

Founder Bio

Steven Klein is a serial entrepreneur, systems architect, and AI-driven operations executive redefining how technology is applied to high-stakes life decisions. Known for building and scaling mission-critical companies, he specializes in converting dense financial, operational, and legal complexity into decision-grade intelligence that empowers individuals before irreversible choices are made.

Across multiple successful ventures, Steven has built and led high-performing, cross-functional teams and engineered scalable platforms at the intersection of automation, data infrastructure, and applied analytics. His work consistently focuses on eliminating information asymmetry, reducing friction, and bringing transparency to systems traditionally defined by opacity and power imbalance.

He founded Divorce AI to disrupt the divorce industry by shifting the starting point from conflict and litigation to clarity and informed choice. Shaped by growing up in the midst of his parents' prolonged and contentious divorce, Steven witnessed firsthand the long-term emotional and financial consequences that lack of clarity can create. That experience informed his decision to build Divorce AI as a privacy-first, consumer-centric platform that allows people to privately model outcomes, de-risk decisions, and avoid unnecessary legal and financial damage.

A vocal advocate for responsible AI, Steven embeds fairness, explainability, and human-centered design into every system he builds. His leadership philosophy blends rigorous systems thinking with empathy and a commitment to using technology to reduce harm, protect families, and improve real-world outcomes at scale.

Founded by Steven Klein, Divorce AI is a **Forbes People's Choice Award** recipient.
