<sup>2</sup>L'Oréal Dermatological Beauty, L'Oréal Poland

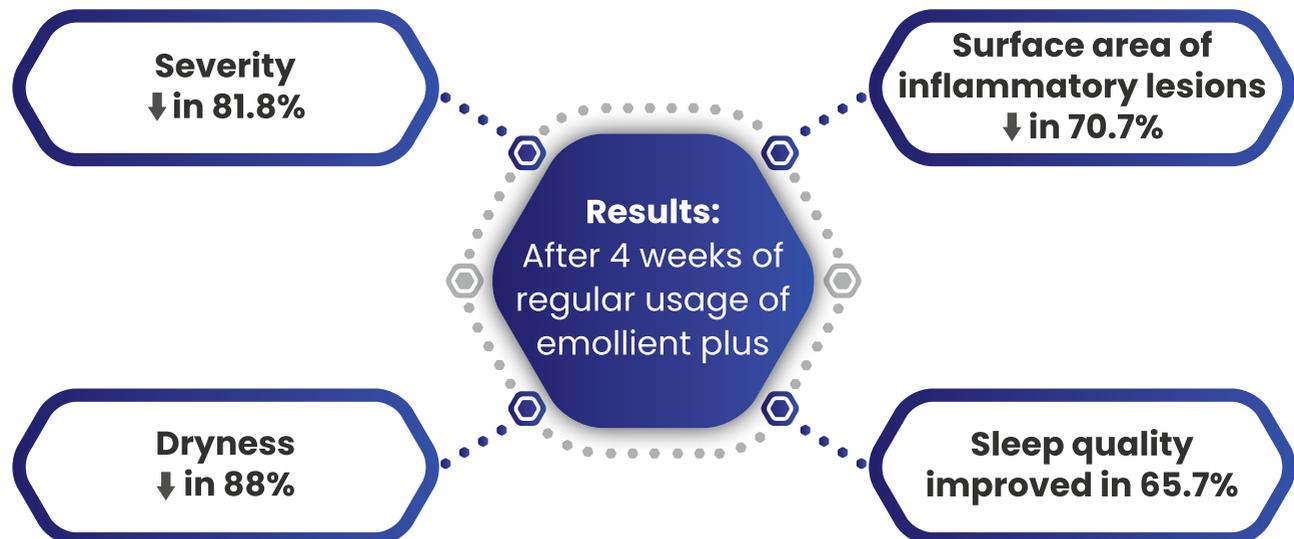

### Objective

To evaluate the effectiveness of emollient plus in patients up to 18 years old with skin diseases that present with dryness.

### Material and Methods

An observational study was conducted on a total of 386 children, suffering from AD (85.2%) and other skin diseases associated with dryness (23.6%).

**Conclusions:** The results indicate that emollient 'plus' preparations are effective and well-tolerated by patients with dryness. They can be used as monotherapy or as an adjunctive therapy.
