Success Criteria

- I can write numbers to 100 in words.
- I can write numbers to 100 in numerals.

Pelmanism Instructions

The word pelmanism is associated with memory. While this game is often called “pairs”, “pelmanism” is a better word as memory is required to remember where the cards that have been turned over are placed. Therefore, it is important that the cards are placed back where they were when they were turned over - indeed preferably turned over in their place. This means the game helps the children develop memory skills as well as the mathematical skills required.

This pack contains individual sets of 7 pairs to make a game that can be played by any number and create a winner. The sets could be printed on different colours to avoid mixing up. This set is numbered up to 111 with the matching number in words.

To Play:

1. Place all cards face down - either in a random pattern or a more organised grid.
2. The first player turns 2 cards in their places and checks to see if they match.
3. If the cards match, they take their pair and try again.
4. If they do not match, the next player takes their turn.
5. The game continues until all the cards are played.
6. The winner is the player with the most pairs.

Other Activities:

It is possible to use the cards for matching ordering activities other than the game.
