
5					
7					
9					

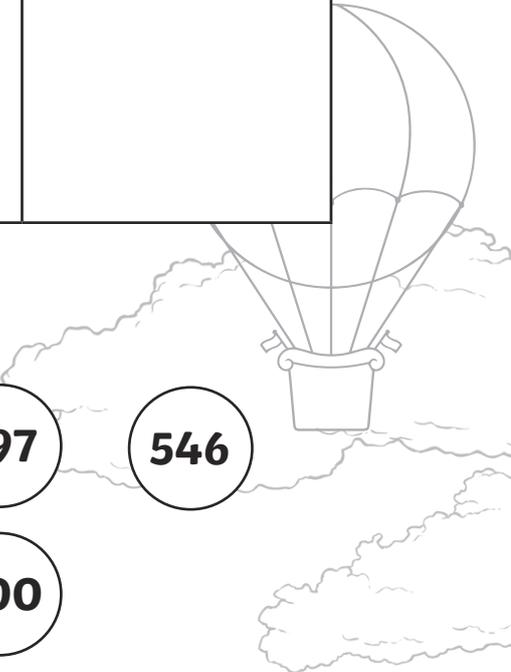

3) a) Sort your answers from question 2 into the correct column.

Hint: Some numbers might appear in more than one column.

Multiples of 3	Multiples of 5	Multiples of 7	Multiples of 9

a) Sort the 3-digit numbers below into the correct column.

You may want to use the rules from question 1 to help you.

117
135
300
414
497
546

630
693
720
900

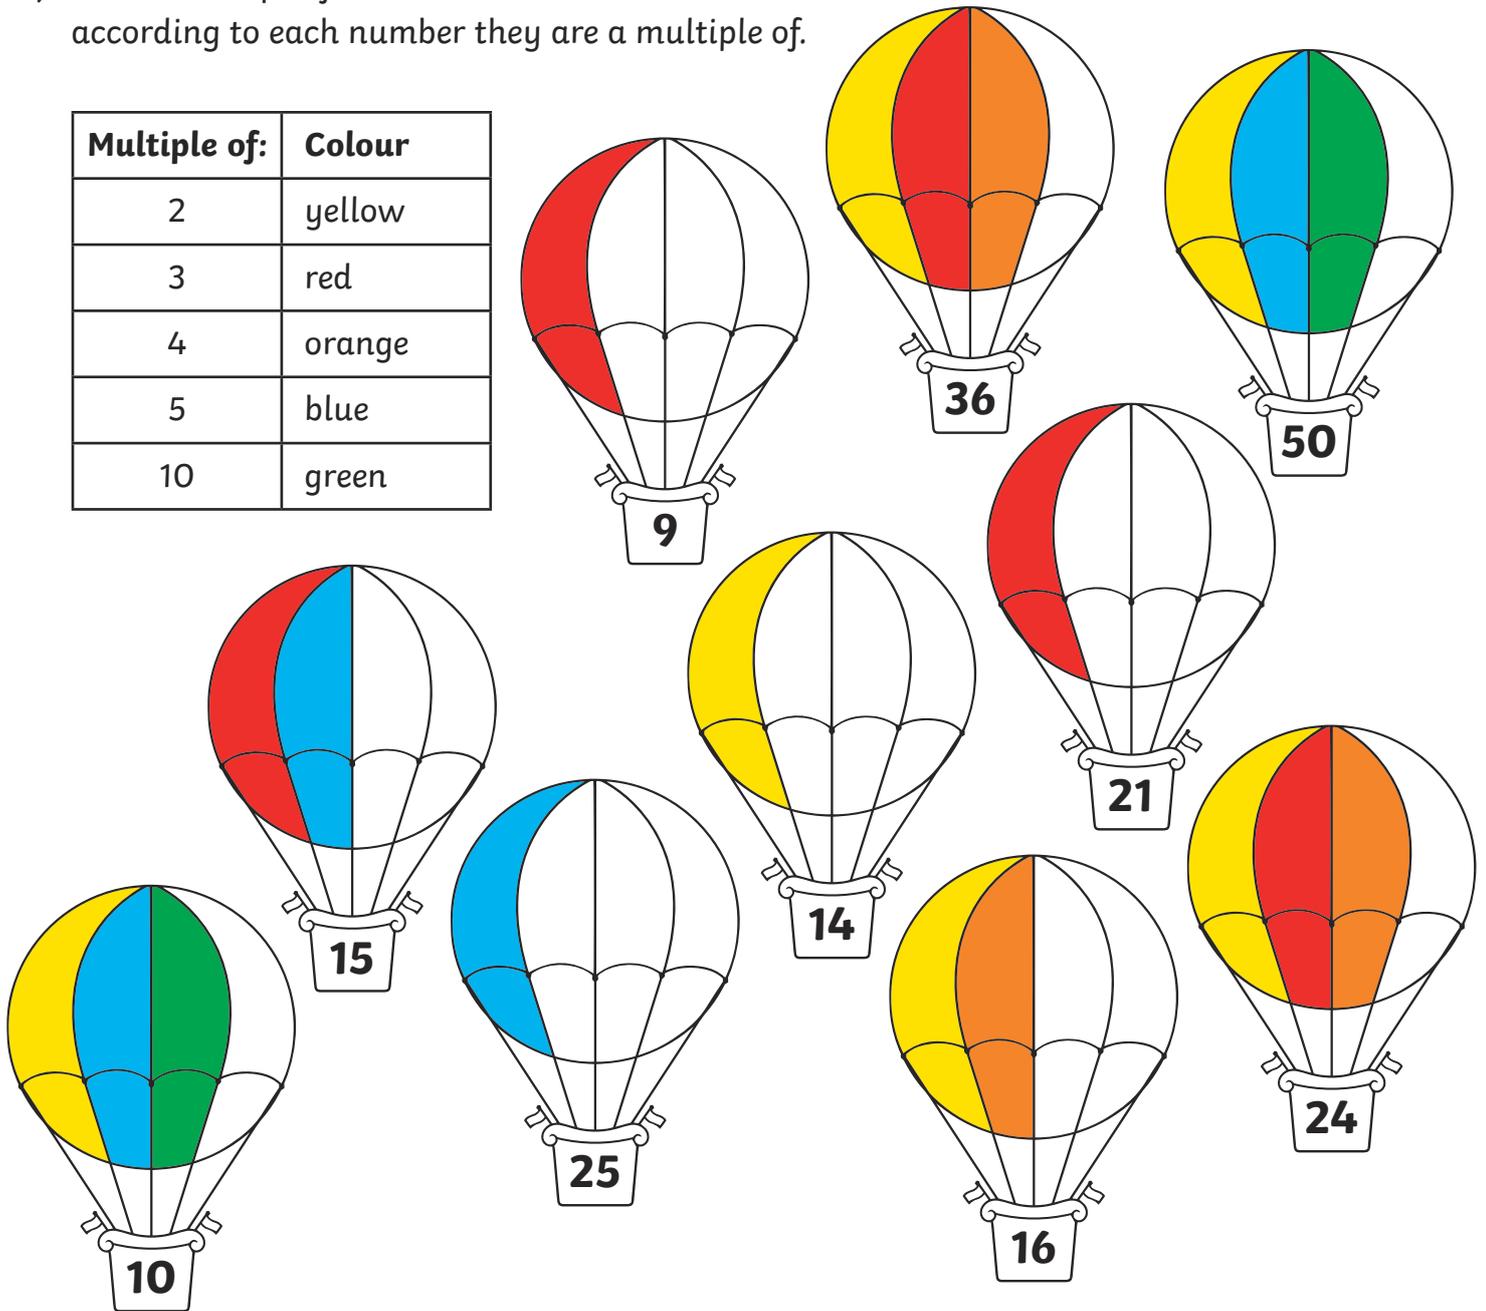

4) Which of the common multiples in the table above can be found in all 4 columns?

5) True or false: All multiples of 3 are also multiples of 9. Prove it.

Multiples Answers

- 1) Colour a stripe of the number balloons below according to each number they are a multiple of.

Multiple of:	Colour
2	yellow
3	red
4	orange
5	blue
10	green

- 2) Which balloons have been coloured more than one colour?

10, 15, 16, 24, 36, 50

- 3) What is the term used to describe these numbers?

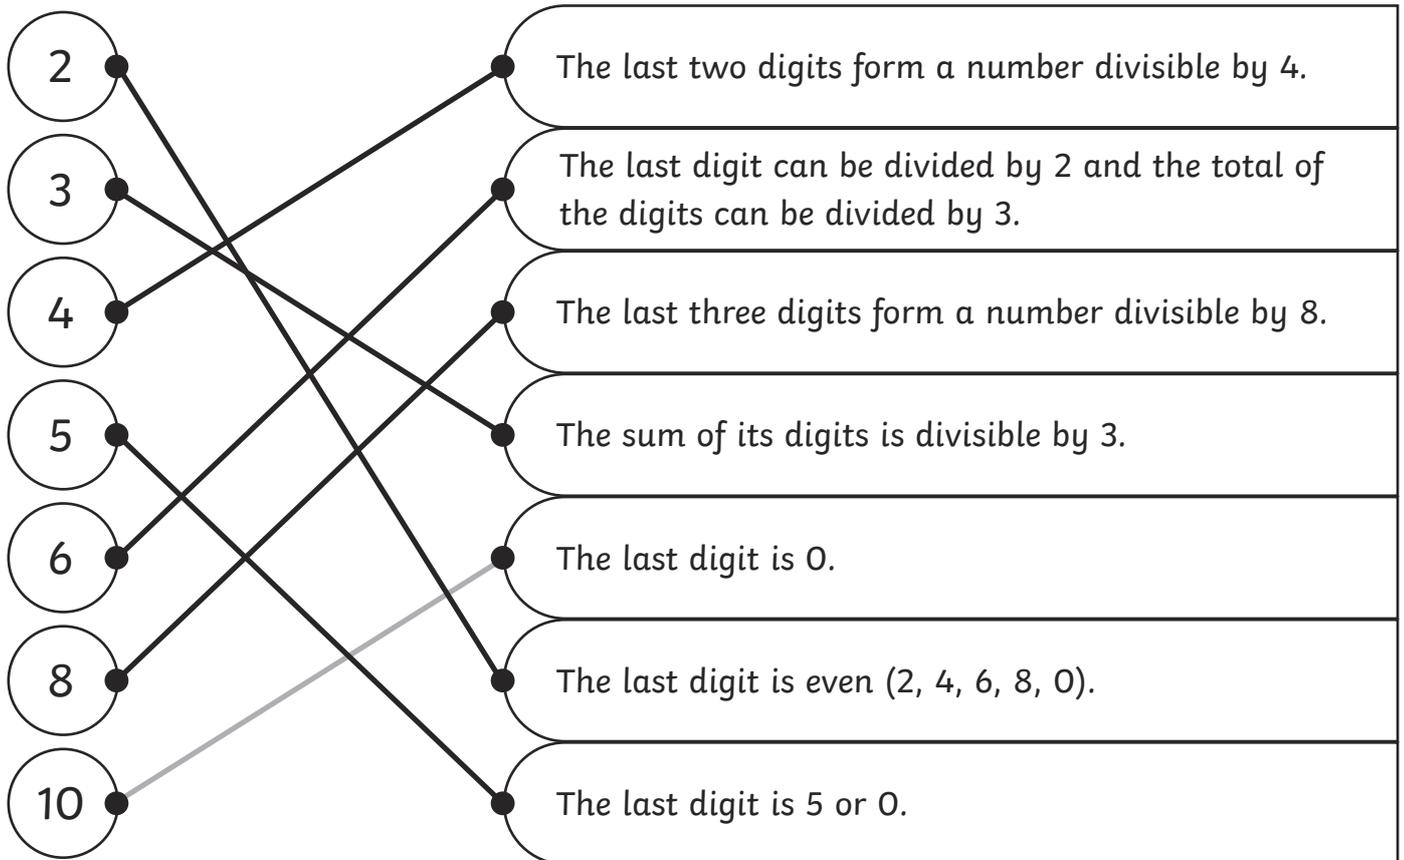

common multiples

- 4) Which of the balloons have only been coloured once?

9, 14, 21, 25

Multiples Answers

1) Match the number to the rule. The first one has been done for you.

2) Fill in the table below with five possible multiples greater than 50 for each number.

Times Table	Multiple
3	Multiple answers possible.
4	Multiple answers possible.
6	Multiple answers possible.
8	Multiple answers possible.

3)

a) Sort your answers from question 2 into the correct column.

Children will have added their answers from the previous question to the correct column.

b) Sort the 3-digit numbers below into the correct column. You may want to use the rules from question 1 to help you.

Multiples of 3	Multiples of 4	Multiples of 6	Multiples of 9
144	144	144	144
246	276	246	378
276	640	276	720
378	720	378	
417	852	720	
720	888	852	
852		888	
888			
933			

4) Which of the common multiples in the table above can be found in all 4 columns?

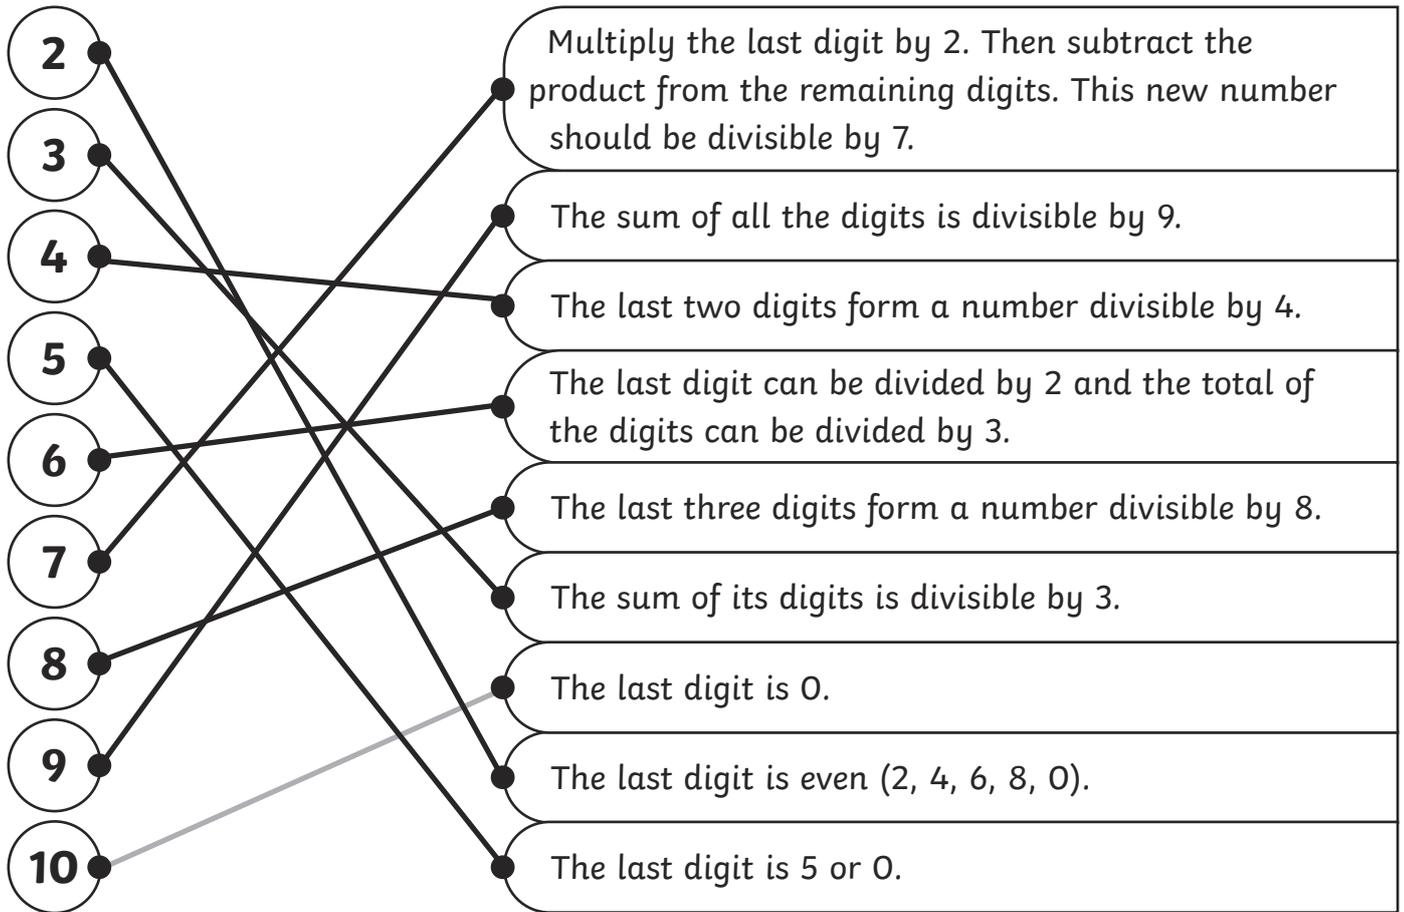

144, 720

5) Can you find any other numbers which are common multiples of 3, 4, 6 and 8?

Answers will vary but may include: 120, 144, 168, 192, 216, 240 (numbers follow the pattern of +24).

Multiples Answers

1) Match the number to the rule. The first one has been done for you.

2) Fill in the table below with five possible 3-digit multiples for each number.

Times Table	Multiple
3	Multiple answers possible.
5	Multiple answers possible.
7	Multiple answers possible.
9	Multiple answers possible.

3)

a) Sort your answers from question 2 into the correct column.

Children will have added their answers from the previous question to the correct column.

b) Sort the 3-digit numbers below into the correct column.

You may want to use the rules from question 1 to help you.

Multiples of 3	Multiples of 5	Multiples of 7	Multiples of 9
117	135	497	117
135	300	546	135
300	630	630	414
414	720	693	630
546	900		693
630			720
693			900
720			
900			

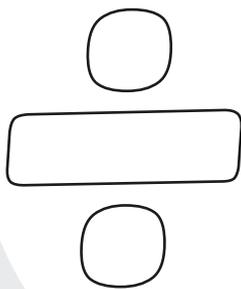

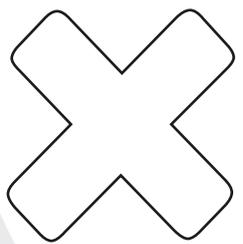

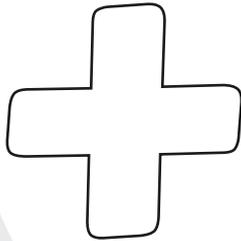

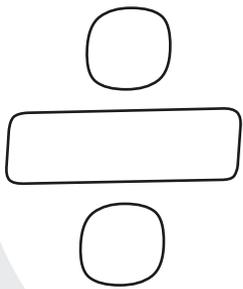

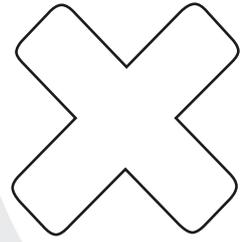

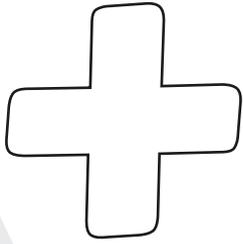

4) Which of the common multiples in the table above can be found in all 4 columns?

630

5) True or false: All multiples of 3 are also multiples of 9. Prove it.

False. All multiples of 9 are multiples of 3 but not all multiples of 3 are multiples of 9.

For example, 300 is a multiple of 3 because $300 \div 3 = 100$ but 300 cannot be a multiple of 9 as $300 \div 9 = 33.3333$

Time Match-Up Cards

Teacher note: These cards get progressively harder, allowing you to add some differentiation into this activity. The cards with bold text don't require any multiplication or division.
