

# KEENETIC EXPLORER

AC1200 Dual Band Mesh Wi-Fi Router/Extender  
with 4-Port Smart Switch

## Command Reference Guide

Model	Explorer (KN-1613)
OS Version	4.1
Edition	1.149 12.07.2024

# Preface

This guide contains Command-Line Interface (CLI) commands to maintain the Explorer device. This guide provides a complete listing of all possible commands. The other chapters provide examples of how to implement the most common of these commands, general information on the interrelationships between the commands and the conceptual background of how to use them.

## 1 Readership

This guide is for the networking or computer technician responsible for configuring and maintaining the Explorer on-site. It is also intended for the operator who manages the Explorer. This manual cover high-level technical support procedures available to Root administrators and Explorer technical support personnel.

## 2 Organization

This manual covers the following topics:

Introduction to the CLI	Describes how to use the Explorer Command-Line Interface (CLI), its hierarchical structure, authorization levels and its help features.
Command Reference	Provides an alphabetical list of the available CLI commands that you can use to configure the Explorer device.

## 3 Document Conventions

Command descriptions use the following conventions:

<b>boldface</b> font	Commands and keywords are in <b>boldface</b> . Must be typed exactly as shown. Bold font is used as a user input in examples.
<i>italic</i> font	Arguments for which you supply values are in <i>italics</i> .
[ <i>optional</i> ]	Elements in square brackets are optional.
⟨ <i>replaceable</i> ⟩	Elements in angle brackets are replaceable.
(x   y   z)	Alternative keywords are grouped in round brackets and separated by vertical bars.
[x   y   z]	Optional alternative keywords are grouped in brackets and separated by vertical bars.

Each command description is broken down into the following sub-sections:

Description	Description of what the command does.
Synopsis	The general format of the command.
Prefix <b>no</b>	The possibility of using <b>no</b> prefix with command.
Change settings	The ability of command to change the settings.
Multiple input	The possibility of multiple input.
Group entry	Name of the group that owns the command. If there is no group, this section does not displayed.
Interface type	Type of interface, which can be managed by the command. The section does not displayed, if this context has no meaning for the command.  Interfaces used in the system and the relationships between them are shown in the diagrams below.
Arguments	List of arguments if they exists, and explanations to them.
Example	An illustration of how the command looks when invoked. Because the interface is straightforward, some of the examples are obvious, but they are included for clarity.

Notes, cautionary statements, and safety warnings use these conventions.

Note: Means "reader take note". Notes contain helpful suggestions or references to materials not contained in this manual.

Warning: Means "reader be careful". You are capable of doing something that might result in equipment damage or loss of data.

# Contents Overview

Preface .....	3
Product Overview .....	25
Introduction to the CLI .....	27
Command Reference .....	33
Glossary .....	597
Interface Hierarchy .....	611
HTTP API .....	613
SNMP MIB .....	621
IPsec Encryption Levels .....	627

# Table of Contents

<b>Preface .....</b>	<b>3</b>

# Product Overview

## 1.1 Hardware Configuration

**CPU** MediaTek MT7628AN MIPS® 24KEc 580 MHz

**RAM** 128MB DDR2

**Flash** 32MB SPI

**Ethernet**

Ports	Chipset	Notes
4	Integrated	

Label	Speed	Notes
0	100 Mbps	WAN port
1	100 Mbps	
2	100 Mbps	
3	100 Mbps	

**Wi-Fi**

Band	Chipset	Notes
2.4 GHz	MediaTek MT7628AN (on-die)	802.11bgn 2x2
5 GHz	MediaTek MT7613BEN (PCIe Gen 1)	802.11an+ac 2x2, BF, MU-MIMO

# Introduction to the CLI

This chapter describes how to use the Explorer Command-Line Interface (CLI), its hierarchical structure, authorization levels and its help features.

The primary tool for managing the Explorer router is the command line interface ([CLI](#)). System settings can be defined as a sequence of commands, which can be executed to bring the device to the specified condition.

Explorer has three types of settings:

Current settings	<i>running config</i> is a set of commands describing the current status of the system. Current settings are stored in RAM and reflect every change of the system settings. However, the content of RAM is lost when the device is turned off. To restore the settings after reboot, they must be saved in non-volatile memory.
Startup configuration	<i>startup config</i> is a sequence of commands, which is stored in a specific partition of the non-volatile memory. It is used to initialize the system immediately after startup.
Default settings	<i>default config</i> contains factory default settings of Explorer. RESET button is used to reset startup configuration to the factory default.

Files `startup-config` and `running-config` can be edited manually, without participation of the command line. It should be remembered that the lines with ! in the beginning are ignored by the parser and the arguments which contain spaces must be enclosed in double quotes (for example, `ssid "Free Wi-Fi"`). Quotes themselves are ignored by the parser.

Responsibility for the accuracy of the changes rests with their author.

## 2.1 Enter commands in the CLI

Command line interpreter in Explorer is designed for beginners as well as experts. All command names and options are clear and easy to remember.

Commands are divided into groups and arranged in a hierarchy. Thus, to do a setting, the operator needs to enter a sequence of nested command group names (node commands), and then enter the final command with parameters.

For example, IP-address of the `FastEthernet0/Vlan2` network interface is set using the **address** command, which is located in the **interface → ip** group:

```
(config)>interface FastEthernet0/Vlan2 ip address 192.168.15.43/24
Network address saved.
```

## 2.1.1 Entering a group

Some of the node commands (containing a group of child commands) can be “entered” to allow direct executing of the child commands without typing the node name as prefix. In this case the prompt is changed to indicate the entered group.

The **exit** command or [Ctrl]+[D] key combination can be used to exit a group.

For example, after entering the interface group the command line prompt is changed to (config-if):

```
(config)>interface FastEthernet0/Vlan2
(config-if)>ip address 192.168.15.43/24
Network address saved.
(config-if)>[Ctrl]+[D]
(config)>
```

## 2.2 Getting Help and auto-completion

To make the configuring process as comfortable as possible, the CLI provides auto-completion of commands and parameters, hinting the operator, which commands are available at the current level of nesting. Auto-completion works by pressing [Tab]. Example:

```
(config)>in[Tab]

interface - network interface configuration

(config)> interface Fa[Tab]

Usage template:
interface {name}

Variants:
FastEthernet0
FastEthernet0/Vlan1
FastEthernet0/Vlan2

(config)> interface FastEthernet0[Tab]

Usage template:
interface {name}

Variants:
FastEthernet0/Vlan1
FastEthernet0/Vlan2

(config)> interface FastEthernet0[Enter]
(config-if)> ip[Tab]

address - set interface IP address
alias - add interface IP alias
dhcp - enable dhcp client
```

```

        mtu - set Maximum Transmit Unit size
        mru - set Maximum Receive Unit size
        access-group - bind access-control rules
        apn - set 3G access point name

(config-if)> ip ad[Tab]

        address - set interface IP address

(config-if)> ip address[Tab]

Usage template:
address {address} {mask}

(config-if)> ip address 192.168.15.43[Enter]
Configurator error[852002]: address: argument parse error.
(config-if)> ip address 192.168.15.43/24[Enter]
Network address saved.
(config-if)>

```

Hint for the current command can always be displayed by pressing [Tab]. Example:

```

(config)> interface FastEthernet0/Vlan2 [Tab]

        description - set interface description
        alias - add interface name alias
        mac-address - set interface MAC address
        dyndns - DynDns updates
        security-level - assign security level
        authentication - configure authentication
            ip - set interface IP parameters
            igmp - set interface IGMP parameters
            up - enable interface
            down - disable interface

(config)> interface FastEthernet0/Vlan2

```

## 2.3 Prefix no

Prefix **no** is used to negate a command.

For example, the command **interface** is responsible for creating a network interface with the given name. When used with this command, prefix **no** causes the opposite action — removing of the interface:

```
(config)> no interface PPPoE0
```

If the command is composite, **no** can be placed in front of any member. For example, **service dhcp** enables the **DHCP** service. It consists of two parts: **service** — the group name in the hierarchy of commands, and **dhcp** — the final command. Prefix **no** can be placed either at the beginning, or in the middle. The action is the same in both cases: stopping of the service.

```
(config)> no service dhcp  
(config)> service no dhcp
```

## 2.4 Multiple input

Many commands have the property of *idempotence*, which means that multiple input of a command has the same effect as the single input. For example, entering **service http** adds a single line “service http” to the current settings, and re-entering does not change anything.

However, some of the commands allow you to add not a single, but multiple records, if they are entered with different arguments. For example, static routing table entries **ip route** or filters **access-list** are added sequentially and appear in the settings as a list:

### Example 2.1. Using a command with multiple input

```
(config)> ip route 1.1.1.0/24 PPTP0  
Network::RoutingTable: Added static route: 1.1.1.0/24 via PPTP0.  
(config)> ip route 1.1.2.0/24 PPTP0  
Network::RoutingTable: Added static route: 1.1.2.0/24 via PPTP0.  
(config)> ip route 1.1.3.0/24 PPTP1  
Network::RoutingTable: Added static route: 1.1.3.0/24 via PPTP1.  
(config)> show running-config  
...  
ip route 1.1.1.0 255.255.255.0 PPTP0  
ip route 1.1.2.0 255.255.255.0 PPTP0  
ip route 1.1.3.0 255.255.255.0 PPTP1  
...
```

Records from such tables can be removed one by one, using prefix **no** and arguments to identify the record you want to remove:

```
(config)> no ip route 1.1.2.0/24  
Network::RoutingTable: Deleted static route: 1.1.2.0/24 via PPTP0.  
(config)> show running-config  
...  
ip route 1.1.1.0 255.255.255.0 PPTP0  
ip route 1.1.3.0 255.255.255.0 PPTP1  
...
```

## 2.5 Saving to startup settings

Current and startup settings are stored in the files running-config and startup-config, respectively. To save the current settings in the non-volatile memory, copy them as shown below:

```
(config)> copy running-config startup-config  
Copied: running-config -> startup-config
```

## 2.6 Delayed restart

If Explorer device is located away from the operator and is managed remotely, there is a risk to lose control over it because of a misoperation. In this case it will be difficult to reboot and return to the saved settings.

The **system reboot** command lets you set a delayed restart timer, perform “risky” settings, then turn off the timer and save the changes. If connection to the device is lost during configuration, the operator will be enough to wait for automatic reboot and connect to the device again.

# Command Reference

## 3.1 Core commands

Core commands are used to manage files on your device.

### 3.1.1 copy

**Description** Copy the contents of one file to another. Used for the firmware updating, saving the current settings, resetting to factory, etc.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(config)>	<b>copy</b> <source> <destination>
-----------	------------------------------------

**Arguments**

Argument	Value	Description
source	<i>Filename</i>	Full path to the file to be copied in <file system>:<path> format
destination	<i>Filename</i>	Full path to the directory for the new file.

**Example** Current settings can be saved as follows:

```
(config)> copy running-config startup-config
```

```
(config)> copy log MyPassport:/log.txt
```

File names in this example are aliases. Full names of the configuration files are system:running-config and flash:startup-config, respectively.

**History**

Version	Description
2.00	The <b>copy</b> command has been introduced.

### 3.1.2 erase

**Description** Delete a file from the Explorer device.

**Prefix no** No

**Change settings** Yes**Multiple input** Yes**Synopsis** (config)> **erase** <filename>**Arguments**

Argument	Value	Description
filename	<i>Filename</i>	Specifies the file to be removed.

**Example**

```
(config)> erase ext-opkg:/dlna_files.db  
FileSystem::Repository: "ext-opkg:/dlna_files.db" erased.
```

**History**

Version	Description
2.00	The <b>erase</b> command has been introduced.

### 3.1.3 exit

**Description** Leave the command node.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis** (config)> **exit****Example**

```
(show)> exit  
Core::Configurator: Done.  
(config)>
```

**History**

Version	Description
2.00	The <b>exit</b> command has been introduced.

### 3.1.4 ls

**Description** Display list of files from the specified directory.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis** (config)> **ls** [<directory>]

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
directory	<i>String</i>	Path to the directory. Must contain the name of the file system and path to the folder directly in the following format <file system>:<path>. Examples of file systems — flash, temp, proc, usb. etc.

**Example**

```
(config)> ls FILES:
               rel: FILES:
               entry, type = D:
                     name: com
               entry, type = R:
                     name: IMAX.mkv
                     size: 1886912512
               entry, type = D:
                     name: speedfan
               entry, type = D:
                     name: portable
               entry, type = D:
                     name: video
               entry, type = D:
                     name: Новая папка
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ls</b> command has been introduced.

### 3.1.5 mkdir

**Description** Create a new directory.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis** (config)> **mkdir** <*directory*>**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
directory	<i>String</i>	Path to the directory.

**Example**

```
(config)> mkdir SANDSK:/test  
FileSystem::Repository: "SANDSK:/test" created.
```

```
(config)> mkdir SANDSK:/test/onetest  
FileSystem::Repository: "SANDSK:/test/onetest" created.
```

**History**

Version	Description
2.12	The <b>mkdir</b> command has been introduced.

## 3.1.6 more

**Description** Display the contents of a text file line by line.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> more <filename>
```

**Arguments**

Argument	Value	Description
filename	<i>Filename</i>	Full path to the file or alias.

**Example**

```
(config)> more temp:/resolv.conf  
nameserver 127.0.0.1  
options timeout:1 attempts:1 rotate
```

**History**

Version	Description
2.00	The <b>more</b> command has been introduced.

## 3.2 access-list

**Description** Access to a group of commands to configure the selected list of packet filtering rules. If the list is not found, the command tries to create it. Such a list can be assigned to a network interface using [interface ip access-group](#) command.

Command with **no** prefix removes the list of rules.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Group entry** (config-acl)

**Synopsis**

```
(config)> access-list <name>
(config)> no access-list <name>
```

**Arguments**

Argument	Value	Description
name	String	Filtering rules list name ( <i>Access Control List</i> , ACL).

**Example**

```
(config)> access-list test_acl
Network::Acl: "test_acl" access list created.
(config-acl)>
```

```
(config)> no access-list test_acl
Network::Acl: "test_acl" access list removed.
```

**History**

Version	Description
2.00	The <b>access-list</b> command has been introduced.

### 3.2.1 access-list auto-delete

**Description**

Enable automatic deletion of the *ACL* rules when deleting an interface. The command is forced on access lists with the *\_WEBADMIN\_* prefix.

The command cannot be enabled if there are no bound interfaces. The exception is reading the startup-config.

Command with **no** prefix disables automatic deletion.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-acl)> auto-delete
(config-acl)> no auto-delete
```

**Example**

```
(config-acl)> auto-delete
Network::Acl: Enabled auto-deletion for "_WEBADMIN_Home" access ▶ group.
```

```
(config-acl)> no auto-delete
Network::Acl: Disabled auto-deletion for "_WEBADMIN_Home" access ▶ group.
```

**History**

<b>Version</b>	<b>Description</b>
3.09	The <b>access-list auto-delete</b> command has been introduced.

### 3.2.2 access-list deny

**Description**

Add a packet filtering deny rule into a specified [ACL](#).

Command with **no** prefix removes the rule.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config-acl)> deny (tcp | udp) <source> <source-mask>
    [ port((<src-port-operator> <source-port>)||
    ( range <source-port> <source-end-port> ))]
    <destination> <destination-mask>
    [ port((<dst-port-operator> <destination-port>)||
    ( range <destination-port> <destination-end-port> ))]

(config-acl)> deny (icmp | esp | gre | ipip | ip) <source> <source-mask>
    <destination> <destination-mask>

(config-acl)> no deny (tcp | udp) <source> <source-mask>
    [ port((<src-port-operator> <source-port>)||
    ( range <source-port> <source-end-port> ))]
    <destination> <destination-mask>
    [ port((<dst-port-operator> <destination-port>)||
    ( range <destination-port> <destination-end-port> ))]

(config-acl)> no deny (icmp | esp | gre | ipip | ip) <source> <source-mask>
    <destination> <destination-mask>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
tcp	<i>Keyword</i>	<a href="#">TCP</a> protocol.
udp	<i>Keyword</i>	<a href="#">UDP</a> protocol.
icmp	<i>Keyword</i>	<a href="#">ICMP</a> protocol.
esp	<i>Keyword</i>	<a href="#">ESP</a> protocol.
gre	<i>Keyword</i>	<a href="#">GRE</a> protocol.
ipip	<i>Keyword</i>	<a href="#">IP in IP</a> protocol.
ip	<i>Keyword</i>	<a href="#">IP</a> protocol (include <a href="#">TCP</a> , <a href="#">UDP</a> , <a href="#">ICMP</a> and other).

Argument	Value	Description
source	<i>IP address</i>	The source address in the header of IP-packet.
source-mask	<i>IP-mask</i>	Mask to be applied to the source address in the header of IP-packet before comparison with <i>source</i> . There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).
source-port	<i>Integer</i>	Source port in the <i>TCP</i> or <i>UDP</i> header.
source-end-port	<i>Integer</i>	The end of the source range of ports.
src-port-operator	lt	Operator “less” to compare the port with the specified <i>source-port</i> .
	eq	Operator “equal” to compare the port with the specified <i>source-port</i> .
	gt	Operator “greater” to compare the port with the specified <i>source-port</i> .
destination	<i>IP address</i>	The destination address in the header of IP-packet.
destination-mask	<i>IP-mask</i>	Mask to be applied to the destination address in the header of IP-packet before comparison with <i>destination</i> . There are two ways to enter the mask: in the canonical form (for example, 255.255.255.0) and in the form of prefix with bit length (for example, /24).
destination-port	<i>Integer</i>	Destination port in the <i>TCP</i> or <i>UDP</i> header.
destination-end-port	<i>Integer</i>	The end of the destination range of ports.
dst-port-operator	lt	Operator “less” to compare the port with the specified <i>destination-port</i> .
	eq	Operator “equal” to compare the port with the specified <i>destination-port</i> .
	gt	Operator “greater” to compare the port with the specified <i>destination-port</i> .

**Example**

```
(config-acl)> deny tcp 0.0.0.0/24 port eq 80 0.0.0.0/24 port ▶
range 18 88
Network::Acl: Rule accepted.
```

```
(config-acl)> deny icmp 192.168.0.0 255.255.255.0 192.168.1.1 ▶
255.255.255.0
Network::Acl: Rule accepted.
```

```
(config-acl)> no deny tcp 0.0.0.0/24 port eq 80 0.0.0.0/24 port ▶
range 18 88
Network::Acl: Rule deleted.
```

```
(config-acl)> no deny icmp 192.168.0.0 255.255.255.0 192.168.1.1 ▶
255.255.255.0
Network::Acl: Rule deleted.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>access-list deny</b> command has been introduced.
2.06	New value <b>ip</b> was added to the <b>protocol</b> argument.
2.08	New protocols <b>esp</b> , <b>gre</b> and <b>ipip</b> were added.
2.09.A.2.1	Port ranges were added.

### 3.2.3 access-list permit

**Description** Add a packet filtering permit rule into a specified [ACL](#).

Command with **no** prefix removes the rule.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config-acl)> permit (tcp | udp) <source> <source-mask>
[ port((<src-port-operator> <source-port>)|
( range <source-port> <source-end-port> ))]
<destination> <destination-mask>
[ port((<dst-port-operator> <destination-port>)|
( range <destination-port> <destination-end-port> ))]

(config-acl)> permit (icmp | esp | gre | ipip | ip) <source> <source-mask>
<destination> <destination-mask>

(config-acl)> no permit (tcp | udp) <source> <source-mask>
[ port((<src-port-operator> <source-port>)|
( range <source-port> <source-end-port> ))]
<destination> <destination-mask>
[ port((<dst-port-operator> <destination-port>)|
( range <destination-port> <destination-end-port> ))]

(config-acl)> no permit (icmp | esp | gre | ipip | ip) <source> <source-mask>
<destination> <destination-mask>
```

Arguments	Argument	Value	Description
	tcp	Keyword	<i>TCP</i> protocol.
	udp	Keyword	<i>UDP</i> protocol.
	icmp	Keyword	<i>ICMP</i> protocol.
	esp	Keyword	<i>ESP</i> protocol.
	gre	Keyword	<i>GRE</i> protocol.
	ipip	Keyword	<i>IP in IP</i> protocol.
	ip	Keyword	<i>IP</i> protocol (include <i>TCP</i> , <i>UDP</i> , <i>ICMP</i> and other).
	source	IP address	The source address in the header of IP-packet.
	source-mask	IP-mask	Mask to be applied to the source address in the header of IP-packet before comparison with <i>source</i> . There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).
	source-port	Integer	Source port in the <i>TCP</i> or <i>UDP</i> header.
	source-end-port	Integer	The end of the source range of ports.
	src-port-operator	lt	Operator “less” to compare the port with the specified <i>source-port</i> .
		eq	Operator “equal” to compare the port with the specified <i>source-port</i> .
		gt	Operator “greater” to compare the port with the specified <i>source-port</i> .
	destination	IP address	The destination address in the header of IP-packet.
	destination-mask	IP-mask	Mask to be applied to the destination address in the header of IP-packet before comparison with <i>destination</i> . There are two ways to enter the mask: in the canonical form (for example, 255.255.255.0) and in the form of prefix with bit length (for example, /24).
	destination-port	Integer	Destination port in the <i>TCP</i> or <i>UDP</i> header.
	destination-end-port	Integer	The end of the destination range of ports.
	dst-port-operator	lt	Operator “less” to compare the port with the specified <i>destination-port</i> .
		eq	Operator “equal” to compare the port with the specified <i>destination-port</i> .

Argument	Value	Description
	gt	Operator “greater” to compare the port with the specified <i>destination-port</i> .

**Example**

```
(config-acl)> permit icmp 192.168.0.0 255.255.255.0 192.168.1.1 ▶
255.255.255.0
Network::Acl: Rule accepted.

(config-acl)> permit tcp 0192.168.1.0/24 port eq 443 0.0.0.0/24 ▶
port range 8080 9090
Network::Acl: Rule accepted.

(config-acl)> no permit icmp 192.168.0.0 255.255.255.0 ▶
192.168.1.1 255.255.255.0
Network::Acl: Rule deleted.

(config-acl)> no permit tcp 0192.168.1.0/24 port eq 443 ▶
0.0.0.0/24 port range 8080 9090
Network::Acl: Rule deleted.
```

**History**

Version	Description
2.00	The <b>access-list permit</b> command has been introduced.
2.06	New value ip was added to the protocol argument.
2.08	New protocols esp, gre and ipip were added.
2.09.A.2.1	Port ranges were added.

### 3.2.4 access-list rule

**Description** Disable, set operation time by schedule, change the order or set description for the *ACL* rule.

Command with **no** prefix enables the rule, removes schedule and description for *ACL* rule.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

<pre>(config-acl)&gt; rule &lt;index&gt; (<b>disable</b>   <b>schedule</b> &lt;schedule&gt;   <b>order</b> &lt;new-index&gt;   <b>description</b> &lt;description&gt;)</pre> <pre>(config-acl)&gt; no rule &lt;index&gt; (<b>disable</b>   <b>schedule</b>   <b>description</b>)</pre>
---

**Arguments**

Argument	Value	Description
index	<i>Integer</i>	The ACL rule number.

Argument	Value	Description
disable	<i>Keyword</i>	Disable the ACL rule.
schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.
order	<i>Integer</i>	New position of the ACL rule in the list.
description	<i>String</i>	The ACL rule description.

**Example**

```
(config-acl)> rule 0 disable
Network::Acl: Rule disabled.

(config-acl)> rule 0 schedule acl_schedule
Network::Acl: Rule schedule set to "acl_schedule".

(config-acl)>rule 0 description myacl
Network::Acl: Rule description set to "myacl".

(config-acl)> rule 0 order 1
Network::Acl: Rule 0 moved to position 1.

(config-acl)> no rule 0 disable
Network::Acl: Rule enabled.

(config-acl)> no rule 0 schedule
Network::Acl: Rule schedule removed.

(config-acl)> no rule 0 description
Network::Acl: Rule description removed.
```

**History**

Version	Description
2.08	The <b>access-list rule</b> command has been introduced.

## 3.3 cloud control2 security-level

**Description** Set Cloud Control2 service security level for Keenetic mobile application. By default, public value is set.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis** (config)> **cloud control2 security-level (public | private)**

**Arguments**

Argument	Value	Description
public	<i>Keyword</i>	Access to the Cloud Control2 is allowed for public, private and protected interfaces.

Argument	Value	Description
private	Keyword	Access to the Cloud Control2 is allowed for private interfaces only.

**Example**

```
(config)> cloud control2 security-level public
CloudControl2::Agent: Security level changed to public.

(config)> cloud control2 security-level private
CloudControl2::Agent: Security level changed to private.
```

**History**

Version	Description
3.05	The <b>cloud control2 security-level</b> command has been introduced.

## 3.4 components

**Description** Access to a group of commands to manage firmware components.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (config-comp)

**Synopsis**

(config)>	<b>components</b>
-----------	-------------------

**History**

Version	Description
2.00	The <b>components</b> command has been introduced.

### 3.4.1 components auto-update channel

**Description** Set source of components for auto-update feature. By default, value stable is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-comp)>	<b>auto-update channel &lt;channel&gt;</b>
----------------	--

(config-comp)> **no auto-update channel**

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
channel	stable	Components have been fully tested and recommended for installation. The web interface specifies this channel as Main.
	preview	Components contain the latest features and enhancements, but have not been fully tested yet. The web interface specifies this channel as Preview.
	draft	The components contain the latest features and are used for testing. The web interface specifies this channel as Dev.

**Example**

(config-comp)> **auto-update channel preview**

Components::Manager: Auto-update channel is "preview".

(config-comp)> **no auto-update channel**

Components::Manager: Reset an auto-update channel to default.

**History**

<b>Version</b>	<b>Description</b>
3.01	The <b>components auto-update channel</b> command has been introduced.

## 3.4.2 components auto-update disable

**Description** Components auto-update function. By default, automatic update is enabled.

Command with **no** prefix enables auto-update.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis** (config-comp)> **auto-update disable**

(config-comp)> **no auto-update disable**

**Example** (config-comp)> **auto-update disable**

Components::Manager: Components auto-update disabled.

(config-comp)> **no auto-update disable**

Components::Manager: Components auto-update enabled.

**History**

<b>Version</b>	<b>Description</b>
2.09	The <b>components auto-update disable</b> command has been introduced.

### 3.4.3 components auto-update schedule

**Description** Assign a schedule for the auto-update operation. Schedule must be created and customized with **schedule action** command before execution.

Command with **no** prefix unbinds the schedule.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-comp)>	<b>auto-update schedule &lt;schedule&gt;</b>
(config-comp)>	<b>no auto-update schedule</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.

**Example**

```
(config-comp)> auto-update schedule Update
Components::Manager: Set auto-update schedule "Update".
```

```
(config-comp)> no auto-update schedule
Components::Manager: Schedule disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.03	The <b>components auto-update schedule</b> command has been introduced.

### 3.4.4 components check-update

**Description** Check the firmware updates for the candidate or member of Modular Wi-Fi System.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(config-comp)>	<b>check-update [ force ]</b>
----------------	-------------------------------

**Arguments**

Argument	Value	Description
force	<i>Keyword</i>	Check for updates constantly.

**Example**

```
(config-comp)> check-update
```

```
release: 2.15.A.3.0-2
        sandbox: draft
        timestamp: Dec 17 18:58:55
        valid: no
```

```
(config-comp)> check-update force
```

```
release: 2.15.A.3.0-2
        sandbox: draft
        timestamp: Dec 17 18:58:55
        valid: no
```

**History**

Version	Description
2.14	The <b>components check-update</b> command has been introduced.

### 3.4.5 components commit

**Description** Apply the changes made by **components install** and **components remove** commands.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis** (config-comp)> **commit**

**History**

Version	Description
2.00	The <b>components commit</b> command has been introduced.

### 3.4.6 components install

**Description** Mark component to install. Final installation carried out with **components commit** command.

**Prefix no** No

**Change settings** Yes

**Multiple input**

Yes

**Synopsis**(config-comp)> **install** <*component*>**Arguments**

Argument	Value	Description
component	<i>String</i>	Component name. List of available components for installation can be displayed with the <b>components list</b> command.

**Example**(config-comp)> **install ntfs**

Components::Manager: Component "ntfs" is queued for installation.

**History**

Version	Description
2.00	The <b>components install</b> command has been introduced.

## 3.4.7 components list

**Description**

Switch to the selected sandbox and mark for installation all the components that require changes to match the version in the sandbox. If you use no argument, the entire list of all components for current sandbox (installed and available) will be displayed. If there is no Internet connection, only the list of installed components will be displayed.

**Prefix no**

No

**Change settings**

No

**Multiple input**

No

**Synopsis**(config-comp)> **list** [ *sandbox* ]**Arguments**

Argument	Value	Description
sandbox	<i>String</i>	Remote sandbox, such as stable or beta.

**Example**(config-comp)> **list**firmware:  
version: 2.13.C.0.0-1

sandbox: stable

local:  
sandbox: betacomponent:  
name: base

```

        priority: optional
        size: 35233
        version: 2.13.C.0.0-1
        hash: f65428af2a6fd636db779370deb58f40
installed: 2.13.B.1.0-1

        preset: minimal
        preset: recommended
        queued: yes
...

```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>components list</b> command has been introduced.
2.06.A.6	The <i>sandbox</i> parameter has been introduced. The command <b>components list</b> should be used in favour of <b>components sync</b> .

### 3.4.8 components preset

**Description** Select a predefined set of components. Installation of preset is carried out with **components commit** command.

Before preset installation check the latest versions of components on the update server with **components list** command. Internet connection is required.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis** (config-comp)> **preset <preset>**

**Arguments** Number and names of presets can be changed, so check the list of available presets with help of **preset [Tab]** command.

<b>Argument</b>	<b>Value</b>	<b>Description</b>
preset	minimal	Minimal set of components will be marked.
	recommended	Recommended set of components will be marked for installation.

**Example** (config-comp)> **preset [Tab]**

Usage template:  
    **preset {preset}**

Choose:

```
minimal  
recommended
```

```
(config-comp)> preset recommended  
lib::libndmComponents error[268369922]: updates are available ►  
for this system.  
(config-comp)> commit  
Components::Manager: Update task started.
```

**History**

Version	Description
2.00	The <b>components preset</b> command has been introduced.

## 3.4.9 components preview

**Description** Show size of firmware as current set of components selected with **components install** command.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis** (config-comp)> **preview**

**Example** (config-comp)> **preview**

```
preview:  
size: 7733308
```

**History**

Version	Description
2.06	The <b>components preview</b> command has been introduced.

## 3.4.10 components remove

**Description** Mark component to remove. Final removal carried out with **components commit** command.

**Prefix no** No

**Change settings** Yes

**Multiple input** Yes

**Synopsis** (config-comp)> **remove <component>**

**Arguments**

Argument	Value	Description
component	<i>String</i>	Component name. List of available components for removal can be displayed with the <b>components list</b> command.

**Example**

```
(config-comp)> remove ntfs
Components::Manager: Component "ntfs" is queued for removal.
```

**History**

Version	Description
2.00	The <b>components remove</b> command has been introduced.

### 3.4.11 components validity-period

**Description**

Set a validity period of a local component list. After this time the command **components list** will be automatically executed to get actual list of components from update server. By default, value 1800 is used.

Command with **no** prefix resets period to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-comp)> validity-period <seconds>
(config-comp)> no validity-period
```

**Arguments**

Argument	Value	Description
seconds	<i>Integer</i>	Validity period of a local component list in seconds. Can take values in the range from 0 to 604800 inclusively.

**Example**

```
(config-comp)> validity-period 500
Components::Manager: Validity period set to 500 seconds.
```

```
(config-comp)> no validity-period
Components::Manager: Validity period reset to 1800 seconds.
```

**History**

Version	Description
2.03	The <b>components validity-period</b> command has been introduced.

## 3.5 crypto engine

<b>Description</b>	Select the type of <i>ESP</i> packets processing with <i>IPsec</i> . Command with <b>no</b> prefix disables the feature.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>  (config)&gt; crypto engine &lt;type&gt;   (config)&gt; no crypto engine</pre>						
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>type</td><td>software</td><td>Software mode.</td></tr></tbody></table>	Argument	Value	Description	type	software	Software mode.
Argument	Value	Description					
type	software	Software mode.					
<b>Example</b>	<pre>(config)&gt; crypto engine software IpSec::CryptoEngineManager: IPsec crypto engine set to "software". (config)&gt; no crypto engine IpSec::CryptoEngineManager: IPsec crypto engine was disabled.</pre>						
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.06</td><td>The <b>crypto engine</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.06	The <b>crypto engine</b> command has been introduced.		
Version	Description						
2.06	The <b>crypto engine</b> command has been introduced.						

## 3.6 crypto ike key

<b>Description</b>	Add <i>IKE</i> key with remote side ID. Command with <b>no</b> prefix removes specified key.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Synopsis</b>	<pre>  (config)&gt; crypto ike key &lt;name&gt; &lt;psk&gt; (&lt;type&gt; &lt;id&gt;   any)   (config)&gt; no crypto ike key &lt;name&gt;</pre>						
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>name</td><td><i>String</i></td><td>Name of the key. Latin letters, numbers, dots, hyphens and underscores are acceptable.</td></tr></tbody></table>	Argument	Value	Description	name	<i>String</i>	Name of the key. Latin letters, numbers, dots, hyphens and underscores are acceptable.
Argument	Value	Description					
name	<i>String</i>	Name of the key. Latin letters, numbers, dots, hyphens and underscores are acceptable.					

Argument	Value	Description
psk	<i>String</i>	Password for authentication. Password length can be from 6 to 96 characters.
type	address	ID type is IP address.
	fqdn	ID type is full domain name.
	dn	ID type is domain name.
	email	ID type is e-mail address.
id	<i>String</i>	Value of the remote side ID.
any	<i>Keyword</i>	Allow the key usage for any remote side.

**Example**

```
(config)> crypto ike key VirtualIPServer >
aDjs0C1gvWCs0iE4Ijhs+HRnNPiheGA478 any
IpSec::Manager: "VirtualIPServer": crypto ike key successfully >
added.
```

```
(config)> crypto ike key VirtualIPServer >
aDjs0C1gvWCs0iE4Ijhs+HRnNPiheGA478R4M6d4+054LLihe any
IpSec::Manager: "VirtualIPServer": crypto ike key successfully >
updated.
```

```
(config)> no crypto ike key VirtualIPServer
IpSec::Manager: "VirtualIPServer": crypto ike key successfully >
removed.
```

**History**

Version	Description
2.06	The <b>crypto ike key</b> command has been introduced.

## 3.7 crypto ike mtu

**Description** Set the *MTU* value to be transmitted to *IKE*. By default, the *MTU* value is inherited from the interface through which the Internet is accessed.

Command with **no** prefix resets the *MTU* value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config)&gt; crypto ike mtu (value)</pre>
<pre>(config)&gt; no crypto ike mtu</pre>

**Arguments**

Argument	Value	Description
value	<i>Integer</i>	<i>MTU</i> value. Can take values in the range from 576 to 1500 inclusively.

**Example**

```
(config)> crypto ike mtu 1400
IpSec::Manager: IKE MTU value is set to 1400.

(config)> no crypto ipsec mtu
IpSec::Manager: Reset IKE MTU value.
```

**History**

Version	Description
3.08	The <b>crypto ike mtu</b> command has been introduced.

## 3.8 crypto ike nat-keepalive

**Description**

Set the timeout between keepalive packets in case of NAT between the client and server *IPsec*. By default, 20 value is set.

Command with **no** prefix resets setting to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> crypto ike nat-keepalive <nat-keepalive>
(config)> no crypto ike nat-keepalive
```

**Arguments**

Argument	Value	Description
nat-keepalive	<i>Integer</i>	Timeout between keepalive packets in seconds. Can take values in the range from 5 to 3600 inclusively.

**Example**

```
(config)> crypto ike nat-keepalive 90
IpSec::Manager: Set crypto ike nat-keepalive timeout to 90 s.

(config)> no crypto ike nat-keepalive
IpSec::Manager: Reset crypto ike nat-keepalive timeout to 20 s.
```

**History**

Version	Description
2.06	The <b>crypto ike nat-keepalive</b> command has been introduced.

## 3.9 crypto ike policy

<b>Description</b>	Access to a group of commands to configure selected <i>IKE</i> policy. If <i>IKE</i> policy is not found, the command tries to create it.						
	Command with <b>no</b> prefix removes <i>IKE</i> policy. At the same time references to this <i>IKE</i> policy are automatically deleted from all <i>IPsec</i> profiles.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Group entry</b>	(config-ike-policy)						
<b>Synopsis</b>	<pre>(config)&gt; crypto ike policy &lt;name&gt; (config)&gt; no crypto ike policy &lt;name&gt;</pre>						
<b>Arguments</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Argument</th> <th style="text-align: left; padding: 2px;">Value</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">name</td> <td style="padding: 2px;"><i>String</i></td> <td style="padding: 2px;"><i>IKE</i> policy name. Latin letters, numbers, dots, hyphens and underscores are acceptable.</td> </tr> </tbody> </table>	Argument	Value	Description	name	<i>String</i>	<i>IKE</i> policy name. Latin letters, numbers, dots, hyphens and underscores are acceptable.
Argument	Value	Description					
name	<i>String</i>	<i>IKE</i> policy name. Latin letters, numbers, dots, hyphens and underscores are acceptable.					
<b>Example</b>	<pre>(config)&gt; crypto ike policy test IpSec::Manager: "test": crypto ike policy successfully created.  (config)&gt; no crypto ike policy test IpSec::Manager: Crypto ike policy "test" removed.</pre>						
<b>History</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Version</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">2.06</td> <td style="padding: 2px;">The <b>crypto ike policy</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.06	The <b>crypto ike policy</b> command has been introduced.		
Version	Description						
2.06	The <b>crypto ike policy</b> command has been introduced.						

### 3.9.1 crypto ike policy lifetime

<b>Description</b>	Set lifetime of <i>IPsec IKE</i> association. By default, the value 86400 is used.
	Command with <b>no</b> prefix resets setting to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config-ike-policy)&gt; lifetime &lt;lifetime&gt; (config-ike-policy)&gt; no lifetime</pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
lifetime	<i>Integer</i>	Lifetime of <i>IPsec IKE</i> association in seconds. Can take values in the range from 60 to 2147483647.

**Example**

```
(config-ike-policy)> lifetime 3600
IpSec::Manager: "test": crypto ike policy lifetime set to 3600 s.

(config-ike-policy)> no lifetime
IpSec::Manager: "test": crypto ike policy lifetime reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ike policy lifetime</b> command has been introduced.

## 3.9.2 crypto ike policy mode

**Description**

Set *IKE* protocol version. By default, the value ikev1 is used.

Command with **no** prefix resets setting to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-ike-policy)> mode <mode>
(config-ike-policy)> no mode
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
mode	ikev1	Protocol version IKEv1.
	ikev2	Protocol version IKEv2.

**Example**

```
(config-ike-policy)> mode ikev2
IpSec::Manager: "test": crypto ike policy mode set to "ikev2".

(config-ike-policy)> no mode
IpSec::Manager: "test": crypto ike policy mode reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ike policy mode</b> command has been introduced.

### 3.9.3 crypto ike policy negotiation-mode

**Description** Set exchange mode for IKEv1 (see [crypto ike policy mode](#) command). By default, the value main is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-ike-policy)>	<b>negotiation-mode</b> < <i>negotiation-mode</i> >
(config-ike-policy)>	<b>no negotiation-mode</b>

Arguments	Argument	Value	Description
	negotiation-mode	main	Main mode, protects the identity of the peers.
		aggressive	Aggressive mode, does not protect the identity of the peers.

**Example**

(config-ike-policy)>	<b>negotiation-mode aggressive</b>
IpSec::Manager: "test": crypto ike policy negotiation-mode set ▶ to "aggressive".	
(config-ike-policy)>	<b>no negotiation-mode</b>
IpSec::Manager: "test": crypto ike policy negotiation-mode reset.	

History	Version	Description
	2.06	The <b>crypto ike policy negotiation-mode</b> command has been introduced.

### 3.9.4 crypto ike policy proposal

**Description** Add reference on existing [IKE](#) proposal to [IKE](#) policy. The order of adding has a value for data exchange on the [IKE](#) protocol.

Command with **no** prefix removes reference on [IKE](#) proposal.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config-ike-policy)>	<b>proposal</b> < <i>proposal</i> >
----------------------	-------------------------------------

```
(config-ike-policy)> no proposal <proposal>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
proposal	<i>String</i>	<i>IKE</i> proposal name. Latin letters, numbers, dots, hyphens and underscores are acceptable.

**Example**

```
(config-ike-policy)> proposal test
IpSec::Manager: "test": crypto ike proposal "test" successfully ►
added.
```

```
(config-ike-policy)> no proposal
IpSec::Manager: "test": crypto ike policy proposal "test" ►
successfully removed.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ike policy proposal</b> command has been introduced.

## 3.10 crypto ike proposal

**Description**

Access to a group of commands to configure selected *IKE* proposal. If *IKE* proposal is not found, the command tries to create it.

A full list of encryption algorithms implemented in the system is provided in the [Appendix](#).

Command with **no** prefix removes *IKE* proposal. At the same time references to this *IKE* proposal are automatically deleted from all *IKE* policy.

<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Group entry</b>	(config-ike-proposal)

**Synopsis**

```
(config)> crypto ike proposal <name>
(config)> no crypto ike proposal <name>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>String</i>	<i>IKE</i> proposal name. Latin letters, numbers, dots, hyphens and underscores are acceptable.

<b>Example</b>	(config)> <b>crypto ike proposal test</b> IpSec::Manager: "test": crypto ike proposal successfully created.
	(config)> <b>no crypto ike proposal test</b> IpSec::Manager: Crypto ike proposal "test" removed.

History	Version	Description
	2.06	The <b>crypto ike proposal</b> command has been introduced.

### 3.10.1 crypto ike proposal aead

**Description** Enable *AEAD* cypher mode on *IKE* proposal.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (config-ike-proposal)> **aead**

<b>Example</b>	(config-ike-proposal)> <b>aead</b> IpSec::Manager: "TEST": crypto ike proposal "TEST" enabled AEAD mode.
----------------	---

History	Version	Description
	3.05	The <b>crypto ike proposal aead</b> command has been introduced.

### 3.10.2 crypto ike proposal dh-group

**Description** Add the selected *DH* group to *IKE* proposal to work in the *PFS* mode. The order of adding has a value for data exchange on the *IKE* protocol.

Command with **no** prefix removes the selected group.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis** (config-ike-proposal)> **dh-group <dh-group>**  
(config-ike-proposal)> **no dh-group <dh-group>**

Arguments	Argument	Value	Description
	dh-group	1	<i>DH</i> group to work in the <i>PFS</i> mode.
		2	
		5	
		14	
		15	
		16	
		17	
		18	
		19	
		20	
		21	
		25	
		26	
		31	
		32	

**Example**

```
(config-ike-proposal)> dh-group 14
IpSec::Manager: "test": crypto ike proposal DH group "14" ▶
successfully added.
```

```
(config-ike-proposal)> no dh-group 14
IpSec::Manager: "test": crypto ike proposal "test" group type ▶
successfully removed.
```

**History**

Version	Description
2.06	The <b>crypto ike proposal dh-group</b> command has been introduced.

### 3.10.3 crypto ike proposal encryption

**Description** Add the selected type of encryption to *IKE* proposal. The order of adding has a value for data exchange on the *IKE* protocol.

Command with **no** prefix removes the selected type of encryption.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config-ike-proposal)> encryption <encryption>
(config-ike-proposal)> no encryption <encryption>
```

**Arguments**

Argument	Value	Description
encryption	des	Type of <i>IKE</i> encryption.
	3des	
	aes-cbc-128	
	aes-cbc-192	
	aes-cbc-256	
	aes-ctr-128	
	aes-ctr-192	
	aes-ctr-256	

**Example**

```
(config-ike-proposal)> encryption des
IpSec::Manager: "test": crypto ike proposal encryption algorithm ▶
"des" added.

(config-ike-proposal)> no encryption des
IpSec::Manager: "test": crypto ike proposal "test" encryption ▶
type successfully removed.
```

**History**

Version	Description
2.06	The <b>crypto ike proposal encryption</b> command has been introduced.

## 3.10.4 crypto ike proposal integrity

**Description** Add the selected value of *HMAC* signature algorithm to *IKE* proposal. The order of adding has a value for data exchange on the *IKE* protocol.

Command with **no** prefix removes the selected algorithm.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config-ike-proposal)> integrity <integrity>
(config-ike-proposal)> no integrity <integrity>
```

Arguments	Argument	Value	Description
integrity	md5	<i>HMAC</i> signature algorithm of <i>IKE</i> messages.	
	sha1		
	sha256		
	sha384		
	sha512		

**Example**

```
(config-ike-proposal)> integrity sha256
IpSec::Manager: "test": crypto ike proposal integrity algorithm ▶
"sha256" successfully added.
```

```
(config-ike-proposal)> no integrity sha256
IpSec::Manager: "test": crypto ike proposal "test" integrity ▶
type successfully removed.
```

**History**

Version	Description
2.06	The <b>crypto ike proposal integrity</b> command has been introduced.

### 3.10.5 crypto ike proposal prf

**Description** Add the selected *PRF* group to *IKE* proposal.

Command with **no** prefix removes the selected algorithm.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

<pre>(config-ike-proposal)&gt; prf &lt;prf&gt;</pre>
<pre>(config-ike-proposal)&gt; no prf &lt;prf&gt;</pre>

**Arguments**

Argument	Value	Description
prf	md5	<i>HMAC</i> signature algorithm of <i>IKE</i> messages.
	sha1	
	aes-xcbc	
	sha256	
	sha384	
	sha512	
	aes-cmac	

**Example**

```
(config-ike-proposal)> prf sha256
IpSec::Manager: "TEST": crypto ike proposal prf algorithm ▶
"sha256" successfully added.
```

```
(config-ike-proposal)> no prf sha256
IpSec::Manager: "TEST": crypto ike proposal "TEST" prf type ▶
successfully removed.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>crypto ike proposal prf</b> command has been introduced.

## 3.11 crypto ipsec incompatible

**Description** Disable *IPsec* tunnels compatibility checking. By default, the setting is disabled.

Command with **no** prefix enables the checking back.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config)&gt; crypto ipsec incompatible</pre>
<pre>(config)&gt; no crypto ipsec incompatible</pre>

**Example**

```
(config)> crypto ipsec incompatible
IpSec::Manager: Compatibility checks is disabled.
```

```
(config)> no crypto ipsec incompatible
IpSec::Manager: Compatibility checks is enabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>crypto ipsec incompatible</b> command has been introduced.

## 3.12 crypto ipsec profile

**Description** Access to a group of commands to configure selected *IPsec* profile. If profile is not found, the command tries to create it.

Command with **no** prefix removes profile. At the same time references to this profile are automatically deleted from all *IPsec* crypto maps.

**Prefix no** Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-ipsec-profile)

**Synopsis**

```
(config)> crypto ipsec profile <name>
```

```
(config)> no crypto ipsec profile <name>
```

**Arguments**

Argument	Value	Description
name	String	<i>IPsec</i> profile name. Latin letters, numbers, dots, hyphens and underscores are acceptable.

**Example**

```
(config)> crypto ipsec profile test
IpSec::Manager: "test": crypto ipsec profile successfully created.
```

```
(config)> no crypto ipsec profile test
IpSec::Manager: Crypto ipsec profile "test" removed.
```

**History**

Version	Description
2.06	The <b>crypto ipsec profile</b> command has been introduced.

### 3.12.1 crypto ipsec profile authentication-local

**Description**

Set authentication type for local host. By default, value pre-share is used.

Command with **no** prefix resets setting to default.**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-ipsec-profile)> authentication-local <auth>
```

```
(config-ipsec-profile)> no authentication-local
```

**Arguments**

Argument	Value	Description
auth	pre-share	A single available type of authorization for now.

**Example**

```
(config-ipsec-profile)> authentication-local pre-share
IpSec::Manager: "test": crypto ipsec profile authentication-local ▶
type "pre-share" is set.
```

```
(config-ipsec-profile)> no authentication-local
IpSec::Manager: "test": crypto ipsec profile authentication-local ▶
reset.
```

History	Version	Description
	2.06	The <b>crypto ipsec profile authentication-local</b> command has been introduced.

### 3.12.2 crypto ipsec profile authentication-remote

**Description** Set authentication type for remote host. By default, value pre-share is used.  
Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-ipsec-profile)> authentication-remote <auth>
(config-ipsec-profile)> no authentication-remote
```

Arguments	Argument	Value	Description
	auth	pre-share	A single available type of authorization for now.

**Example**

```
(config-ipsec-profile)> authentication-remote pre-share
IpSec::Manager: "test": crypto ipsec profile ▶
authentication-remote type "pre-share" is set.
```

```
(config-ipsec-profile)> no authentication-remote
IpSec::Manager: "test": crypto ipsec profile ▶
authentication-remote reset.
```

History	Version	Description
	2.06	The <b>crypto ipsec profile authentication-remote</b> command has been introduced.

### 3.12.3 crypto ipsec profile dpd-clear

**Description** Set method of action when detecting a dead [IKE](#) peer. By default, the setting is enabled, which means deleting peer information.

Command with **no** prefix set action to restart.

<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config-ipsec-profile)&gt; <b>dpd-clear</b>   (config-ipsec-profile)&gt; <b>no dpd-clear</b></pre>				
<b>Example</b>	<pre>(config-ipsec-profile)&gt; <b>dpd-clear</b> IpSec::Manager: "VPNL2TPServer": crypto ipsec profile DPD action ▶ set to "clear".</pre> <pre>(config-ipsec-profile)&gt; <b>no dpd-clear</b> IpSec::Manager: "VPNL2TPServer": crypto ipsec profile DPD action ▶ set to "restart".</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.11</td> <td>The <b>crypto ipsec profile dpd-clear</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.11	The <b>crypto ipsec profile dpd-clear</b> command has been introduced.
Version	Description				
2.11	The <b>crypto ipsec profile dpd-clear</b> command has been introduced.				

### 3.12.4 crypto ipsec profile dpd-interval

<b>Description</b>	Set parameters of method to detect a dead <a href="#">IKE</a> peer. By default, <b>interval</b> is set to 30, <b>retry-count</b> is set to 3.  Command with <b>no</b> prefix resets settings to default.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	No									
<b>Synopsis</b>	<pre>(config-ipsec-profile)&gt; <b>dpd-interval &lt;interval&gt; [retry-count]</b>   (config-ipsec-profile)&gt; <b>no dpd-interval</b></pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>interval</td> <td><i>Integer</i></td> <td>The interval of sending <a href="#">DPD</a> packets in seconds. Can take values in the range from 2 to 3600.</td> </tr> <tr> <td>retry-count</td> <td><i>Integer</i></td> <td>Number of attempts to send <a href="#">DPD</a> packets. Can take values in the range from 3 to 60.</td> </tr> </tbody> </table>	Argument	Value	Description	interval	<i>Integer</i>	The interval of sending <a href="#">DPD</a> packets in seconds. Can take values in the range from 2 to 3600.	retry-count	<i>Integer</i>	Number of attempts to send <a href="#">DPD</a> packets. Can take values in the range from 3 to 60.
Argument	Value	Description								
interval	<i>Integer</i>	The interval of sending <a href="#">DPD</a> packets in seconds. Can take values in the range from 2 to 3600.								
retry-count	<i>Integer</i>	Number of attempts to send <a href="#">DPD</a> packets. Can take values in the range from 3 to 60.								

**Example**

```
(config-ipsec-profile)> dpd-interval 5 30
IpSec::Manager: "test": crypto ipsec profile dpd retry count is ▶
set to 30.
```

```
(config-ipsec-profile)> no dpd-interval
IpSec::Manager: "test": crypto ipsec profile dpd retry count ▶
reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ipsec profile dpd-interval</b> command has been introduced.

### 3.12.5 crypto ipsec profile identity-local

**Description** Set a local identifier of *IPsec* profile.

Command with **no** prefix removes the local identifier.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-ipsec-profile)&gt; <b>identity-local &lt;type&gt; &lt;id&gt;</b></pre>
<pre>(config-ipsec-profile)&gt; <b>no identity-local</b></pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
type	address	ID type is IP address.
	fqdn	ID type is full domain name.
	dn	ID type is domain name.
	email	ID type is e-mail address.
id	<i>String</i>	Local ID value.

**Example**

```
(config-ipsec-profile)> identity-local address 10.10.10.5
IpSec::Manager: "test": crypto ipsec profile identity-local is ▶
set to "10.10.10.5" with type "address".
```

```
(config-ipsec-profile)> no identity-local
IpSec::Manager: "test": crypto ipsec profile identity-local reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ipsec profile identity-local</b> command has been introduced.

## 3.12.6 crypto ipsec profile match-identity-remote

<b>Description</b>	Set remote host identifier for <i>IPsec</i> profile.																						
	Command with <b>no</b> prefix removes remote host ID.																						
<b>Prefix no</b>	Yes																						
<b>Change settings</b>	Yes																						
<b>Multiple input</b>	No																						
<b>Synopsis</b>	<pre>(config-ipsec-profile)&gt; match-identity-remote (&lt;type&gt; &lt;id&gt;   any)</pre> <pre>(config-ipsec-profile)&gt; no match-identity-remote</pre>																						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>type</td> <td>address</td> <td>ID type is IP address.</td> </tr> <tr> <td></td> <td>fqdn</td> <td>ID type is full domain name.</td> </tr> <tr> <td></td> <td>dn</td> <td>ID type is domain name.</td> </tr> <tr> <td></td> <td>email</td> <td>ID type is e-mail address.</td> </tr> <tr> <td>id</td> <td><i>String</i></td> <td>Remote host ID value.</td> </tr> <tr> <td>any</td> <td><i>Keyword</i></td> <td>Allow usage of any remote host.</td> </tr> </tbody> </table>		Argument	Value	Description	type	address	ID type is IP address.		fqdn	ID type is full domain name.		dn	ID type is domain name.		email	ID type is e-mail address.	id	<i>String</i>	Remote host ID value.	any	<i>Keyword</i>	Allow usage of any remote host.
Argument	Value	Description																					
type	address	ID type is IP address.																					
	fqdn	ID type is full domain name.																					
	dn	ID type is domain name.																					
	email	ID type is e-mail address.																					
id	<i>String</i>	Remote host ID value.																					
any	<i>Keyword</i>	Allow usage of any remote host.																					
<b>Example</b>	<pre>(config-ipsec-profile)&gt; match-identity-remote any IpSec::Manager: "test": crypto ipsec profile &gt; match-identity-remote is set to any.</pre> <pre>(config-ipsec-profile)&gt; no match-identity-remote IpSec::Manager: "test": crypto ipsec profile &gt; match-identity-remote reset.</pre>																						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.06</td> <td>The <b>crypto ipsec profile match-identity-remote</b> command has been introduced.</td> </tr> </tbody> </table>		Version	Description	2.06	The <b>crypto ipsec profile match-identity-remote</b> command has been introduced.																	
Version	Description																						
2.06	The <b>crypto ipsec profile match-identity-remote</b> command has been introduced.																						

## 3.12.7 crypto ipsec profile mode

<b>Description</b>	Set the mode of operation <i>IPsec</i> . By default, tunnel value is set.
	Command with <b>no</b> prefix resets setting to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

**Synopsis**

```
(config-ipsec-profile)> mode <mode>
```

```
(config-ipsec-profile)> no mode
```

**Arguments**

Argument	Value	Description
mode	tunnel	Tunnel mode, when the entire IP packet is encrypted and/or authenticated.
	transport	Transport mode, when only the payload of the IP packet is encrypted and/or authenticated.

**Example**

```
(config-ipsec-profile)> mode transport
IpSec::Manager: "test": crypto ipsec profile mode set to ▶
"transport".
```

```
(config-ipsec-profile)> no mode
IpSec::Manager: "test": crypto ipsec profile mode reset.
```

**History**

Version	Description
2.06	The <b>crypto ipsec profile mode</b> command has been introduced.

## 3.12.8 crypto ipsec profile policy

**Description** Set the reference to existing *IKE* policy (see **crypto ike policy** command).

Command with **no** prefix removes the reference.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-ipsec-profile)> policy <policy>
```

```
(config-ipsec-profile)> no policy
```

**Arguments**

Argument	Value	Description
policy	String	<i>IKE</i> policy name. You can see the list of available policies with help of <b>policy [Tab]</b> command.

**Example**

```
(config-ipsec-profile)> policy [Tab]
Usage template:
    policy {name: {A-Z, a-z, 0-9, ., _, -}}
```

Choose:  
**VirtualIPServer**  
**VPNL2TPServer**

```
(config-ipsec-profile)> policy VirtualIPServer
IpSec::Manager: "TEST": crypto ipsec profile policy set to ▶
"VirtualIPServer".
```

```
(config-ipsec-profile)> no policy
IpSec::Manager: "test": crypto ipsec profile policy reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ipsec profile policy</b> command has been introduced.

### 3.12.9 crypto ipsec profile preshared-key

**Description** Set pre-shared key for *IPsec* profile.

Command with **no** prefix removes pre-shared key.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-ipsec-profile)&gt; <b>preshared-key &lt;preshare-key&gt;</b></pre>
<pre>(config-ipsec-profile)&gt; <b>no preshared-key</b></pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
preshare-key	<i>String</i>	Pre-shared key value.

**Example**

```
(config-ipsec-profile)> preshared-key testkey
IpSec::Manager: "test": crypto ipsec profile preshared key was ▶
set.
```

```
(config-ipsec-profile)> no preshared-key
IpSec::Manager: "test": crypto ipsec profile preshared key reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ipsec profile preshared-key</b> command has been introduced.

## 3.12.10 crypto ipsec profile xauth

**Description** Enable additional authentication *XAuth* for IKEv1 mode. By default, function is disabled.

Command with **no** prefix disables additional authentication.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-ipsec-profile)>	<b>xauth &lt;type&gt;</b>
(config-ipsec-profile)>	<b>no xauth</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	<b>type</b>	client	Client mode.
		server	Server mode.

<b>Example</b>	(config-ipsec-profile)> <b>xauth client</b> IpSec::Manager: "test": crypto ipsec profile xauth set to ▶ "client".
	(config-ipsec-profile)> <b>no xauth</b> IpSec::Manager: "test": crypto ipsec profile xauth is disabled.

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.06	The <b>crypto ipsec profile xauth</b> command has been introduced.

## 3.12.11 crypto ipsec profile xauth-identity

**Description** Set login for additional authentication *XAuth* in client mode.

Command with **no** prefix removes the login.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-ipsec-profile)>	<b>xauth-identity &lt;identity&gt;</b>
(config-ipsec-profile)>	<b>no xauth-identity</b>

**Arguments**

Argument	Value	Description
identity	<i>String</i>	Login for <i>XAuth</i> client mode.

**Example**

```
(config-ipsec-profile)> xauth-identity ident
IpSec::Manager: "test": crypto ipsec profile xauth-identity is ▶
set to "ident".

(config-ipsec-profile)> no xauth-identity
IpSec::Manager: "test": crypto ipsec profile xauth identity is ▶
deleted.
```

**History**

Version	Description
2.06	The <b>crypto ipsec profile xauth-identity</b> command has been introduced.

### 3.12.12 crypto ipsec profile xauth-password

**Description**

Set password for additional authentication *XAuth* in client mode.

Command with **no** prefix removes the password.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-ipsec-profile)> xauth-password <password>
(config-ipsec-profile)> no xauth-password
```

**Arguments**

Argument	Value	Description
password	<i>String</i>	Password for <i>XAuth</i> client mode.

**Example**

```
(config-ipsec-profile)> xauth-password password
IpSec::Manager: "test": crypto ipsec profile xauth-password is ▶
set.

(config-ipsec-profile)> no xauth-password
IpSec::Manager: "test": crypto ipsec profile xauth password is ▶
deleted.
```

**History**

Version	Description
2.06	The <b>crypto ipsec profile xauth-password</b> command has been introduced.

## 3.13 crypto ipsec rekey delete-delay

**Description** Set interval before removing the IKE SA after receiving the DELETE command from the remote side. By default, the 10 value is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>crypto ipsec rekey delete-delay &lt;delay&gt;</b>
(config)>	<b>no crypto ipsec rekey delete-delay</b>

Arguments	Argument	Value	Description
	delay	<i>Integer</i>	Delay value in seconds. Can take value in the range from 1 to 60.

**Example**

(config)>	<b>crypto ipsec rekey delete-delay 1</b>
	IpSec::Manager: Rekey delete-delay value is set to 1.
(config)>	<b>no crypto ipsec rekey delete-delay</b>
	IpSec::Manager: Rekey delete-delay value is set to 10.

History	Version	Description
	2.11	The <b>crypto ipsec rekey delete-delay</b> command has been introduced.

## 3.14 crypto ipsec rekey make-before

**Description** Set the mode when new IKE SA creates before the breaking the old one. By default, the feature is disabled.

Command with **no** prefix disables the mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>crypto ipsec rekey make-before</b>
(config)>	<b>no crypto ipsec rekey make-before</b>

**Example**

```
(config)> crypto ipsec rekey make-before
IpSec::Manager: Enable make-before-brake scheme for IKEv2 rekey.

(config)> no crypto ipsec rekey make-before
IpSec::Manager: Disable make-before-brake scheme for IKEv2 rekey.
```

**History**

Version	Description
2.11	The <b>crypto ipsec rekey make-before</b> command has been introduced.

## 3.15 crypto ipsec transform-set

**Description**

Access to a group of commands to configure selected *IPsec ESP* transformation during Phase 2. If transformation is not found, the command tries to create it.

Command with **no** prefix removes transformation. At the same time references to this transformation are automatically deleted from all *IPsec* crypto maps.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-ipsec-transform)

**Synopsis**

```
(config)> crypto ipsec transform-set <name>
(config)> no crypto ipsec transform-set <name>
```

**Arguments**

Argument	Value	Description
name	<i>String</i>	<i>IPsec</i> transformation name. Latin letters, numbers, dots, hyphens and underscores are acceptable.

**Example**

```
(config)> crypto ipsec transform-set test
IpSec::Manager: "test": crypto ipsec transform-set successfully ►
created.

(config)> no crypto ipsec transform-set test
IpSec::Manager: Crypto ipsec transform-set "test" removed.
```

**History**

Version	Description
2.06	The <b>crypto ipsec transform-set</b> command has been introduced.

### 3.15.1 crypto ipsec transform-set aead

**Description** Enable [AEAD](#) cypher mode on [IPsec](#).

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(config-ipsec-transform)>	<b>aead</b>
---------------------------	-------------

**Example**

```
(config-ipsec-transform)> dh-group 14
```

```
IpSec::Manager: "TEST": crypto ipsec transform-set "TEST" enabled ▶
AEAD mode.
```

**History**

Version	Description
3.05	The <b>crypto ipsec transform-set aead</b> command has been introduced.

### 3.15.2 crypto ipsec transform-set cypher

**Description** Add the selected type of encryption to [IPsec](#) transformation. The order of adding has a value for data exchange on the [IKE](#) protocol.

Command with **no** prefix removes the selected type of encryption.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config-ipsec-transform)>	<b>cypher &lt;cypher&gt;</b>
---------------------------	------------------------------

(config-ipsec-transform)>	<b>no cypher &lt;cypher&gt;</b>
---------------------------	---------------------------------

**Arguments**

Argument	Value	Description
cypher	esp-des	Type of <a href="#">IPsec ESP</a> encryption.
	esp-3des	
	esp-aes-128	
	esp-aes-192	
	esp-aes-256	

**Example**

```
(config-ipsec-transform)> cypher esp-3des
```

```
IpSec::Manager: "test": crypto ipsec transform-set cypher ▶
"esp-3des" successfully added.
```

```
(config-ipsec-transform)> no cipher esp-3des
IpSec::Manager: "test": crypto ipsec transform-set "test" cipher ▶
successfully removed.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto ipsec transform-set cipher</b> command has been introduced.

### 3.15.3 crypto ipsec transform-set dh-group

**Description** Add the selected **DH** group to **IPsec** transformation to work in the **PFS** mode. The order of adding has a value for data exchange on the **IKE** protocol.

Command with **no** prefix removes the selected group.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config-ipsec-transform)>	<b>dh-group &lt;dh-group&gt;</b>
(config-ipsec-transform)>	<b>no dh-group &lt;dh-group&gt;</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
dh-group	1	<i>DH</i> group to work in the <b>PFS</b> mode.
	2	
	5	
	14	
	15	
	16	
	17	
	18	

**Example**

```
(config-ipsec-transform)> dh-group 14
IpSec::Manager: "test": crypto ipsec transform-set dh-group "14" ▶
successfully added.
```

```
(config-ipsec-transform)> no dh-group 14
IpSec::Manager: "test": crypto ipsec transform-set "test" ▶
dh-group successfully removed.
```

History	Version	Description
	2.06	The <b>crypto ipsec transform-set dh-group</b> command has been introduced.

### 3.15.4 crypto ipsec transform-set hmac

**Description** Add the selected value of **HMAC** signature algorithm to **IPsec** transformation. The order of adding has a value for data exchange on the **IKE** protocol.

Command with **no** prefix removes the selected algorithm.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config-ipsec-transform)>	<b>hmac &lt;hmac&gt;</b>
(config-ipsec-transform)>	<b>no hmac &lt;hmac&gt;</b>

Arguments	Argument	Value	Description
	<b>hmac</b>	<b>esp-md5-hmac</b>	<b>HMAC</b> signature algorithm of <b>IPsec ESP</b> transformation.
		<b>esp-sha1-hmac</b>	
		<b>esp-sha256-hmac</b>	

**Example**

```
(config-ipsec-transform)> hmac esp-sha1-hmac
IpSec::Manager: "test": crypto ipsec transform-set hmac ▶
"esp-sha1-hmac" successfully added.
```

```
(config-ipsec-transform)> no hmac esp-sha1-hmac
IpSec::Manager: "test": crypto ipsec transform-set "test" hmac ▶
successfully removed.
```

History	Version	Description
	2.06	The <b>crypto ipsec transform-set hmac</b> command has been introduced.

### 3.15.5 crypto ipsec transform-set lifetime

**Description** Set lifetime of selected **IPsec** transformation. By default, the value 3600 is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-ipsec-transform)&gt; lifetime &lt;lifetime&gt; (config-ipsec-transform)&gt; no lifetime</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>lifetime</td><td><i>Integer</i></td><td>Lifetime of <i>IPsec</i> transformation in seconds. Can take values in the range from 60 to 2147483647.</td></tr> </tbody> </table>	Argument	Value	Description	lifetime	<i>Integer</i>	Lifetime of <i>IPsec</i> transformation in seconds. Can take values in the range from 60 to 2147483647.
Argument	Value	Description					
lifetime	<i>Integer</i>	Lifetime of <i>IPsec</i> transformation in seconds. Can take values in the range from 60 to 2147483647.					
<b>Example</b>	<pre>(config-ipsec-transform)&gt; lifetime 8640 IpSec::Manager: "test": crypto ipsec transform-set lifetime set ▶ to 8640 s.  (config-ipsec-transform)&gt; no lifetime IpSec::Manager: "test": crypto ipsec transform-set lifetime reset.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.06</td><td>The <b>crypto ipsec transform-set lifetime</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.06	The <b>crypto ipsec transform-set lifetime</b> command has been introduced.		
Version	Description						
2.06	The <b>crypto ipsec transform-set lifetime</b> command has been introduced.						

## 3.16 crypto map

<b>Description</b>	Access to a group of commands to configure selected <i>IPsec</i> crypto map. If crypto map is not found, the command tries to create it.  Command with <b>no</b> prefix removes crypto map.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Group entry</b>	(config-crypto-map)						
<b>Synopsis</b>	<pre>(config)&gt; crypto map &lt;name&gt; (config)&gt; no crypto map &lt;name&gt;</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>name</td><td><i>String</i></td><td><i>IPsec</i> crypto map name. Latin letters, numbers, dots, hyphens and underscores are acceptable.</td></tr> </tbody> </table>	Argument	Value	Description	name	<i>String</i>	<i>IPsec</i> crypto map name. Latin letters, numbers, dots, hyphens and underscores are acceptable.
Argument	Value	Description					
name	<i>String</i>	<i>IPsec</i> crypto map name. Latin letters, numbers, dots, hyphens and underscores are acceptable.					

**Example**

```
(config)> crypto map test
IpSec::Manager: "test": crypto map successfully created.
```

```
(config)> no crypto map test
IpSec::Manager: Crypto map profile "test" removed.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto map</b> command has been introduced.

### 3.16.1 crypto map connect

**Description**

Enable automatic unconditional *IPsec* connection to the remote host. Setting has no meaning if basic remote host was set to any (see **crypto map set-peer** command). By default, setting is disabled and connection is established when attempting to transmit traffic through the *IPsec ESP* transformation.

Command with **no** prefix disables automatic unconditional connection.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-crypto-map)> connect
```

```
(config-crypto-map)> no connect
```

**Example**

```
(config-crypto-map)> connect
IpSec::Manager: "test": crypto map autoconnect enabled.
```

```
(config-crypto-map)> no connect
IpSec::Manager: "test": crypto map autoconnect disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto map connect</b> command has been introduced.

### 3.16.2 crypto map enable

**Description**

Enable selected *IPsec* crypto map. By default, setting is enabled.

Command with **no** prefix disables crypto map.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-crypto-map)> enable
```

```
(config-crypto-map)> no enable
```

**Example**

```
(config-crypto-map)> enable
IpSec::Manager: "test": crypto map enabled.
```

```
(config-crypto-map)> no enable
IpSec::Manager: "test": crypto map disabled.
```

**History**

Version	Description
2.06	The <b>crypto map enable</b> command has been introduced.

### 3.16.3 crypto map fallback-check-interval

**Description**

Enable periodic checking of basic host availability and return to it in case of presence basic and backup remote hosts both. By default, setting is disabled.

Command with **no** prefix disables checking.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-crypto-map)> fallback-check-interval <interval-value>
```

```
(config-crypto-map)> no fallback-check-interval
```

**Arguments**

Argument	Value	Description
interval-value	<i>Integer</i>	Period of checking in seconds. Can take values in the range from 60 to 86400.

**Example**

```
(config-crypto-map)> fallback-check-interval 120
IpSec::Manager: "test": crypto map fallback check interval is set to 120.
```

```
(config-crypto-map)> no fallback-check-interval
IpSec::Manager: "test": crypto map fallback check interval is cleared.
```

**History**

Version	Description
2.06	The <b>crypto map fallback-check-interval</b> command has been introduced.

### 3.16.4 crypto map force-encaps

<b>Description</b>	Enforce the <i>ESP</i> packet wrapping mode in <i>UDP</i> to bypass the firewall and NAT. Command with <b>no</b> prefix disables the mode.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config-crypto-map)&gt; <b>force-encaps</b> (config-crypto-map)&gt; <b>no force-encaps</b></pre>
<b>Example</b>	<pre>(config-crypto-map)&gt; <b>force-encaps</b> IpSec::Manager: "test": crypto map force ESP in UDP encapsulation ► enabled.  (config-crypto-map)&gt; <b>no force-encaps</b> IpSec::Manager: "test": crypto map force ESP in UDP encapsulation ► disabled.</pre>

History	Version	Description
	2.08	The <b>crypto map force-encaps</b> command has been introduced.

### 3.16.5 crypto map l2tp-server dhcp route

<b>Description</b>	Assign a route which is transmitted in DHCP INFORM messages to the <i>L2TP</i> server clients. Command with <b>no</b> prefix cancels the specified route. If you use no arguments, the entire list of routes will be cleared.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Synopsis</b>	<pre>(config-crypto-map)&gt; <b>l2tp-server dhcp route &lt;address&gt; &lt;mask&gt;</b> (config-crypto-map)&gt; <b>no l2tp-server dhcp route [&lt;address&gt; &lt;mask&gt;]</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>address</td> <td><i>IP address</i></td> <td>Network client address.</td> </tr> </tbody> </table>	Argument	Value	Description	address	<i>IP address</i>	Network client address.
Argument	Value	Description					
address	<i>IP address</i>	Network client address.					

Argument	Value	Description
mask	<i>IP-mask</i>	Network client mask. There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).

**Example**

```
(config-crypto-map)> l2tp-server dhcp route 192.168.2.0/24
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
added DHCP INFORM route to 192.168.2.0/255.255.255.0.
```

```
(config-crypto-map)> l2tp-server no dhcp route
IpSec::Manager: "VPNL2TPServer": Cleared DHCP INFORM routes.
```

**History**

Version	Description
2.12	The <b>crypto map l2tp-server dhcp route</b> command has been introduced.

### 3.16.6 crypto map l2tp-server enable

**Description** Enable *L2TP* server on *IPsec* crypto map. By default, the setting is enabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-crypto-map)> l2tp-server enable
(config-crypto-map)> no l2tp-server enable
```

**Example**

```
(config-crypto-map)> l2tp-server enable
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
enabled.
```

```
(config-crypto-map)> no l2tp-server enable
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
disabled.
```

**History**

Version	Description
2.11	The <b>crypto map l2tp-server enable</b> command has been introduced.

## 3.16.7 crypto map l2tp-server interface

**Description** Bind **L2TP** server to the specified interface.

Command with **no** prefix unbinds the server.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-crypto-map)>	<b>l2tp-server interface &lt;interface&gt;</b>
(config-crypto-map)>	<b>no l2tp-server interface</b>

Arguments	Argument	Value	Description
	interface	<i>Interface</i>	Full name or an alias of the interface. You can see the list of available interfaces with help of <b>l2tp-server interface [Tab]</b> command.

**Example**

```
(config-crypto-map)> l2tp-server interface [Tab]
```

Usage template:  
    interface {interface}

Choose:  
    GigabitEthernet1  
                ISP  
    WifiMaster0/AccessPoint2  
    WifiMaster1/AccessPoint1  
    WifiMaster0/AccessPoint3  
    WifiMaster0/AccessPoint0  
                AccessPoint  
    WifiMaster1/AccessPoint2  
    WifiMaster0/AccessPoint1  
                GuestWiFi

```
(config-crypto-map)> l2tp-server interface ISP
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
is bound to ISP.
```

```
(config-crypto-map)> no l2tp-server interface ISP
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
is unbound.
```

**History**

Version	Description
2.11	The <b>crypto map l2tp-server interface</b> command has been introduced.

## 3.16.8 crypto map l2tp-server ipv6cp

**Description** Enable IPv6 support. DHCP IPv6 pools are created for each *L2TP* server. By default, the setting is disabled.

Command with **no** prefix disables IPv6 support.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-crypto-map)>	<b>l2tp-server ipv6cp</b>
(config-crypto-map)>	<b>no l2tp-server ipv6cp</b>

**Example**

(config-crypto-map)>	<b>l2tp-server ipv6cp</b>
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ► IPv6CP is enabled.	
(config-crypto-map)>	<b>no l2tp-server ipv6cp</b>
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ► IPv6CP is disabled.	

History	Version	Description
	3.00	The <b>crypto map l2tp-server ipv6cp</b> command has been introduced.

## 3.16.9 crypto map l2tp-server lcp echo

**Description** Specify the testing rules of the *L2TP* server connections with *LCP* echo tools.

Command with **no** prefix disables *LCP* echo.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-crypto-map)>	<b>l2tp-server lcp echo &lt;interval&gt; &lt;count&gt;</b>
(config-crypto-map)>	<b>no l2tp-server lcp echo</b>

Arguments	Argument	Value	Description
	interval	<i>Integer</i>	Interval between sending <i>LCP</i> echo, in seconds. If within the specified time interval there is no <i>LCP</i> echo request from the remote

Argument	Value	Description
		location, the same request will be sent there asking for response <i>LCP</i> reply.
count	<i>Integer</i>	The number of consecutive requests <i>LCP</i> echo sent, for which no response <i>LCP</i> reply was received. If count of <i>LCP</i> echo requests goes unanswered, the connection is terminated.

**Example**

```
(config-crypto-map)> l2tp-server lcp echo 5 3
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
set LCP echo to "5" : "3".

(config-crypto-map)> no l2tp-server lcp echo
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
LCP echo disabled.
```

**History**

Version	Description
2.11	The <b>crypto map l2tp-server lcp echo</b> command has been introduced.

### 3.16.10 crypto map l2tp-server mru

**Description** Set *MRU* value to be transmitted to *L2TP* server. By default, 1200 value is used. Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-crypto-map)&gt; l2tp-server mru &lt;mru&gt;</pre>
<pre>(config-crypto-map)&gt; no l2tp-server mru</pre>

**Arguments**

Argument	Value	Description
mru	<i>Integer</i>	<i>MRU</i> value. Can take values in the range from 128 to 1500 inclusively.

**Example**

```
(config-crypto-map)> l2tp-server mru 1500
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
set MRU to "1500".

(config-crypto-map)> no l2tp-server mru
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
MRU reset to default.
```

History	Version	Description
	2.11	The <b>crypto map l2tp-server mtu</b> command has been introduced.

### 3.16.11 crypto map l2tp-server mtu

**Description** Set **MTU** value to be transmitted to **L2TP** server. By default, 1400 value is used.

Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-crypto-map)> l2tp-server mtu <mtu>
```

```
(config-crypto-map)> no l2tp-server mtu
```

**Arguments**

Argument	Value	Description
mtu	<i>Integer</i>	<b>MTU</b> value. Can take values in the range from 576 to 1500 inclusively.

**Example**

```
(config-crypto-map)> l2tp-server mtu 1400
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
set MTU to "1400".
```

```
(config-crypto-map)> no l2tp-server mtu
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
MTU reset to default.
```

**History**

Version	Description
2.11	The <b>crypto map l2tp-server mtu</b> command has been introduced.

### 3.16.12 crypto map l2tp-server multi-login

**Description** Allow connection to **L2TP** server for multiple users from one account.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-crypto-map)> l2tp-server multi-login
```

```
(config-crypto-map)> no l2tp-server multi-login
```

**Example**

```
(config-crypto-map)> l2tp-server multi-login
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
multiple login is enabled.
```

```
(config-crypto-map)> no l2tp-server multi-login
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
multiple login is disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>crypto map l2tp-server multi-login</b> command has been introduced.

### 3.16.13 crypto map l2tp-server nat

**Description** Enable translation of addresses for [L2TP](#) server.

Command with **no** prefix disables the translation.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-crypto-map)> l2tp-server nat
```

```
(config-crypto-map)> no l2tp-server nat
```

**Example**

```
(config-crypto-map)> l2tp-server nat
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
SNAT is enabled.
```

```
(config-crypto-map)> no l2tp-server nat
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
SNAT is disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>crypto map l2tp-server nat</b> command has been introduced.

### 3.16.14 crypto map l2tp-server range

**Description** Assign a pool of addresses for the clients of [L2TP](#) server. By default, size 100 is used.

Command with **no** prefix removes a pool.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-crypto-map)>	<b>l2tp-server range &lt;begin&gt;(&lt;end&gt;   &lt;size&gt;)</b>
(config-crypto-map)>	<b>no l2tp-server range</b>

**Arguments**

Argument	Value	Description
begin	<i>IP address</i>	Start address of pool.
end	<i>IP address</i>	End address of pool.
size	<i>Integer</i>	Pool size.

**Example**

```
(config-crypto-map)> l2tp-server range 172.16.2.33 172.16.2.38
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
pool range set from "172.16.2.33" to "172.16.2.38".
```

```
(config-crypto-map)> l2tp-server range 172.16.2.33 100
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
pool range set from "172.16.2.33" to "172.16.2.132".
```

```
(config-crypto-map)> no l2tp-server range
IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶
pool range deleted.
```

**History**

Version	Description
2.11	The <b>crypto map l2tp-server range</b> command has been introduced.

### 3.16.15 crypto map l2tp-server static-ip

**Description** Bind IP address to the user. User account must have ipsec-l2tp tag.

Command with **no** prefix removes binding.

**Prefix no** Yes

**Change settings** Yes

<b>Multiple input</b>	No									
<b>Synopsis</b>	<pre>(config-crypto-map)&gt; static-ip &lt;user&gt; &lt;address&gt; (config-crypto-map)&gt; no static-ip &lt;user&gt;</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>user</td><td><i>String</i></td><td>Username.</td></tr> <tr> <td>address</td><td><i>IP address</i></td><td>IP address to bind.</td></tr> </tbody> </table>	Argument	Value	Description	user	<i>String</i>	Username.	address	<i>IP address</i>	IP address to bind.
Argument	Value	Description								
user	<i>String</i>	Username.								
address	<i>IP address</i>	IP address to bind.								
<b>Example</b>	<pre>(config-crypto-map)&gt; l2tp-server static-ip admin 172.16.2.33 IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶ static IP "172.16.2.33" assigned to user "admin". (config-crypto-map)&gt; no l2tp-server static-ip admin IpSec::Manager: "VPNL2TPServer": crypto map L2TP/IPsec server ▶ static IP removed for user "admin".</pre>									
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.11</td><td>The <b>crypto map l2tp-server static-ip</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.11	The <b>crypto map l2tp-server static-ip</b> command has been introduced.					
Version	Description									
2.11	The <b>crypto map l2tp-server static-ip</b> command has been introduced.									

## 3.16.16 crypto map nail-up

<b>Description</b>	Enable automatic renegotiation of <i>IPsec ESP</i> transformations at their obsolescence. By default, setting is disabled.  Command with <b>no</b> prefix disables automatic renegotiation.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config-crypto-map)&gt; nail-up (config-crypto-map)&gt; no nail-up</pre>				
<b>Example</b>	<pre>(config-crypto-map)&gt; nail-up IpSec::Manager: "test": crypto map SA renegotiation enabled. (config-crypto-map)&gt; no nail-up IpSec::Manager: "test": crypto map SA renegotiation disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.06</td><td>The <b>crypto map nail-up</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.06	The <b>crypto map nail-up</b> command has been introduced.
Version	Description				
2.06	The <b>crypto map nail-up</b> command has been introduced.				

## 3.16.17 crypto map reauth-passive

**Description** Enable passive reauthentication of *IPsec* crypto map. By default, setting is disabled.

Command with **no** prefix disables passive reauthentication.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-crypto-map)>	<b>reauth-passive</b>
(config-crypto-map)>	<b>no reauth-passive</b>

**Example**

```
(config-crypto-map)> reauth-passive
IpSec::Manager: "VPNL2TPServer": crypto map SA passive ▶
reauthentication enabled.
```

```
(config-crypto-map)> no reauth-passive
IpSec::Manager: "VPNL2TPServer": crypto map SA passive ▶
reauthentication disabled.
```

**History**

Version	Description
2.11	The <b>crypto map reauth-passive</b> command has been introduced.

## 3.16.18 crypto map set-peer

**Description** Set basic remote host for *IPsec* connection.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-crypto-map)>	<b>set-peer &lt;remote-ip&gt;</b>
(config-crypto-map)>	<b>no set-peer</b>

**Arguments**

Argument	Value	Description
remote-ip	<i>String</i>	IP address or domain name of remote host.
	any	Accept any incoming connections.

**Example**

```
(config-crypto-map)> set-peer ipsec.test.com
IpSec::Manager: "test": crypto map primary remote peer is set ▶
to "ipsec.test.com".
```

```
(config-crypto-map)> no set-peer
IpSec::Manager: "test": crypto map remote primary and fallback ▶
peer reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto map set-peer</b> command has been introduced.

### 3.16.19 crypto map set-peer-fallback

**Description** Set backup remote host for *IPsec* connection. This setting can be made after assignment of basic host (see [crypto map set-peer](#) command).

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-crypto-map)&gt; <b>set-peer-fallback &lt;remote-ip&gt;</b></pre>
<pre>(config-crypto-map)&gt; <b>no set-peer-fallback</b></pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
remote-ip	String	IP address or domain name of remote host.

**Example**

```
(config-crypto-map)> set-peer-fallback test.com
IpSec::Manager: "test": crypto map fallback remote peer cannot ▶
be set without primary peer.
```

```
(config-crypto-map)> no set-peer-fallback
IpSec::Manager: "test": crypto map fallback remote peer reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>crypto map set-peer-fallback</b> command has been introduced.

### 3.16.20 crypto map set-profile

**Description** Set the reference to existing *IPsec* profile (see [crypto ipsec profile](#) command).

Command with **no** prefix removes the reference.

<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-crypto-map)&gt; <b>set-profile</b> &lt;profile&gt; (config-crypto-map)&gt; <b>no set-profile</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>profile</td><td>String</td><td><i>IPsec</i> profile name. You can see the list of available profiles with help of <b>set-profile [Tab]</b> command.</td></tr> </tbody> </table>	Argument	Value	Description	profile	String	<i>IPsec</i> profile name. You can see the list of available profiles with help of <b>set-profile [Tab]</b> command.
Argument	Value	Description					
profile	String	<i>IPsec</i> profile name. You can see the list of available profiles with help of <b>set-profile [Tab]</b> command.					
<b>Example</b>	<pre>(config-crypto-map)&gt; <b>set-profile</b> [Tab] Usage template:     set-profile {name: {A-Z, a-z, 0-9, ., _, -}} Choose:     TEST     MYMY VirtualIPServer VPNL2TPServer</pre> <pre>(config-crypto-map)&gt; <b>set-profile test</b> IpSec::Manager: "test": crypto map ipsec profile is set to "test".</pre> <pre>(config-crypto-map)&gt; <b>no set-profile</b> IpSec::Manager: "test": crypto map ipsec profile reset.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.06</td><td>The <b>crypto map set-profile</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.06	The <b>crypto map set-profile</b> command has been introduced.		
Version	Description						
2.06	The <b>crypto map set-profile</b> command has been introduced.						

### 3.16.21 crypto map set-tcpmss

<b>Description</b>	Set the limit on the segment size of outgoing <i>TCP</i> sessions within <i>IPsec</i> tunnel. If the <i>MSS</i> value, which is transmitted in the header of SYN-packets, exceeds the specified limit, command changes it. Path MTU Discovery mode allows automatically identify <i>MSS</i> limit.  Command with <b>no</b> prefix removes all limits from <i>MSS</i> .
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

**Synopsis**

```
(config-crypto-map)> set-tcpmss <mss-value>
```

```
(config-crypto-map)> no set-tcpmss
```

**Arguments**

Argument	Value	Description
mss-value	<i>Integer</i>	<i>MSS</i> upper limit. Can take values in the range from 576 to 1500.
	pmtu	Enable Path MTU Discovery mode.

**Example**

```
(config-crypto-map)> set-tcpmss 1280
```

```
IpSec::Manager: "test": crypto map tcpmss set to 1280.
```

```
(config-crypto-map)> no set-tcpmss
```

```
IpSec::Manager: "test": crypto map tcpmss reset.
```

**History**

Version	Description
2.06	The <b>crypto map set-tcpmss</b> command has been introduced.

## 3.16.22 crypto map set-transform

**Description**

Set the reference to existing *IPsec ESP* transformation (see [crypto ipsec transform-set](#) command).

Command with **no** prefix removes the reference.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-crypto-map)> set-transform <transform-set>
```

```
(config-crypto-map)> no set-transform
```

**Arguments**

Argument	Value	Description
transform-set	<i>String</i>	<i>IPsec</i> transformation name. You can see the list of available transformations with help of <b>set-transform</b> [Tab] command.

**Example**

```
(config-crypto-map)> set-transform [Tab]
```

Usage template:

```
set-transform {name: {A-Z, a-z, 0-9, ., _, -}}
```

Choose:

<b>VirtualIPServer</b> <b>VPNL2TPServer</b>
--

```
(config-crypto-map)> set-transform test
IpSec::Manager: "test": crypto map ipsec transform-set is set ▶
to "test".
```

```
(config-crypto-map)> no set-transform
IpSec::Manager: "test": crypto map ipsec transform-set reset.
```

**History**

Version	Description
2.06	The <b>crypto map set-transform</b> command has been introduced.

### 3.16.23 crypto map traffic-selectors

**Description** Assign an object group as *IPsec* Phase 2 selectors.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>  (config-crypto-map)&gt; <b>traffic-selectors &lt;local&gt; &lt;remote&gt;</b></pre>	<pre>  (config-crypto-map)&gt; <b>no traffic-selectors</b></pre>
--	--

**Arguments**

Argument	Value	Description
local	<i>String</i>	Name of local object group.
remote	<i>String</i>	Name of remote object group.

**Example**

```
(config-crypto-map)> traffic-selectors ▶
_WEBADMIN_IPSEC_VPNL2TPServer-local ▶
_WEBADMIN_IPSEC_VPNL2TPServer-remote
IpSec::Config::CryptoMap: "test": set traffic-selectors to ▶
" _WEBADMIN_IPSEC_VPNL2TPServer-local": ▶
" _WEBADMIN_IPSEC_VPNL2TPServer-remote".
```

```
(config-crypto-map)> no traffic-selectors
IpSec::Config::CryptoMap: "test": reset traffic-selectors.
```

**History**

Version	Description
4.00	The <b>crypto map traffic-selectors</b> command has been introduced.

## 3.16.24 crypto map tunnel-interface

**Description** Assign the `XFRM` interface to a crypto map for site-to-site traffic routing.

Command with `no` prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-crypto-map)>	<b>tunnel-interface &lt;interface&gt;</b>
(config-crypto-map)>	<b>no tunnel-interface</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	interface	<i>Interface</i>	Full name of the interface.

**Example**

(config-crypto-map)>	<b>tunnel-interface XFRM0</b>
	IpSec::Config::CryptoMap: "TEST": linked tunnel interface "XFRM0".
(config-crypto-map)>	<b>no tunnel-interface</b>
	IpSec::Config::CryptoMap: "TEST": reset tunnel interface.

<b>History</b>	<b>Version</b>	<b>Description</b>
	4.01	The <b>crypto map tunnel-interface</b> command has been introduced.

## 3.16.25 crypto map virtual-ip dhcp route

**Description** Assign a route which is transmitted in DHCP INFORM messages to the Virtual IP server clients.

Command with `no` prefix deletes the specified route. If you use no arguments, the entire list of routes will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config-crypto-map)>	<b>virtual-ip dhcp route &lt;address&gt; &lt;mask&gt;</b>
(config-crypto-map)>	<b>no virtual-ip dhcp route [ &lt;address&gt; &lt;mask&gt; ]</b>

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	Network client address.
mask	<i>IP-mask</i>	Network client mask. There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).

**Example**

```
(config-crypto-map)> virtual-ip dhcp route 192.168.2.0/24
IpSec::ManagerVirtualIp: "VirtualIPServerIKE2": crypto map ▶
Virtual IP server added DHCP INFORM route to ▶
192.168.2.0/255.255.255.0.
```

```
(config-crypto-map)> no virtual-ip dhcp route 192.168.2.0/24
IpSec::ManagerVirtualIp: "VirtualIPServerIKE2": crypto map ▶
Virtual IP server DHCP INFORM route to 192.168.2.0/255.255.255.0 ▶
removed.
```

```
(config-crypto-map)> no virtual-ip dhcp route
IpSec::ManagerVirtualIp: "VirtualIPServerIKE2": crypto map ▶
Virtual IP server DHCP INFORM routes cleared.
```

**History**

Version	Description
3.06	The <b>crypto map virtual-ip dhcp route</b> command has been introduced.

## 3.16.26 crypto map virtual-ip dns-server

**Description**

Set **DNS** server issued to clients in Virtual IP server mode.

Command with **no** prefix deletes the address.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-crypto-map)> virtual-ip dns-server <address>
(config-crypto-map)> no virtual-ip dns-server
```

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	IP address of <b>DNS</b> server.

**Example**

```
(config-crypto-map)> virtual-ip dns-server 10.5.5.5
IpSec::Manager: "test": crypto map Virtual IP DNS server set to ▶
"10.5.5.5".
```

```
(config-crypto-map)> no virtual-ip dns-server
IpSec::Manager: "test": crypto map Virtual IP DNS server deleted.
```

History	Version	Description
	2.08	The <b>crypto map virtual-ip dns-server</b> command has been introduced.

### 3.16.27 crypto map virtual-ip enable

**Description** Enable Virtual IP server mode, when clients receive addresses from a given range. The value of a remote subnet, specified in the corresponding access-list, will be ignored. By default, the setting is disabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-crypto-map)> virtual-ip enable
(config-crypto-map)> no virtual-ip enable
```

**Example**

```
(config-crypto-map)> virtual-ip enable
IpSec::Manager: "test": crypto map Virtual IP mode enabled.
```

```
(config-crypto-map)> no virtual-ip enable
IpSec::Manager: "test": crypto map Virtual IP mode disabled.
```

History	Version	Description
	2.08	The <b>crypto map virtual-ip enable</b> command has been introduced.

### 3.16.28 crypto map virtual-ip multi-login

**Description** Allow connection to Virtual IP server for multiple users from one account.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-crypto-map)> virtual-ip multi-login
```

```
(config-crypto-map)> no virtual-ip multi-login
```

**Example**

```
(config-crypto-map)> virtual-ip multi-login
IpSec::Manager: "VirtualIPServer": crypto map Virtual IP server ▶
multiple login is enabled.
```

```
(config-crypto-map)> no virtual-ip multi-login
IpSec::Manager: "VirtualIPServer": crypto map Virtual IP server ▶
multiple login is disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>crypto map virtual-ip multi-login</b> command has been introduced.

### 3.16.29 crypto map virtual-ip nat

**Description** Enable translation for remote network of Virtual IP extension server.

Command with **no** prefix removes the rule.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-crypto-map)> virtual-ip nat
(config-crypto-map)> no virtual-ip nat
```

**Example**

```
(config-crypto-map)> virtual-ip nat
IpSec::Manager: "test": crypto map Virtual IP remote pool SNAT ▶
is enabled.
```

```
(config-crypto-map)> no virtual-ip nat
IpSec::Manager: "test": crypto map Virtual IP remote pool SNAT ▶
is disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>crypto map virtual-ip nat</b> command has been introduced.

### 3.16.30 crypto map virtual-ip range

**Description** Configure the range of addresses issued to clients in Virtual IP server mode.

Command with **no** prefix removes the range.

<b>Prefix no</b>	Yes												
<b>Change settings</b>	Yes												
<b>Multiple input</b>	No												
<b>Synopsis</b>	<pre>(config-crypto-map)&gt; <b>virtual-ip range &lt;begin&gt;(&lt;end&gt;   &lt;size&gt;)</b>   (config-crypto-map)&gt; <b>no virtual-ip range</b></pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>begin</td><td><i>IP address</i></td><td>The beginning of the address range.</td></tr> <tr> <td>end</td><td><i>IP address</i></td><td>The end of the address range.</td></tr> <tr> <td>size</td><td><i>Integer</i></td><td>Address range size.</td></tr> </tbody> </table>	Argument	Value	Description	begin	<i>IP address</i>	The beginning of the address range.	end	<i>IP address</i>	The end of the address range.	size	<i>Integer</i>	Address range size.
Argument	Value	Description											
begin	<i>IP address</i>	The beginning of the address range.											
end	<i>IP address</i>	The end of the address range.											
size	<i>Integer</i>	Address range size.											
<b>Example</b>	<pre>(config-crypto-map)&gt; <b>virtual-ip range 10.5.0.0 20</b> IpSec::Manager: "test": crypto map Virtual IP pool range set ▶ from "10.5.0.0" to "10.5.0.19" (CIDR 10.5.0.0/27).  (config-crypto-map)&gt; <b>no virtual-ip range</b> IpSec::Manager: "test": crypto map Virtual IP pool range deleted.</pre>												
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.08</td><td>The <b>crypto map virtual-ip range</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.08	The <b>crypto map virtual-ip range</b> command has been introduced.								
Version	Description												
2.08	The <b>crypto map virtual-ip range</b> command has been introduced.												

### 3.16.31 crypto map virtual-ip static-ip

<b>Description</b>	Bind IP address to the user. User account must have ipsec-xauth tag.  Command with <b>no</b> prefix removes binding.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	Yes									
<b>Synopsis</b>	<pre>(config-crypto-map)&gt; <b>virtual-ip static-ip &lt;user&gt; &lt;address&gt;</b>   (config-crypto-map)&gt; <b>no virtual-ip static-ip &lt;user&gt;</b></pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>user</td><td><i>String</i></td><td>Username.</td></tr> <tr> <td>address</td><td><i>IP address</i></td><td>IP address to bind.</td></tr> </tbody> </table>	Argument	Value	Description	user	<i>String</i>	Username.	address	<i>IP address</i>	IP address to bind.
Argument	Value	Description								
user	<i>String</i>	Username.								
address	<i>IP address</i>	IP address to bind.								

**Example**

```
(config-crypto-map)> virtual-ip static-ip admin 172.20.0.1
IpSec::ManagerVirtualIp: "VirtualIPServer": crypto map Virtual ▶
IP server static address "172.20.0.1" assigned to user "admin".
```

```
(config-crypto-map)> no virtual-ip static-ip admin
IpSec::ManagerVirtualIp: "VirtualIPServer": crypto map Virtual ▶
IP server static address removed for user "admin".
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>crypto map virtual-ip static-ip</b> command has been introduced.

## 3.17 dns-proxy

**Description** Access to a group of commands to manage DNS proxy service.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (config-dnspx)

**Synopsis** (config)> **dns-proxy**

**Example**

```
(config)> dns-proxy
Core::Configurator: Done.
(config-dnspx)>
```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>dns-proxy</b> command has been introduced.

### 3.17.1 dns-proxy filter assign host preset

**Description** Assign a filtering preset to a network device.

See the list of presets you can with help of [show dns-proxy filter presets](#) command.

Command with **no** prefix removes the defined preset for host. If you use no argument, the entire list of presets will be cleared for hosts.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config-dnspx)> filter assign host preset <host> <preset>
(config-dnspx)> no filter assign host preset [<host>]
```

**Arguments**

Argument	Value	Description
host	<i>MAC address</i>	Network device MAC address.
preset	<i>String</i>	Preset name.

**Example**

```
(config-dnspx)> filter assign host preset 04:d4:c1:51:b1:59 >
opendns-family
Dns::Filter::Public: Associated host "04:d4:c1:51:b1:59" with >
preset "opendns-family".

(config-dnspx)> no filter assign host preset 04:d4:c1:51:b1:59
Dns::Filter::Public: Removed preset for host "04:d4:c1:51:b1:59".

(config-dnspx)> no filter assign host preset
Dns::Filter::Public: Removed presets for hosts.
```

**History**

Version	Description
3.08	The <b>dns-proxy filter assign host preset</b> command has been introduced.

## 3.17.2 dns-proxy filter assign host profile

**Description**

Assign a filtering profile to a network device.

Add new profile you can with help of [dns-proxy filter profile](#) command.

See the list of profiles you can with help of [show dns-proxy filter profiles](#) command.

Command with **no** prefix removes the defined profile for host. If you use no argument, the entire list of profiles will be cleared for hosts.

<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes

**Synopsis**

```
(config-dnspx)> filter assign host profile <host> <profile>
(config-dnspx)> no filter assign host profile [<host>]
```

**Arguments**

Argument	Value	Description
host	<i>MAC address</i>	Network device MAC address.

Argument	Value	Description
profile	<i>String</i>	Profile name.

**Example**

```
(config-dnspx)> filter assign host profile 00:d2:c1:54:bc:59 test
Dns::Filter::Public: Associated host "00:d2:c1:54:bc:59" with ▶
profile "test".
```

```
(config-dnspx)> no filter assign host profile 00:d2:c1:54:bc:59
Dns::Filter::Public: Removed profile for host "00:d2:c1:54:bc:59".
```

```
(config-dnspx)> no filter assign host profile
Dns::Filter::Public: Removed profiles for hosts.
```

**History**

Version	Description
3.08	The <b>dns-proxy filter assign host profile</b> command has been introduced.

### 3.17.3 dns-proxy filter assign interface preset

**Description**

Assign a filtering preset to all devices on segment (exclude ones with already assigned profiles/presets).

See the list of presets you can with help of [show dns-proxy filter presets](#) command.

Command with **no** prefix removes the defined preset for interface. If you use no argument, the entire list of presets for interfaces will be cleared.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config-dnspx)> filter assign interface preset <interface> <preset>
(config-dnspx)> no filter assign interface preset [<interface>]
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Network interface name. Must have a private or protected security level.
preset	<i>String</i>	Preset name.

**Example**

```
(config-dnspx)> filter assign interface preset Bridge0 ▶
quad9-security
Dns::Filter::Public: Associated interface "Bridge0" with preset ▶
"quad9-security".
```

```
(config-dnspx)> no filter assign interface preset Bridge0
Dns::Filter::Public: Removed preset for interface "Bridge0".
```

```
(config-dnspx)> no filter assign interface preset
Dns::Filter::Public: Removed presets for interfaces.
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>dns-proxy filter assign interface preset</b> command has been introduced.

### 3.17.4 dns-proxy filter assign interface profile

**Description**

Assign a filtering profile to all devices on segment (exclude ones with already assigned profiles/presets).

Add new profile you can with help of [dns-proxy filter profile](#) command.

See the list of profiles you can with help of [show dns-proxy filter profiles](#) command.

Command with **no** prefix removes the defined profile for interface. If you use no argument, the entire list of profiles for interfaces will be cleared.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config-dnspx)> filter assign interface profile <interface> <profile>
(config-dnspx)> no filter assign interface profile [<interface>]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	<i>Interface</i>	Network interface name. Must have a private or protected security level.
profile	<i>String</i>	Profile name.

**Example**

```
(config-dnspx)> filter assign interface profile >
GigabitEthernet0/Vlan1 DnsProfile0
Dns::Filter::Public: Associated interface >
"GigabitEthernet0/Vlan1" with profile "DnsProfile0".
```

```
(config-dnspx)> no filter assign interface profile >
GigabitEthernet0/Vlan1
Dns::Filter::Public: Removed profile for interface >
"GigabitEthernet0/Vlan1".
```

```
(config-dnspx)> no filter assign interface profile
Dns::Filter::Public: Removed profiles for interfaces.
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>dns-proxy filter assign interface profile</b> command has been introduced.

## 3.17.5 dns-proxy filter engine

**Description**

Selects DNS engine.

Command with **no** prefix disables the feature. Config request will return empty value in case of disabled filter.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-dnspx)> filter engine <engine>
(config-dnspx)> no filter engine
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
engine	interceptor	One of available DNS filtering engines.
	public	
	nextdns	
	opkg	
	skydns	

**Example**

```
(config-dnspx)> filter engine interceptor
Dns::Filter::Interceptor: Enabled.
```

```
(config-dnspx)> no filter engine
Dns::Manager: Disabled filter engine.
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>dns-proxy filter engine</b> command has been introduced.

## 3.17.6 dns-proxy filter profile

**Description**

Create a user-defined DNS filtering profile.

Command with **no** prefix removes profile.

**Prefix no**

Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Synopsis</b>	<pre>(config-dnspx)&gt; <b>filter profile &lt;name&gt;</b> (config-dnspx)&gt; <b>no filter profile &lt;name&gt;</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>name</td><td><i>String</i></td><td>Profile name in reduced form, not more than 32 characters. The maximum number of profiles is 8.</td></tr> </tbody> </table>	Argument	Value	Description	name	<i>String</i>	Profile name in reduced form, not more than 32 characters. The maximum number of profiles is 8.
Argument	Value	Description					
name	<i>String</i>	Profile name in reduced form, not more than 32 characters. The maximum number of profiles is 8.					
<b>Example</b>	<pre>(config-dnspx)&gt; <b>filter profile test</b> Dns::Filter::Public: Created profile "test".  (config-dnspx)&gt; <b>no filter profile test</b> Dns::Filter::Public: Removed profile "test".</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>3.08</td><td>The <b>dns-proxy filter profile</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	3.08	The <b>dns-proxy filter profile</b> command has been introduced.		
Version	Description						
3.08	The <b>dns-proxy filter profile</b> command has been introduced.						

## 3.17.7 dns-proxy filter profile description

<b>Description</b>	Assign description for DNS filtering profile.  Command with <b>no</b> prefix deletes the profile description.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	No									
<b>Synopsis</b>	<pre>(config-dnspx)&gt; <b>filter profile &lt;name&gt;description &lt;description&gt;</b> (config-dnspx)&gt; <b>no filter profile &lt;name&gt;description &lt;description&gt;</b></pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>name</td><td><i>String</i></td><td>Profile name.</td></tr> <tr> <td>description</td><td><i>String</i></td><td>Arbitrary description of the profile.</td></tr> </tbody> </table>	Argument	Value	Description	name	<i>String</i>	Profile name.	description	<i>String</i>	Arbitrary description of the profile.
Argument	Value	Description								
name	<i>String</i>	Profile name.								
description	<i>String</i>	Arbitrary description of the profile.								

<b>Example</b>	<pre>(config-dnspx)&gt; <b>filter profile test description MyProfile1</b> Dns::Filter::Public: Set description to profile "test".</pre>
----------------	---

```
(config-dnspx)> no filter profile test description
Dns::Filter::Public: Cleared description of profile "test".
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>dns-proxy filter profile description</b> command has been introduced.

## 3.17.8 dns-proxy filter profile dns53 upstream

**Description** Add IP address of the DNS server to user-defined filtering profile. Number of servers are limited to 6.

Command with **no** prefix removes the defined server from the list. If you use no argument, the entire list of servers will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config-dnspx)> filter profile <name>dns53 upstream <address>[:<port>]
(config-dnspx)> no filter profile <name>dns53 description [<address>[:<port>]]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>String</i>	Profile name.
address	<i>IP address</i>	IP address of the server.
port	<i>Integer</i>	The server port.

**Example**

```
(config-dnspx)> filter profile test dns53 upstream 1.1.1.1
Dns::Filter::Public: Added DNS name server 1.1.1.1 to profile >
"test".
(config-dnspx)> no filter profile test dns53 upstream
Dns::Filter::Public: Removed DNS name server from profile "test".
(config-dnspx)> no filter profile test dns53 upstream 1.1.1.1
Dns::Filter::Public: Removed DNS name server 1.1.1.1 from profile >
"test".
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>dns-proxy filter profile dns53 upstream</b> command has been introduced.

### 3.17.9 dns-proxy filter profile https upstream

**Description** Add *DNS over HTTPS* server to user-defined filtering profile. Number of servers are limited to 6.

Command with **no** prefix removes the defined server from the list. If you use no argument, the entire list of servers will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

<pre>(config-dnspx)&gt; filter profile &lt;name&gt;https upstream &lt;url&gt; [ spki &lt;hash&gt; ]</pre>
<pre>(config-dnspx)&gt; no filter profile &lt;name&gt;https description [&lt;url&gt;]</pre>

Arguments	Argument	Value	Description
	name	<i>String</i>	Profile name.
	url	<i>String</i>	URL of DNS service.
	hash	<i>String</i>	Hash TLS certificate.

<b>Example</b>	<pre>(config-dnspx)&gt; filter profile test https upstream ▶ https://dns.google/resolve Dns::Filter::Public: Added DNS-over-HTTPS name server ▶ https://dns.google/resolve to profile "test".</pre>
	<pre>(config-dnspx)&gt; no filter profile test https upstream ▶ https://dns.google/resolve Dns::Filter::Public: Removed DNS-over-HTTPS name server ▶ https://dns.google/resolve from profile "test".</pre>
	<pre>(config-dnspx)&gt; no filter profile test https upstream Dns::Filter::Public: Removed DNS-over-HTTPS name server from ▶ profile "test".</pre>

History	Version	Description
	3.08	The <b>dns-proxy filter profile https upstream</b> command has been introduced.

### 3.17.10 dns-proxy filter profile intercept enable

**Description** Enable transit DNS requests interception for filtering profile. By default, the interception is disabled.

Command with **no** prefix disables the interception for filtering profile.

<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Synopsis</b>	<pre>(config-dnspx)&gt; filter profile &lt;name&gt;intercept enable (config-dnspx)&gt; no filter profile &lt;name&gt;intercept enable</pre>						
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>name</td><td>String</td><td>Filtering profile name.</td></tr></tbody></table>	Argument	Value	Description	name	String	Filtering profile name.
Argument	Value	Description					
name	String	Filtering profile name.					
<b>Example</b>	<pre>(config-dnspx)&gt; filter profile DnsProfile0 intercept enable Dns::Filter::Public: Enabled intercept in profile "DnsProfile0".  (config-dnspx)&gt; no filter profile DnsProfile0 intercept enable Dns::Filter::Public: Disabled intercept in profile "DnsProfile0".</pre>						
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>3.09</td><td>The <b>dns-proxy filter profile intercept enable</b> command has been introduced.</td></tr></tbody></table>	Version	Description	3.09	The <b>dns-proxy filter profile intercept enable</b> command has been introduced.		
Version	Description						
3.09	The <b>dns-proxy filter profile intercept enable</b> command has been introduced.						

### 3.17.11 dns-proxy filter profile tls upstream

<b>Description</b>	Add <i>DNS over TLS</i> server to user-defined filtering profile. Number of servers are limited to 6.  Command with <b>no</b> prefix removes the defined server from the list. If you use no argument, the entire list of servers will be cleared.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	Yes									
<b>Synopsis</b>	<pre>(config-dnspx)&gt; filter profile &lt;name&gt;tls upstream &lt;address&gt; [&lt;port&gt;] [&lt;sni&gt; &lt;fqdn&gt;] [&lt;spki&gt; &lt;hash&gt;]  (config-dnspx)&gt; no filter profile &lt;name&gt;tls description [&lt;address&gt;] [&lt;port&gt;]</pre>									
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>name</td><td>String</td><td>Profile name.</td></tr><tr><td>address</td><td>IP address FQDN</td><td>Address of the server.</td></tr></tbody></table>	Argument	Value	Description	name	String	Profile name.	address	IP address FQDN	Address of the server.
Argument	Value	Description								
name	String	Profile name.								
address	IP address FQDN	Address of the server.								

Argument	Value	Description
port	<i>Integer</i>	The server port.
fqdn	<i>String</i>	Full domain name.
hash	<i>String</i>	Hash TLS certificate.

**Example**

```
(config-dnspx)> filter profile test tls upstream 1.1.1.1 8853 ▶
sni cloudflare-dns.com
Dns::Filter::Public: Added DNS-over-TLS name server 1.1.1.1 to ▶
profile "test".
```

```
(config-dnspx)> no filter profile test tls upstream 1.1.1.1 8853
Dns::Filter::Public: Removed DNS-over-TLS name server 1.1.1.1 ▶
from profile "test".
```

```
(config-dnspx)> no filter profile test tls upstream
Dns::Filter::Public: Removed DNS-over-TLS name server from ▶
profile "test".
```

**History**

Version	Description
3.08	The <b>dns-proxy filter profile tls upstream</b> command has been introduced.

## 3.17.12 dns-proxy https upstream

**Description**

Add *DNS over HTTPS* server.

Command with **no** prefix removes the defined server from the list. If you use no argument, the entire list of servers will be cleared.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config-dnspx)> https upstream <url> [<format>] [<sni hash>] [<on interface>] [<domain domain>]
(config-dnspx)> no https upstream [<url>]
```

**Arguments**

Argument	Value	Description
url	<i>String</i>	Custom URL of DNS service.
format	dnsm	The format to represent DNS data.
	json	
hash	<i>String</i>	Hash TLS certificate.
interface	<i>Interface</i>	Interface name to configure.

Argument	Value	Description
domain	<i>String</i>	The domain name.

**Example**

```
(config-dnspx)> https upstream >
https://cloudflare-dns.com/dns-query?ct=application/dns-json json

Dns::Secure::ManagerDoh: DNS-over-HTTPS name server ▶
"https://my.domain.com/dns-query" (dnsm) added.

(config-dnspx)> no https upstream >
https://dns.adguard.com/dns-query
Dns::Secure::ManagerDoh: DNS-over-HTTPS name server ▶
"https://dns.adguard.com/dns-query" deleted.

(config-dnspx)> no https upstream
Dns::Secure::ManagerDoh: DNS-over-HTTPS name servers cleared.
```

**History**

Version	Description
3.01	The <b>dns-proxy https upstream</b> command has been introduced.
3.08	The domain argument was added.

### 3.17.13 dns-proxy intercept enable

<b>Description</b>	Enable transit DNS requests interception for system profile. By default, the interception is disabled.
	Command with <b>no</b> prefix disables the interception for system profile.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

**Synopsis**

```
(config-dnspx)> intercept enable
```

```
(config-dnspx)> no intercept enable
```

**Example**

```
(config-dnspx)> intercept enable  
Dns::Filter::Filter: Enable intercept for system profile.  
(config-dnspx)> no intercept enable  
Dns::Filter::Filter: Disable intercept for system profile.
```

**History**

Version	Description
3.06	The <b>dns-proxy intercept enable</b> command has been introduced.
3.08	The <b>dns-proxy intercept enable</b> command was removed as obsolete.
3.09	The <b>dns-proxy intercept enable</b> command has been added again.

### 3.17.14 dns-proxy max-ttl

**Description** Set maximum TTL for DNS proxy cached entries.

Command with **no** prefix removes maximum TTL value.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dnspx)> max-ttl <max-ttl>
```

```
(config-dnspx)> no max-ttl
```

**Arguments**

Argument	Value	Description
max-ttl	<i>Integer</i>	The maximum value of TTL. Can take values in the range from 1 to 604800000 milliseconds (1 week).

**Example**

```
(config-dnspx)> max-ttl 10000  
Dns::Proxy: Dns-proxy set max-ttl to 10000.
```

```
(config-dnspx)> no max-ttl  
Dns::Proxy: Dns-proxy max-ttl cleared.
```

**History**

Version	Description
2.05	The <b>dns-proxy max-ttl</b> command has been introduced.

### 3.17.15 dns-proxy proceed

**Description** Set interval between concurrent requests, which is sent by DNS proxy to multiple DNS servers. By default, 500 value is used.

Command with **no** prefix resets proceed to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dnspx)> proceed <proceed>
(config-dnspx)> no proceed
```

Arguments	Argument	Value	Description
	proceed	<i>Integer</i>	The value of DNS proxy proceed in milliseconds. Can take values in the range from 1 to 50000.

**Example**

```
(config-dnspx)> proceed 600
Dns::Proxy: Dns-proxy set 600 msec. proceed.
```

```
(config-dnspx)> no proceed
Dns::Proxy: Dns-proxy proceed timeout reset.
```

History	Version	Description
	2.04	The <b>dns-proxy proceed</b> command has been introduced.

### 3.17.16 dns-proxy rebind-protect

**Description** Enable protect against *DNS rebinding* attacks. By default, auto mode is used.

Command with **no** prefix disables protection.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dnspx)> rebind-protect (auto | strict)
(config-dnspx)> no rebind-protect
```

**Arguments**

Argument	Value	Description
auto	Keyword	Protect subnets for private interfaces.
strict	Keyword	Protect subnets from list IANA IPv4 Special-Purpose Address Registry <sup>1</sup> .

**Example**

```
(config-dnspx)> rebind-protect auto
Dns::Manager: Enabled rebind protection.
(config-dnspx)> no rebind-protect
Dns::Manager: Disabled rebind protection.
```

**History**

Version	Description
3.04	The <b>dns-proxy rebind-protect</b> command has been introduced.

### 3.17.17 dns-proxy srr-reset

**Description** Set DNS proxy send-response rating reset time. By default, value 600000 is used.

Command with **no** prefix resets time reset to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dnspx)> srr-reset <srr-reset>
(config-dnspx)> no srr-reset
```

**Arguments**

Argument	Value	Description
srr-reset	<i>Integer</i>	The value of time reset in milliseconds. Can take values in the range from 0 to 600000.

**Example**

```
(config-dnspx)> srr-reset 111
Dns::Manager: Set send-response rating reset time to 111 ms.
```

```
(config-dnspx)> no srr-reset
Dns::Manager: Reset send-response rating reset time to default.
```

**History**

Version	Description
2.12	The <b>dns-proxy srr-reset</b> command has been introduced.

<sup>1</sup> <https://www.iana.org/assignments/iana-ipv4-special-registry/iana-ipv4-special-registry.xhtml>

## 3.17.18 dns-proxy tls upstream

<b>Description</b>	Add <i>DNS over TLS</i> server.																					
	Command with <b>no</b> prefix removes the defined server from the list. If you use no argument, the entire list of servers will be cleared.																					
<b>Prefix no</b>	Yes																					
<b>Change settings</b>	Yes																					
<b>Multiple input</b>	Yes																					
<b>Synopsis</b>	<pre>(config-dnspx)&gt; <b>tls upstream</b> &lt;address&gt; [&lt;port&gt;] [<b>sni</b> &lt;fqdn&gt;] [<b>spki</b> &lt;hash&gt;] [<b>on</b> &lt;interface&gt;] [<b>domain</b> &lt;domain&gt;]</pre> <pre>(config-dnspx)&gt; <b>no tls upstream</b> [&lt;address&gt;] [&lt;port&gt;]</pre>																					
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>address</td><td><i>IP address</i></td><td>IP address of the server.</td></tr> <tr> <td>port</td><td><i>Integer</i></td><td>The server port.</td></tr> <tr> <td>fqdn</td><td><i>String</i></td><td>Full domain name.</td></tr> <tr> <td>hash</td><td><i>String</i></td><td>Hash TLS certificate.</td></tr> <tr> <td>interface</td><td><i>Interface</i></td><td>Interface name to configure.</td></tr> <tr> <td>domain</td><td><i>String</i></td><td>The domain name.</td></tr> </tbody> </table>	Argument	Value	Description	address	<i>IP address</i>	IP address of the server.	port	<i>Integer</i>	The server port.	fqdn	<i>String</i>	Full domain name.	hash	<i>String</i>	Hash TLS certificate.	interface	<i>Interface</i>	Interface name to configure.	domain	<i>String</i>	The domain name.
Argument	Value	Description																				
address	<i>IP address</i>	IP address of the server.																				
port	<i>Integer</i>	The server port.																				
fqdn	<i>String</i>	Full domain name.																				
hash	<i>String</i>	Hash TLS certificate.																				
interface	<i>Interface</i>	Interface name to configure.																				
domain	<i>String</i>	The domain name.																				
<b>Example</b>	<pre>(config-dnspx)&gt; <b>tls upstream</b> 1.1.1.1 853 <b>sni</b> cloudflare-dns.com Dns::Secure::ManagerDot: DNS-over-TLS name server 1.1.1.1:853 ► added.</pre> <pre>(config-dnspx)&gt; <b>tls upstream</b> 1.1.1.1 853 <b>sni</b> cloudflare-dns.com <b>on</b> ISP Dns::Secure::ManagerDot: DNS-over-TLS name server 1.1.1.1:853 ► added.</pre> <pre>(config-dnspx)&gt; <b>tls upstream</b> 144.144.144.143 853 <b>sni</b> ► my.domain.com <b>domain</b> my.lib Dns::Secure::ManagerDot: DNS-over-TLS name server ► 144.144.144.143:853 added.</pre> <pre>(config-dnspx)&gt; <b>no tls upstream</b> 1.1.1.1 853 Dns::Secure::ManagerDot: DNS-over-TLS name server 1.1.1.1:853 ► deleted.</pre> <pre>(config-dnspx)&gt; <b>no tls upstream</b> Dns::Secure::ManagerDot: DNS-over-TLS name servers cleared.</pre>																					

**History**

<b>Version</b>	<b>Description</b>
3.01	The <b>dns-proxy tls upstream</b> command has been introduced.
3.08	The domain argument was added.

## 3.18 dpn accept

**Description**

Accept user agreement **DPN**. Until the license is accepted, the configurator does not accept any command except READ\_ONLY.

**Prefix no**

No

**Change settings**

No

**Multiple input**

No

**Synopsis**

```
| (config)> dpn accept
```

**Example**

```
(config)> dpn accept
Core::Legal: Accepted dpn version 20200330.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>dpn accept</b> command has been introduced.

## 3.19 dyndns profile

**Description**

Access to a group of commands to configure DynDns profile. If the profile is not found, the command tries to create it. You can enter up to 32 profiles.

Command with **no** prefix removes DynDns profile.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-dyndns)

**Synopsis**

```
| (config)> dyndns profile <name>
```

```
| (config)> no dyndns profile <name>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>String</i>	The profile name. Maximum name length is 64 characters.

**Example**

```
(config)> dyndns profile _WEBADMIN
Core::Configurator: Done.
(config-dyndns)>
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>dyndns profile</b> command has been introduced.

### 3.19.1 dyndns profile domain

**Description** Assign permanent domain name to the computer. You need to register this domain name on the site [dyndns.com](http://www.dyndns.com)<sup>2</sup> or [no-ip.com](http://www.no-ip.com)<sup>3</sup> before execution.  
Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-dyndns)&gt; domain &lt;domain&gt;</pre>
<pre>(config-dyndns)&gt; no domain</pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
domain	<i>String</i>	The domain name. Maximum domain name length is 254 characters.

**Example**

```
(config-dyndns)> domain support.ddns.net
DynDns::Profile: "_WEBADMIN": domain saved..
```

```
(config-dyndns)> no domain
DynDns::Profile: "_WEBADMIN" domain cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>dyndns profile domain</b> command has been introduced.

### 3.19.2 dyndns profile password

**Description** Set password for access via DynDns.

**Prefix no** Yes

<sup>2</sup> <http://www.dyndns.com>

<sup>3</sup> <http://www.no-ip.com>

<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-dyndns)&gt; password &lt;password&gt; (config-dyndns)&gt; no password</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>password</td><td><i>String</i></td><td>The password for authentication. Maximum password length is 64 characters.</td></tr> </tbody> </table>	Argument	Value	Description	password	<i>String</i>	The password for authentication. Maximum password length is 64 characters.
Argument	Value	Description					
password	<i>String</i>	The password for authentication. Maximum password length is 64 characters.					
<b>Example</b>	<pre>(config-dyndns)&gt; password 123456789 DynDns::Profile: "_WEBADMIN": password saved.  (config-dyndns)&gt; no password DynDns::Profile: "_WEBADMIN" password cleared.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>dyndns profile password</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>dyndns profile password</b> command has been introduced.		
Version	Description						
2.00	The <b>dyndns profile password</b> command has been introduced.						

### 3.19.3 dyndns profile send-address

<b>Description</b>	Enable the necessity of connection IP address indication in DynDns request. Command with <b>no</b> prefix removes the setting.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config-dyndns)&gt; send-address (config-dyndns)&gt; no send-address</pre>				
<b>Example</b>	<pre>(config-dyndns)&gt; send-address DynDns::Profile: Send address is enabled.  (config-dyndns)&gt; no send-address DynDns::Profile: Send address is disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.03</td><td>The <b>dyndns profile send-address</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.03	The <b>dyndns profile send-address</b> command has been introduced.
Version	Description				
2.03	The <b>dyndns profile send-address</b> command has been introduced.				

### 3.19.4 dyndns profile type

**Description** Set DynDns type depending on the site where the domain name was registered.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-dyndns)>	<b>type</b> <type>
(config-dyndns)>	<b>no type</b>

Arguments	Argument	Value	Description
	type	dyndns	Used if the domain name was registered on the <a href="http://www.dyndns.com">dyndns.com</a> <sup>4</sup> site.
		noip	Used if the domain name was registered on the <a href="http://www.no-ip.com">no-ip.com</a> <sup>5</sup> site.
		custom	Used if the domain name was registered on the other site (defined with <a href="#">dyndns profile url</a> command).

**Example**

(config-dyndns)>	<b>type noip</b>
(config-dyndns)>	DynDns::Profile: "_WEBADMIN": type saved.

(config-dyndns)>	<b>no type</b>
(config-dyndns)>	DynDns::Profile: "_WEBADMIN" type cleared.

History	Version	Description
	2.00	The <b>dyndns profile type</b> command has been introduced.

### 3.19.5 dyndns profile update-interval

**Description** Set the address update interval for DynDns.

Command with **no** prefix cancels the ability to update.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

<sup>4</sup> <http://www.dyndns.com>

<sup>5</sup> <http://www.no-ip.com>

**Synopsis**

```
(config-dyndns)> update-interval <days> days [ <hours> hours ]
[ <minutes> minutes ] [ <seconds> seconds ]
(config-dyndns)> no update-interval
```

**Arguments**

Argument	Value	Description
days	<i>Integer</i>	Interval time in days.
hours	<i>Integer</i>	Interval time in hours.
minutes	<i>Integer</i>	Interval time in minutes.
seconds	<i>Integer</i>	Interval time in seconds.

**Example**

```
(config-dyndns)> update-interval 5 days 5 hours 5 minutes 5 >
seconds
DynDns::Profile: Interval is set to 450305 seconds.

(config-dyndns)> update-interval 5 days
DynDns::Profile: Interval is set to 432000 seconds.

(config-dyndns)> no update-interval
DynDns::Profile: Periodic registration disabled.
```

**History**

Version	Description
2.03	The <b>dyndns profile update-interval</b> command has been introduced.

## 3.19.6 dyndns profile url

**Description** Set dynamic DNS service custom URL.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dyndns)> url <url>
(config-dyndns)> no url
```

**Arguments**

Argument	Value	Description
url	<i>String</i>	Custom URL of DNS service.

**Example**

```
(config-dyndns)> url http://members.dyndns.org/nic/update
DynDns::Profile: "_WEBADMIN": URL saved.
```

```
(config-dyndns)> no url
DynDns::Profile: "_WEBADMIN" URL cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.05	The <b>dyndns profile url</b> command has been introduced.

## 3.19.7 dyndns profile username

**Description** Set username for access via DynDns.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dyndns)> username <username>
(config-dyndns)> no username
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
username	String	Username for authentication. Maximum name length is 64 characters.

**Example**

```
(config-dyndns)> username test@gmail.com
DynDns::Profile: "_WEBADMIN": username saved.
```

```
(config-dyndns)> no username
DynDns::Profile: "_WEBADMIN" username cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>dyndns profile username</b> command has been introduced.

## 3.20 easyconfig check

**Description** Access to a group of commands to configure Internet access check. To check Internet access, first requests to the default gateway are sent. If the answer is received, then the remote hosts specified in the settings are polled. The duration and frequency of requests are also specified in the settings. If all the checks have been passed, then the Internet access is provided.

**Prefix no** No

**Change settings** No

<b>Multiple input</b>	No				
<b>Group entry</b>	(ezconfig-check)				
<b>Synopsis</b>	(config)> <b>easyconfig check</b>				
<b>Example</b>	(config)> <b>easyconfig check</b> (ezconfig-check)>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.00</td> <td>The <b>easyconfig check</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.00	The <b>easyconfig check</b> command has been introduced.
Version	Description				
2.00	The <b>easyconfig check</b> command has been introduced.				

### 3.20.1 easyconfig check exclude-gateway

<b>Description</b>	Disable default gateway check. By default, the setting is enabled.  Command with <b>no</b> prefix enables the check back.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(ezconfig-check)&gt; <b>exclude-gateway</b> (ezconfig-check)&gt; <b>no exclude-gateway</b></pre>				
<b>Example</b>	<pre>(ezconfig-check)&gt; <b>exclude-gateway</b> Network::InternetChecker: Gateway checking disabled.</pre> <pre>(ezconfig-check)&gt; <b>no exclude-gateway</b> Network::InternetChecker: Gateway checking enabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.05</td> <td>The <b>easyconfig check exclude-gateway</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.05	The <b>easyconfig check exclude-gateway</b> command has been introduced.
Version	Description				
2.05	The <b>easyconfig check exclude-gateway</b> command has been introduced.				

### 3.20.2 easyconfig check max-fails

<b>Description</b>	Specify the number of consecutive failed requests to the cloud service to conclude that the internet is unavailable. By default, value 3 is used.  Command with <b>no</b> prefix resets setting to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

**Multiple input**

No

**Synopsis**(ezconfig-check)> **max-fails** <count>(ezconfig-check)> **no max-fails****Arguments**

Argument	Value	Description
count	<i>Integer</i>	Amount of failed requests. Can take values in the range from 2 to 8 inclusively.

**Example**(ezconfig-check)> **max-fails** 5

Network::InternetChecker: A new maximum fail count set to 5.

(ezconfig-check)> **no max-fails**

Network::InternetChecker: The maximum fail count reset to the default value (3).

**History**

Version	Description
2.00	The <b>easyconfig check max-fails</b> command has been introduced.

### 3.20.3 easyconfig check period

**Description**

Set a period of checking. By default, the value 15 is used.

Command with **no** prefix resets setting to default.**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**(ezconfig-check)> **period** <period>(ezconfig-check)> **no period****Arguments**

Argument	Value	Description
period	<i>Integer</i>	Check interval in seconds. Can take values in the range from 10 to 60 inclusively.

**Example**(ezconfig-check)> **period** 20

Network::InternetChecker: A new check period set to 20 seconds.

(ezconfig-check)> **no period**

Network::InternetChecker: Check period reset to default (15 seconds).

History	Version	Description
	2.00	The <b>easyconfig check period</b> command has been introduced.

## 3.21 easyconfig disable

**Description** Disable initial setup wizard. By default, the setting is enabled.

Command with **no** prefix enables initial setup wizard.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> easyconfig disable
(config)> no easyconfig disable
```

**Example**

```
(config)> easyconfig disable
EasyConfig::Manager: Disabled.
```

```
(config)> no easyconfig disable
EasyConfig::Manager: Enabled.
```

History	Version	Description
	3.01	The <b>easyconfig disable</b> command has been introduced.

## 3.22 eula accept

**Description** Accept user agreement [EULA](#). Until the license is accepted, the configurator does not accept any command except READ\_ONLY.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> eula accept
```

**Example**

```
(config)> eula accept
Core::Eula: "20181001" license accepted.
```

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>eula accept</b> command has been introduced.

## 3.23 igmp-proxy

**Description** Access to a group of commands to configure [IGMP](#).

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (igmp-proxy)

**Synopsis**

```
(config)> igmp-proxy
```

**Example**

```
(config)> igmp-proxy
(igmp-proxy)>
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>igmp-proxy</b> command has been introduced.

### 3.23.1 igmp-proxy fast-leave

**Description** Enable the [IGMP](#) fast-leave to immediately remove a port from the forwarding entry for a multicast group when the port receives a leave message.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(igmp-proxy)> fast-leave
```

```
(igmp-proxy)> no fast-leave
```

**Example**

```
(igmp-proxy)> fast-leave
Igmp::Proxy: Enabled Fast Leave.
```

```
(igmp-proxy)> no fast-leave
Igmp::Proxy: Disabled Fast Leave.
```

**History**

<b>Version</b>	<b>Description</b>
3.09	The <b>igmp-proxy fast-leave</b> command has been introduced.

## 3.23.2 igmp-proxy force

**Description**

Force old version of **IGMP**. By default, the setting is disabled and the protocol version is selected in automatic mode.

Command with **no** prefix resets setting to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(igmp-proxy)> force <protocol>
```

```
(igmp-proxy)> no force
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
protocol	igmp-v1	Apply filtering to incoming packets.
	igmp-v2	Apply filtering to outgoing packets.

**Example**

```
(igmp-proxy)> force igmp-v1
Igmp::Proxy: Forced protocol: igmp-v1.
```

```
(igmp-proxy)> no force
Igmp::Proxy: Enabled IGMP auto-detect.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>igmp-proxy force</b> command has been introduced.

## 3.24 igmp-snooping disable

**Description**

Disable IGMP snooping. Command is available in Client, Repeater or AP modes only.

Command with **no** prefix enables IGMP snooping.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> igmp-snooping disable
```

**Example**

```
(config)> igmp-snooping disable
Igmp::Snooping: Disabled.
```

```
(config)> no igmp-snooping disable
Igmp::Snooping: Enabled.
```

**History**

Version	Description
2.12	The <b>igmp-snooping disable</b> command has been introduced.

## 3.25 interface

**Description**

Access to a group of commands to configure the selected interface. If the interface is not found, the command tries to create it.

The interface name specifies its class that inherits certain properties, see the diagrams in the [Appendix](#). The commands work in relation to classes. The corresponding interface class is specified in the command description.

Command with **no** prefix deletes the interface.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-if)

**Synopsis**

```
(config)> interface <name>
```

```
(config)> no interface <name>
```

**Arguments**

Argument	Value	Description
name	Interface	Full interface name or an alias. You can see the list of available interfaces with help of <b>interface [Tab]</b> command.

**Example**

```
(config)> interface [Tab]
```

Usage template:  
    **interface {name}**

Choose:

Pvc  
Vlan

```

CdcEthernet
UsbModem
RealtekEthernet
AsixEthernet
Davicom
UsbQmi
UsbLte
Yota
Bridge
PPPoE
SSTPEthernet
SSTP
PPTP
L2TP
ZeroTier
Wireguard
Proxy
OpenVPN
IPIP
XFRM
TunnelSixInFour
IKE
Gre
EoIP
Clat
MapT
DsLite
TunnelFourInSix
Chilli

```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface</b> command has been introduced.

### 3.25.1 interface atf disable

**Description** Disable **ATF** for AP 5 GHz. By default, the setting is disabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFiMaster

**Synopsis**

(config-if)>	<b>atf disable</b>
(config-if)>	<b>no atf disable</b>

**Example**

```
(config-if)> atf disable
Network::Interface::Rtx::WifiMaster: "WifiMaster1": Airtime ►
Fairness disabled.
```

```
(config-if)> no atf disable
Network::Interface::Rtx::WifiMaster: "WifiMaster1": Airtime ►
Fairness enabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.02	The <b>interface atf disable</b> command has been introduced.

### 3.25.2 interface atf inbound

**Description** Enable [ATF](#) for transferring inbound packets only for AP 5 GHz. By default, the setting is disabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFiMaster

**Synopsis**

```
| (config-if)> atf inbound
| (config-if)> no atf inbound
```

**Example**

```
(config-if)> atf inbound
Network::Interface::Rtx::WifiMaster: "WifiMaster0": Airtime ►
Fairness inbound is set.
```

```
(config-if)> atf inbound
Network::Interface::Rtx::WifiMaster: "WifiMaster1": Airtime ►
Fairness inbound is set.
```

```
(config-if)> no atf inbound
Network::Interface::Rtx::WifiMaster: "WifiMaster1": Airtime ►
Fairness inbound is unset.
```

**History**

<b>Version</b>	<b>Description</b>
3.02	The <b>interface atf inbound</b> command has been introduced.

### 3.25.3 interface authentication chap

<b>Description</b>	Enable <b>CHAP</b> authentication support. Command with <b>no</b> prefix disables <b>CHAP</b> .				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	Secure				
<b>Synopsis</b>	<pre>(config-if)&gt; <b>authentication chap</b> (config-if)&gt; <b>no authentication chap</b></pre>				
<b>Example</b>	<pre>(config-if)&gt; <b>authentication chap</b> Network::Interface::Supplicant: "PPTP0": added authentication: ▶ CHAP.  (config-if)&gt; <b>no authentication chap</b> Network::Interface::Supplicant: "PPTP0": removed authentication: ▶ CHAP.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.00</td> <td>The <b>interface authentication chap</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.00	The <b>interface authentication chap</b> command has been introduced.
Version	Description				
2.00	The <b>interface authentication chap</b> command has been introduced.				

### 3.25.4 interface authentication eap-md5

<b>Description</b>	Enable EAP-MD5 authentication support. Command with <b>no</b> prefix disables EAP-MD5.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	Secure
<b>Synopsis</b>	<pre>(config-if)&gt; <b>authentication eap-md5</b> (config-if)&gt; <b>no authentication eap-md5</b></pre>
<b>Example</b>	<pre>(config-if)&gt; <b>authentication eap-md5</b> Network::Interface::Ethernet: "GigabitEthernet1": configured ▶ authentication: EAP-MD5.</pre>

```
(config-if)> no authentication eap-md5
Network::Interface::Supplicant: "GigabitEthernet1": removed ▶
authentication: EAP-MD5.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface authentication eap-md5</b> command has been introduced.

### 3.25.5 interface authentication eap-mschapv2

<b>Description</b>	Enable EAP-MSCHAPv2 authentication support. Command with <b>no</b> prefix disables EAP-MSCHAPv2, MS-CHAPv2.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	Secure
<b>Synopsis</b>	<pre>(config-if)&gt; authentication eap-mschapv2 (config-if)&gt; no authentication eap-mschapv2</pre>
<b>Example</b>	<pre>(config-if)&gt; authentication eap-mschapv2 Network::Interface::Supplicant: "IKE0": authentication is ▶ unchanged.  (config-if)&gt; no authentication eap-mschapv2 Network::Interface::Supplicant: "IKE0": removed authentication: ▶ EAP-MSCHAPv2, MS-CHAPv2.</pre>

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>interface authentication eap-mschapv2</b> command has been introduced.

### 3.25.6 interface authentication eap-ttls

<b>Description</b>	Enable EAP-TTLS authentication support. Command with <b>no</b> prefix disables EAP-TTLS.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

<b>Interface type</b>	Secure				
<b>Synopsis</b>	<pre>(config-if)&gt; authentication eap-ttls (config-if)&gt; no authentication eap-ttls</pre>				
<b>Example</b>	<pre>(config-if)&gt; authentication eap-ttls Network::Interface::Ethernet: "GigabitEthernet1": configured ▶ authentication: EAP-TTLS.  (config-if)&gt; no authentication eap-ttls Network::Interface::Supplicant: "GigabitEthernet1": removed ▶ authentication: EAP-TTLS.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.00</td> <td>The <b>interface authentication eap-ttls</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.00	The <b>interface authentication eap-ttls</b> command has been introduced.
Version	Description				
2.00	The <b>interface authentication eap-ttls</b> command has been introduced.				

## 3.25.7 interface authentication identity

<b>Description</b>	Specify user name for device authentication on the remote system. Equally often used on PPTP, PPPoE, L2TP and Proxy connections.  Command with <b>no</b> prefix deletes the previously specified user name.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	Secure						
<b>Synopsis</b>	<pre>(config-if)&gt; authentication identity &lt;identity&gt; (config-if)&gt; no authentication identity</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>identity</td> <td>String</td> <td>User name for authentication.</td> </tr> </tbody> </table>	Argument	Value	Description	identity	String	User name for authentication.
Argument	Value	Description					
identity	String	User name for authentication.					
<b>Example</b>	<pre>(config-if)&gt; authentication identity mylogin Network::Interface::Supplicant: "PPTP0": identity saved.  (config-if)&gt; no authentication identity Network::Interface::Supplicant: "PPTP0": identity cleared.</pre>						

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface authentication identity</b> command has been introduced.

## 3.25.8 interface authentication mschap

**Description** Enable MS-CHAP authentication support.  
Command with **no** prefix disables MS-CHAP.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> authentication mschap
(config-if)> no authentication mschap
```

**Example**

```
(config-if)> authentication mschap
Network::Interface::Suplicant: "PPTP0": added authentication: ▶
MS-CHAP.

(config-if)> no authentication mschap
Network::Interface::Suplicant: "PPTP0": removed authentication: ▶
MS-CHAP.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface authentication mschap</b> command has been introduced.

## 3.25.9 interface authentication mschap-v2

**Description** Enable MS-CHAPv2 authentication support.  
Command with **no** prefix disables MS-CHAPv2.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> authentication mschap-v2
```

```
(config-if)> no authentication mschap-v2
```

**Example**

```
(config-if)> authentication mschap-v2
```

Network::Interface::Supplicant: "PPTP0": authnentication is ► unchanged.

```
(config-if)> no authentication mschap-v2
```

Network::Interface::Supplicant: "PPTP0": removed authentication: ► MS-CHAPv2.

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface authentication mschap-v2</b> command has been introduced.

### 3.25.10 interface authentication pap

**Description** Enable *PAP* authentication support.

Command with **no** prefix disables *PAP*.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> authentication pap
(config-if)> no authentication pap
```

**Example**

```
(config-if)> authentication pap
```

Network::Interface::Supplicant: "PPTP0": added authentication: ► PAP.

```
(config-if)> no authentication pap
```

Network::Interface::Supplicant: "PPTP0": removed authentication: ► PAP.

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface authentication pap</b> command has been introduced.

## 3.25.11 interface authentication password

**Description** Specify password for device authentication on the remote system. Equally often used on PPTP, PPPoE, L2TP and Proxy connections.

Command with **no** prefix deletes the password.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

(config-if)>	<b>authentication password &lt;password&gt;</b>
(config-if)>	<b>no authentication password</b>

Arguments	Argument	Value	Description
	password	<i>String</i>	Password for authentication.

**Example**

(config-if)>	<b>authentication password Aihoi2cha1</b>
	Network::Interface::Supplicant: "PPTP0": password saved.

(config-if)>	<b>no authentication password</b>
	Network::Interface::Supplicant: "PPTP0": password cleared.

History	Version	Description
	2.00	The <b>interface authentication password</b> command has been introduced.

## 3.25.12 interface authentication peap

**Description** Enable [EAP-PEAP](#) authentication support.

Command with **no** prefix disables [EAP-PEAP](#).

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

(config-if)>	<b>authentication peap</b>
(config-if)>	<b>no authentication peap</b>

**Example**

```
(config-if)> authentication peap
Network::Interface::Ethernet: "WifiMaster1/AccessPoint0": ►
configured authentication: PEAP.
```

```
(config-if)> no authentication peap
Network::Interface::Supplicant: "WifiMaster1/AccessPoint0": ►
removed authentication: PEAP.
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>interface authentication peap</b> command has been introduced.

### 3.25.13 interface authentication shared

**Description**

Enable authentication with a *shared key*. This mode is used only in conjunction with *WEP* encryption. *Shared keys* are specified by **interface encryption key** command.

Command with **no** prefix turns authentication to open mode.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

WiFi

**Synopsis**

```
(config-if)> authentication shared
(config-if)> no authentication shared
```

**Example**

```
(config-if)> authentication shared
Network::Interface::Rtx::AccessPoint: "WifiMaster1/AccessPoint0": ►
shared authentication mode enabled.
```

```
(config-if)> no authentication shared
Network::Interface::Rtx::AccessPoint: "WifiMaster1/AccessPoint0": ►
shared authentication mode disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface authentication shared</b> command has been introduced.

### 3.25.14 interface authentication wpa-psk

**Description**

Specify the pre-agreed key for authentication via WPA-PSK protocol. It is possible to specify the key as a 256-bit hexadecimal number or as a string of

ASCII-characters. In the second case, the string is used as a code phrase to generate the key (passphrase).

Command with **no** prefix removes setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFi

**Synopsis**

(config-if)>	<b>authentication wpa-psk &lt;psk&gt;</b>
(config-if)>	<b>no authentication wpa-psk</b>

Arguments	Argument	Value	Description
	psk	String	Pre-agreed key in the form of a 256-bit hexadecimal number, which consists of 64 hexadecimal digits, or in the form of ASCII string of 8 to 63 characters length.

**Example**

(config-if)>	<b>authentication wpa-psk Eethaich9z</b>
	Network::Interface::Wifi: "WifiMaster1/AccessPoint0": WPA PSK set.
(config-if)>	<b>no authentication wpa-psk</b>
	Network::Interface::Wifi: "WifiMaster1/AccessPoint0": WPA PSK removed.

History	Version	Description
	2.00	The <b>interface authentication wpa-psk</b> command has been introduced.

## 3.25.15 interface auto-ssid

**Description** Generate a custom wireless network name (SSID) based on the router's MAC address.

**Prefix no** No

**Changse settings** Yes

**Multiple input** No

**Interface type** WifiMaster

**Synopsis**

(config-if)>	<b>auto-ssid &lt;template&gt; &lt;prefix&gt;</b>
--------------	--

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
template	mac4	Template name — the last 4 or 6 digits of the MAC address to be added to the prefix.
	mac6	
prefix	<i>String</i>	Custom string at the user's choice.

**Example**

```
(config-if)> auto-ssid mac4 12313213
Network::Interface::AccessPoint: "WifiMaster0/AccessPoint0": ▶
generated SSID "12313213207E".
```

```
(config-if)> auto-ssid mac6 12313213
Network::Interface::AccessPoint: "WifiMaster0/AccessPoint0": ▶
generated SSID "1231321369207E".
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>interface auto-ssid</b> command has been introduced.

## 3.25.16 interface backhaul

**Description**

Enable support of [VLAN](#) for wireless connection between routers Keenetic in the trunk mode. By default, setting is disabled.

Command with **no** prefix disables the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

WiFiMaster

**Synopsis**

```
| (config-if)> backhaul
```

```
| (config-if)> no backhaul
```

**Example**

```
(config-if)> backhaul
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint1": ▶
backhaul mode enabled.
```

```
(config-if)> no backhaul
```

```
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint1": ▶
backhaul mode disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.02	The <b>interface backhaul</b> command has been introduced.

## 3.25.17 interface band-steering

<b>Description</b>	Enable <i>Band Steering</i> for AP 5 GHz. By default, the setting is enabled.				
	For correct <i>Band Steering</i> operation it is necessary to fulfill the following conditions:				
	<ul style="list-style-type: none"> <li>• access points 2,4 GHz and 5 GHz are enabled both</li> <li>• they have the same SSID's</li> <li>• they have the same security settings (encryption type, key value, etc.)</li> </ul>				
	Command with <b>no</b> prefix disables the <i>Band Steering</i> .				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	WiFiMaster				
<b>Synopsis</b>	<pre>(config-if)&gt; <b>band-steering</b> (config-if)&gt; <b>no band-steering</b></pre>				
<b>Example</b>	<pre>(config-if)&gt; <b>band-steering</b> Network::Interface::Rtx::WifiMaster: "WifiMaster1": band steering ▶ enabled.  (config-if)&gt; <b>no band-steering</b> Network::Interface::Rtx::WifiMaster: "WifiMaster1": band steering ▶ disabled.</pre>				
<b>History</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; padding: 2px;"><b>Version</b></th> <th style="text-align: left; padding: 2px;"><b>Description</b></th> </tr> </thead> <tbody> <tr> <td style="text-align: left; padding: 2px;">2.09</td> <td style="text-align: left; padding: 2px;">The <b>interface band-steering</b> command has been introduced.</td> </tr> </tbody> </table>	<b>Version</b>	<b>Description</b>	2.09	The <b>interface band-steering</b> command has been introduced.
<b>Version</b>	<b>Description</b>				
2.09	The <b>interface band-steering</b> command has been introduced.				

## 3.25.18 interface band-steering preference

<b>Description</b>	Set the band to give a preference in <i>Band Steering</i> technology. By default, the value is not defined.
	Command with <b>no</b> prefix resets setting to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

<b>Interface type</b>	WiFiMaster									
<b>Synopsis</b>	<pre>(config-if)&gt; band-steering preference &lt;band&gt;</pre> <pre>(config-if)&gt; no band-steering preference</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>band</td><td>2</td><td>2,4 GHz band.</td></tr> <tr> <td></td><td>5</td><td>5 GHz band.</td></tr> </tbody> </table>	Argument	Value	Description	band	2	2,4 GHz band.		5	5 GHz band.
Argument	Value	Description								
band	2	2,4 GHz band.								
	5	5 GHz band.								
<b>Example</b>	<pre>(config-if)&gt; band-steering preference 5 Network::Interface::Rtx::WifiMaster: "WifiMaster1": band steering ▶ preference is 5 GHz.</pre> <pre>(config-if)&gt; no band-steering preference Network::Interface::Rtx::WifiMaster: "WifiMaster1": band steering ▶ preference disabled.</pre>									
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.09</td><td>The <b>interface band-steering preference</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.09	The <b>interface band-steering preference</b> command has been introduced.					
Version	Description									
2.09	The <b>interface band-steering preference</b> command has been introduced.									

### 3.25.19 interface ccp

<b>Description</b>	Enable <i>CCP</i> support during establishing connection.  Command with <b>no</b> prefix disables <i>CCP</i> .
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	PPP
<b>Synopsis</b>	<pre>(config-if)&gt; ccp</pre> <pre>(config-if)&gt; no ccp</pre>
<b>Example</b>	<pre>(config-if)&gt; ccp CCP enabled.</pre> <pre>(config-if)&gt; no ccp CCP disabled.</pre>

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface ccp</b> command has been introduced.

## 3.25.20 interface channel

**Description**

Set the radio channel (broadcasting frequency band) for wireless interfaces. Wi-Fi interfaces take integers from 1 to 14 (frequency range from 2.412 GHz to 2.484 GHz) and from 36 to 165 (frequency range from 5.180 GHz to 5.825 GHz) as channel numbers. By default, auto value is used.

Command with **no** prefix resets to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Radio

**Synopsis**

```
(config-if)> channel <channel>
```

```
(config-if)> no channel
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
channel	number	Number of radio channel.
	auto	Radio channel number is detected automatically.

**Example**

```
(config-if)> channel 8
```

Network::Interface::Rtx::WifiMaster: "WifiMaster0": channel set ▶ to 8.

```
(config-if)> channel 36
```

Network::Interface::Rtx::WifiMaster: "WifiMaster1": channel set ▶ to 36.

```
(config-if)> no channel
```

Network::Interface::Rtx::WifiMaster: "WifiMaster0": auto channel ▶ mode set.

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface channel</b> command has been introduced.

## 3.25.21 interface channel auto-rescan

**Description** Set a schedule for radio channel automatic scanning. By default, the setting is disabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Radio

**Synopsis**

```
(config-if)> channel auto-rescan [<hh>:<mm>]interval <interval>
(config-if)> no channel auto-rescan
```

Arguments	Argument	Value	Description
	interval	1	Rescan interval in hours.
		6	
		12	
		24	

**Example**

```
(config-if)> channel auto-rescan interval 1
Network::Interface::Rtx::WifiMaster: "WifiMaster0": scheduled >
auto rescan, interval 1 hour.
```

```
(config-if)> no channel auto-rescan
Network::Interface::Rtx::WifiMaster: "WifiMaster0": auto rescan >
disabled.
```

History	Version	Description
	2.07	The <b>interface channel auto-rescan</b> command has been introduced.

## 3.25.22 interface channel width

**Description** Set the bandwidth for a specified channel. By default, 40 -below value is used.

Command with **no** prefix resets to default.

**Prefix no** Yes

**Change settings** Yes

<b>Multiple input</b>	No												
<b>Interface type</b>	Radio												
<b>Synopsis</b>	<pre>(config-if)&gt; channel width &lt;width&gt; (config-if)&gt; no channel width</pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>width</td><td>20</td><td>Set bandwidth equal to 20 MHz.</td></tr> <tr> <td></td><td>40-above</td><td>Expand the bandwidth up to 40 MHz using next channel.</td></tr> <tr> <td></td><td>40-below</td><td>Expand the bandwidth up to 40 MHz using previous channel.</td></tr> </tbody> </table>	Argument	Value	Description	width	20	Set bandwidth equal to 20 MHz.		40-above	Expand the bandwidth up to 40 MHz using next channel.		40-below	Expand the bandwidth up to 40 MHz using previous channel.
Argument	Value	Description											
width	20	Set bandwidth equal to 20 MHz.											
	40-above	Expand the bandwidth up to 40 MHz using next channel.											
	40-below	Expand the bandwidth up to 40 MHz using previous channel.											
<b>Example</b>	<pre>(config-if)&gt; channel width 20 Network::Interface::Rtx::WifiMaster: "WifiMaster0": channel ► bandwidth setting applied.</pre> <pre>(config-if)&gt; no channel width Network::Interface::Rtx::WifiMaster: "WifiMaster0": channel ► bandwidth settings reset to default.</pre>												
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.04</td><td>The <b>interface channel width</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.04	The <b>interface channel width</b> command has been introduced.								
Version	Description												
2.04	The <b>interface channel width</b> command has been introduced.												

### 3.25.23 interface chilli coaport

<b>Description</b>	Set <a href="#">UDP</a> port to which disconnect requests from the <a href="#">RADIUS</a> client are sent. Command with <b>no</b> prefix removes the setting.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	Chilli						
<b>Synopsis</b>	<pre>(config-if)&gt; chilli coaport &lt;coaport&gt; (config-if)&gt; no chilli coaport</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>coaport</td><td><i>Integer</i></td><td>The <a href="#">CoA</a> port number.</td></tr> </tbody> </table>	Argument	Value	Description	coaport	<i>Integer</i>	The <a href="#">CoA</a> port number.
Argument	Value	Description					
coaport	<i>Integer</i>	The <a href="#">CoA</a> port number.					

**Example**

```
(config-if)> chilli coaport 3940
Chilli::Interface: "Chilli0": coaport set to 3940.
```

```
(config-if)> no chilli coaport
Chilli::Interface: "Chilli0": coaport reset to default.
```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>interface chilli coaport</b> command has been introduced.

### 3.25.24 interface chilli dhcpif

**Description**

Assign Chilli interface to the system network interface.

Command with **no** prefix cancels the association.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Chilli

**Synopsis**

```
(config-if)> chilli dhcpif <dhcpif>
(config-if)> no chilli dhcpif
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
dhcpif	<i>Interface</i>	Full interface name or an alias.

**Example**

```
(config-if)> chilli dhcpif Bridge1
Chilli::Interface: "Chilli0": bound to Bridge1.
```

```
(config-if)> no chilli dhcpif
Chilli::Interface: "Chilli0": unbound.
```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>interface chilli dhcpif</b> command has been introduced.

### 3.25.25 interface chilli dns

**Description**

Set IP address of the DNS server.

Command with **no** prefix removes the setting.

<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	No									
<b>Interface type</b>	Chilli									
<b>Synopsis</b>	<pre>(config-if)&gt; <b>chilli dns &lt;dns1&gt; [&lt;dns2&gt;]</b> (config-if)&gt; <b>no chilli dns</b></pre>									
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>dns1</td><td><i>IP address</i></td><td>Address of primary DNS server.</td></tr><tr><td>dns2</td><td><i>IP address</i></td><td>Address of secondary DNS server.</td></tr></tbody></table>	Argument	Value	Description	dns1	<i>IP address</i>	Address of primary DNS server.	dns2	<i>IP address</i>	Address of secondary DNS server.
Argument	Value	Description								
dns1	<i>IP address</i>	Address of primary DNS server.								
dns2	<i>IP address</i>	Address of secondary DNS server.								
<b>Example</b>	<pre>(config-if)&gt; <b>chilli dns 8.8.8.8 1.1.1.1</b> Chilli::Interface: "Chilli0": DNS servers set to 8.8.8.8, 1.1.1.1.  (config-if)&gt; <b>no chilli dns</b> Chilli::Interface: "Chilli0": DNS servers reset to default.</pre>									

<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.10</td><td>The <b>interface chilli dns</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.10	The <b>interface chilli dns</b> command has been introduced.
Version	Description				
2.10	The <b>interface chilli dns</b> command has been introduced.				

## 3.25.26 interface chilli lease

<b>Description</b>	Configure the lease time of the connected client IP addresses. By default, the value 3600 is used.						
	Command with <b>no</b> prefix resets setting to default.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	Chilli						
<b>Synopsis</b>	<pre>(config-if)&gt; <b>chilli lease &lt;lease&gt;</b> (config-if)&gt; <b>no chilli lease</b></pre>						
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>lease</td><td><i>Integer</i></td><td>Lease time in seconds. The maximum value is 259200.</td></tr></tbody></table>	Argument	Value	Description	lease	<i>Integer</i>	Lease time in seconds. The maximum value is 259200.
Argument	Value	Description					
lease	<i>Integer</i>	Lease time in seconds. The maximum value is 259200.					

**Example**

```
(config-if)> chilli lease 1000
Chilli::Interface: "Chilli0": lease has been set 1000 seconds.

(config-if)> no chilli lease
Chilli::Interface: "Chilli0": lease has been reset to default ▶
(3600 seconds).
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>interface chilli lease</b> command has been introduced.

## 3.25.27 interface chilli login

**Description**

Configure authorization to connect to the *RADIUS* server.

**Prefix no**

No

**Change settings**

No

**Multiple input**

No

**Interface type**

Chilli

**Synopsis**

```
(config-if)> chillilogin <mac>[ username <username> password <password> ]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
mac	<i>MAC address</i>	MAC address for authentication.
username	<i>String</i>	Username for authentication.
password	<i>String</i>	The password for authentication.

**Example**

```
(config-if)> interface Chillio chilli login 00:01:02:03:04:05
Chilli::Interface: "Chilli0": sent login request for ▶
00:01:02:03:04:05
```

```
(config-if)> interface Chillio chilli login 00:01:02:03:04:05 ▶
username test password test
Chilli::Interface: "Chilli0": sent login request for ▶
00:01:02:03:04:05
```

**History**

<b>Version</b>	<b>Description</b>
4.00	The <b>interface chilli login</b> command has been introduced.

## 3.25.28 interface chilli logout

**Description**

Force the MAC address of the specified client to be disabled.

<b>Prefix no</b>	No									
<b>Change settings</b>	No									
<b>Multiple input</b>	No									
<b>Interface type</b>	Chilli									
<b>Synopsis</b>	(config-if)> <b>chilli logout</b> ( <i>mac</i>   <b>all</b> )									
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>mac</td><td><i>MAC address</i></td><td>MAC address of the registered client.</td></tr><tr><td>all</td><td>Keyword</td><td>Disable all MAC addresses.</td></tr></tbody></table>	Argument	Value	Description	mac	<i>MAC address</i>	MAC address of the registered client.	all	Keyword	Disable all MAC addresses.
Argument	Value	Description								
mac	<i>MAC address</i>	MAC address of the registered client.								
all	Keyword	Disable all MAC addresses.								
<b>Example</b>	(config-if)> <b>chilli logout</b> 64:a2:22:51:b4:11 (config-if)> <b>chilli logout all</b> Chilli::Interface: "Chilli0": service restarted.									
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.10</td><td>The interface <b>chilli logout</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.10	The interface <b>chilli logout</b> command has been introduced.					
Version	Description									
2.10	The interface <b>chilli logout</b> command has been introduced.									

### 3.25.29 interface chilli macauth

<b>Description</b>	Enable user authentication option based on MAC address detection only.  Command with <b>no</b> prefix disables the setting.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	Chilli
<b>Synopsis</b>	(config-if)> <b>chilli macauth</b> (config-if)> <b>no chilli macauth</b>
<b>Example</b>	(config-if)> <b>chilli macauth</b> Chilli::Interface: "Chilli0": macauth set to "".  (config-if)> <b>no chilli macauth</b> Chilli::Interface: "Chilli0": macauth cleared.

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>interface chilli macauth</b> command has been introduced.

### 3.25.30 interface chilli macpasswd

**Description** Set the password for MAC address authentication.Command with **no** prefix removes the setting.**Prefix no** Yes**Change settings** Yes**Multiple input** No**Interface type** Chilli

**Synopsis**

```
(config-if)> chilli macpasswd <macpasswd>
(config-if)> no chilli macpasswd
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
macpasswd	<i>String</i>	The user password.

**Example**

```
(config-if)> chilli macpasswd 1234567890
Chilli::Interface: "Chilli0": macpasswd set to "1234567890".
```

```
(config-if)> no chilli macpasswd
Chilli::Interface: "Chilli0": macpasswd cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>interface chilli macpasswd</b> command has been introduced.

### 3.25.31 interface chilli nasip

**Description** Set **RADIUS** option NAS IP Address. Allows you to configure and use an arbitrary IP address.Command with **no** prefix removes the setting.**Prefix no** Yes**Change settings** Yes**Multiple input** No

**Interface type**

Chilli

**Synopsis**

```
(config-if)> chilli nasip <address> | interface <wan> | auto)
      (config-if)> no chilli nasip
```

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	Specific IP address of the server.
wan	<i>Interface</i>	IP address from the specified WAN interface.
auto	<i>Keyword</i>	IP address from the current WAN interface.

**Example**

```
(config-if)> chilli nasip 95.213.215.187
Chilli::Interface: "Chilli0": NAS IP address set to ▶
"95.213.215.187".
```

```
(config-if)> chilli nasip interface ISP
Chilli::Interface: "Chilli0": NAS IP interface set to ▶
"GigabitEthernet1".
```

```
(config-if)> chilli nasip auto
Chilli::Interface: "Chilli0": NAS IP address set to auto.
```

```
(config-if)> no chilli nasip
Chilli::Interface: "Chilli0": NAS IP address cleared.
```

**History**

Version	Description
2.10	The <b>interface chilli nasip</b> command has been introduced.

### 3.25.32 interface chilli nasmac

**Description**

Set MAC address for [RADIUS](#) Called-Station-ID attribute. By default, MAC address of the guest network is used.

Command with **no** prefix resets setting to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Chilli

**Synopsis**

```
(config-if)> chilli nasmac <mac>
      (config-if)> no chilli nasmac
```

**Arguments**

Argument	Value	Description
mac	MAC address	New MAC address for RADIUS Called-Station-ID.

**Example**

```
(config-if)> chilli nasmac 50:ff:20:00:1e:86
Chilli::Interface: "Chilli0": NAS MAC address set to ▶
"50:ff:20:00:1e:86".
```

```
(config-if)> no chilli nasmac
Chilli::Interface: "Chilli0": NAS MAC address cleared.
```

**History**

Version	Description
2.11	The <b>interface chilli nasmac</b> command has been introduced.

### 3.25.33 interface chilli profile

**Description**

Assign Chilli profile to the Chilli interface.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Chilli

**Synopsis**

```
(config-if)> chilli profile <profile>
(config-if)> no chilli profile
```

**Arguments**

Argument	Value	Description
profile	String	RADIUS server profile name.

**Example**

```
(config-if)> chilli profile Wi-Fi_SYSTEM
Chilli::Interface: "Chilli0": assigned profile: Wi-Fi.
```

```
(config-if)> no chilli profile
Chilli::Interface: "Chilli0": profile cleared.
```

**History**

Version	Description
2.10	The <b>interface chilli profile</b> command has been introduced.

### 3.25.34 interface chilli radius

<b>Description</b>	Add the <b>RADIUS</b> server addresses. Command with <b>no</b> prefix removes the servers.										
<b>Prefix no</b>	Yes										
<b>Change settings</b>	Yes										
<b>Multiple input</b>	No										
<b>Interface type</b>	Chilli										
<b>Synopsis</b>	<pre>(config-if)&gt; <b>chilli radius &lt;server1&gt; [&lt;server2&gt;]</b> (config-if)&gt; <b>no chilli radius</b></pre>										
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>server1</td><td><i>String</i></td><td>Address of first <b>RADIUS</b> server.</td></tr><tr><td>server2</td><td><i>String</i></td><td>Address of second <b>RADIUS</b> server.</td></tr></tbody></table>		Argument	Value	Description	server1	<i>String</i>	Address of first <b>RADIUS</b> server.	server2	<i>String</i>	Address of second <b>RADIUS</b> server.
Argument	Value	Description									
server1	<i>String</i>	Address of first <b>RADIUS</b> server.									
server2	<i>String</i>	Address of second <b>RADIUS</b> server.									
<b>Example</b>	<pre>(config-if)&gt; <b>chilli radius radius.example.net radius2.example.net</b> Chilli::Interface: "Chilli0": RADIUS servers set to ► radius.example.net, radius2.example.net.</pre> <pre>(config-if)&gt; <b>no chilli radius</b> Chilli::Interface: "Chilli0": RADIUS servers cleared.</pre>										
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.10</td><td>The <b>interface chilli radius</b> command has been introduced.</td></tr></tbody></table>		Version	Description	2.10	The <b>interface chilli radius</b> command has been introduced.					
Version	Description										
2.10	The <b>interface chilli radius</b> command has been introduced.										

### 3.25.35 interface chilli radiusacctport

<b>Description</b>	Set accounting UDP-port of <b>RADIUS</b> server. By default, value 1813 is used. Command with <b>no</b> prefix resets port to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	Chilli
<b>Synopsis</b>	<pre>(config-if)&gt; <b>chilli radiusacctport &lt;radiusacctport&gt;</b></pre>

```
(config-if)> no chilli radiusacctport
```

**Arguments**

Argument	Value	Description
radiusacctport	<i>String</i>	The port number.

**Example**

```
(config-if)> chilli radiusacctport 1819
Chilli::Interface: "Chilli0": radiusacctport set to 1819.
```

```
(config-if)> no chilli radiusacctport
Chilli::Interface: "Chilli0": radiusacctport reset to default.
```

**History**

Version	Description
3.06	The <b>interface chilli radiusacctport</b> command has been introduced.

## 3.25.36 interface chilli radiusauthport

**Description** Set authentication UDP-port of **RADIUS** server. By default, value 1812 is used.

Command with **no** prefix resets port to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

```
(config-if)> chilli radiusauthport <radiusauthport>
(config-if)> no chilli radiusauthport
```

**Arguments**

Argument	Value	Description
radiusauthport	<i>String</i>	The port number.

**Example**

```
(config-if)> chilli radiusauthport 1820
Chilli::Interface: "Chilli0": radiusauthport set to 1820.
```

```
(config-if)> no chilli radiusauthport
Chilli::Interface: "Chilli0": radiusauthport reset to default.
```

**History**

Version	Description
3.06	The <b>interface chilli radiusauthport</b> command has been introduced.

### 3.25.37 interface chilli radiuslocationid

**Description** Set location identifier of **RADIUS** server. It should be in the format `isocc=`, `cc=`, `ac=`, `network=`.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

(config-if)>	<b>chilli radiuslocationid &lt;radiuslocationid&gt;</b>
(config-if)>	<b>no chilli radiuslocationid</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	<code>radiuslocationid</code>	<code>String</code>	Location identifier value.

**Example**

(config-if)>	<b>chilli radiuslocationid &gt;</b> <code>isocc=,cc=,ac=,network=WiFISYSTEM,</code> Chilli::Interface: "Chilli0": radiuslocationid set to > <code>"isocc=,cc=,ac=,network=WiFISYSTEM,".</code>
(config-if)>	<b>no chilli radiuslocationid</b> Chilli::Interface: "Chilli0": radiuslocationid cleared.

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.10	The <b>interface chilli radiuslocationid</b> command has been introduced.

### 3.25.38 interface chilli radiuslocationname

**Description** Set location name of **RADIUS** server.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

(config-if)>	<b>chilli radiuslocationname &lt;radiuslocationname&gt;</b>
--------------	---

```
(config-if)> no chilli radiuslocationname
```

**Arguments**

Argument	Value	Description
radiuslocationname	<i>String</i>	Location name.

**Example**

```
(config-if)> chilli radiuslocationname MyHotSpot
Chilli::Interface: "Chilli0": radiuslocationname set to ▶
"MyHotSpot".
```

```
(config-if)> no chilli radiuslocationname
Chilli::Interface: "Chilli0": radiuslocationname cleared.
```

**History**

Version	Description
2.10	The <b>interface chilli radiuslocationname</b> command has been introduced.

### 3.25.39 interface chilli radiusnasid

**Description** Set Network Access Server identifier.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

```
(config-if)> chilli radiusnasid <radiusnasid>
(config-if)> no chilli radiusnasid
```

**Arguments**

Argument	Value	Description
radiusnasid	<i>String</i>	NAS identifier.

**Example**

```
(config-if)> chilli radiusnasid keeneticru_12
Chilli::Interface: "Chilli0": radiusnasid set to "keeneticru_12".
```

```
(config-if)> no chilli radiusnasid
Chilli::Interface: "Chilli0": radiusnasid cleared.
```

**History**

Version	Description
2.10	The <b>interface chilli radiusnasid</b> command has been introduced.

## 3.25.40 interface chilli radiussecret

**Description** Set shared secret for both **RADIUS** servers.  
Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

```
(config-if)> chilli radiussecret <radiussecret>
          (config-if)> no chilli radiussecret
```

Arguments	Argument	Value	Description
	radiussecret	String	A secret value.

**Example**

```
(config-if)> chilli radiussecret 12df34fd
Chilli::Interface: "Chilli0": radiussecret set to "12df34fd".
          (config-if)> no chilli radiussecret
Chilli::Interface: "Chilli0": radiussecret cleared.
```

History	Version	Description
	2.10	The <b>interface chilli radiussecret</b> command has been introduced.

## 3.25.41 interface chilli uamallowed

**Description** Specify the resource to which the client has access without first authenticating.  
Command with **no** prefix removes the resource from the list. If you use no argument, the entire list of resources will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** Chilli

**Synopsis**

```
(config-if)> chilli uamallowed <uamallowed>
          (config-if)> no chilli uamallowed [ <uamallowed> ]
```

**Arguments**

Argument	Value	Description
uamallowed	<i>String</i>	IP-address, URL or subnetwork.

**Example**

```
(config-if)> chilli uamallowed 188.166.114.0/24
Chilli::Interface: "Chilli0": "188.166.114.0/24" added to walled garden.

(config-if)> chilli uamallowed www.example.link
Chilli::Interface: "Chilli0": "www.example.link" added to walled garden.

(config-if)> no chilli uamallowed 188.166.114.0/24
Chilli::Interface: "Chilli0": "188.166.114.0/24" removed from walled garden.

(config-if)> no chilli uamallowed www.example.link
Chilli::Interface: "Chilli0": "www.example.link" removed from walled garden.

(config-if)> no chilli uamallowed
Chilli::Interface: "Chilli0": walled garden cleared.
```

**History**

Version	Description
2.10	The <b>interface chilli uamallowed</b> command has been introduced.

### 3.25.42 interface chilli uamdomain

**Description** Specify the domain name to which the client has access without first authenticating.  
Command with **no** prefix removes the domain name from the list. If you use no argument, the entire list of domain names will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** Chilli

**Synopsis**

<pre>(config-if)&gt; <b>chilli uamdomain &lt;uamdomain&gt;</b></pre>
<pre>(config-if)&gt; <b>no chilli uamdomain [&lt;uamdomain&gt;]</b></pre>

**Arguments**

Argument	Value	Description
uamdomain	<i>String</i>	Domain name of remote host.

**Example**

```
(config-if)> chilli uamdomain example.net
Chilli::Interface: "Chilli0": "example.net" added to walled ▶
garden.
```

```
(config-if)> no chilli uamdomain example.net
Chilli::Interface: "Chilli0": "example.net" removed from walled ▶
garden.
```

```
(config-if)> no chilli uamdomain
Chilli::Interface: "Chilli0": walled garden cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>interface chilli uamdomain</b> command has been introduced.

### 3.25.43 interface chilli uamhomepage

**Description** Set URL of homepage to redirect unauthenticated users to.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

```
(config-if)> chilli uamhomepage <uamhomepage>
```

```
(config-if)> no chilli uamhomepage
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
uamhomepage	<i>String</i>	Custom URL.

**Example**

```
(config-if)> chilli uamhomepage http://192.168.2.1/welcome.html
Chilli::Interface: "Chilli0": uamhomepage set to ▶
"http://192.168.2.1/welcome.html".
```

```
(config-if)> no chilli uamhomepage
Chilli::Interface: "Chilli0": uamhomepage cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>interface chilli uamhomepage</b> command has been introduced.

## 3.25.44 interface chilli uampport

**Description** Set [TCP](#) port to bind to for authenticating clients. By default, value 3990 is used.

Command with **no** prefix resets port to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

(config-if)>	<b>chilli uampport &lt;uampport&gt;</b>
(config-if)>	<b>no chilli uampport</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	uampport	<i>Integer</i>	The port number.

**Example**

(config-if)>	<b>chilli uampport 3922</b>
	Chilli::Interface: "Chilli0": uampport set to 3922.

(config-if)>	<b>no chilli uampport</b>
	Chilli::Interface: "Chilli0": uampport reset to default.

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.10	The <b>interface chilli uampport</b> command has been introduced.

## 3.25.45 interface chilli uamsecret

**Description** Set shared secret between [UAM](#) server and Chilli. The [UAM](#) secret is used to hash the challenge before password computation.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

(config-if)>	<b>chilli uamsecret &lt;uamsecret&gt;</b>
--------------	---

```
(config-if)> no chilli uamsecret
```

**Arguments**

Argument	Value	Description
uamsecret	String	A secret value.

**Example**

```
(config-if)> chilli uamsecret 12df34fd
Chilli::Interface: "Chilli0": uamsecret set to "12df34fd".
```

```
(config-if)> no chilli uamsecret
Chilli::Interface: "Chilli0": uamsecret set to "".
```

**History**

Version	Description
2.10	The <b>interface chilli uamsecret</b> command has been introduced.

## 3.25.46 interface chilli uamserver

**Description** Set URL of web server to use for authenticating clients.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Chilli

**Synopsis**

```
(config-if)> chilli uamserver <uamserver>
(config-if)> no chilli uamserver
```

**Arguments**

Argument	Value	Description
uamserver	String	Custom URL of web server.

**Example**

```
(config-if)> chilli uamserver ▶
https://auth.example.net/hotspotlogin
Chilli::Interface: "Chilli0": uamserver set to ▶
"https://auth.example.net/hotspotlogin".
```

```
(config-if)> no chilli uamserver
Chilli::Interface: "Chilli0": uamserver cleared.
```

History	Version	Description
	2.10	The <b>interface chilli uamserver</b> command has been introduced.

### 3.25.47 interface compatibility

Description	Set the standard for wireless communications, with which a given wireless adapter (the interface) must be compatible. For Wi-Fi interfaces, the compatibility is set by string of Latin letters A, B, G, N, that denote extensions to the standard IEEE 802.11. For example, the presence 'N' in the compatibility line will imply that the given adapter will be able to deal with the 802.11n-compatible devices via radio channel. The set of admissible compatibility lines is defined by the hardware capabilities of a particular adapter and provisions of the relevant additions to the IEEE 802.11 standard.
	By default, "BGN" value is used for 2.4 GHz, "AN" — for 5 GHz.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** Radio

**Synopsis**

(config-if)> <b>compatibility</b> <annex>
---

**Arguments**

Argument	Value	Description
annex	B, G, N	For 2,4 GHz.
	A, N	For 5 GHz.
	A, N+AC	Additional IEEE standard.

**Example**

```
(config-if)> compatibility N
Network::Interface::Rtx::WifiMaster: "WifiMaster0": PHY mode set.
```

```
(config-if)> compatibility N+AC
Network::Interface::Rtx::WifiMaster: "WifiMaster1": PHY mode set.
```

**History**

Version	Description
2.00	The <b>interface compatibility</b> command has been introduced.
2.06	New standard AC was added.

### 3.25.48 interface connect

**Description** Start the process of connecting to a remote node.

Command with **no** prefix terminates the connection.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** PPP, IP

**Synopsis**

```
(config-if)> connect [ via <via> ]  
(config-if)> no connect
```

**Arguments**

Argument	Value	Description
via	<i>Interface</i>	Interface through which remote node is accessed. For PPPoE this option is mandatory.

**Example**

```
(config-if)> connect via ISP
```

```
(config-if)> no connect
```

**History**

Version	Description
2.00	The <b>interface connect</b> command has been introduced.

### 3.25.49 interface country-code

**Description** Assign to the interface a literal country code, which influences the set of radio channels. By default, RU value is used.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** Radio

**Synopsis**

```
(config-if)> country-code <code>
```

**Arguments**

Argument	Value	Description
code	<i>String</i>	The country code.

**Example**

```
(config-if)> country-code RU  
Network::Interface::Rtx::WifiMaster: "WifiMaster0": country code ►  
set.
```

History	Version	Description
	2.00	The <b>interface country-code</b> command has been introduced.

## 3.25.50 interface debug

**Description** Enable debug mode of **PPP** connection. Detailed info about connection progress is saved to the system log. By default, setting is disabled.

Command with **no** prefix disables the debug mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** PPP

**Synopsis**

```
(config-if)> debug
(config-if)> no debug
```

**Example**

```
(config-if)> debug
Network::Interface::Base: Debug enabled.
```

```
(config-if)> no debug
Network::Interface::Base: Debug disabled.
```

History	Version	Description
	2.00	The <b>interface debug</b> command has been introduced.

## 3.25.51 interface description

**Description** Assign arbitrary description to the specified network interface. Command with **no** prefix deletes the description.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-if)> description <description>
(config-if)> no description
```

**Arguments**

Argument	Value	Description
description	<i>String</i>	Arbitrary description of the interface.

**Example**

```
(config-if)> description MYHOME
Network::Interface::Base: "Bridge0": description saved.

(config-if)> no description
Network::Interface::Base: "Bridge0": description saved.
```

**History**

Version	Description
2.00	The <b>interface description</b> command has been introduced.

## 3.25.52 interface down

**Description** Disable the network interface and persist the state “down” to the settings.  
Command with **no** prefix enables the network interface and deletes “down” from settings.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-if)> down
(config-if)> no down
```

**Example**

```
(config-if)> down
Network::Interface::Base: "GigabitEthernet0/2": interface is down.

(config-if)> up
Network::Interface::Base: "GigabitEthernet0/2": interface is up.
```

**History**

Version	Description
2.00	The <b>interface down</b> command has been introduced.

## 3.25.53 interface duplex

**Description** Set the duplex mode of the Ethernet port. By default, auto value is set.  
Command with **no** prefix resets setting to default.

**Prefix no** Yes

<b>Change settings</b>	Yes												
<b>Multiple input</b>	No												
<b>Interface type</b>	Ethernet												
<b>Synopsis</b>	<pre>(config-if)&gt; duplex {full   half   auto}</pre> <pre>(config-if)&gt; no duplex</pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>mode</td><td>full</td><td>Full duplex protocol.</td></tr> <tr> <td></td><td>half</td><td>Half duplex protocol.</td></tr> <tr> <td></td><td>auto</td><td>Auto duplex protocol.</td></tr> </tbody> </table>	Argument	Value	Description	mode	full	Full duplex protocol.		half	Half duplex protocol.		auto	Auto duplex protocol.
Argument	Value	Description											
mode	full	Full duplex protocol.											
	half	Half duplex protocol.											
	auto	Auto duplex protocol.											
<b>Example</b>	<pre>(config-if)&gt; duplex full Network::Interface::Ethernet: "GigabitEthernet0/1": duplex set ▶ to "full".</pre> <pre>(config-if)&gt; no duplex Network::Interface::Ethernet: "GigabitEthernet0/1": duplex reset ▶ to default.</pre>												
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.06.B.1</td><td>The <b>interface duplex</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.06.B.1	The <b>interface duplex</b> command has been introduced.								
Version	Description												
2.06.B.1	The <b>interface duplex</b> command has been introduced.												

## 3.25.54 interface dyndns profile

<b>Description</b>	Assign the DynDns profile to the interface. Profile must be created and customized with <a href="#">dyndns profile</a> commands before execution.  Command with <b>no</b> prefix unbinds the profile.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-if)&gt; dyndns profile &lt;profile&gt;</pre> <pre>(config-if)&gt; no dyndns profile</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>profile</td><td><i>String</i></td><td>The name of DynDns profile.</td></tr> </tbody> </table>	Argument	Value	Description	profile	<i>String</i>	The name of DynDns profile.
Argument	Value	Description					
profile	<i>String</i>	The name of DynDns profile.					

**Example**

```
(config-if)> dyndns profile TEST
DynDns::Profile: Interface set.
```

```
(config-if)> no dyndns profile TEST
DynDns::Profile: Interface removed.
```

**History**

Version	Description
2.02	The <b>interface dyndns profile</b> command has been introduced.

### 3.25.55 interface dyndns update

**Description** Update IP address for DynDns manually. By default command works in accordance with the policy of the DynDns service provider, that is not allows to update too often. Using the keyword force allows you to update excluding policy of the service provider.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis** (config-if)> **dyndns update [ force ]**

**Arguments**

Argument	Value	Description
force	Keyword	Not take into account the update rate recommended by service provider.

**Example**

```
(config-if)> dyndns update
```

**History**

Version	Description
2.00	The <b>interface dyndns update</b> command has been introduced.

### 3.25.56 interface encryption anonymous-dh

**Description** Enable Anonymous DH for SSTP servers without a certificate.

Command with **no** prefix disables Anonymous DH.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

<b>Interface type</b>	SSTP				
<b>Synopsis</b>	<pre>(config-if)&gt; <b>encryption anonymous-dh</b> (config-if)&gt; <b>no encryption anonymous-dh</b></pre>				
<b>Example</b>	<pre>(config-if)&gt; <b>encryption anonymous-dh</b> Network::Interface::Sstp: "SSTP0": anonymous DH TLS is enabled.  (config-if)&gt; <b>no encryption anonymous-dh</b> Network::Interface::Sstp: "SSTP0": anonymous DH TLS is disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.13</td> <td>The <b>interface encryption anonymous-dh</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.13	The <b>interface encryption anonymous-dh</b> command has been introduced.
Version	Description				
2.13	The <b>interface encryption anonymous-dh</b> command has been introduced.				

### 3.25.57 interface encryption disable

<b>Description</b>	Disable encryption on the wireless interface.				
<b>Prefix no</b>	No				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	WiFi				
<b>Synopsis</b>	<pre>(config-if)&gt; <b>encryption disable</b></pre>				
<b>Example</b>	<pre>(config-if)&gt; <b>encryption disable</b> Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ wireless encryption disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.00</td> <td>The <b>interface encryption disable</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.00	The <b>interface encryption disable</b> command has been introduced.
Version	Description				
2.00	The <b>interface encryption disable</b> command has been introduced.				

### 3.25.58 interface encryption enable

<b>Description</b>	Enable encryption on the wireless interface. By default, <a href="#">WEP</a> encryption is used.  Command with <b>no</b> prefix disables wireless interface encryption.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

**Multiple input**

No

**Interface type**

WiFi

**Synopsis**

```
(config-if)> encryption enable
```

```
(config-if)> no encryption enable
```

**Example**

```
(config-if)> encryption enable
```

Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ► wireless encryption enabled.

```
(config-if)> no encryption enable
```

Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ► wireless encryption disabled.

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface encryption enable</b> command has been introduced.

### 3.25.59 interface encryption key

**Description**

Specify the [WEP](#) encryption keys. Depending on the bit, the key can be standard 64-bit [WEP](#) uses a 40 bit key (also known as WEP-40), or 128-bit [WEP](#) uses a 26 hexadecimal characters (13 characters ASCII). Overall, there can be 1 to 4 encryption keys, with one of them default key must be assigned.

Command with **no** prefix removes key.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

WiFi

**Synopsis**

```
(config-if)> encryption key <id> (<value> [default] | default)
```

```
(config-if)> no encryption key <id>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
id	<i>Integer</i>	The key number. Overall, up to 4 keys could be specified.
value	<i>String</i>	The key value as a hexadecimal number, consisting of 10 or 26 digits.
default	<i>Keyword</i>	Indicates that this key will be used by default.

**Example**

```
(config-if)> encryption key 1 1231231234
Network::Interface::Wifi: "WifiMaster0/AccessPoint0": WEP key 1 ▶
set.
```

```
(config-if)> no encryption key 1
Network::Interface::Wifi: "WifiMaster0/AccessPoint0": WEP key 1 ▶
removed.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface encryption key</b> command has been introduced.

### 3.25.60 interface encryption mppe

**Description** Enable **MPPE** encryption support.

Command with **no** prefix disables **MPPE** encryption.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** PPTP

**Synopsis**

```
| (config-if)> encryption mppe
| (config-if)> no encryption mppe
```

**Example**

```
(config-if)> encryption mppe
MPPE enabled.
```

```
(config-if)> no encryption mppe
MPPE disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface encryption mppe</b> command has been introduced.

### 3.25.61 interface encryption owe

**Description** Enable **OWE** security algorithms on the wireless interface. By default, the setting is disabled.

Command with **no** prefix disables **OWE** support.

**Prefix no** Yes

<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	WifiMaster				
<b>Synopsis</b>	<pre>(config-if)&gt; <b>encryption owe</b>           (config-if)&gt; <b>no encryption owe</b></pre>				
<b>Example</b>	<pre>(config-if)&gt; <b>encryption owe</b> Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ► OWE algorithms enabled.</pre> <pre>(config-if)&gt; <b>no encryption owe</b> Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ► OWE algorithms disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.00</td> <td>The <b>interface encryption owe</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	3.00	The <b>interface encryption owe</b> command has been introduced.
Version	Description				
3.00	The <b>interface encryption owe</b> command has been introduced.				

### 3.25.62 interface encryption tkip hold-down

<b>Description</b>	Set the "countermeasure" timer value for <b>TKIP</b> when the joint use <b>WPA</b> and <b>WPA2</b> security algorithms on the wireless interface. By default, the value 60 is used.  Command with <b>no</b> prefix resets setting to default.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	WiFi						
<b>Synopsis</b>	<pre>(config-if)&gt; <b>encryption tkip hold-down &lt;hold-down&gt;</b>           (config-if)&gt; <b>no encryption tkip hold-down</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>hold-down</td> <td><i>Integer</i></td> <td>Timer value in seconds. Can take values in the range from 0 to 60. If timer is set to 0, the setting is disabled.</td> </tr> </tbody> </table>	Argument	Value	Description	hold-down	<i>Integer</i>	Timer value in seconds. Can take values in the range from 0 to 60. If timer is set to 0, the setting is disabled.
Argument	Value	Description					
hold-down	<i>Integer</i>	Timer value in seconds. Can take values in the range from 0 to 60. If timer is set to 0, the setting is disabled.					

**Example**

```
(config-if)> encryption tkip hold-down 10
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ►
hold-down interval is 10 sec.
```

```
(config-if)> no encryption tkip hold-down
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ►
hold-down interval is reset to default (60 sec.).
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>interface encryption tkip hold-down</b> command has been introduced.

### 3.25.63 interface encryption wpa

**Description**

Enable **WPA** security algorithms on the wireless interface. Wireless interface can support the joint use of **WPA** and **WPA2**, but supporting **WEP** automatically disables when any of the **WPA** is enabled.

Command with **no** prefix disables **WPA** support.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

WiFi

**Synopsis**

```
(config-if)>   encryption wpa
(config-if)> no encryption wpa
```

**Example**

```
(config-if)> encryption wpa
WPA algorithms enabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface encryption wpa</b> command has been introduced.

### 3.25.64 interface encryption wpa2

**Description**

Enable **WPA2** (IEEE 802.11i, RSN) security algorithms on the wireless interface. Wireless interface can support the joint use of **WPA** and **WPA2**, but supporting **WEP** automatically disables when any of the **WPA** is enabled.

Command with **no** prefix disables **WPA2** support.

**Prefix no**

Yes

<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	WiFi
<b>Synopsis</b>	<pre>(config-if)&gt; encryption wpa2           (config-if)&gt; no encryption wpa2</pre>
<b>Example</b>	<pre>(config-if)&gt; encryption wpa2 WPA2 algorithms enabled.</pre>

History	Version	Description
	2.00	The <b>interface encryption wpa2</b> command has been introduced.

## 3.25.65 interface encryption wpa3

<b>Description</b>	Enable <a href="#">WPA3</a> security algorithms on the wireless interface. Wireless interface can support the joint use of <a href="#">WPA2</a> and <a href="#">WPA3</a> . By default, the setting is disabled.  Command with <b>no</b> prefix disables <a href="#">WPA3</a> support.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	WiFi
<b>Synopsis</b>	<pre>(config-if)&gt; encryption wpa3           (config-if)&gt; no encryption wpa3</pre>
<b>Example</b>	<pre>(config-if)&gt; encryption wpa3 Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ WPA3 algorithms enabled.  (config-if)&gt; no encryption wpa3 Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ WPA3 algorithms disabled.</pre>

History	Version	Description
	3.00	The <b>interface encryption wpa3</b> command has been introduced.

## 3.25.66 interface encryption wpa3 suite-b

**Description** Enable [WPA3](#) security algorithms to protect sensitive data Suite-B for [WPA Enterprise](#). By default, the feature is disabled.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** WiFi

**Synopsis**

(config-if)>	<b>encryption wpa3 suite-b</b>
--------------	--------------------------------

**Example**

(config-if)>	<b>encryption wpa3 suite-b</b>
--------------	--------------------------------

```
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint1": ▶
WPA3 SuiteB enabled.
```

History	Version	Description
	3.01	The <b>interface encryption wpa3 suite-b</b> command has been introduced.

## 3.25.67 interface flowcontrol

**Description** Configure Ethernet flow control Tx/Rx. By default, the feature is enabled.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

(config-if)>	<b>flowcontrol on</b>
--------------	-----------------------

(config-if)>	<b>no flowcontrol [send]</b>
--------------	------------------------------

Arguments	Argument	Value	Description
	send	Keyword	Flow control works asynchronously.

**Example**

(config-if)>	<b>flowcontrol on</b>
--------------	-----------------------

```
Network::Interface::Ethernet: "GigabitEthernet0/0": flow control ▶
enabled.
```

```
(config-if)> no flowcontrol send
Network::Interface::Ethernet: "GigabitEthernet0/0": flow control ▶
send disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>interface flowcontrol</b> command has been introduced.

## 3.25.68 interface follow

**Description**

Copy settings from AP on WifiMaster0 (2.4 GHz) to the AP on WifiMaster with an index greater than zero (5 GHz or above).

The follower automatically copies all changes applied to the master access point.

If you change the follower settings, the link with the master access point is terminated.

**Warning:** The WifiMaster0 access points are always used as a source of settings. They never follow. They can only be followed.

**Prefix no**

No

**Change settings**

Yes

**Multiple input**

No

**Interface type**

AccessPoint

**Synopsis**

```
(config-if)> follow <access-point>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
access-point	<i>Interface</i>	The name of an AccessPoint interface on the WifiMaster0 2.4 GHz. You can see the list of available interfaces with help of <b>follow [Tab]</b> command.

**Example**

```
(config-if)> follow WifiMaster0/AccessPoint0
Network::Interface::AccessPoint: "WifiMaster1/AccessPoint0": set ▶
to follow WifiMaster0/AccessPoint0.
```

**History**

<b>Version</b>	<b>Description</b>
3.07	The <b>interface follow</b> command has been introduced.

## 3.25.69 interface ft enable

<b>Description</b>	Enable support of <i>FT</i> for Access Point (FT Over the Air, OTA) within the IEEE 802.11r standard. By default, the option is disabled.				
	For correct <i>FT</i> operation between 2,4 and 5 GHz APs it is necessary to fulfill the following conditions:				
	<ul style="list-style-type: none"> <li>• access points 2,4 GHz and 5 GHz are enabled both</li> <li>• they have the same SSID's</li> <li>• they have the same security settings (encryption type — WPA2 or without password, password value, etc.)</li> </ul>				
	Command with <b>no</b> prefix removes the setting.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	AccessPoint				
<b>Synopsis</b>	<pre>(config-if)&gt; <b>ft enable</b> (config-if)&gt; <b>no ft enable</b></pre>				
<b>Example</b>	<pre>(config-if)&gt; <b>ft enable</b> Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ fast transition enabled.  (config-if)&gt; <b>no ft enable</b> Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ fast transition disabled.</pre>				
<b>History</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Version</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px; vertical-align: top;">2.13</td> <td style="padding: 2px; vertical-align: top;">The <b>interface ft enable</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.13	The <b>interface ft enable</b> command has been introduced.
Version	Description				
2.13	The <b>interface ft enable</b> command has been introduced.				

## 3.25.70 interface ft mdid

<b>Description</b>	Set Mobility Domain ID for <i>FT</i> . By default, KN value is used.
	Command with <b>no</b> prefix resets setting to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

<b>Interface type</b>	AccessPoint						
<b>Synopsis</b>	<pre>(config-if)&gt; ft mdid &lt;mdid&gt; (config-if)&gt; no ft mdid</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>mdid</td><td>String</td><td>The value of Mobility Domain ID. Consists of 2 ASCII symbols.</td></tr> </tbody> </table>	Argument	Value	Description	mdid	String	The value of Mobility Domain ID. Consists of 2 ASCII symbols.
Argument	Value	Description					
mdid	String	The value of Mobility Domain ID. Consists of 2 ASCII symbols.					
<b>Example</b>	<pre>(config-if)&gt; ft mdid 1F Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ fast transition MDID set to "1F".</pre> <pre>(config-if)&gt; no ft mdid Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ fast transition MDID reset to default.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.13</td><td>The <b>interface ft mdid</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.13	The <b>interface ft mdid</b> command has been introduced.		
Version	Description						
2.13	The <b>interface ft mdid</b> command has been introduced.						

## 3.25.71 interface ft otd

<b>Description</b>	Enable support of <b>FT</b> Over-the-DS (Distribution System) within the IEEE 802.11r standard. This type of <b>FT</b> is used for roaming in outdated subscriber devices, for example, in the iPhone 4s. By default, the setting is disabled.
	Command with <b>no</b> prefix removes the setting.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	AccessPoint
<b>Synopsis</b>	<pre>(config-if)&gt; ft otd (config-if)&gt; no ft otd</pre>
<b>Example</b>	<pre>(config-if)&gt; ft otd Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ fast transition OTD enabled.</pre> <pre>(config-if)&gt; no ft otd Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶ fast transition OTD disabled.</pre>

**History**

<b>Version</b>	<b>Description</b>
2.13	The <b>interface ft otd</b> command has been introduced.

## 3.25.72 interface hide-ssid

**Description**

Enable hidden **SSID** mode. When using this feature, Access Point will not be displayed in the list of available wireless networks. But if user informed of the existence of this network and know its **SSID**, than he can connect to it. The mode is disabled by default.

Command with **no** prefix disables the mode.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Access Point

**Synopsis**

```
(config-if)> hide-ssid
```

```
(config-if)> no hide-ssid
```

**Example**

```
(config-if)> hide-ssid
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶
SSID broadcasting disabled.
```

```
(config-if)> no hide-ssid
```

```
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶
SSID broadcasting enabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface hide-ssid</b> command has been introduced.

## 3.25.73 interface iapp auto

**Description**

Generate **IAPP** key in automatic mode. To assign the key manually, use **interface iapp key** command.

**Prefix no**

No

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Bridge

**Synopsis**

```
(config-if)> iapp auto
```

**Example**

```
(config-if)> iapp auto
Network::Interface::Rtx::Iapp: Bridge0 autoconfigured.
```

**History**

<b>Version</b>	<b>Description</b>
3.03	The <b>interface iapp auto</b> command has been introduced.

## 3.25.74 interface iapp key

**Description**

Assign the **IAPP** Mobile Domain key for successful synchronization between Access Points where **FT** works (**interface ft enable** command). Access Points must belong to the same IP-subnet. By default, the key is not assigned.

Command with **no** prefix removes key value.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Bridge

**Synopsis**

```
(config-if)> iapp key <key>
```

```
(config-if)> no iapp key
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
key	<i>String</i>	The value of <b>IAPP</b> key. Maximum key length is 64 characters.

**Example**

```
(config-if)> iapp key 11223344556677
Network::Interface::Rtx::Iapp: Bridge0 key applied.
```

```
(config-if)> no iapp key
Network::Interface::Rtx::Iapp: Bridge0 key cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.13	The <b>interface iapp key</b> command has been introduced.

## 3.25.75 interface idle-timeout

**Description**

Set the interval for the STA client to disconnect from the Access Point by inactivity timeout. By default, 600 value is used.

Command with **no** prefix disables the setting.

**Prefix no**

Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	WiFiMaster						
<b>Synopsis</b>	<pre>(config-if)&gt; <b>idle-timeout &lt;idle-timeout&gt;</b>             (config-if)&gt; <b>no idle-timeout</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>idle-timeout</td> <td><i>Integer</i></td> <td>Idle-timeout value in seconds. Can take values in the range from 60 to 2147483646.</td> </tr> </tbody> </table>	Argument	Value	Description	idle-timeout	<i>Integer</i>	Idle-timeout value in seconds. Can take values in the range from 60 to 2147483646.
Argument	Value	Description					
idle-timeout	<i>Integer</i>	Idle-timeout value in seconds. Can take values in the range from 60 to 2147483646.					
<b>Example</b>	<pre>(config-if)&gt; <b>idle-timeout 500</b> Network::Interface::Rtx::WifiMaster: "WifiMaster1": idle timeout ▶ value is 500 sec.  (config-if)&gt; <b>no idle-timeout</b> Network::Interface::Rtx::WifiMaster: "WifiMaster1": idle timeout ▶ disabled.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.06</td> <td>The <b>interface idle-timeout</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	3.06	The <b>interface idle-timeout</b> command has been introduced.		
Version	Description						
3.06	The <b>interface idle-timeout</b> command has been introduced.						

## 3.25.76 interface igmp downstream

<b>Description</b>	Enable <b>IGMP</b> mode on the interface in the direction of the multicast recipients. <b>service igmp-proxy</b> must be enabled on the device. There can be several downstream interfaces.  Command with <b>no</b> prefix disables the mode.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config-if)&gt; <b>igmp downstream</b>             (config-if)&gt; <b>no igmp downstream</b></pre>
<b>Example</b>	<pre>(config-if)&gt; <b>igmp downstream</b>  (config-if)&gt; <b>no igmp downstream</b></pre>

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface igmp downstream</b> command has been introduced.

## 3.25.77 interface igmp fork

**Description** Enable the duplication of outgoing packets **IGMP** upstream to the specified interface. There can be only one fork interface.

Command with **no** prefix disables the mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
| (config-if)>  igmp fork
| (config-if)> no igmp fork
```

**Example**

```
(config-if)> igmp fork
```

```
(config-if)> no igmp fork
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface igmp fork</b> command has been introduced.

## 3.25.78 interface igmp upstream

**Description** Enable **IGMP** mode on the interface in the direction of the multicast source. **service igmp-proxy** must be enabled on the device. Only one upstream interface is allowed.

Command with **no** prefix disables the mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
| (config-if)>  igmp upstream
```

```
(config-if)> no igmp upstream
```

**Example**

```
(config-if)> igmp upstream
```

```
(config-if)> no igmp upstream
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface igmp upstream</b> command has been introduced.

## 3.25.79 interface include

**Description** Specify Ethernet-interface name which will be added to the software bridge as a port.

Command with **no** prefix removes the interface from the bridge.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** Bridge

**Synopsis**

```
(config-if)> include <interface>
(config-if)> no include <interface>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	<i>Interface</i>	Name or alias of the Ethernet-interface that should be plugged into the bridge.

**Example**

```
(config-if)> include ISP
Network::Interface::Bridge: "Bridge0": ISP included.
```

```
(config-if)> no include
Network::Interface::Bridge: "Bridge0": removed ISP.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface include</b> command has been introduced.

## 3.25.80 interface inherit

**Description** Specify the name of the Ethernet-interface which will be added to the program bridge as a port. In contrast with the **include** command, **inherit** command

transfers some settings of the interface being added to the bridge, such as IP address, mask and IP-aliases. On removing either the bridge itself or the bridge interface, these settings, even if they have been changed will be copied back to the vacant interface.

The command allows one to add the device control interface to the bridge so that control is not lost.

Command with **no** prefix removes the interface from the bridge, returns the settings that have earlier been inherited by the bridge back to the interface, and resets these settings on the bridge.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** Bridge

**Synopsis**

```
(config-if)> inherit <interface>
(config-if)> no inherit <interface>
```

Arguments	Argument	Value	Description
	interface	Interface	Name or alias of the Ethernet-interface that should be plugged into the bridge.

**Example**

```
(config-if)> inherit GigabitEthernet0/Vlan3
Network::Interface::Bridge: "Bridge1": GigabitEthernet0/Vlan3 ►
inherited in Bridge1.
```

```
(config-if)> no inherit
Network::Interface::Bridge: "Bridge1": inherit removed.
```

History	Version	Description
	2.00	The <b>interface inherit</b> command has been introduced.

## 3.25.81 interface ip access-group

**Description** Assign a named list of filtering rules ([ACL](#), see [access-list](#)) to the interface. Parameter in or out indicates the traffic direction for which the [ACL](#) will be applied. Several ACLs can be assigned to a single interface.

Command with **no** prefix disables the [ACL](#) for the specified interface and traffic direction.

**Prefix no** Yes

**Change settings** Yes

<b>Multiple input</b>	Yes									
<b>Interface type</b>	IP									
<b>Synopsis</b>	<pre>(config-if)&gt; ip access-group &lt;acl&gt; &lt;direction&gt; (config-if)&gt; no ip access-group [&lt;acl&gt; [&lt;direction&gt;]]</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>acl</td><td><i>String</i></td><td>List of filtering rules as previously created using <b>access-list</b> command.</td></tr> <tr> <td>direction</td><td>in out</td><td>Apply filtering to incoming packets. Apply filtering to outgoing packets.</td></tr> </tbody> </table>	Argument	Value	Description	acl	<i>String</i>	List of filtering rules as previously created using <b>access-list</b> command.	direction	in out	Apply filtering to incoming packets. Apply filtering to outgoing packets.
Argument	Value	Description								
acl	<i>String</i>	List of filtering rules as previously created using <b>access-list</b> command.								
direction	in out	Apply filtering to incoming packets. Apply filtering to outgoing packets.								
<b>Example</b>	<pre>(config-if)&gt; ip access-group BLOCK in Network::Acl: Input "BLOCK" access list added to "CdcEthernet1". (config-if)&gt; ip access-group BLOCK out Network::Acl: Output "BLOCK" access list added to "CdcEthernet1". (config-if)&gt; no ip access-group BLOCK in Network::Acl: "BLOCK" access group deleted from "CdcEthernet1". (config-if)&gt; no ip access-group Network::Acl: All access groups deleted from "CdcEthernet1".</pre>									
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>interface ip access-group</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>interface ip access-group</b> command has been introduced.					
Version	Description									
2.00	The <b>interface ip access-group</b> command has been introduced.									

## 3.25.82 interface ip address

<b>Description</b>	Change the IP address and the mask of the network interface. If the address automatic configuration service is running on the interface, for instance, DHCP client, (see <b>interface ip address dhcp</b> ), then the manually set address can be overwritten.  Command with <b>no</b> prefix resets the address to 0.0.0.0.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config-if)&gt; ip address &lt;address&gt; &lt;mask&gt;</pre>

```
(config-if)> no ip address
```

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	The network interface address.
mask	<i>IP-mask</i>	The network interface mask. There are two ways to specify the mask: the canonical form (for example, 255.255.255.0) and the prefix with bit length (for example, /24).

**Example**

The network address, defined by the IP address and mask, can be specified in either of the two ways: specify a mask in the canonical form, or set the prefix bit length.

```
(config)> ip address 192.168.9.1/24
Network::Interface::Ip: "Bridge3": IP address is 192.168.9.1/24.
```

```
(config)> no ip address
Network::Interface::Ip: "Bridge3": IP address cleared.
```

**History**

Version	Description
2.00	The <b>interface ip address</b> command has been introduced.

## 3.25.83 interface ip address dhcp

**Description**

Start the DHCP client to automatically configure the network parameters: IP address and mask of the interface, *DNS* servers and default gateway.

Command with **no** prefix stops the DHCP client, removes the dynamically configured settings and restores the previous settings of IP address and mask.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

```
(config-if)> ip address dhcp [ hostname <hostname> ]
```

```
(config-if)> no ip address dhcp
```

**Arguments**

Argument	Value	Description
hostname	<i>String</i>	Name of the host to be placed in the DHCP option 12 field. This name need not be the

Argument	Value	Description
		same as the host name entered in global configuration mode.

**Example**

```
(config-if)> ip address dhcp hostname QWERTY2
```

Dhcp::Client: Started DHCP client on ISP.

```
(config-if)> no ip address dhcp
```

Dhcp::Client: Stopped DHCP client on ISP.

**History**

Version	Description
2.00	The <b>interface ip address dhcp</b> command has been introduced.

### 3.25.84 interface ip adjust-ttl recv

**Description** Modify the TTL for all inbound packets on the interface.

Command with **no** prefix cancels the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
(config-if)> ip adjust-ttl recv <recv>
```

```
(config-if)> no ip adjust-ttl recv
```

**Arguments**

Argument	Value	Description
recv	<i>Integer</i>	The value of TTL changing. Can take values in the range from 1 to 255 inclusively.

**Example**

```
(config-if)> ip adjust-ttl recv 1
```

Network::Interface::Ip: "CdcEthernet0": incoming TTL set to 1.

```
(config-if)> no ip adjust-ttl recv
```

Network::Interface::Ip: "CdcEthernet0": incoming TTL settings removed.

**History**

Version	Description
3.07	The <b>interface ip adjust-ttl recv</b> command has been introduced. Previous command name is <b>interface ip adjust-ttl</b> .

## 3.25.85 interface ip adjust-ttl send

**Description** Modify the TTL for all outbound packets on the interface.

Command with **no** prefix cancels the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
| (config-if)> ip adjust-ttl send <send>
| (config-if)> no ip adjust-ttl send
```

Arguments	Argument	Value	Description
	send	<i>Integer</i>	The value of TTL changing. Can take values in the range from 1 to 255 inclusively.

**Example**

```
(config-if)> ip adjust-ttl send 65
Network::Interface::Ip: "CdcEthernet1": outgoing TTL set to 65.

(config-if)> no ip adjust-ttl send
Network::Interface::Ip: "CdcEthernet1": outgoing TTL settings ▶ removed.
```

History	Version	Description
	2.09	The <b>interface ip adjust-ttl send</b> command has been introduced.

## 3.25.86 interface ip alias

**Description** Assign an additional IP address and mask to the network interface (alias).

Command with **no** prefix resets the specified alias to 0.0.0.0. If you use no arguments, the entire list of aliases will be removed.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** IP, Ethernet

**Synopsis**

```
| (config-if)> ip alias <address> <mask>
```

(config-if)> **no ip alias** [ <address> <mask> ]

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
address	<i>IP address</i>	Additional address of the network interface.
mask	<i>IP-mask</i>	Additional mask of the network interface. There are two ways to specify the mask: the canonical form (for example, 255.255.255.0) and the prefix with bit length (for example, /24).

**Example**

```
(config-if)> ip alias 192.168.1.88/24
```

Network::Interface::Ip: "WifiMaster1/WifiStation0": alias 0 is ▶ 192.168.1.88/24.

```
(config-if)> no ip alias 192.168.1.88/24
```

Network::Interface::Ip: "WifiMaster1/WifiStation0": alias 0 reset ▶ to 0.0.0.0/0.

```
(config-if)> no ip alias
```

Network::Interface::Ip: "WifiMaster1/WifiStation0": all aliases ▶ removed.

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface ip alias</b> command has been introduced.

## 3.25.87 interface ip dhcp client broadcast

**Description**

Set broadcast bit in the DHCP Discover messages, that indicate to a server how the reply should be sent back to the client. By default, the setting is disabled.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Ethernet

**Synopsis**

```
(config-if)> ip dhcp client broadcast
```

```
(config-if)> no ip dhcp client broadcast
```

**Example**

```
(config-if)> ip dhcp client broadcast
```

Dhcp::Client: ISP DHCP client request broadcast enabled.

```
(config-if)> no ip dhcp client broadcast
Dhcp::Client: ISP DHCP client request broadcast disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>interface ip dhcp client broadcast</b> command has been introduced.

### 3.25.88 interface ip dhcp client class-id

**Description** Specify the device vendor name where **DHCP** client is running (dhcp option 60).

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

```
(config-if)> ip dhcp client class-id <class>
(config-if)> no ip dhcp client class-id
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
class	<i>String</i>	Vendor class name, enclosed in double quotes.

**Example**

```
(config-if)> ip dhcp client class-id "Explorer"
Dhcp::Client: ISP DHCP client vendor class is set to "Explorer".
```

```
(config-if)> no ip dhcp client class-id
Dhcp::Client: ISP DHCP client vendor class is cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.02	The <b>interface ip dhcp client class-id</b> command has been introduced.

### 3.25.89 interface ip dhcp client debug

**Description** Enable debug mode for DHCP client. Detailed info about DHCP client working is saved to the system log.

Command with **no** prefix disables the debug mode.

<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	Ethernet				
<b>Synopsis</b>	<pre>(config-if)&gt; ip dhcp client debug (config-if)&gt; no ip dhcp client debug</pre>				
<b>Example</b>	<pre>(config-if)&gt; ip dhcp client debug Dhcp::Client: ISP DHCP client debug enabled.  (config-if)&gt; no ip dhcp client debug Dhcp::Client: ISP DHCP client debug disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.01</td> <td>The interface <b>ip dhcp client debug</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.01	The interface <b>ip dhcp client debug</b> command has been introduced.
Version	Description				
2.01	The interface <b>ip dhcp client debug</b> command has been introduced.				

### 3.25.90 interface ip dhcp client displace

<b>Description</b>	Displace static address of <i>what</i> if it conflicts with an address from DHCP client of main interface.  This command is executed automatically when you connect the USB Ethernet adapter. After that the configuration will be saved and device will be restarted.  Command with <b>no</b> prefix cancels the displacement for the specified interface.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	Yes									
<b>Interface type</b>	Ethernet									
<b>Synopsis</b>	<pre>(config-if)&gt; ip dhcp client displace &lt;what&gt; [ check-session ] (config-if)&gt; no ip dhcp client displace &lt;what&gt; [ check-session ]</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>what</td> <td><i>Interface</i></td> <td>Name or alias of the interface whose static address will be displaced.</td> </tr> <tr> <td>check-session</td> <td><i>Keyword</i></td> <td>With active SCGI sessions, it does not allow rebooting and changing the router's</td> </tr> </tbody> </table>	Argument	Value	Description	what	<i>Interface</i>	Name or alias of the interface whose static address will be displaced.	check-session	<i>Keyword</i>	With active SCGI sessions, it does not allow rebooting and changing the router's
Argument	Value	Description								
what	<i>Interface</i>	Name or alias of the interface whose static address will be displaced.								
check-session	<i>Keyword</i>	With active SCGI sessions, it does not allow rebooting and changing the router's								

Argument	Value	Description
		network address. By default, command is added to default-config.

**Example**

```
(config-if)> ip dhcp client displace Home
Dhcp::Client: ISP added "Home" displacement.
```

```
(config-if)> ip dhcp client displace Home check-session
Dhcp::Client: ISP added "Home" displacement.
```

```
(config-if)> no ip dhcp client displace Home
Dhcp::Client: ISP deleted "Home" displacement.
```

```
(config-if)> no ip dhcp client displace Home check-session
Dhcp::Client: ISP deleted "Home" displacement.
```

**History**

Version	Description
2.03	The interface <b>ip dhcp client displace</b> command has been introduced.
2.15	Argument <b>check-session</b> was added.

## 3.25.91 interface ip dhcp client dns-routes

**Description** Enable automatic addition of host routes to the DNS server received from the DHCP server. By default, the setting is enabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

<pre>(config-if)&gt; ip dhcp client dns-routes</pre>
<pre>(config-if)&gt; no ip dhcp client dns-routes</pre>

**Example**

```
(config-if)> ip dhcp client dns-routes
Dhcp::Client: ISP DHCP client DNS host routes are enabled.
```

```
(config-if)> no ip dhcp client dns-routes
Dhcp::Client: ISP DHCP client DNS host routes are disabled.
```

History	Version	Description
	2.00	The <b>interface ip dhcp client dns-routes</b> command has been introduced.

## 3.25.92 interface ip dhcp client fallback

**Description** Set static IP address in case of DHCP errors.  
Command with **no** prefix cancels setting and sets 0.0.0.0. address.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

```
(config-if)> ip dhcp client fallback <type>
(config-if)> no ip dhcp client fallback
```

Arguments	Argument	Value	Description
	type	String	The type of IP address. Currently implemented only one type — static.

**Example**

```
(config-if)> ip dhcp client fallback static
Dhcp::Client: A DHCP address fallback is static.

(config-if)> no ip dhcp client fallback
Dhcp::Client: A DHCP address fallback set to zero for "ISP".
```

History	Version	Description
	2.05	The <b>interface ip dhcp client fallback</b> command has been introduced.

## 3.25.93 interface ip dhcp client hostname

**Description** Assign a host name which is sent in DHCP-request.  
Command with **no** prefix resets the host name to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

<b>Interface type</b>	Ethernet								
<b>Synopsis</b>	<pre>(config-if)&gt; ip dhcp client hostname &lt;hostname&gt;</pre> <pre>(config-if)&gt; no ip dhcp client hostname</pre>								
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>hostname</td><td>String</td><td>The host name to assign.</td></tr> </tbody> </table>			Argument	Value	Description	hostname	String	The host name to assign.
Argument	Value	Description							
hostname	String	The host name to assign.							
<b>Example</b>	<pre>(config-if)&gt; ip dhcp client hostname MYHOME</pre> <p>Dhcp::Client: ISP DHCP client hostname is set to MYHOME.</p> <pre>(config-if)&gt; no ip dhcp client hostname</pre> <p>Dhcp::Client: ISP DHCP client hostname is reset to default (HOME).</p>								
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>interface ip dhcp client hostname</b> command has been introduced.</td></tr> </tbody> </table>			Version	Description	2.00	The <b>interface ip dhcp client hostname</b> command has been introduced.		
Version	Description								
2.00	The <b>interface ip dhcp client hostname</b> command has been introduced.								

## 3.25.94 interface ip dhcp client name-servers

<b>Description</b>	Use <a href="#">DNS</a> server addresses which are received via <a href="#">DHCP</a> . By default, the function is enabled.						
	Command with <b>no</b> prefix denies using of <a href="#">DNS</a> server addresses which are received via <a href="#">DHCP</a> .						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	Ethernet						
<b>Synopsis</b>	<pre>(config-if)&gt; ip dhcp client name-servers</pre> <pre>(config-if)&gt; no ip dhcp client name-servers</pre>						
<b>Example</b>	<pre>(config-if)&gt; ip dhcp client name-servers</pre> <p>Dhcp::Client: ISP DHCP name servers are enabled.</p> <pre>(config-if)&gt; no ip dhcp client name-servers</pre> <p>Dhcp::Client: ISP DHCP name servers are disabled.</p>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>interface ip dhcp client name-servers</b> command has been introduced.</td></tr> </tbody> </table>			Version	Description	2.00	The <b>interface ip dhcp client name-servers</b> command has been introduced.
Version	Description						
2.00	The <b>interface ip dhcp client name-servers</b> command has been introduced.						

## 3.25.95 interface ip dhcp client release

**Description** DHCP client releases lease IP address and goes into sleep mode. Another execution of this command takes DHCP client to the mode of automatical obtaining of IP address.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

```
(config-if)> ip dhcp client release
```

**Example**

```
(config-if)> ip dhcp client release
Dhcp::Client: IP address released.
```

History	Version	Description
	2.03	The <b>interface ip dhcp client release</b> command has been introduced.

## 3.25.96 interface ip dhcp client renew

**Description** DHCP client releases lease IP address and passes in a mode of obtaining a new one.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

```
(config-if)> ip dhcp client renew
```

**Example**

```
(config-if)> ip dhcp client renew
Dhcp::Client: IP address renewed.
```

History	Version	Description
	2.03	The <b>interface ip dhcp client renew</b> command has been introduced.

## 3.25.97 interface ip dhcp client routes

<b>Description</b>	Enable receiving routes from the provider (dhcp options 33, 121, 242). By default it is enabled. In the configuration it is displayed only with <b>no</b> prefix.  Command with <b>no</b> prefix disables the setting.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	Ethernet				
<b>Synopsis</b>	<pre>(config-if)&gt; ip dhcp client routes (config-if)&gt; no ip dhcp client routes</pre>				
<b>Example</b>	<pre>(config-if)&gt; ip dhcp client routes Dhcp::Client: ISP DHCP client static routes are enabled.  (config-if)&gt; no ip dhcp client routes Dhcp::Client: ISP DHCP client static routes are disabled.</pre>				
<b>History</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Version</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">2.05</td> <td style="padding: 2px;">The <b>interface ip dhcp client routes</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.05	The <b>interface ip dhcp client routes</b> command has been introduced.
Version	Description				
2.05	The <b>interface ip dhcp client routes</b> command has been introduced.				

## 3.25.98 interface ip flow

<b>Description</b>	Enable <i>NetFlow</i> sensor on the specified interface. By default, the setting is disabled.  Command with <b>no</b> prefix disables <i>NetFlow</i> sensor.								
<b>Prefix no</b>	Yes								
<b>Change settings</b>	Yes								
<b>Multiple input</b>	No								
<b>Interface type</b>	IP								
<b>Synopsis</b>	<pre>(config-if)&gt; ip flow &lt;direction&gt; (config-if)&gt; no ip flow</pre>								
<b>Arguments</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Argument</th> <th style="text-align: left; padding: 2px;">Value</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">direction</td> <td style="padding: 2px;">ingress</td> <td style="padding: 2px;">Collection of incoming traffic.</td> </tr> </tbody> </table>			Argument	Value	Description	direction	ingress	Collection of incoming traffic.
Argument	Value	Description							
direction	ingress	Collection of incoming traffic.							

Argument	Value	Description
	egress	Collection of outgoing traffic.
	both	Collection of incoming and outgoing traffic both.

**Example**

```
(config-if)> ip flow ingress
Netflow::Manager: NetFlow collector is enabled on interface ▶
"Home" in "ingress" direction.
```

```
(config-if)> ip flow egress
Netflow::Manager: NetFlow collector is enabled on interface ▶
"Home" in "egress" direction.
```

```
(config-if)> ip flow both
Netflow::Manager: NetFlow collector is enabled on interface ▶
"Home" in "both" direction.
```

**History**

Version	Description
2.11	The <b>interface ip flow</b> command has been introduced.

## 3.25.99 interface ip global

**Description**

Set property “global” with a parameter to the interface. This property is necessary to configure the default route, DynDNS client and NAT functioning. Can represent global-interfaces as leading to the global network (the Internet).

Property “global” affects the interface priority in setting the default route. The higher the priority the more desirable it is for the user to access the global network through the specified interface. Internet access backup (WAN backup) functionality is using priority “global”.

By default, setting is disabled.

Command with **no** prefix removes property.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
| (config-if)> ip global (<priority> | order <order> | auto)
```

```
| (config-if)> no ip global
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
priority	<i>Integer</i>	Interface priority to configure the default route. Can take values in the range from 1 to 65534.
order	<i>Integer</i>	Relative priority between interfaces. It can take values in the range from 0 to 65534, but not more than the number of global interfaces.
auto	<i>Keyword</i>	Automatic priority calculation of the interface. The interface is located near the end of the list, but above order X.

**Example**

```
(config-if)> ip global 10
Network::Interface::IP: "L2TP0": global priority is 10.
```

```
(config-if)> ip global order 0
Network::Interface::IP: "L2TP0": order is 1.
```

```
(config-if)> ip global auto
Network::Interface::IP: Global priority recalculated.
```

```
(config-if)> no ip global
Network::Interface::IP: "L2TP0": global priority cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface ip global</b> command has been introduced.
2.09	The order and auto arguments were added.

## 3.25.100 interface ip mru

**Description** Set the value of **MRU** to be transmitted to a remote node during establishing the **PPP (IPCP)** connection. By default, 1460 value is used.

Command with **no** prefix resets the **MRU** value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** PPP

**Synopsis**

<pre>(config-if)&gt; ip mru &lt;mru&gt;</pre>
<pre>(config-if)&gt; no ip mru</pre>

**Arguments**

Argument	Value	Description
mru	<i>Integer</i>	MRU value.

**Example**

```
(config-if)> ip mru 1492
Network::Interface::Ppp: "PPPoE0": MRU saved.
```

```
(config-if)> no ip mru
Network::Interface::Ppp: "PPPoE0": MRU reset to default.
```

**History**

Version	Description
2.00	The <b>interface ip mru</b> command has been introduced.

## 3.25.101 interface ip mtu

**Description**

Set the **MTU** value on the network interface. When establishing a connection via **PPP (IPCP)**, packets with defined **MTU** size will be sent to the remote host, even if the host requested a lower **MTU** value.

Command with **no** prefix resets the **MTU** value to that which was before the first use of the command.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config-if)> ip mtu <mtu>
```

```
(config-if)> no ip mtu
```

**Arguments**

Argument	Value	Description
mtu	<i>Integer</i>	<b>MTU</b> value. Can take values in the range from 64 to 65535 inclusively.

**Example**

```
(config-if)> ip mtu 1500
Network::Interface::Base: "GigabitEthernet1": static MTU is 1500.
```

```
(config-if)> no ip mtu
Network::Interface::Base: "GigabitEthernet1": static MTU reset ▶
to default.
```

**History**

Version	Description
2.00	The <b>interface ip mtu</b> command has been introduced.

## 3.25.102 interface ip nat loopback

<b>Description</b>	Enable reverse translation to send local requests to the local server from the Internet. By default, the setting is enabled for the Home segment interfaces (private and protected security levels).				
	Command with <b>no</b> prefix disables NAT loopback.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	IP				
<b>Synopsis</b>	<pre>(config-if)&gt; ip nat loopback (config-if)&gt; no ip nat loopback</pre>				
<b>Example</b>	<pre>(config-if)&gt; ip nat loopback Network::StaticNat: NAT loopback is explicitly enabled on "Home". (config-if)&gt; no ip nat loopback Network::StaticNat: NAT loopback is explicitly disabled on "Home".</pre>				
<b>History</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Version</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px; text-align: center;">2.11</td> <td style="padding: 2px;">The <b>ip nat loopback</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.11	The <b>ip nat loopback</b> command has been introduced.
Version	Description				
2.11	The <b>ip nat loopback</b> command has been introduced.				

## 3.25.103 interface ip remote

<b>Description</b>	Set a remote peer static address.								
<b>Prefix no</b>	Yes								
<b>Change settings</b>	Yes								
<b>Multiple input</b>	No								
<b>Interface type</b>	PPP								
<b>Synopsis</b>	<pre>(config-if)&gt; ip remote &lt;address&gt; (config-if)&gt; no ip remote</pre>								
<b>Arguments</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Argument</th> <th style="text-align: left; padding: 2px;">Value</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px; text-align: center;">address</td> <td style="padding: 2px; text-align: center;"><i>IP address</i></td> <td style="padding: 2px;">A remote peer address.</td> </tr> </tbody> </table>			Argument	Value	Description	address	<i>IP address</i>	A remote peer address.
Argument	Value	Description							
address	<i>IP address</i>	A remote peer address.							

**Example**

```
(config-if)> ip remote 192.168.2.19
Network::Interface::Ppp: "L2TP0": remote address saved.
```

```
(config-if)> no ip remote
Network::Interface::Ppp: "L2TP0": remote address erased.
```

**History**

Version	Description
2.00	The <b>interface ip remote</b> command has been introduced.

### 3.25.104 interface ip tcp adjust-mss

**Description**

Set the limit on the segment size of outgoing **TCP** sessions. If the **MSS** value, which is transmitted in the header of SYN-packets, exceeds the specified limit, command changes it. The command is applied to the interface and affects all outgoing **TCP** SYN packets.

Command with **no** prefix removes all limits from **MSS**.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config-if)> ip tcp adjust-mss (pmtu | <mss> )
```

```
(config-if)> no ip tcp adjust-mss
```

**Arguments**

Argument	Value	Description
pmtu	Keyword	Set the upper limit of <b>MSS</b> , equal to the minimum <b>MTU</b> along the path to the remote peer.
mss	<i>Integer</i>	<b>MSS</b> upper limit.

**Example**

```
(config-if)> ip tcp adjust-mss pmtu
Network::Interface::Ip: "L2TP0": TCP-MSS adjustment enabled.
```

```
(config-if)> ip tcp adjust-mss 1300
Network::Interface::Ip: "L2TP0": TCP-MSS adjustment enabled.
```

```
(config-if)> no ip tcp adjust-mss
Network::Interface::Ip: "L2TP0": TCP-MSS adjustment disabled.
```

**History**

Version	Description
2.00	The <b>interface ip tcp adjust-mss</b> command has been introduced.

## 3.25.105 interface ipcp address

<b>Description</b>	Use address from the remote peer. Command with <b>no</b> prefix disables the setting.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	PPP
<b>Synopsis</b>	<pre>  (config-if)&gt; ipcp address   (config-if)&gt; no ipcp address</pre>

<b>Example</b>	<pre>(config-if)&gt; ipcp address using address from remote peer</pre>
	<pre>(config-if)&gt; no ipcp address not using address from remote peer</pre>

History	Version	Description
	3.09	The <b>interface ipcp address</b> command has been introduced.

## 3.25.106 interface ipcp default-route

<b>Description</b>	Use the remote peer address as default gateway. By default, the setting is enabled. Command with <b>no</b> prefix denies default gateway changing.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	PPP
<b>Synopsis</b>	<pre>  (config-if)&gt; ipcp default-route   (config-if)&gt; no ipcp default-route</pre>

<b>Example</b>	<pre>(config-if)&gt; ipcp default-route Using peer as a default gateway.</pre>
----------------	--

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface ipcp default-route</b> command has been introduced.

### 3.25.107 interface ipcp dns-routes

**Description**

Use routes which are received via [IPCP](#). By default, the setting is enabled.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

PPP

**Synopsis**

```
(config-if)> ipcp dns-routes
```

```
(config-if)> no ipcp dns-routes
```

**Example**

```
(config-if)> ipcp dns-routes
```

DNS routes enabled

```
(config-if)> no ipcp dns-routes
```

DNS routes disabled

**History**

<b>Version</b>	<b>Description</b>
2.02	The <b>interface ipcp dns-routes</b> command has been introduced.

### 3.25.108 interface ipcp name-servers

**Description**

Use [DNS](#) servers addresses which are received via [IPCP](#). By default, the setting is enabled.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

PPP

**Synopsis**

```
(config-if)> ipcp name-servers
```

```
(config-if)> no ipcp name-servers
```

**Example**

```
(config-if)> ipcp name-servers  
using remote name servers.
```

```
(config-if)> no ipcp name-servers  
not using remote name servers.
```

**History**

Version	Description
2.00	The <b>interface ipcp name-servers</b> command has been introduced.

## 3.25.109 interface ipcp vj

**Description** Enable compression of TCP/IP headers by Van Jacobson's method. By default, the setting is disabled.

Command with **no** prefix disables compression.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** PPP

**Synopsis**

```
(config-if)> ipcp vj [cid]
```

```
(config-if)> no ipcp vj
```

**Arguments**

Argument	Value	Description
cid	Keyword	Enable compression of Connection ID into headers.

**Example**

```
(config-if)> ipcp vj cid  
VJ compression enabled.
```

```
(config-if)> no ipcp vj  
VJ compression disabled.
```

**History**

Version	Description
2.03	The <b>interface ipcp vj</b> command has been introduced.

## 3.25.110 interface ipsec encryption-level

**Description** Set encryption level for *IPSec* connection that is automatically associated with the tunnel. By default, the normal value is used.

A detailed description of each level is given in the [Appendix](#).

Command with **no** prefix resets encryption level to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

(config-if)>	<b>ipsec encryption-level &lt;level&gt;</b>
(config-if)>	<b>no ipsec encryption-level</b>

**Arguments**

Argument	Value	Description
level	weak	Weak level, DES and MD5 algorithms enabled.
	normal	Level is compatible with most systems, priority is given to AES128 and SHA1.
	normal-3des	Level is compatible with most systems, priority is given to 3DES and SHA1.
	strong	The strongest level, <i>PFS</i> is mandatory, priority is given to AES256 and SHA1.
	weak-pfs	The same as weak, but for the second phase <i>PFS</i> group 1 and 2 is enabled.
	normal-pfs	The same as normal, but for the second phase <i>PFS</i> group 2 and 5 is enabled.
	normal-3des-pfs	The same as normal-3des, but for the second phase <i>PFS</i> group 5 and 14 is enabled.
	high	A set of modern algorithms for external providers of VPN services.
	strong-aead	The strongest level, priority is given to AES256 and SHA1 with addition of <i>AEAD</i> algorithms.
	strong-aead-pfs	The strongest level, <i>PFS</i> is mandatory, priority is given to AES256 and SHA1 with addition of <i>AEAD</i> algorithms.

**Example**

```
(config-if)> ipsec encryption-level high
Network::Interface::Secure: "IKE0": security level is set to ▶
"high".
```

```
(config-if)> no ipsec encryption-level
Network::Interface::Secure: "IKE0": security level was reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>interface ipsec encryption-level</b> command has been introduced.
3.07	New levels of encryption has been added — high, strong-aead and strong-aead-pfs.

### 3.25.111 interface ipsec force-encaps

**Description** Enable support of *ESP* forced encapsulation in *UDP* for client tunnels. By default, the feature is disabled.

Command with **no** prefix cancels the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> ipsec force-encaps
(config-if)> no ipsec force-encaps
```

**Example**

```
(config-if)> ipsec force-encaps
Network::Interface::Secure: Force ESP in UDP encapsulation ►
enabled.
```

```
(config-if)> no ipsec force-encaps
Network::Interface::Secure: Force ESP in UDP encapsulation ►
disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.12	The <b>interface ipsec force-encaps</b> command has been introduced.

### 3.25.112 interface ipsec ignore

**Description** Disable processing incoming *IKE* packets for *IPSec* service on the interface. By default the command is disabled.

Command with **no** prefix cancels the setting.

**Prefix no** Yes

<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	Secure				
<b>Synopsis</b>	<pre>(config-if)&gt; ipsec ignore           (config-if)&gt; no ipsec ignore</pre>				
<b>Example</b>	<pre>(config-if)&gt; ipsec ignore IpSec::Manager: Interface "Gre0" added to IPsec ignore list.  (config-if)&gt; no ipsec ignore IpSec::Manager: Interface "Gre0" removed from IPsec ignore list.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.10</td> <td>The <b>interface ipsec ignore</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.10	The <b>interface ipsec ignore</b> command has been introduced.
Version	Description				
2.10	The <b>interface ipsec ignore</b> command has been introduced.				

### 3.25.113 interface ipsec ikev2

<b>Description</b>	Enable IKEv2 protocol for <i>IPSec</i> connection that is automatically associated with the tunnel. By default, IKEv1 is used.				
	Command with <b>no</b> prefix resets setting to default.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	Secure				
<b>Synopsis</b>	<pre>(config-if)&gt; ipsec ikev2           (config-if)&gt; no ipsec ikev2</pre>				
<b>Example</b>	<pre>(config-if)&gt; ipsec ikev2 Network::Interface::Secure: IKEv2 is enabled.  (config-if)&gt; no ipsec ikev2 Network::Interface::Secure: IKEv2 is disabled, enable IKEv1.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.10</td> <td>The <b>interface ipsec ikev2</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.10	The <b>interface ipsec ikev2</b> command has been introduced.
Version	Description				
2.10	The <b>interface ipsec ikev2</b> command has been introduced.				

## 3.25.114 interface ipsec nail-up

**Description** Enable automatic changes of the secret keys for L2TP/IPsec, EoIP/IPsec, Gre/IPsec, IPIP/IPsec tunnels. By default, setting is enabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> ipsec nail-up
```

```
(config-if)> no ipsec nail-up
```

**Example**

```
(config-if)> ipsec nail-up
```

Network::Interface::Secure: SA renegotiation enabled.

```
(config-if)> no ipsec nail-up
```

Network::Interface::Secure: SA renegotiation disabled.

**History**

Version	Description
2.12	The <b>interface ipsec nail-up</b> command has been introduced.

## 3.25.115 interface ipsec name-servers

**Description** Use **DNS** server addresses which are received via IKEv1 or IKEv2 **IPSec** server. By default, the function is enabled.

Command with **no** prefix denies using of **DNS** server addresses which are received via IKEv1 and IKEv2 **IPSec** server.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> ipsec name-servers
```

```
(config-if)> no ipsec name-servers
```

**Example**

```
(config-if)> ipsec name-servers
IpSec::Interface::Ike: "IKE0": automatic name servers via IKE ►
Configuration Payload are enabled.
```

```
(config-if)> no ipsec name-servers
IpSec::Interface::Ike: "IKE0": automatic name servers via IKE ►
Configuration Payload are disabled.
```

History	Version	Description
	3.06	The <b>interface ipsec name-servers</b> command has been introduced.

## 3.25.116 interface ipsec preshared-key

**Description** Set PSK key for *IPSec* connection that is automatically associated with the tunnel. Command also enables *IPSec* for this tunnel.

Command with **no** prefix resets the key.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> ipsec preshared-key <key>
(config-if)> no ipsec preshared-key
```

Arguments	Argument	Value	Description
	key	String	Secret PSK key value.

**Example**

```
(config-if)> ipsec preshared-key 12345678
Network::Interface::Secure: "Gre0": preshared key was set.
```

```
(config-if)> no ipsec preshared-key
Network::Interface::Secure: "Gre0": preshared key was reset.
```

History	Version	Description
	2.08	The <b>interface ipsec preshared-key</b> command has been introduced.

## 3.25.117 interface ipsec proposal lifetime

**Description** Set lifetime of *IPSec* transformation Phase1 on the interface. By default, the value 28800 is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

(config-if)>	<b>ipsec proposal lifetime &lt;lifetime&gt;</b>
(config-if)>	<b>no ipsec proposal lifetime</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	lifetime	<i>Integer</i>	Lifetime of <i>IPSec</i> transformation in seconds. Can take values in the range from 60 to 2147483647.

**Example**

```
(config-if)> ipsec proposal lifetime 222222
Network:::Interface::Secure: IPsec IKE proposal lifetime set to ▶
222222 s.
```

```
(config-if)> no ipsec proposal lifetime
Network:::Interface::Secure: IPsec IKE proposal lifetime reset ▶
to 28800 s.
```

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.11	The <b>interface ipsec proposal lifetime</b> command has been introduced.

## 3.25.118 interface ipsec proposal local-id

**Description** Set custom local identifier for *IKE*.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> ipsec proposal local-id <local-id>
(config-if)> no ipsec proposal local-id
```

**Arguments**

Argument	Value	Description
local-id	String	IP address or domain name of local host.

**Example**

```
(config-if)> ipsec proposal local-id 192.168.8.4
Network::Interface::Secure: Set IKE local ID to "192.168.8.4".
(config-if)> no ipsec proposal local-id
Network::Interface::Secure: Reset IKE local ID.
```

**History**

Version	Description
3.08	The interface ipsec proposal local-id command has been introduced.

### 3.25.119 interface ipsec proposal remote-id

**Description** Set custom remote identifier for [IKE](#).

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> ipsec proposal remote-id <remote-id>
(config-if)> no ipsec proposal remote-id
```

**Arguments**

Argument	Value	Description
remote-id	String	IP address or domain name of remote host.

**Example**

```
(config-if)> ipsec proposal remote-id my.domain.com
Network::Interface::Secure: Set IKE remote ID to "my.domain.com".
(config-if)> no ipsec proposal remote-id
Network::Interface::Secure: Reset IKE remote ID.
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>interface ipsec proposal remote-id</b> command has been introduced.

## 3.25.120 interface ipsec transform-set lifetime

**Description** Set lifetime of **IPSec** transformation Phase2 on the interface. By default, the value 28800 is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Secure

**Synopsis**

```
(config-if)> ipsec transform-set lifetime <lifetime>
(config-if)> no ipsec transform-set lifetime
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
lifetime	<i>Integer</i>	Lifetime of <b>IPSec</b> transformation in seconds. Can take values in the range from 60 to 2147483647.

**Example**

```
(config-if)> ipsec transform-set lifetime 2222222
Network:::Interface::Secure: IPsec ESP transform-set lifetime set ▶
to 2222222 s.
```

```
(config-if)> no ipsec transform-set lifetime
Network:::Interface::Secure: IPsec ESP transform-set lifetime ▶
reset to 28800 s.
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>interface ipsec transform-set lifetime</b> command has been introduced.

## 3.25.121 interface ipv6 address

**Description** Configure an IPv6 address on the interface. If the argument is **auto**, address is autoconfigured. Passing a literal address as an argument will assign it statically.

Command with **no** prefix removes the setting.

<b>Prefix no</b>	Yes												
<b>Change settings</b>	Yes												
<b>Multiple input</b>	Yes												
<b>Synopsis</b>	<pre>(config-if)&gt; <b>ipv6 address</b> (&lt;address&gt;   &lt;block&gt;   <b>auto</b>)   (config-if)&gt; <b>no ipv6 address</b> [&lt;address&gt;   &lt;block&gt;   <b>auto</b>]</pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>address</td><td><i>IPv6 address</i></td><td>The network interface address.</td></tr> <tr> <td>block</td><td><i>IPv6 address</i></td><td>The network interface address with mask.</td></tr> <tr> <td>auto</td><td><i>Keyword</i></td><td>Enable stateless autoconfiguration.</td></tr> </tbody> </table>	Argument	Value	Description	address	<i>IPv6 address</i>	The network interface address.	block	<i>IPv6 address</i>	The network interface address with mask.	auto	<i>Keyword</i>	Enable stateless autoconfiguration.
Argument	Value	Description											
address	<i>IPv6 address</i>	The network interface address.											
block	<i>IPv6 address</i>	The network interface address with mask.											
auto	<i>Keyword</i>	Enable stateless autoconfiguration.											
<b>Example</b>	<pre>(config-if)&gt; <b>ipv6 address</b> 2a01:291:2:612:52ff:20ff:fe00:1e87 Network::Interface::Ip6: "GigabitEthernet1": added static address ▶ 2a01:291:2:612:52ff:20ff:fe00:1e87.</pre> <pre>(config-if)&gt; <b>ipv6 address</b> 2001:db8::1 Network::Interface::Ip6: "GigabitEthernet1": added static address ▶ 2001:db8::1.</pre> <pre>(config-if)&gt; <b>ipv6 address</b> fd08:a648:e303::3/64 Network::Interface::Ip6: "GigabitEthernet1": added static address ▶ fd08:a648:e303::3/64.</pre> <pre>(config-if)&gt; <b>no ipv6 address</b> 2a01:291:2:612:52ff:20ff:fe00:1e87 Network::Interface::Ip6: "GigabitEthernet1": removed static ▶ address 2a01:291:2:612:52ff:20ff:fe00:1e87.</pre> <pre>(config-if)&gt; <b>no ipv6 address</b> Network::Interface::Ip6: "GigabitEthernet1": cleared addresses.</pre>												
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>interface ipv6 address</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>interface ipv6 address</b> command has been introduced.								
Version	Description												
2.00	The <b>interface ipv6 address</b> command has been introduced.												

### 3.25.122 interface ipv6 dhcp client pd hint

<b>Description</b>	Configure DHCPv6 client prefix delegation hint.  Command with <b>no</b> prefix removes the setting.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

**Synopsis**

```
(config-if)> ipv6 dhcp client pd hint <prefix>
(config-if)> no ipv6 dhcp client pd hint
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
prefix	<i>Prefix</i>	Requested IPv6 prefix or only its length if specified as ::/length.

**Example**

```
(config-if)> ipv6 dhcp client pd hint fd08:a648:e303::/64
Ip6::Dhcp::Client: "GigabitEthernet1": set a prefix delegation ▶
hint to "fd08:a648:e303::/64".
```

```
(config-if)> ipv6 dhcp client pd hint ::/64
Ip6::Dhcp::Client: "GigabitEthernet1": set a prefix delegation ▶
hint to "::/64".
```

```
(config-if)> no ipv6 dhcp client pd hint
Ip6::Dhcp::Client: "GigabitEthernet1": reset prefix delegation ▶
hint.
```

**History**

<b>Version</b>	<b>Description</b>
4.01	The <b>interface ipv6 dhcp client pd hint</b> command has been introduced.

## 3.25.123 interface ipv6 id

**Description** Set the way of IPv6 interface identifier generation. By default, the eui64 value is used.

Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-if)> ipv6 id (<suffix> | eui64 | random)
(config-if)> no ipv6 id
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
suffix	<i>Suffix</i>	The static suffix.
eui64	<i>Keyword</i>	The identifier is based on the interface MAC address.
random	<i>Keyword</i>	Random generation of the interface identifier.

**Example**

```
(config-if)> ipv6 id ::2
Network::Interface::Ip6: "Bridge0": interface ID is set to ::2.

(config-if)> ipv6 id eui64
Network::Interface::Ip6: "Bridge0": interface ID is set to eui64.

(config-if)> ipv6 id random
Network::Interface::Ip6: "Bridge0": interface ID is set to random.

(config-if)> no ipv6 id
Network::Interface::Ip6: "Bridge0": interface ID is reset to ▶
default value.
```

**History**

<b>Version</b>	<b>Description</b>
4.01	The <b>interface ipv6 id</b> command has been introduced.

### 3.25.124 interface ipv6 name-servers

**Description** Configure retrieval of [DNS](#) information. When **auto** is set, enables DHCPv6 name-server requests.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-if)&gt; <b>ipv6 name-servers (auto)</b></pre>
<pre>(config-if)&gt; <b>no ipv6 name-servers [auto]</b></pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
auto	<i>Keyword</i>	Enable name-server autoconfiguration.

**Example**

```
(config-if)> ipv6 name-servers auto
Name servers provided by the interface network are accepted.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface ipv6 name-servers</b> command has been introduced.

## 3.25.125 interface ipv6 prefix

**Description** Configure prefix delegation. When **auto** is set, prefix is requested via DHCPv6-PD.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-if)>	<b>ipv6 prefix</b> (<prefix>   <b>auto</b> )
(config-if)>	<b>no ipv6 prefix</b> [<prefix>   <b>auto</b> ]

**Arguments**

Argument	Value	Description
auto	<i>Keyword</i>	Enable prefix delegation.
prefix	<i>Prefix</i>	Manual input of prefix.

**Example**

```
(config-if)> ipv6 prefix 2001:db8:43:ab12::/64
Static IPv6 prefix added.
```

**History**

Version	Description
2.00	The <b>interface ipv6 prefix</b> command has been introduced.

## 3.25.126 interface ipv6cp

**Description** Enable *IPv6CP* support during establishing connection.

Command with **no** prefix disables *IPv6CP*.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** PPP

**Synopsis**

(config-if)>	<b>ipv6cp</b>
(config-if)>	<b>no ipv6cp</b>

**Example**

```
(config-if)> ipv6cp
IPv6CP enabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface ipv6cp</b> command has been introduced.

## 3.25.127 interface lcp acfc

**Description**

Enable compression negotiation of the *Data Link Layer Address and Control fields*. By default, the feature is disabled.

Command with **no** prefix disables this option and all the remote peer requests for the **ACFC** negotiation will be rejected.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

PPP

**Synopsis**

```
(config-if)> lcp acfc [cid]
```

```
(config-if)> no lcp acfc
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
cid	Keyword	Enable compression of Connection ID into headers.

**Example**

```
(config-if)> lcp acfc cid
```

ACFC compression enabled

```
(config-if)> no lcp acfc cid
```

ACFC compression disabled

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>interface lcp acfc</b> command has been introduced.

## 3.25.128 interface lcp echo

**Description**

Specify the testing rules of the **PPP** connection with **LCP** echo tools.

By default, interval is set to 30, count is set to 3.

Command with **no** prefix disables **LCP** echo.

**Prefix no**

Yes

**Change settings**

Yes

<b>Multiple input</b>	No												
<b>Interface type</b>	PPP												
<b>Synopsis</b>	<pre>(config-if)&gt; lcp echo &lt;interval&gt; &lt;count&gt; [adaptive] (config-if)&gt; no lcp echo</pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>interval</td><td><i>Integer</i></td><td>Interval between sending <i>LCP</i> echo, in seconds. If within the specified time interval there is no <i>LCP</i> echo request from the remote location, the same request will be sent there asking for response <i>LCP</i> reply.</td></tr> <tr> <td>count</td><td><i>Integer</i></td><td>The number of consecutive requests <i>LCP</i> echo sent, for which no response <i>LCP</i> reply was received. If count of <i>LCP</i> echo requests goes unanswered, the connection is terminated.</td></tr> <tr> <td>adaptive</td><td><i>Keyword</i></td><td>Pppd will send LCP echo-request frames only if no traffic was received from the peer since the last echo-request was sent.</td></tr> </tbody> </table>	Argument	Value	Description	interval	<i>Integer</i>	Interval between sending <i>LCP</i> echo, in seconds. If within the specified time interval there is no <i>LCP</i> echo request from the remote location, the same request will be sent there asking for response <i>LCP</i> reply.	count	<i>Integer</i>	The number of consecutive requests <i>LCP</i> echo sent, for which no response <i>LCP</i> reply was received. If count of <i>LCP</i> echo requests goes unanswered, the connection is terminated.	adaptive	<i>Keyword</i>	Pppd will send LCP echo-request frames only if no traffic was received from the peer since the last echo-request was sent.
Argument	Value	Description											
interval	<i>Integer</i>	Interval between sending <i>LCP</i> echo, in seconds. If within the specified time interval there is no <i>LCP</i> echo request from the remote location, the same request will be sent there asking for response <i>LCP</i> reply.											
count	<i>Integer</i>	The number of consecutive requests <i>LCP</i> echo sent, for which no response <i>LCP</i> reply was received. If count of <i>LCP</i> echo requests goes unanswered, the connection is terminated.											
adaptive	<i>Keyword</i>	Pppd will send LCP echo-request frames only if no traffic was received from the peer since the last echo-request was sent.											

<b>Example</b>	<pre>(config-if)&gt; lcp echo 20 2 Network::Interface::Ppp: "PPPoE0": LCP echo parameters updated.  (config-if)&gt; no lcp echo Network::Interface::Ppp: "PPPoE0": LCP echo disabled.</pre>
----------------	---

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>interface lcp echo</b> command has been introduced.</td></tr> <tr> <td>2.06</td><td>The adaptive keyword has been added.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>interface lcp echo</b> command has been introduced.	2.06	The adaptive keyword has been added.
Version	Description						
2.00	The <b>interface lcp echo</b> command has been introduced.						
2.06	The adaptive keyword has been added.						

## 3.25.129 interface lcp pfc

<b>Description</b>	Enable compression negotiation of the <i>PPP Protocol field</i> . By default, the feature is disabled.  Command with <b>no</b> prefix disables this option and all the remote peer requests for the <i>PFC</i> negotiation will be rejected.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	PPP

**Synopsis**

```
(config-if)> lcp pfc [cid]
```

```
(config-if)> no lcp pfc
```

**Arguments**

Argument	Value	Description
cid	Keyword	Enable compression of Connection ID into headers.

**Example**

```
(config-if)> lcp pfc cid
PFC compression enabled
```

```
(config-if)> no lcp pfc cid
PFC compression disabled
```

**History**

Version	Description
2.03	The <b>interface lcp pfc</b> command has been introduced.

## 3.25.130 interface ldpc

**Description** Enable the [LDPC](#) code for AP 5 GHz. By default, the feature is disabled.

Command with **no** prefix disables this feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFiMaster

**Synopsis**

(config-if)> ldpc
(config-if)> no ldpc

**Example**

```
(config-if)> ldpc
Network::Interface::Rtx::WiFiMaster: "WiFiMaster1": LDPC enabled.
```

```
(config-if)> no ldpc
Network::Interface::Rtx::WiFiMaster: "WiFiMaster1": LDPC disabled.
```

**History**

Version	Description
2.07	The <b>interface ldpc</b> command has been introduced.

## 3.25.131 interface led wan

<b>Description</b>	Display the interface status by means of LED. SelectedWan control should be chosen with <a href="#">system led</a> command. By default, function is disabled.  Command with <b>no</b> prefix disables the feature.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config-if)&gt; led wan (config-if)&gt; no led wan</pre>
<b>Example</b>	<pre>(config-if)&gt; led wan Network:::Interface::Led: Selected WAN GigabitEthernet1.  (config-if)&gt; no led wan Network:::Interface::Led: Selected no WAN.</pre>

History	Version	Description
	2.08	The <b>interface led wan</b> command has been introduced.

## 3.25.132 interface lldp disable

<b>Description</b>	Disable <a href="#">LLDP</a> agent on interface. By default, the feature is enabled.  Command with <b>no</b> prefix enables <a href="#">LLDP</a> agent.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config-if)&gt; lldp disable (config-if)&gt; no lldp disable</pre>
<b>Example</b>	<pre>(config-if)&gt; lldp disable Network:::DiscoveryManager: LLDP agent is disabled on interface ▶ "ISP".  (config-if)&gt; no lldp disable Network:::DiscoveryManager: LLDP agent is enabled on interface ▶ "ISP".</pre>

History	Version	Description
	2.11	The <b>interface lldp disable</b> command has been introduced.

### 3.25.133 interface mac access-list address

**Description** Add a MAC address to the permit/deny filtering list of the interface. Type of access list is set with **interface mac access-list type** command.

Command with **no** prefix removes the specified MAC address from the [ACL](#).

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** Access Point

**Synopsis**

```
(config-if)> mac access-list address <address>
(config-if)> no mac access-list address <address>
```

Arguments	Argument	Value	Description
	address	MAC address	A MAC address to be added to the <a href="#">ACL</a> .

**Example**

```
(config-if)> mac access-list address 64:a2:f9:53:b2:12
Network::Interface::Ethernet: "WifiMaster0/AccessPoint1": added ▶
64:a2:f9:53:b2:12 to the ACL.
```

```
(config-if)> no mac access-list address 64:a2:f9:53:b2:12
Network::Interface::Ethernet: "WifiMaster0/AccessPoint1": removed ▶
64:a2:f9:53:b2:12 from the ACL.
```

```
(config-if)> no mac access-list address
Network::Interface::Ethernet: "WifiMaster0/AccessPoint1": ACL ▶
cleared.
```

History	Version	Description
	2.00	The <b>interface mac access-list address</b> command has been introduced.

### 3.25.134 interface mac access-list type

**Description** Set the type for filtering list of the interface. Type is not defined by default (none value assigned).

<b>Prefix no</b>	No										
<b>Change settings</b>	Yes										
<b>Multiple input</b>	No										
<b>Interface type</b>	Access Point										
<b>Synopsis</b>	(config-if)> <b>mac access-list type &lt;type&gt;</b>										
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td rowspan="3">type</td><td>none</td><td>Type of filtering list is not defined.</td></tr> <tr> <td>permit</td><td>Only approved MAC addresses will be added to the list.</td></tr> <tr> <td>deny</td><td>Only restricted MAC addresses will be added to the list.</td></tr> </tbody> </table>	Argument	Value	Description	type	none	Type of filtering list is not defined.	permit	Only approved MAC addresses will be added to the list.	deny	Only restricted MAC addresses will be added to the list.
Argument	Value	Description									
type	none	Type of filtering list is not defined.									
	permit	Only approved MAC addresses will be added to the list.									
	deny	Only restricted MAC addresses will be added to the list.									
<b>Example</b>	(config-if)> <b>mac access-list type permit</b> Network::Interface::Ethernet: "WifiMaster0/AccessPoint1": ACL ► type changed to permit.										
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>interface mac access-list type</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>interface mac access-list type</b> command has been introduced.						
Version	Description										
2.00	The <b>interface mac access-list type</b> command has been introduced.										

### 3.25.135 interface mac address

<b>Description</b>	Set the MAC address to the specified network interface. Address is specified in hexadecimal format <code>00:00:00:00:00:00</code> . The command allows one to assign arbitrary address, but warns the user if the new address “multicast” bit is set or “OUI enforced” bit is cleared.  Command with <b>no</b> prefix resets the original MAC addresses on the interface.  Warning: Change MAC address on Wi-Fi interface is prohibited.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	MAC
<b>Synopsis</b>	<pre>(config-if)&gt; <b>mac address &lt;mac&gt;</b> (config-if)&gt; <b>no mac address</b></pre>

**Arguments**

Argument	Value	Description
mac	MAC address	New MAC address of the interface.

**Example**

(config-if)&gt; mac address 3C:1F:6E:2A:1C:BA

(config-if)&gt; no mac address

**History**

Version	Description
2.00	The <b>interface mac address</b> command has been introduced.

### 3.25.136 interface mac address factory

**Description** Set the factory MAC address to the interface.**Prefix no** No**Change settings** Yes**Multiple input** No**Interface type** MAC**Synopsis** (config-if)> **mac address factory <name>****Arguments**

Argument	Value	Description
name	lan	"LAN" MAC address will be assigned to the interface.
	wan	"WAN" MAC address will be assigned to the interface.
	wlan5	"WLAN5" MAC address will be assigned to the interface.

**Example**(config-if)> **mac address factory lan**  
Core::System::UConfig: done.**History**

Version	Description
2.00	The <b>interface mac address factory</b> command has been introduced.

### 3.25.137 interface mac band

**Description** Bind a registered host to a 2.4 GHz or 5 GHz frequency band.

Command with **no** prefix removes the binding. If you use no argument, the entire list of bindings will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** Bridge

**Synopsis**

```
(config-if)> mac band <mac> <band>
(config-if)> no mac band [ <mac> ]
```

**Arguments**

Argument	Value	Description
mac	MAC address	MAC address of the registered client.
band	0	2,4 GHz band.
	1	5 GHz band.

**Example**

```
(config-if)> mac band c0:b8:83:c2:cb:11 0
Network::Interface::Rtx::MacBand: "Bridge0": bound ▶
c0:b8:83:c2:cb:11 to 2.4 GHz.
```

```
(config-if)> mac band c0:b8:83:c2:cb:11 1
Network::Interface::Rtx::MacBand: "Bridge0": bound ▶
c0:b8:83:c2:cb:11 to 5 GHz.
```

```
(config-if)> no mac band c0:b8:83:c2:cb:85
Network::Interface::Rtx::MacBand: "Bridge0": unbound ▶
c0:b8:83:c2:cb:85 from 2.4 GHz.
```

```
(config-if)> no mac band
Network::Interface::Rtx::MacBand: Unbound all hosts.
```

**History**

Version	Description
3.05	The <b>interface mac band</b> command has been introduced.

### 3.25.138 interface mac bssid

**Description** Specify the Access Point's MAC address to connect to [WISP](#).

Command with **no** prefix removes the MAC address.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

<b>Interface type</b>	WifiStation						
<b>Synopsis</b>	<pre>(config-if)&gt; mac bssid &lt;bssid&gt; (config-if)&gt; no mac bssid</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>bssid</td> <td>MAC address</td> <td>MAC address of WISP Access Point.</td> </tr> </tbody> </table>	Argument	Value	Description	bssid	MAC address	MAC address of WISP Access Point.
Argument	Value	Description					
bssid	MAC address	MAC address of WISP Access Point.					

<b>Example</b>	<pre>(config-if)&gt; mac bssid 56:ff:20:00:1e:11 Network::Interface::WifiStation: BSSID set to 56:ff:20:00:1e:11.  (config-if)&gt; no mac bssid Network::Interface::WifiStation: BSSID cleared.</pre>
----------------	---

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.13</td><td>The <b>interface mac bssid</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.13	The <b>interface mac bssid</b> command has been introduced.
Version	Description				
2.13	The <b>interface mac bssid</b> command has been introduced.				

### 3.25.139 interface mac clone

**Description** Clone the MAC address from the operator's PC to the interface.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** MAC, IP

<b>Synopsis</b>	<pre>(config-if)&gt; mac clone</pre>
-----------------	--------------------------------------

<b>Example</b>	<pre>(config-if)&gt; mac clone</pre>
----------------	--------------------------------------

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>interface mac clone</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>interface mac clone</b> command has been introduced.
Version	Description				
2.00	The <b>interface mac clone</b> command has been introduced.				

### 3.25.140 interface openvpn accept-routes

**Description** Enable receiving routes from a remote side via OpenVPN.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

<b>Multiple input</b>	No				
<b>Interface type</b>	OpenVPN				
<b>Synopsis</b>	<pre>(config-if)&gt; <b>openvpn accept-routes</b> (config-if)&gt; <b>no openvpn accept-routes</b></pre>				
<b>Example</b>	<pre>(config-if)&gt; <b>openvpn accept-routes</b> Network::Interface::OpenVpn: "OpenVPN0": enable automatic routes ▶ accept via tunnel.</pre> <pre>(config-if)&gt; <b>no openvpn accept-routes</b> Network::Interface::OpenVpn: "OpenVPN0": disable automatic routes ▶ accept via tunnel.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.10</td> <td>The <b>interface openvpn accept-routes</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.10	The <b>interface openvpn accept-routes</b> command has been introduced.
Version	Description				
2.10	The <b>interface openvpn accept-routes</b> command has been introduced.				

### 3.25.141 interface openvpn connect

<b>Description</b>	Set interface for OpenVPN connection. If you use no argument, connection is set via any interface.						
<b>Prefix no</b>	No						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	OpenVPN						
<b>Synopsis</b>	<pre>(config-if)&gt; <b>openvpn connect [via &lt;via&gt;]</b> (config-if)&gt; <b>openvpn connect</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>via</td> <td><i>Interface</i></td> <td>Full interface name or an alias.</td> </tr> </tbody> </table>	Argument	Value	Description	via	<i>Interface</i>	Full interface name or an alias.
Argument	Value	Description					
via	<i>Interface</i>	Full interface name or an alias.					
<b>Example</b>	<pre>(config-if)&gt; <b>openvpn connect via ISP</b> Network::Interface::OpenVpn: "OpenVPN0": set connection via ISP.</pre> <pre>(config-if)&gt; <b>openvpn connect</b> Network::Interface::OpenVpn: "OpenVPN0": set connection via any ▶ interface.</pre>						

History	Version	Description
	2.10	The <b>interface openvpn connect</b> command has been introduced.

### 3.25.142 interface openvpn name-servers

<b>Description</b>	Use <a href="#">DNS</a> server addresses which are received via OpenVPN server. By default, the function is enabled.
	Command with <b>no</b> prefix denies using of <a href="#">DNS</a> server addresses which are received via OpenVPN server.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	OpenVPN
<b>Synopsis</b>	<pre>(config-if)&gt; openvpn name-servers (config-if)&gt; no openvpn name-servers</pre>
<b>Example</b>	<pre>(config-if)&gt; openvpn name-servers Network::Interface::OpenVpn: "OpenVPN0": automatic name servers ▶ via tunnel are enabled.  (config-if)&gt; no openvpn name-servers Network::Interface::OpenVpn: "OpenVPN0": automatic name servers ▶ via tunnel are disabled.</pre>

History	Version	Description
	3.06	The <b>interface openvpn name-servers</b> command has been introduced.

### 3.25.143 interface peer

<b>Description</b>	Specify ID of the remote peer to which the <a href="#">PPP</a> connection will be used. A more precise meaning of configuration depends on interface type. For example, for PPPoE the <b>interface peer</b> command specifies the name of access hub, for PPTP — remote host name or IP address, and for SSTP — specifies a remote server with port 443 or another.
	Command with <b>no</b> prefix cancels the setting.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

**Multiple input**

No

**Interface type**

PPP

**Synopsis**

```
(config-if)> peer <peer>
```

```
(config-if)> no peer
```

**Arguments**

Argument	Value	Description
peer	<i>String</i>	Remote connection point ID or remote server address host.example.net:port. By default, port number is 443.

**Example**

```
(config-if)> peer 111
```

```
(config-if)> peer host.example.net:5555
```

**History**

Version	Description
2.00	The <b>interface peer</b> command has been introduced.
2.12	Added the ability to change the port of a remote server.

## 3.25.144 interface peer-isolation

**Description**

Enable the isolation of wireless clients in the Home segment. The setting applies on the Bridge interface and has an effect for all access points included in it. Also, it blocks traffic from wireless clients inside the L2 network.

Command with **no** prefix cancels the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Bridge

**Synopsis**

```
(config-if)> peer-isolation
```

```
(config-if)> no peer-isolation
```

**Example**

```
(config-if)> peer-isolation
```

```
Network::Interface::Ethernet: "Bridge0": peer isolation enabled.
```

```
(config-if)> no peer-isolation
```

```
Network::Interface::Ethernet: "Bridge0": peer isolation disabled.
```

History	Version	Description
	2.10	The <b>interface peer-isolation</b> command has been introduced.

### 3.25.145 interface ping-check profile

**Description** Assign *Ping Check* profile to the interface.

Command with **no** prefix cancels the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-if)> <b>ping-check profile</b> < <i>profile</i> >
(config-if)> <b>no ping-check profile</b>

Arguments	Argument	Value	Description
	profile	<i>String</i>	Profile name to assign.

**Example**

(config-if)> <b>ping-check profile test</b>
PingCheck::Client: Set ping-check profile for interface "ISP".
(config-if)> <b>no ping-check profile</b>
PingCheck::Client: Reset ping-check profile for interface "ISP".

History	Version	Description
	2.04	The <b>interface ping-check profile</b> command has been introduced.

### 3.25.146 interface ping-check restart

**Description** Enable interface restart if *Ping Check* is triggered (Internet is not available on interface). By default the function is disabled.

Command with **no** prefix disables the function.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-if)> <b>ping-check restart</b> [ < <i>interface</i> > ]
---

```
(config-if)> no ping-check restart
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Full name or alias of the interface to be restarted when the <i>Ping Check</i> on the binded interface is triggered. If this argument is not specified, the interface binded with <i>Ping Check</i> profile will be restarted.

**Example**

```
(config-if)> ping-check restart
PingCheck::Client: Enabled "PPPoE0" interface restart.

(config-if)> ping-check restart ISP
PingCheck::Client: Enabled "ISP" interface restart for "PPPoE0".

(config-if)> no ping-check restart
PingCheck::Client: Remove restart settings for "PPPoE0".
```

**History**

Version	Description
3.04	The <b>interface ping-check restart</b> command has been introduced.

## 3.25.147 interface pmf

**Description**

Enable *PMF* functionality.

Command with **no** prefix disables the feature.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

WiFi

**Synopsis**

```
(config-if)> pmf
```

```
(config-if)> no pmf
```

**Example**

```
(config-if)> pmf
Network::Interface::Rtx::WifiStation: "WifiMaster0/WifiStation0": ▶
PMF enabled.

(config-if)> no pmf
Network::Interface::Rtx::WifiStation: "WifiMaster0/WifiStation0": ▶
PMF disabled.
```

History	Version	Description
	2.09	The <b>interface pmf</b> command has been introduced.

### 3.25.148 interface pmksa-lifetime

<b>Description</b>	Change the <b>PMK</b> cache lifetime. By default, the value 1440 is set.							
<b>Prefix no</b>	No							
<b>Change settings</b>	Yes							
<b>Multiple input</b>	No							
<b>Interface type</b>	WiFiMaster							
<b>Synopsis</b>	<pre>(config-if)&gt; <b>pmksa-lifetime &lt;pmksa-lifetime&gt;</b></pre>							
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>pmksa-lifetime</td> <td><i>Integer</i></td> <td>Lifetime value, in minutes.</td> </tr> </tbody> </table>		Argument	Value	Description	pmksa-lifetime	<i>Integer</i>	Lifetime value, in minutes.
Argument	Value	Description						
pmksa-lifetime	<i>Integer</i>	Lifetime value, in minutes.						
<b>Example</b>	<pre>(config-if)&gt; <b>interface WifiMaster1 pmksa-lifetime 43200</b> Network::Interface::Mtk::WifiMaster: "WifiMaster1": PMKSA cache ▶ lifetime updated.</pre>							
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>4.01</td> <td>The <b>interface pmksa-lifetime</b> command has been introduced.</td> </tr> </tbody> </table>		Version	Description	4.01	The <b>interface pmksa-lifetime</b> command has been introduced.		
Version	Description							
4.01	The <b>interface pmksa-lifetime</b> command has been introduced.							

### 3.25.149 interface power

<b>Description</b>	Set the transmitter power for the radio interface. Transmitter power is limited by the hardware capabilities and state laws applicable to radio broadcast. This command allows one to only reduce the power of the transmitter relative to its maximum power, such as to decrease potential interference with other devices in this range/band. By default, the setting value of the power is set to 100.
<b>Prefix no</b>	No
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	Radio
<b>Synopsis</b>	<pre>(config-if)&gt; <b>power &lt;power&gt;</b></pre>

**Arguments**

Argument	Value	Description
power	<i>Integer</i>	The transmitter power as the percentage of the maximum power (from 1 to 100).

**Example**

```
(config-if)> power 1
Network::Interface::Rtx::WifiMaster: "WifiMaster0": TX power ▶
level set.
```

**History**

Version	Description
2.00	The <b>interface power</b> command has been introduced.

## 3.25.150 interface pppoe service

**Description** Specify PPPoE service. If service is not defined, then PPPoE client will be connected to an arbitrary service.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** PPPoE

**Synopsis**

```
(config-if)> pppoe service <service>
(config-if)> no pppoe service
```

**Arguments**

Argument	Value	Description
service	<i>String</i>	Name of PPPoE service.

**Example**

```
(config-if)> pppoe service TEST
Network::Interface::Pppoe: "PPPoE0": service set.
```

```
(config-if)> no pppoe service
Network::Interface::Pppoe: "PPPoE0": service removed.
```

**History**

Version	Description
2.05	The <b>interface pppoe service</b> command has been introduced.

## 3.25.151 interface pppoe session auto-cleanup

**Description** Enable sending a PADT packet for the unfinished PPPoE session. By default the option is enabled.

Command with **no** prefix disables sending a PADT packet.

<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	PPPoE				
<b>Synopsis</b>	<pre>(config-if)&gt; pppoe session auto-cleanup (config-if)&gt; no pppoe session auto-cleanup</pre>				
<b>Example</b>	<pre>(config-if)&gt; pppoe session auto-cleanup Network::Interface::Ppp: "PPPoE0": enabled session auto cleanup.  (config-if)&gt; no pppoe session auto-cleanup Network::Interface::Ppp: "PPPoE0": disabled session auto cleanup.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.03</td> <td>The <b>interface pppoe session auto-cleanup</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	3.03	The <b>interface pppoe session auto-cleanup</b> command has been introduced.
Version	Description				
3.03	The <b>interface pppoe session auto-cleanup</b> command has been introduced.				

### 3.25.152 interface preamble-short

<b>Description</b>	Use short <i>preamble</i> . By default, the setting is disabled.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	Radio
<b>Synopsis</b>	<pre>(config-if)&gt; preamble-short (config-if)&gt; no preamble-short</pre>
<b>Example</b>	<pre>(config-if)&gt; preamble-short Network::Interface::Rtx::WifiMaster: "WifiMaster0": short ▶ preamble enabled.  (config-if)&gt; no preamble-short Network::Interface::Rtx::WifiMaster: "WifiMaster0": short ▶ preamble disabled.</pre>

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface preamble-short</b> command has been introduced.

## 3.25.153 interface proxy connect

**Description** Start the process of connecting to the proxy server. By default, connection is set via any interface.

Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Proxy

**Synopsis**

```
(config-if)> proxy connect [ via <via> ]
(config-if)> no proxy connect
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
via	Interface	Interface through which remote node is accessed.

**Example**

```
(config-if)> proxy connect via WifiMaster1/WifiStation0
Proxy::Interface: "Proxy0": set connection via ▶
WifiMaster1/WifiStation0.
```

```
(config-if)> no proxy connect
Proxy::Interface: "Proxy0": set connection via any interface.
```

**History**

<b>Version</b>	<b>Description</b>
3.09	The <b>interface proxy connect</b> command has been introduced.

## 3.25.154 interface proxy protocol

**Description** Set the connection protocol. By default, the http protocol and [TCP](#) connection is used for proxy server.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

<b>Multiple input</b>	No									
<b>Interface type</b>	Proxy									
<b>Synopsis</b>	<pre>(config-if)&gt; proxy protocol &lt;protocol&gt; (config-if)&gt; no proxy protocol</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>protocol</td><td>socks5</td><td>Use <b>SOCKS5</b> protocol for connection.</td></tr> <tr> <td></td><td>http</td><td>Use <b>HTTP or HTTPS</b> protocol for connection.</td></tr> </tbody> </table>	Argument	Value	Description	protocol	socks5	Use <b>SOCKS5</b> protocol for connection.		http	Use <b>HTTP or HTTPS</b> protocol for connection.
Argument	Value	Description								
protocol	socks5	Use <b>SOCKS5</b> protocol for connection.								
	http	Use <b>HTTP or HTTPS</b> protocol for connection.								
<b>Example</b>	<pre>(config-if)&gt; proxy protocol socks5 Proxy::Interface: "Proxy0": set proxy protocol to socks5.  (config-if)&gt; no proxy protocol Proxy::Interface: "Proxy0": reset proxy protocol.</pre>									
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>3.09</td><td>The <b>interface proxy protocol</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	3.09	The <b>interface proxy protocol</b> command has been introduced.					
Version	Description									
3.09	The <b>interface proxy protocol</b> command has been introduced.									

## 3.25.155 interface proxy socks5-udp

<b>Description</b>	Enable <b>UDP</b> mode for the <b>SOCKS5</b> protocol. By default, the <b>UDP</b> mode is disabled.  Command with <b>no</b> prefix disables the mode.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	Proxy
<b>Synopsis</b>	<pre>(config-if)&gt; proxy socks5-udp (config-if)&gt; no proxy socks5-udp</pre>
<b>Example</b>	<pre>(config-if)&gt; proxy socks5-udp Proxy::Interface: "Proxy0": enable SOCKS5 UDP mode.  (config-if)&gt; no proxy socks5-udp Proxy::Interface: "Proxy0": disable SOCKS5 UDP mode.</pre>

**History**

<b>Version</b>	<b>Description</b>
4.1	The <b>interface proxy socks5-udp</b> command has been introduced.

## 3.25.156 interface proxy udpgw-upstream

**Description**

Set proxy server for *UDP* connection.

Note: Command is available if the *SOCKS5* is the connection protocol.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Proxy

**Synopsis**

```
(config-if)> proxy udpgw-upstream <host> [<port>]
```

```
(config-if)> no proxy udpgw-upstream
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
host	<i>String</i>	IP-address or domain name of proxy server.
port	<i>Integer</i>	The <i>UDP</i> port of server.

**Example**

```
(config-if)> proxy udpgw-upstream 202.150.93.130 8080
Proxy::Interface: "Proxy0": set proxy UDPGW upstream to ▶
202.150.93.130:8080.
```

```
(config-if)> no proxy udpgw-upstream
Proxy::Interface: "Proxy0": cleared proxy UDPGW upstream.
```

**History**

<b>Version</b>	<b>Description</b>
4.1	The <b>interface proxy udpgw-upstream</b> command has been introduced.

## 3.25.157 interface proxy upstream

**Description**

Set proxy server for connection.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

<b>Change settings</b>	Yes									
<b>Multiple input</b>	No									
<b>Interface type</b>	Proxy									
<b>Synopsis</b>	<pre>(config-if)&gt; proxy upstream &lt;host&gt; [&lt;port&gt;]   (config-if)&gt; no proxy upstream</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>host</td> <td><i>String</i></td> <td>IP-address or domain name of proxy server.</td> </tr> <tr> <td>port</td> <td><i>Integer</i></td> <td>The server port.</td> </tr> </tbody> </table>	Argument	Value	Description	host	<i>String</i>	IP-address or domain name of proxy server.	port	<i>Integer</i>	The server port.
Argument	Value	Description								
host	<i>String</i>	IP-address or domain name of proxy server.								
port	<i>Integer</i>	The server port.								
<b>Example</b>	<pre>(config-if)&gt; proxy upstream 161.8.174.48 1080 Proxy::Interface: "Proxy0": set proxy upstream to ▶ 161.8.174.48:1080.  (config-if)&gt; no proxy upstream Proxy::Interface: "Proxy0": cleared proxy upstream.</pre>									
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.09</td> <td>The <b>interface proxy upstream</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	3.09	The <b>interface proxy upstream</b> command has been introduced.					
Version	Description									
3.09	The <b>interface proxy upstream</b> command has been introduced.									

## 3.25.158 interface reconnect-delay

<b>Description</b>	Set the period of time between reconnection attempts. By default, value 3 is used.						
	Command with <b>no</b> prefix resets setting to default.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	PPP						
<b>Synopsis</b>	<pre>(config-if)&gt; reconnect-delay &lt;sec&gt;   (config-if)&gt; no reconnect-delay</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>sec</td> <td><i>Integer</i></td> <td>Value of time in seconds. Can take values in the range from 3 to 600.</td> </tr> </tbody> </table>	Argument	Value	Description	sec	<i>Integer</i>	Value of time in seconds. Can take values in the range from 3 to 600.
Argument	Value	Description					
sec	<i>Integer</i>	Value of time in seconds. Can take values in the range from 3 to 600.					

**Example**

```
(config-if)> reconnect-delay 3
Network::Interface::Ppp: "PPTP1": reconnect delay set to 3 ►
seconds.
```

```
(config-if)> no reconnect-delay
Network::Interface::Ppp: "PPTP0": reconnect delay reset to ►
default.
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>interface reconnect-delay</b> command has been introduced.

### 3.25.159 interface rekey-interval

**Description**

Set the period of time between automatic changes of the secret keys, which all devices on the network share. By default, 86400 value is used.

Command with **no** prefix disables keys changing.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

WiFi

**Synopsis**

```
(config-if)> rekey-interval <interval>
```

```
(config-if)> no rekey-interval
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interval	<i>Integer</i>	Value of rekey interval in seconds.

**Example**

```
(config-if)> rekey-interval 3000
Network::Interface::Rtx::WifiMaster: "WifiMaster0": rekey ►
interval is 3000 sec.
```

```
(config-if)> no rekey-interval
Network::Interface::Rtx::WifiMaster: "WifiMaster0": rekey ►
interval disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>interface rekey-interval</b> command has been introduced.
2.15	Added default value of rekey interval 3600 sec.
3.04	Default value of rekey interval is changed to 86400 sec.

## 3.25.160 interface rename

<b>Description</b>	Assign arbitrary name to the specified network interface. The interface can be referred to by the new name just like by ID.  Command with <b>no</b> prefix removes the setting.						
	Warning: Do not rename Home interface. This can cause unpredictable system errors.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-if)&gt; rename &lt;rename&gt; (config-if)&gt; no rename</pre>						
<b>Arguments</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Argument</th> <th style="text-align: left; padding: 2px;">Value</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">rename</td> <td style="padding: 2px;"><i>String</i></td> <td style="padding: 2px;">New interface name.</td> </tr> </tbody> </table>	Argument	Value	Description	rename	<i>String</i>	New interface name.
Argument	Value	Description					
rename	<i>String</i>	New interface name.					
<b>Example</b>	<pre>(config-if)&gt; rename PPPoE1 Network::Interface::Base: "PPPoE0": renamed to "PPPoE1".</pre> <pre>(config-if)&gt; no rename Network::Interface::Base: "PPPoE0": name cleared.</pre>						
<b>History</b>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr style="background-color: #cccccc;"> <th style="text-align: left; padding: 2px;">Version</th> <th style="text-align: left; padding: 2px;">Description</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">2.08</td> <td style="padding: 2px;">The <b>interface rename</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.08	The <b>interface rename</b> command has been introduced.		
Version	Description						
2.08	The <b>interface rename</b> command has been introduced.						

## 3.25.161 interface rf e2p set

<b>Description</b>	Change the memory cell value of calibration data at <i>offset</i> by <i>value</i> for the specified interface.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Interface type</b>	Radio
<b>Synopsis</b>	<pre>(config-if)&gt; rf e2p set &lt;offset&gt; &lt;value&gt;</pre>

**Arguments**

Argument	Value	Description
offset	Hex	Memory cell location. Can take values in the range from 1E0 to 1FE.
value	Hex	Value to be set. Can take values in the range from 0 to FFFF.

**Example**

```
(config-if)> rf e2p set 1f6 0
Network::Interface::Rtx::WifiMaster: EEPROM [0x01F6]:0000 set.
```

**History**

Version	Description
2.04	The <b>interface rf e2p set</b> command has been introduced.

## 3.25.162 interface role

**Description**

Set a role for the interface. Multiple roles can be assigned to one interface. Command is used for correct view of VLAN connections in the web interface. Command with **no** prefix removes the role. If you use no arguments, the entire list of roles will be removed.

**Prefix no**

Yes

**Change settings**

No

**Multiple input**

Yes

**Synopsis**

```
(config-if)> role <role> [ for <ifor> ]
(config-if)> no role [ <role> ]
```

**Arguments**

Argument	Value	Description
role	inet	Interface is used for Internet connection.
	iptv	Interface is used for IPTV service.
	voip	Interface is used for VoIP service.
	misc	Interface is used for <a href="#">IP Policy</a> .
ifor	Interface	Full interface name or an alias.

**Example**

```
(config-if)> role iptv for GigabitEthernet1
Network::Interface::Base: "GigabitEthernet1": assigned role >
"iptv" for GigabitEthernet1.
```

```
(config-if)> no role iptv for GigabitEthernet1
Network::Interface::Base: "GigabitEthernet1": deleted role "iptv".
```

```
(config-if)> no role
Network::Interface::Base: "GigabitEthernet1": deleted all roles.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>interface role</b> command has been introduced.
2.10	Argument <code>misc</code> was added.

## 3.25.163 interface rrm

**Description**

Enable **RRM** for search of nearby APs according to IEEE 802.11k standard in order to provide this AP list to the subscriber device by request. By default, the option is disabled.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

AccessPoint

**Synopsis**

```
(config-if)> rrm
```

```
(config-if)> no rrm
```

**Example**

```
(config-if)> rrm
```

```
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶
RRM enabled.
```

```
(config-if)> no rrm
```

```
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶
RRM disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.13	The <b>interface rrm</b> command has been introduced.

## 3.25.164 interface rssи-threshold

**Description**

Set the RSSI signal strength threshold for the Access Point at which Wi-Fi clients will be disconnected and cannot connect to the Access Point. By default, the RSSI value 0 is used.

Command with **no** prefix resets setting to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

AccessPoint

**Synopsis**(config-if)> **rssi-threshold** <rssi-threshold>(config-if)> **no rssi-threshold****Arguments**

Argument	Value	Description
rssi-threshold	<i>Integer</i>	RSSI values in the range from -100 to 0. If value is set to 0, the setting is disabled.

**Example**(config-if)> **rssi-threshold** -30Network::Interface::Mtk::AccessPoint: "WifiMaster0/AccessPoint0": ►  
rssi threshold is set to -30.(config-if)> **no rssi-threshold**Network::Interface::Mtk::AccessPoint: "WifiMaster0/AccessPoint0": ►  
rssi threshold reset to 0.**History**

Version	Description
4.01	The <b>interface rssi-threshold</b> command has been introduced.

## 3.25.165 interface schedule

**Description**Assign a schedule to the interface. Schedule must be created and customized with **schedule action** command before execution.Command with **no** prefix unbinds the schedule.**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**(config-if)> **schedule** <schedule>(config-if)> **no schedule****Arguments**

Argument	Value	Description
schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.

**Example**(config-if)> **schedule WIFI**

Network::Interface::Base: "WifiMaster0": schedule is "WiFi".

```
(config-if)> no schedule
Network::Interface::Base: "WifiMaster0": schedule cleared.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>interface schedule</b> command has been introduced.

## 3.25.166 interface security-level

**Description**

Specify the interface security level. The security levels define the firewall logic:

- Allow establishing private → public connections.
- Prohibit establishing connections coming to the public interface, i. e. in the direction public → private and public → public.
- The device itself accepts network connections (allows control) only from private interfaces.
- Data transfer between private interfaces can be allowed or disallowed depending on the **isolate-private** global parameter.
- protected interfaces have no access to device and to other private/protected subnetworks, but they have access to public interfaces and to the internet. The device provides only DHCP and DNS services to the protected segments.
- Data transfer from private to protected interfaces is forbidden by default. To allow such connection use the **no isolate-private** command.

**Note:** By default, to all newly created interfaces public security level assigned.

Access lists **access-list** have higher priority than the security levels, so they can be used to set additional rules of packet filtering.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis** (config-if)> **security-level (public | private | protected)**

**Example** Despite the fact that there is no functionality to disable the firewall completely, it is possible to disable it for particular directions. Suppose that it is necessary to allow data transfer between the “home” network Home and global network

PPPoE0. To accomplish that, to both interfaces must be assigned private security level and function **isolate-private** must be disabled.

```
(config)> interface Home security-level private
Network::Interface::IP: "Bridge0": security level set to ▶
"private".
```

```
(config)> interface PPPoE0 security-level private
Network::Interface::IP: "PPPoE0": security level set to "private".
```

```
(config)> no isolate-private
Netfilter::Manager: Private networks not isolated.
```

**Note:** The firewall and the address translation — are the functions designed to solve fundamentally different problems. Enabling NAT between Home and PPPoE0 interfaces in the configuration shown above, does not prohibit access to the network Home from the global network. Even as the address translation is enabled by command **ip nat Home**, the packets from PPPoE0 will get to Home network.

## History

Version	Description
2.00	The <b>interface security-level</b> command has been introduced.
2.06	The protected parameter was added.

## 3.25.167 interface speed

**Description** Configure the speed of the Ethernet interface. By default, auto value is set.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

<pre>(config-if)&gt; speed (10   100   1000   auto)</pre>
<pre>(config-if)&gt; no speed</pre>

## Arguments

Argument	Value	Description
10	<i>Keyword</i>	Connection speed in Mbit/s.
100		
1000		

Argument	Value	Description
auto	Keyword	Automatical speed configuration.

**Example**

```
(config-if)> speed 1000
Network::Interface::Ethernet: "GigabitEthernet1/0": speed set ▶
to 1000.
```

```
(config-if)> no speed
Network::Interface::Ethernet: "GigabitEthernet1/0": speed reset ▶
to default (auto-negotiation).
```

**History**

Version	Description
2.06.B.1	The <b>interface speed</b> command has been introduced.

## 3.25.168 interface speed nonegotiate

**Description**

Disable autonegotiation. By default, autonegotiation is enabled.

Command with **no** prefix enables autonegotiation.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Ethernet

**Synopsis**

```
| (config-if)> speed nonegotiate
```

```
| (config-if)> no speed nonegotiate
```

**Example**

```
(config-if)> speed nonegotiate
Network::Interface::Ethernet: "GigabitEthernet1/0": ▶
autonegotiation will be disabled for fixed speed.
```

```
(config-if)> no speed nonegotiate
Network::Interface::Ethernet: "GigabitEthernet1/0": ▶
autonegotiation enabled..
```

**History**

Version	Description
2.08	The <b>interface speed nonegotiate</b> command has been introduced.

## 3.25.169 interface ssid

**Description** Specify the wireless network name (SSID) for WiFiStation and AccessPoint interfaces. Depending on the interface type, the SSID value is processed differently.

- For AccessPoint, the SSID is a necessary setting, without which the connection will not be accepted.
- For the WiFiStation SSID determines which access point WiFiStation will connect to. Without a specified SSID, WiFiStation can connect to any available wireless network at its discretion.

Command with **no** prefix resets network name to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFi

**Synopsis**

```
(config-if)> ssid <ssid>
(config-if)> no ssid
```

**Arguments**

Argument	Value	Description
ssid	String	Wireless Network Name (SSID).

**Example**

```
(config-if)> ssid MYNETWORK
Network::Interface::Wireless: "WifiMaster0/AccessPoint0": SSID ▶
saved.

(config-if)> no ssid
Network::Interface::Rtx::AccessPoint: "WifiMaster0/AccessPoint0": ▶
SSID reset.
```

**History**

Version	Description
2.00	The <b>interface ssid</b> command has been introduced.

## 3.25.170 interface standby enable

**Description** Enable the standby mode. When the standby mode is enabled for an interface, it is automatically turned off when another WAN connection with a higher global priority is up and running.

The standby option is ignored in following cases:

- the global priority is not configured;
- the standby interface is included in a group, such as Bridge;
- the current WAN connection operates over the standby interface.

Command with **no** prefix disables the standby mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-if)> standby enable
          (config-if)> no standby enable
```

**Example**

```
(config-if)> standby enable
Network::Interface::Standby: "CdcEthernet0": enabled.
```

```
(config-if)> no standby enable
Network::Interface::Standby: "CdcEthernet0": disabled.
```

History	Version	Description
	4.00	The <b>interface standby enable</b> command has been introduced.

### 3.25.171 interface storm-control disable

**Description** Enable the broadcast storm control on the Bridge interface. By default, the setting is enabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Bridge

**Synopsis**

```
(config-if)> storm-control disable
          (config-if)> no storm-control disable
```

**Example**

```
(config-if)> storm-control disable
Network::Interface::Bridge: "Bridge0": disabled storm control ▶
and loop detector.
```

```
(config-if)> no storm-control disable
Network::Interface::Bridge: "Bridge0": enabled storm control and ▶
loop detector.
```

**History**

<b>Version</b>	<b>Description</b>
4.00	The <b>interface storm-control disable</b> command has been introduced.

### 3.25.172 interface switchport access

**Description** Set the port **VLAN** ID for access mode. Allows to transfer frames of the specified **VLAN** to the port and remove **VLAN** marker from the transferred frames.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Port

**Synopsis**

(config-if)>	<b>switchport access vlan &lt;vid&gt;</b>
(config-if)>	<b>no switchport access vlan</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
vid	<i>Integer</i>	Access <b>VLAN</b> ID. Can take values in the range from 1 to 4094 inclusively.

**Example**

```
(config-if)> switchport access vlan 1
Network::Interface::Switch: "FastEthernet0/0": set access VLAN ▶
ID: 1.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>interface switchport access</b> command has been introduced.

### 3.25.173 interface switchport friend

**Description** Configure undirectional **VLAN** for multicast traffic in addition to access **VLAN**. Port can be a member of one access **VLAN**. This command enables forwarding of downstream traffic from a different **VLAN** (called "friend"). Friend packets are transmitted without a tag.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Port

**Synopsis**

(config-if)>	<b>switchport friend vlan &lt;vid&gt;</b>
(config-if)>	<b>no switchport friend vlan</b>

**Arguments**

Argument	Value	Description
vid	<i>Integer</i>	Friend <b>VLAN</b> ID. Can take values in the range from 1 to 4094 inclusively.

**Example**

(config-if)>	<b>switchport friend vlan 2</b>
Network::Interface::Switch:	"FastEthernet0/0": set friend VLAN ▶ ID: 2.

**History**

Version	Description
2.06	The <b>interface switchport friend</b> command has been introduced.

### 3.25.174 interface switchport mode

**Description** Set access or trunk mode for **VLAN**. By default, access mode is set.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Port

**Synopsis**

(config-if)>	<b>switchport mode [ (access [q-in-q] )   trunk]</b>
(config-if)>	<b>no switchport mode</b>

**Arguments**

Argument	Value	Description
mode	access	Enable the access mode to a <b>VLAN</b> , that is the mode when only the untagged frames pass through the port. The incoming frames get

Argument	Value	Description
		tagged with the PVID marker, which is set with <b>switchport access</b> command. The port is an output one only for <b>VLAN</b> with PVID ID. Once a frame is transferred to the port, the <b>VLAN</b> marker gets removed.
	trunk	Enable the <b>VLAN</b> trunk mode, that is the mode when frames belonging to several VLANs get transmitted through the port. In this case each frame gets tagged. The list of IDs of <b>VLAN</b> networks that include the port is set with <b>switchport trunk</b> command.
q-in-q	<i>Keyword</i>	Enable double tagging.

**Example**

```
(config-if)> switchport mode access
Network::Interface::Switch: "FastEthernet0/1": access mode ►
enabled.
```

**History**

Version	Description
2.06	The <b>interface switchport mode</b> command has been introduced.

## 3.25.175 interface switchport trunk

**Description**

Add a port to the **VLAN**. Allows receiving and transmitting of the given **VLAN** frames to the port, such that VLAN marker from the transmitted frames is not removed. In the trunk mode it is allowed to add a port to several VLANs.

Command with **no** prefix removes the port from the specified **VLAN**. If you use no argument, the port will be removed from all the VLANs.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

Port

**Synopsis**

```
(config-if)> switchport trunk vlan <vid>
```

```
(config-if)> no switchport trunk vlan [ vid ]
```

**Arguments**

Argument	Value	Description
vid	<i>Integer</i>	<b>VLAN</b> ID. Can take values in the range from 1 to 4094 inclusively.

**Example**

```
(config-if)> switchport trunk vlan 100
Network::Interface::Switch: "FastEthernet0/1": set trunk VLAN ▶
ID: 100.
```

**History**

Version	Description
2.06	The <b>interface switchport trunk</b> command has been introduced.

### 3.25.176 interface traffic-shape

**Description** Set the limit of data rate on a specified interface in both directions. By default speed is not limited.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-if)&gt; traffic-shape rate &lt;rate&gt; [ asymmetric &lt;upstream-rate&gt; ] [ schedule &lt;schedule&gt; ]</pre> <pre>(config-if)&gt; no traffic-shape</pre>
--

**Arguments**

Argument	Value	Description
rate	<i>Integer</i>	Value of data download rate in Kbps. Limit should be in the range from 64 Kbps to 1 Gbps.
upstream-rate	<i>Integer</i>	Data upload rate in Kbps. Value can be in the range from 64 Kbps to 1 Gbps.
schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.

**Example**

```
(config-if)> traffic-shape rate 5000
TrafficControl::Manager: "Bridge0" interface rate limited to ▶
5000 kbit/s.
```

```
(config-if)> traffic-shape rate 5000 asymmetric 500
TrafficControl::Manager: "Bridge0" interface rate limited to ▶
5000/500 kbit/s.
```

```
(config-if)> no traffic-shape
TrafficControl::Manager: Rate limit removed for "Bridge0" ▶
interface.
```

**History**

<b>Version</b>	<b>Description</b>
2.05	The <b>interface traffic-shape</b> command has been introduced.
3.04	The <b>upstream-rate</b> argument was added.

## 3.25.177 interface tunnel destination

**Description**

Set the remote end of tunnel. If it is used in conjunction with an automatic **IPSec** connection associated with the tunnel, remote host becomes the initiator of an **IPSec** connection.

Command with **no** prefix resets the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Tunnel

**Synopsis**

```
(config-if)> tunnel destination <destination>
(config-if)> no tunnel destination
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
destination	String	IP address or domain name of the remote host.

**Example**

```
(config-if)> tunnel destination example.net
Network::Interface::Tunnel: "Gre0": destination set to ▶
example.net.
```

```
(config-if)> no tunnel destination
Network::Interface::Tunnel: "Gre0": destination was reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>interface tunnel destination</b> command has been introduced.

## 3.25.178 interface tunnel eoip id

**Description**

Set identifier of EoIP tunnel.

Command with **no** prefix resets the setting.

**Prefix no**

Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	Eoip						
<b>Synopsis</b>	<pre>(config-if)&gt; tunnel eoip id &lt;id&gt; (config-if)&gt; no tunnel eoip id</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>id</td> <td><i>Integer</i></td> <td>Tunnel ID.</td> </tr> </tbody> </table>	Argument	Value	Description	id	<i>Integer</i>	Tunnel ID.
Argument	Value	Description					
id	<i>Integer</i>	Tunnel ID.					
<b>Example</b>	<pre>(config-if)&gt; tunnel eoip id 50 Network::Interface::Tunnel: "Gre0": eoip id interface set to auto.  (config-if)&gt; no tunnel eoip id Network::Interface::Tunnel: "Gre0": eoip id was reset.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.08</td> <td>The <b>interface tunnel eoip id</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.08	The <b>interface tunnel eoip id</b> command has been introduced.		
Version	Description						
2.08	The <b>interface tunnel eoip id</b> command has been introduced.						

## 3.25.179 interface tunnel gre keepalive

<b>Description</b>	Enable support of Cisco-like keepalive for GRE tunnel. By default, interval is set to 5, count is set to 3.  Command with <b>no</b> prefix removes the setting.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	Tunnel						
<b>Synopsis</b>	<pre>(config-if)&gt; tunnel gre keepalive &lt;interval&gt; [count] (config-if)&gt; no tunnel gre keepalive</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>interval</td> <td><i>Integer</i></td> <td>The interval of sending keepalive packets in seconds. Can take values in the range from 0 to 60. If 0 is set, then GRE keepalive replies is enabled only and the router will not react on the tunnel state change.</td> </tr> </tbody> </table>	Argument	Value	Description	interval	<i>Integer</i>	The interval of sending keepalive packets in seconds. Can take values in the range from 0 to 60. If 0 is set, then GRE keepalive replies is enabled only and the router will not react on the tunnel state change.
Argument	Value	Description					
interval	<i>Integer</i>	The interval of sending keepalive packets in seconds. Can take values in the range from 0 to 60. If 0 is set, then GRE keepalive replies is enabled only and the router will not react on the tunnel state change.					

Argument	Value	Description
count	<i>Integer</i>	Number of attempts to send keepalive packets. Can take values in the range from 1 to 20.

**Example**

```
(config-if)> tunnel gre keepalive 10 7
Network::Interface::Gre: "Gre0": set GRE keepalive to 10 s (7 ▶
retries).
```

```
(config-if)> no tunnel gre keepalive
Network::Interface::Gre: "Gre0": disable GRE keepalive.
```

```
(config-if)> tunnel gre keepalive 0
Network::Interface::Gre: "Gre0": enable only GRE keepalive ▶
replies.
```

**History**

Version	Description
2.10	The <b>interface tunnel gre keepalive</b> command has been introduced.

## 3.25.180 interface tunnel source

**Description** Set the local end of tunnel. If it is used in conjunction with an automatic [IPSec](#) connection associated with the tunnel, then the reception mode of IPSec IKE connections is activated to establish a secure tunnel.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** Tunnel

**Synopsis**

(config-if)>	<b>tunnel source (auto   &lt;interface&gt;   &lt;address&gt;)</b>
--------------	---

**Arguments**

Argument	Value	Description
auto	<i>Keyword</i>	Set the current working WAN interface.
interface	<i>Interface</i>	Full interface name or an alias.
address	<i>IP address</i>	Local IP-address of the tunnel.

**Example**

```
(config-if)> tunnel source auto
Network::Interface::Tunnel: "Gre0": set source interface to auto.
```

History	Version	Description
	2.08	The <b>interface tunnel source</b> command has been introduced.
	2.09	The <b>auto</b> argument has been added.
	3.08	The <b>no</b> prefix was removed as obsolete.

## 3.25.181 interface tx-burst

<b>Description</b>	Enable Wi-Fi packet aggregation (Tx Burst). By default, the setting is disabled. Command with <b>no</b> prefix disables the setting.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config-if)&gt; tx-burst (config-if)&gt; no tx-burst</pre>
<b>Example</b>	<pre>(config-if)&gt; tx-burst Network::Interface::Rtx::WifiMaster: Tx Burst enabled.</pre>

History	Version	Description
	2.07	The <b>interface tx-burst</b> command has been introduced.

## 3.25.182 interface tx-queue length

<b>Description</b>	Set the size of the queue of outgoing packets on the interface. By default, 1000 value is set. Command with <b>no</b> prefix resets to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config-if)&gt; tx-queue length &lt;length&gt; (config-if)&gt; no tx-queue length</pre>

**Arguments**

Argument	Value	Description
length	<i>Integer</i>	Queue length can take values in the range from 0 to 65536.

**Example**

```
(config-if)> tx-queue length 255
Network::Interface::Base: "L2TP0": TX queue length is 255.
```

```
(config-if)> no tx-queue length
Network::Interface::Base: "L2TP0": TX queue length reset to ▶
default.
```

**History**

Version	Description
3.06	The <b>interface tx-queue length</b> command has been introduced.

## 3.25.183 interface tx-queue scheduler cake

**Description** Set the **CAKE** package scheduler for the interface. By default, the value **cake** is used for DSL and USB-modem interfaces, **fq\_codel** — for all others.

Command with **no** prefix resets the scheduler to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-if)&gt; tx-queue scheduler cake</pre>
<pre>(config-if)&gt; no tx-queue scheduler cake</pre>

**Example**

```
(config-if)> tx-queue scheduler cake
Network::Interface::Base: "L2TP0": set TX queue scheduler to ▶
"cake".
```

```
(config-if)> no tx-queue scheduler cake
Network::Interface::Base: "L2TP0": set default TX queue scheduler.
```

**History**

Version	Description
3.06	The <b>interface tx-queue scheduler cake</b> command has been introduced.

## 3.25.184 interface tx-queue scheduler fq\_codel

**Description** Set the *FQ\_CODEL* package scheduler for the interface. By default, the value *cake* is used for DSL and USB-modem interfaces, *fq\_codel* — for all others.

Command with **no** prefix resets the scheduler to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-if)>	<b>tx-queue scheduler fq_codel</b>
(config-if)>	<b>no tx-queue scheduler fq_codel</b>

**Example**

(config-if)>	<b>tx-queue scheduler fq_codel</b>
Network::Interface::Base: "L2TP0": set TX queue scheduler to ► "fq_codel".	
(config-if)>	<b>no tx-queue scheduler fq_codel</b>
Network::Interface::Base: "L2TP0": set default TX queue scheduler.	

History	Version	Description
	3.06	The <b>interface tx-queue scheduler fq_codel</b> command has been introduced.

## 3.25.185 interface up

**Description** Enable the network interface and persist the state “up” to the settings.

Command with **no** prefix disables the the network interface and deletes “up” from settings. Also **interface down** command can be used.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-if)>	<b>up</b>
(config-if)>	<b>no up</b>

**Example**

(config-if)>	<b>up</b>
Interface enabled.	

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>interface up</b> command has been introduced.

## 3.25.186 interface vga-clamp

**Description** Enable **VGA** technology adjustment. By default, adjustment is disabled.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFiMaster

**Synopsis**

```
(config-if)> vga-clamp <vga-clamp>
```

```
(config-if)> no vga-clamp
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
vga-clamp	<i>Integer</i>	The value of correction. Can take values in the range from 1 to 8 inclusively.

**Example**

```
(config-if)> vga-clamp 1
Network::Interface::Rtx::WifiMaster: "WifiMaster0": VGA clamp ▶
set to 1.
```

```
(config-if)> no vga-clamp
Network::Interface::Rtx::WifiMaster: "WifiMaster0": VGA clamp ▶
disabled.
```

```
(config-if)> vga-clamp 2
Network::Interface::Rtx::WifiMaster: "WifiMaster1": VGA clamp ▶
set to 2.
```

```
(config-if)> no vga-clamp
Network::Interface::Rtx::WifiMaster: "WifiMaster1": VGA clamp ▶
disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.09	The <b>interface vga-clamp</b> command has been introduced.

## 3.25.187 interface wireguard listen-port

**Description** Specify [UDP](#) port number to which incoming connections are accepted. By default, port number is not defined.

Command with **no** prefix resets the port.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Wireguard

**Synopsis**

(config-if)>	<b>wireguard listen-port &lt;port&gt;</b>
--------------	---

(config-if)>	<b>no wireguard listen-port</b>
--------------	---------------------------------

Arguments	Argument	Value	Description
	port	<i>Integer</i>	Port number. Can take values in the range from 1 to 65535 inclusively.

**Example**

(config-if)>	<b>wireguard listen-port 11633</b>
--------------	------------------------------------

Wireguard::Interface: "Wireguard4": set listen port to "11633".

(config-if)>	<b>no wireguard listen-port</b>
--------------	---------------------------------

Wireguard::Interface: "Wireguard4": reset listen port.

History	Version	Description
	3.03	The <b>interface wireguard listen-port</b> command has been introduced.

## 3.25.188 interface wireguard peer

**Description** Add the remote peer public key to configure the secure connection using the [WireGuard](#) protocol.

Command with **no** prefix removes specified key.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** Wireguard

**Group entry** (config-wg-peer)

**Synopsis**

```
(config-if)> wireguard peer <key>
```

```
(config-if)> no wireguard peer <key>
```

**Arguments**

Argument	Value	Description
key	<i>String</i>	Value of the key. Latin letters, numbers and equal signs are acceptable. The key length is 44 characters (Base64-encoded 32-byte string representation).

**Example**

```
(config-if)> wireguard peer ▶  

gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm0g=  

(config-wg-peer)>
```

```
(config-if)> no wireguard peer ▶  

gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm0g=  

Wireguard::Interface: "Wireguard4": removed peer ▶  

"gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm0g=". .
```

**History**

Version	Description
3.03	The <b>interface wireguard peer</b> command has been introduced.

**3.25.188.1 interface wireguard peer allow-ips****Description**

Add the subnet of IP addresses to which the transmission of packets inside the tunnel is allowed.

Note: You can add `0.0.0.0/0` subnet to allow transmission to any addresses.

Command with **no** prefix removes the subnet. If you use no argument, the entire list of subnets will be removed.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

Wireguard

**Synopsis**

```
(config-wg-peer)> allow-ips <address> <mask>
```

```
(config-wg-peer)> no allow-ips [ <address> <mask> ]
```

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	Together with mask <i>mask</i> sets the subnet of IP addresses to be translated.
mask	<i>IP-mask</i>	Mask of subnet. There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).

**Example**

```
(config-wg-peer)> allow-ips 0.0.0.0/0
Wireguard::Interface: "Wireguard4": add allowed IPs >
"0.0.0.0/0.0.0.0" from peer >
"gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=".
```

```
(config-wg-peer)> allow-ips 192.168.11.0 255.255.255.0
Wireguard::Interface: "Wireguard4": add allowed IPs >
"192.168.11.0/255.255.255.0" from peer >
"gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=".
```

```
(config-wg-peer)> no allow-ips
Wireguard::Interface: "Wireguard4": clear allowed IPs of peer >
"gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=".
```

**History**

Version	Description
3.03	The <b>interface wireguard peer allow-ips</b> command has been introduced.

**3.25.188.2 interface wireguard peer connect**

**Description** Set interface for WireGuard peer connection. By default, connection is set via any interface.

Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WireGuard

**Synopsis**

<pre>(config-wg-peer)&gt; <b>connect via &lt;via&gt;</b></pre>
<pre>(config-wg-peer)&gt; <b>no connect</b></pre>

**Arguments**

Argument	Value	Description
via	<i>Interface</i>	Full interface name or an alias.

**Example**

```
(config-wg-peer)> connect via ISP
Wireguard::Interface: "Wireguard0": set peer ▶
"IrtyFcVtI5wcqxn4cCmuWc+p8s8byP0zK/MAI67VmXs=" connect via "ISP"

(config-wg-peer)> no connect
Wireguard::Interface: "Wireguard0": disabled peer ▶
"IrtyFcVtI5wcqxn4cCmuWc+p8s8byP0zK/MAI67VmXs=".
```

History	Version	Description
	4.01	The <b>interface wireguard peer connect</b> command has been introduced.

### 3.25.188.3 interface wireguard peer endpoint

**Description** Set the remote peer address to which the *WireGuard* connection will be established.

Command with **no** prefix removes the endpoint.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Wireguard

**Synopsis**

```
(config-wg-peer)> endpoint <address> [<port>]
(config-wg-peer)> no endpoint
```

Arguments	Argument	Value	Description
	address	<i>IP address</i>	IP address or domain name of the server.
	port	<i>Integer</i>	The <i>UDP</i> server port.

**Example**

```
(config-wg-peer)> endpoint 10.0.1.10:11635
Wireguard::Interface: "Wireguard4": set peer ▶
"gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=" endpoint to ▶
"10.0.1.10:11635".
```

```
(config-wg-peer)> no endpoint
Wireguard::Interface: "Wireguard4": reset endpoint for peer ▶
"gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=".
```

History	Version	Description
	3.03	The <b>interface wireguard peer endpoint</b> command has been introduced.

### 3.25.188.4 interface wireguard peer keepalive-interval

**Description** Set the interval of keepalive packet sending for [WireGuard](#) connection monitoring. By default, the interval is not set.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Wireguard

**Synopsis**

(config-wg-peer)>	<b>keepalive-interval &lt;interval&gt;</b>
(config-wg-peer)>	<b>no keepalive-interval</b>

Arguments	Argument	Value	Description
	interval	<i>Integer</i>	The interval of keepalive packet sending in seconds. Can take values in the range from 3 to 3600 inclusively.

**Example**

(config-wg-peer)>	<b>keepalive-interval 3</b>
Wireguard::Interface: "Wireguard4": set peer ▶	"gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=" keepalive interval ▶
to "3".	
(config-wg-peer)>	<b>no keepalive-interval</b>
Wireguard::Interface: "Wireguard4": reset persistent keepalive ▶	interval for peer "gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=". ▶

History	Version	Description
	3.03	The <b>interface wireguard peer keepalive-interval</b> command has been introduced.

### 3.25.188.5 interface wireguard peer preshared-key

**Description** Set preshared key for [WireGuard](#) connection to remote peer. The preshared key (PSK) is an optional security improvement as per the [WireGuard](#) protocol and should be a unique PSK per client for highest security. By default, PSK is not used.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

<b>Multiple input</b>	No						
<b>Interface type</b>	Wireguard						
<b>Synopsis</b>	<pre>(config-wg-peer)&gt; <b>preshared-key</b> &lt;preshared-key&gt; (config-wg-peer)&gt; <b>no preshared-key</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>preshared-key</td> <td><i>String</i></td> <td>Secret PSK key value. Latin letters, numbers and equal signs are acceptable. The key length is 44 characters.</td> </tr> </tbody> </table>	Argument	Value	Description	preshared-key	<i>String</i>	Secret PSK key value. Latin letters, numbers and equal signs are acceptable. The key length is 44 characters.
Argument	Value	Description					
preshared-key	<i>String</i>	Secret PSK key value. Latin letters, numbers and equal signs are acceptable. The key length is 44 characters.					
<b>Example</b>	<pre>(config-wg-peer)&gt; <b>preshared-key</b> ▶ WY2fkhJZuDCbYew7L8whBMzkReVf8KKzWJrmaR79F8z= Wireguard::Interface: "Wireguard4": set preshared key for peer ▶ "gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=".  (config-wg-peer)&gt; <b>no preshared-key</b> Wireguard::Interface: "Wireguard4": reset preshared key for peer ▶ "gbp1gW3pBQKssrAdah1hiib13Jl123ZM8dBIjjPmm2g=".</pre>						

History	Version	Description
	3.03	The <b>interface wireguard peer preshared-key</b> command has been introduced.

## 3.25.189 interface wireguard private-key

**Description** Set or generate the private key to connect to the remote peers via [WireGuard](#) protocol. By default, private key is not configured.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** Wireguard

**Synopsis**

(config-if)> <b>wireguard private-key</b> [<private-key>]
---

Arguments	Argument	Value	Description
	private-key	<i>String</i>	A new private key value. Latin letters, numbers and equal signs are acceptable. The key length is 44 characters.

**Example**

(config-if)> <b>wireguard private-key</b> <pre>Wireguard::Interface: "Wireguard4": generated new private key.</pre>
---

```
(config-if)> wireguard private-key >
UshaeghezaiJ7reo8iK6ear0eomujohkeen8jahX5uo=
Wireguard::Interface: "Wireguard4": set private key.
```

History	Version	Description
	3.03	The <b>interface wireguard private-key</b> command has been introduced.

### 3.25.190 interface wmm

**Description** Enable [WMM](#) on the interface.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Access Point

**Synopsis**

```
(config-if)> wmm
(config-if)> no wmm
```

**Example**

```
(config-if)> wmm
WMM extensions enabled.
```

History	Version	Description
	2.00	The <b>interface wmm</b> command has been introduced.

### 3.25.191 interface wpa-eap radius secret

**Description** Specify the shared secret for secure communication between a [RADIUS](#) server and a [RADIUS](#) client.

Command with **no** prefix deletes the shared secret.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Bridge

**Synopsis**

```
(config-if)> wpa-eap radius secret <secret>
(config-if)> no wpa-eap radius secret
```

**Arguments**

Argument	Value	Description
secret	<i>String</i>	The value of <b>RADIUS</b> shared secret. Maximum key length is 64 characters.

**Example**

```
(config-if)> wpa-eap radius secret >
(>R#G`}-JNxru'i8i|lK}wBN9E^X0Xa{xF0G-N^%FaTnr|S(e(q$/lP2/tbX/#Q
Network::Interface::Rtx::WpaEap: Bridge0 RADIUS secret applied.
```

```
(config-if)> no wpa-eap radius secret
Network::Interface::Rtx::WpaEap: Bridge0 RADIUS secret cleared.
```

**History**

Version	Description
3.01	The <b>interface wpa-eap radius secret</b> command has been introduced.

## 3.25.192 interface wpa-eap radius server

**Description** Specify **RADIUS** server address.

Command with **no** prefix deletes the address.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Bridge

**Synopsis**

```
(config-if)> wpa-eap radius server <address>[:<port>]
(config-if)> no wpa-eap radius server
```

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	<b>RADIUS</b> server IP address.
port	<i>Integer</i>	<b>RADIUS</b> server port.

**Example**

```
(config-if)> wpa-eap radius server 192.168.10.10
Network::Interface::Rtx::WpaEap: Bridge0 RADIUS server set to >
192.168.10.10.
```

```
(config-if)> wpa-eap radius server 192.168.10.10:1111
Network::Interface::Rtx::WpaEap: Bridge0 RADIUS server set to >
192.168.10.10:1111.
```

```
(config-if)> no wpa-eap radius server
Network::Interface::Rtx::WpaEap: Bridge0 RADIUS server cleared.
```

History	Version	Description
	3.01	The <b>interface wpa-eap radius server</b> command has been introduced.

### 3.25.193 interface wps

**Description** Enable **WPS** functionality.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFi

**Synopsis**

```
(config-if)> wps
```

```
(config-if)> no wps
```

**Example**

```
(config-if)> wps
WPS functionality enabled.
```

History	Version	Description
	2.00	The <b>interface wps</b> command has been introduced.

### 3.25.194 interface wps auto-self-pin

**Description** Enable **WPS** auto-self-pin mode. By default auto-self-pin mode is enabled.

Command with **no** prefix disables this mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** WiFi

**Synopsis**

```
(config-if)> wps auto-self-pin
```

```
(config-if)> no wps auto-self-pin
```

**Example**

```
(config-if)> wps auto-self-pin
Network::Interface::Rtx::Wps: an auto self PIN mode enabled.
```

History	Version	Description
	2.04	The <b>interface wps auto-self-pin</b> command has been introduced.

## 3.25.195 interface wps button

**Description** Start WPS process using a software button. Process takes 2 minutes or until the first connection occurred.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** WiFi

**Synopsis**

(config-if)>	wps button <direction>
--------------	------------------------

**Arguments**

Argument	Value	Description
direction	send	Send WiFi configuration.
	receive	Receive WiFi configuration from Explorer.

**Example**

(config-if)> wps button send
Sending WiFi configuration process started (software button mode).

**History**

Version	Description
2.00	The <b>interface wps button</b> command has been introduced.

## 3.25.196 interface wps peer

**Description** Start WPS process using remote peer's PIN. Process takes 2 minutes or until the first connection occurred. By default, WPS PIN is disabled.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** WiFi

**Synopsis**

(config-if)>	wps peer <direction> <pin>
--------------	----------------------------

**Arguments**

Argument	Value	Description
direction	send	Send WiFi configuration.
	receive	Receive WiFi configuration from the remote peer.
pin	<i>String</i>	PIN code of the remote peer.

**Example**

```
(config-if)> wps peer send 53794141
```

Network::Interface::Rtx::Wps: "WifiMaster0/AccessPoint0": peer ►  
PIN WPS session started.

**History**

Version	Description
2.04	The <b>interface wps peer</b> command has been introduced.

### 3.25.197 interface wps self-pin

**Description** Start WPS process using self PIN. Process takes 2 minutes or until the first connection occur.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** WiFi

**Synopsis**

(config-if)>	<b>wps self-pin &lt;direction&gt;</b>
--------------	---------------------------------------

**Arguments**

Argument	Value	Description
direction	send	Send WiFi configuration.
	receive	Receive WiFi configuration from Explorer.

**Example**

```
(config-if)> wps self-pin receive
```

Receiving WiFi configuration process started (self PIN mode).

**History**

Version	Description
2.00	The <b>interface wps self-pin</b> command has been introduced.

### 3.25.198 interface zerotier accept-addresses

**Description** Enable address accepting from the *ZeroTier* server.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** ZeroTier

**Synopsis**

(config-if)>	<b>zerotier accept-addresses</b>
(config-if)>	<b>no zerotier accept-addresses</b>

**Example**

```
(config-if)> zerotier accept-addresses
ZeroTier::Interface: "ZeroTier0": enabled addresses accept.
```

```
(config-if)> no zerotier accept-addresses
ZeroTier::Interface: "ZeroTier0": disabled addresses accept.
```

History	Version	Description
	4.01	The <b>interface zerotier accept-addresses</b> command has been introduced.

## 3.25.199 interface zerotier accept-routes

**Description** Enable receiving routes from a remote side via [ZeroTier](#).

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** ZeroTier

**Synopsis**

(config-if)>	<b>zerotier accept-routes</b>
(config-if)>	<b>no zerotier accept-routes</b>

**Example**

```
(config-if)> zerotier accept-routes
ZeroTier::Interface: "ZeroTier0": enabled routes accept.
```

```
(config-if)> no zerotier accept-routes
ZeroTier::Interface: "ZeroTier0": disabled routes accept.
```

History	Version	Description
	4.01	The <b>interface zerotier accept-routes</b> command has been introduced.

## 3.25.200 interface zerotier connect

**Description** Set interface for *ZeroTier* connection. If you use no argument, connection is set via any interface.

Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** ZeroTier

**Synopsis**

```
(config-if)> zerotier connect [via <via>]
(config-if)> no zerotier connect
```

Arguments	Argument	Value	Description
	via	Interface	Full interface name or an alias.

**Example**

```
(config-if)> zerotier connect via ISP
ZeroTier::Interface: "ZeroTier0": set connection via ISP.
```

```
(config-if)> no zerotier connect
ZeroTier::Interface: "ZeroTier0": set connection via any ▶
interface.
```

History	Version	Description
	4.01	The <b>interface zerotier connect</b> command has been introduced.

## 3.25.201 interface zerotier network-id

**Description** Set identifier of *ZeroTier* tunnel.

Command with **no** prefix resets the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

<b>Interface type</b>	ZeroTier						
<b>Synopsis</b>	<pre>(config-if)&gt; zerotier network-id &lt;network-id&gt; (config-if)&gt; no zerotier network-id</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>network-id</td><td><i>String</i></td><td>Tunnel ID.</td></tr> </tbody> </table>	Argument	Value	Description	network-id	<i>String</i>	Tunnel ID.
Argument	Value	Description					
network-id	<i>String</i>	Tunnel ID.					
<b>Example</b>	<pre>(config-if)&gt; zerotier network-id 816227940c13c37e ZeroTier::Interface: "ZeroTier0": set network ID to ▶ "816227940c13c37e".</pre> <pre>(config-if)&gt; no zerotier network-id ZeroTier::Interface: "ZeroTier0": reset network ID.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>4.01</td><td>The <b>interface zerotier network-id</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	4.01	The <b>interface zerotier network-id</b> command has been introduced.		
Version	Description						
4.01	The <b>interface zerotier network-id</b> command has been introduced.						

## 3.26 ip arp

<b>Description</b>	Set static mapping between an IP address and a MAC address for hosts that do not support dynamic <a href="#">ARP</a> .									
	Command with <b>no</b> prefix removes entry from ARP table. If you use no arguments, the whole list of ARP entries will be removed.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	Yes									
<b>Synopsis</b>	<pre>(config)&gt; ip arp &lt;ip&gt; &lt;mac&gt; (config)&gt; no ip arp [&lt;ip&gt;]</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>ip</td><td><i>IP address</i></td><td>IP address in four-part dotted decimal format corresponding to the local data-link address.</td></tr> <tr> <td>mac</td><td><i>MAC address</i></td><td>MAC address as six groups of two hexadecimal digits separated by colons.</td></tr> </tbody> </table>	Argument	Value	Description	ip	<i>IP address</i>	IP address in four-part dotted decimal format corresponding to the local data-link address.	mac	<i>MAC address</i>	MAC address as six groups of two hexadecimal digits separated by colons.
Argument	Value	Description								
ip	<i>IP address</i>	IP address in four-part dotted decimal format corresponding to the local data-link address.								
mac	<i>MAC address</i>	MAC address as six groups of two hexadecimal digits separated by colons.								
<b>Example</b>	<pre>(config)&gt; ip arp 192.168.2.50 a1:2e:84:85:f4:21 Network::ArpTable: Static ARP entry saved.</pre>									

```
(config)> no ip arp 192.168.2.50
Network::ArpTable: Static ARP entry deleted for 192.168.2.50.
```

```
(config)> no ip arp
Network::ArpTable: Static ARP table cleared.
```

**History**

Version	Description
2.00	The <b>ip arp</b> command has been introduced.

## 3.27 ip dhcp class

**Description**

Access to a group of commands to configure *DHCP* vendor class (option 60). If specified class name is not found, the command tries to create it.

Command with **no** prefix removes selected class.

**Prefix no**

Yes

**Change settings**

No

**Multiple input**

Yes

**Group entry**

(config-dhcp-class)

**Synopsis**

```
(config)> ip dhcp class <class>
```

```
(config)> no ip dhcp class <class>
```

**Arguments**

Argument	Value	Description
class	String	The vendor-class name.

**Example**

```
(config)> ip dhcp class STB-One
Dhcp::Server: Vendor class "STB-One" has been created.
```

**History**

Version	Description
2.00	The <b>ip dhcp class</b> command has been introduced.

### 3.27.1 ip dhcp class option

**Description**

Set an option 60 to match the vendor-class.

Command with **no** prefix removes selected option.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config-dhcp-class)> option <number> hex <data>
(config-dhcp-class)> no option <number>
```

**Arguments**

Argument	Value	Description
number	<i>Integer</i>	Option number. Now the only 60 value is used.
data	<i>String</i>	Value of an option.

**Example**

```
(config-dhcp-class)> option 60 hex FF
Dhcp::Server: Option 60 is set to FF.
```

**History**

Version	Description
2.00	The <b>ip dhcp class option</b> command has been introduced.

## 3.28 ip dhcp host

**Description**

Configure static linking of IP address to MAC address of the host. If the host with the specified name is not found, the command tries to create it. If the specified IP address is not in range of any pool, the command will remain in the settings, but will not affect the *DHCP server* functioning.

The command allows one to change the MAC address, leaving the old value IP address and vice versa — to change the IP address, leaving the old MAC address value intact.

Command with **no** prefix removes the host.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config)> ip dhcp host <host> [ mac ] [ ip ]
(config)> no ip dhcp host <host>
```

**Arguments**

Argument	Value	Description
host	<i>String</i>	Arbitrary host name, used to identify a MAC-IP pair in the settings.
mac	<i>MAC address</i>	MAC address of the host for static linking of IP address. If not specified, the value is taken from the previous configuration.

Argument	Value	Description
ip	<i>IP address</i>	IP address of the host. If not specified, the value is taken from the previous configuration.

**Example**

```
(config)> ip dhcp host HOST 192.168.1.44
new host "HOST" has been created.
```

**History**

Version	Description
2.00	The <b>ip dhcp host</b> command has been introduced.

## 3.29 ip dhcp pool

**Description**

Access to a group of commands to configure DHCP-pool. If the pool is not found, the command tries to create it. For a pool one sets a list of DNS servers (**dns-server** command), default gateway (**default-router** command) and the lease time (**lease** command), as well as a range of dynamic IP addresses (**range** command).

Having configured the pool, it is necessary to enable the **DHCP** service using the **service dhcp** command.

You can enter up to 32 pools. Maximum pool name length is 32 characters.

**Note:** In the current version of the system no more than one pool per interface is supported. For **DHCP server** to function correctly it is required that the range of IP addresses set by **range** command belong to the network that is configured on one of the device's Ethernet-interfaces.

Command with **no** prefix removes the pool.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-dhcp-pool)

**Synopsis**

```
(config)> ip dhcp pool <name>
```

```
(config)> no ip dhcp pool <name>
```

**Arguments**

Argument	Value	Description
name	<i>String</i>	DHCP pool name.

**Example**

```
(config)> ip dhcp pool test_pool
pool "test_pool" has been created.
```

**History**

Version	Description
2.00	The <b>ip dhcp pool</b> command has been introduced.

## 3.29.1 ip dhcp pool bind

**Description** Bind the pool to specified interface.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

```
(config-dhcp-pool)> bind <interface>
(config-dhcp-pool)> no bind <interface>
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Full interface name or an alias.

**Example**

```
(config-dhcp-pool)> bind FastEthernet0/Vlan2
pool "test_pool" bound to interface FastEthernet0/Vlan2.
```

**History**

Version	Description
2.00	The <b>ip dhcp pool bind</b> command has been introduced.

## 3.29.2 ip dhcp pool bootfile

**Description** Set boot file path on TFTP server for DHCP client (option 67).

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

```
(config-dhcp-pool)> bootfile <bootfile>
```

```
(config-dhcp-pool)> no bootfile
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
bootfile	<i>Filename</i>	The boot file path.

**Example**

```
(config-dhcp-pool)> bootfile test.cnf
Dhcp::Pool: "_WEBADMIN": set bootfile option to "test.cnf".
```

```
(config-dhcp-pool)> no bootfile
Dhcp::Pool: "_WEBADMIN": cleared bootfile option.
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>ip dhcp pool bootfile</b> command has been introduced.

### 3.29.3 ip dhcp pool class

**Description**

Access to a group of commands to configure *DHCP* vendor class for selected pool. If specified class name is not found, the command tries to create it.

To work correctly class name should be the same as for **ip dhcp class** command.

Command with **no** prefix removes selected class.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-dhcp-pool-class)

**Synopsis**

```
(config-dhcp-pool)> class <class>
```

```
(config-dhcp-pool)> no class <class>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
class	<i>String</i>	The vendor-class name.

**Example**

```
(config-dhcp-pool)> class STB-0ne
Dhcp::Server: Vendor class "STB-0ne" has been created.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ip dhcp pool class</b> command has been introduced.

### 3.29.3.1 ip dhcp pool class option

**Description** Set additional options for *DHCP* client in case of vendor-class matching.

Command with **no** prefix removes selected option.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config-dhcp-pool-class)>	<b>option &lt;number&gt; &lt;type&gt; &lt;data&gt;</b>
(config-dhcp-pool-class)>	<b>no option &lt;number&gt;</b>

**Arguments**

Argument	Value	Description
number	6	6 option, DNS server.
	42	42 option, NTP server.
	43	43 option, vendor specific information.
type	ip	Type of data is IP address. This type is not used for 43 option.
	hex	Type of data is hexadecimal number.
data	<i>String</i>	Value of an option.

**Example**

(config-dhcp-pool-class)>	<b>option 6 ip 192.168.1.1</b>
Dhcp::Server:	Option 6 is set to 192.168.1.1.

**History**

Version	Description
2.00	The <b>ip dhcp pool class option</b> command has been introduced.

### 3.29.4 ip dhcp pool debug

**Description** Add debug messages to the system log. By default, the setting is disabled.

Command with **no** prefix disables debugging.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-dhcp-pool)>	<b>debug</b>
(config-dhcp-pool)>	<b>no debug</b>

**History**

<b>Version</b>	<b>Description</b>
2.01	The <b>ip dhcp pool debug</b> command has been introduced.

## 3.29.5 ip dhcp pool default-router

**Description**

Configure default gateway IP address. If not specified, the address of the Ethernet-interface determined automatically for a given range **range** will be used.

Command with **no** prefix cancels the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-dhcp-pool)> default-router <address>
(config-dhcp-pool)> no default-router
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
address	<i>IP address</i>	Default gateway address.

**Example**

```
(config-dhcp-pool)> default-router 192.168.1.88
pool "test_pool" router address has been saved.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ip dhcp pool default-router</b> command has been introduced.

## 3.29.6 ip dhcp pool dns-server

**Description**

Configure IP addresses of the DNS servers (DHCP option 6). If not specified, the address of the Ethernet-interface determined automatically for a given range **range** will be used.

Command with **no** prefix cancels the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-dhcp-pool)> dns-server ( <address1> [ address2 ] | disable)
```

```
(config-dhcp-pool)> no dns-server
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
address1	<i>IP address</i>	Address of primary DNS server.
address2	<i>IP address</i>	Address of secondary DNS server.
disable	<i>Keyword</i>	Disable DHCP option 6.

**Example**

```
(config-dhcp-pool)> dns-server 192.168.1.88
pool "test_pool" name server list has been saved.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ip dhcp pool dns-server</b> command has been introduced.
2.11	Disable argument has been added.

## 3.29.7 ip dhcp pool domain

**Description**

Specify the domain name that client should use when resolving hostnames via DNS (option 15).

Command with **no** prefix cancels the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-dhcp-pool)> domain <domain>
```

```
(config-dhcp-pool)> no domain
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
domain	<i>String</i>	Local domain name.

**Example**

```
(config-dhcp-pool)> domain example.net
Dhcp::Pool: Domain option has been saved.
```

**History**

<b>Version</b>	<b>Description</b>
2.05	The <b>ip dhcp pool domain</b> command has been introduced.

## 3.29.8 ip dhcp pool enable

<b>Description</b>	Start to use the pool in the system. Command with <b>no</b> prefix disables pool using.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config-dhcp-pool)&gt; enable (config-dhcp-pool)&gt; no enable</pre>				
<b>Example</b>	<pre>(config-dhcp-pool)&gt; enable Dhcp::Server: pool "111" is enabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.03</td> <td>The <b>ip dhcp pool enable</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.03	The <b>ip dhcp pool enable</b> command has been introduced.
Version	Description				
2.03	The <b>ip dhcp pool enable</b> command has been introduced.				

## 3.29.9 ip dhcp pool lease

<b>Description</b>	Set the lease time of DHCP pool IP address. By default, 25200 value is used (7 hours). Command with <b>no</b> prefix resets lease time to default.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-dhcp-pool)&gt; lease &lt;lease&gt; (config-dhcp-pool)&gt; no lease</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lease</td> <td><i>Integer</i></td> <td>Lease time in seconds. Can take values in the range from 1 to 259200 seconds (3 days).</td> </tr> </tbody> </table>	Argument	Value	Description	lease	<i>Integer</i>	Lease time in seconds. Can take values in the range from 1 to 259200 seconds (3 days).
Argument	Value	Description					
lease	<i>Integer</i>	Lease time in seconds. Can take values in the range from 1 to 259200 seconds (3 days).					
<b>Example</b>	<pre>(config-dhcp-pool)&gt; lease 259200 Dhcp::Pool: "_WEBADMIN": set lease time: 259200 seconds.  (config-dhcp-pool)&gt; no lease Dhcp::Pool: "_WEBADMIN": lease time reset to default (25200 ▶ seconds).</pre>						

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ip dhcp pool lease</b> command has been introduced.

### 3.29.10 ip dhcp pool next-server

**Description**

Set TFTP server address for DHCP client (option 66).

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

Ethernet

**Synopsis**

```
(config-dhcp-pool)> next-server <address>
```

```
(config-dhcp-pool)> no next-server
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
address	<i>IP address</i>	TFTP server address.

**Example**

```
(config-dhcp-pool)> next-server 10.1.1.11
Dhcp::Pool: "_WEBADMIN": set next server address: 10.1.1.11.
```

```
(config-dhcp-pool)> no next-server
Dhcp::Pool: "_WEBADMIN": cleared next server address.
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>ip dhcp pool next-server</b> command has been introduced.

### 3.29.11 ip dhcp pool option

**Description**

Set additional options for DHCP server.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

Ethernet

**Synopsis**

```
(config-dhcp-pool)> option <number> [ type ] <data>
(config-dhcp-pool)> no option <number>
```

**Arguments**

Argument	Value	Description
number	4	4 option, Time server. Type is IP address.
	6	6 option, DNS server. Type is IP address.
	42	42 option, NTP server. Type is IP address.
	44	44 option, NetBIOS server. Type is IP address.
	26	26 option, MTU. Can take values in the range from 0 to 65535 inclusively.
	121	121 option, Classless Static Routes. Type is IP address of the destination network and mask of the destination network the form of prefix bit length (for example, /24).
	249	249 option, Microsoft Classless Static Routes. Type is IP address of the destination network and mask of the destination network the form of prefix bit length (for example, /24).
type	hex	Hexadecimal number.
	ascii	ASCII number.
	ip	IP address. It is not applicable to 26 option. It is not specified as a keyword in the command.
data	<i>String</i>	Value of an option.

**Example**

```
(config-dhcp-pool)> option 4 192.168.2.1
Dhcp::Pool: "_WEBADMIN_BRIDGE2": set option 4.
```

```
(config-dhcp-pool)> option 60 ascii "MSFT 5.0"
Dhcp::Pool: "_WEBADMIN_BRIDGE2": set option 60.
```

```
(config-dhcp-pool)> option 150 ip 41.57.50.46,42.54.50.46
Dhcp::Pool: "_WEBADMIN_BRIDGE2": set option 150.
```

```
(config-dhcp-pool)> no option 4
Dhcp::Pool: "_WEBADMIN_BRIDGE2": cleared option 4.
```

**History**

Version	Description
2.09	The <b>ip dhcp pool option</b> command has been introduced.

## 3.29.12 ip dhcp pool range

**Description** Configure the range of dynamic addresses issued to DHCP clients of a subnet. The range is set by start and end IP addresses or the start address and size. The network interface to which the settings are applied is chosen automatically. Address of the chosen interface is used as the default gateway and DNS server, if other addresses are not specified using commands **ip dhcp pool default-router** and **ip dhcp pool dns-server**.

Command with **no** prefix removes the range.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dhcp-pool)> range <begin> (<end> | <size>)  
(config-dhcp-pool)> no range
```

Arguments	Argument	Value	Description
	begin	<i>IP address</i>	Pool's start address.
	end	<i>IP address</i>	Pool's end address.
	size	<i>Integer</i>	Pool size.

**Example**

```
(config-dhcp-pool)> range 192.168.15.43 3  
pool "_WEBADMIN" range has been saved.
```

History	Version	Description
	2.00	The <b>ip dhcp pool range</b> command has been introduced.

## 3.29.13 ip dhcp pool update-dns

**Description** Add static records into DNS-proxy when DHCP-address is assigned. The name of record is the hostname of the DHCP-request. By default, the feature is disabled.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dhcp-pool)> update-dns
```

```
(config-dhcp-pool)> no update-dns
```

**Example**

```
(config-dhcp-pool)> update-dns
Dhcp::Pool: DNS update has been enabled.
```

**History**

Version	Description
2.06	The <b>ip dhcp pool update-dns</b> command has been introduced.

## 3.29.14 ip dhcp pool wpad

**Description** Configure DHCP option 252 — [WPAD](#) protocol. By default, the option is disabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-dhcp-pool)> wpad <wpad>
(config-dhcp-pool)> no wpad
```

**Arguments**

Argument	Value	Description
wpad	<i>String</i>	URL of proxy.

**Example**

```
(config-dhcp-pool)> wpad http://wpad/wpad.dat
Dhcp::Pool: WPAD option has been saved.
```

**History**

Version	Description
2.05	The <b>ip dhcp pool wpad</b> command has been introduced.

## 3.30 ip dhcp relay lan

**Description** Specify which network interface the DHCP relay will use to handle client's requests. Several "lan" interfaces can be specified, to which end the command should be entered several times, enumerating all desired interfaces one by one.

Command with **no** prefix disables the DHCP relay on the specified interface. If you use no argument, the DHCP relay will be removed from all interfaces.

<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Synopsis</b>	<pre>(config)&gt; ip dhcp relay lan &lt;interface&gt; (config)&gt; no ip dhcp relay lan [ interface ]</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>interface</td><td><i>Interface</i></td><td>Full name or an alias of Ethernet interface, through which DHCP relay will accept requests from clients.</td></tr> </tbody> </table>	Argument	Value	Description	interface	<i>Interface</i>	Full name or an alias of Ethernet interface, through which DHCP relay will accept requests from clients.
Argument	Value	Description					
interface	<i>Interface</i>	Full name or an alias of Ethernet interface, through which DHCP relay will accept requests from clients.					
<b>Example</b>	<pre>(config)&gt; ip dhcp relay lan Home added LAN interface Home.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>ip dhcp relay lan</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>ip dhcp relay lan</b> command has been introduced.		
Version	Description						
2.00	The <b>ip dhcp relay lan</b> command has been introduced.						

## 3.31 ip dhcp relay server

<b>Description</b>	Specify the IP address of the <i>DHCP server</i> , to which the relay will forward client requests from the LAN.						
	Command with <b>no</b> prefix removes the setting.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config)&gt; ip dhcp relay server &lt;address&gt; (config)&gt; no ip dhcp relay server [ address ]</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>address</td><td><i>IP address</i></td><td>IP address of the <i>DHCP server</i>.</td></tr> </tbody> </table>	Argument	Value	Description	address	<i>IP address</i>	IP address of the <i>DHCP server</i> .
Argument	Value	Description					
address	<i>IP address</i>	IP address of the <i>DHCP server</i> .					
<b>Example</b>	<pre>(config)&gt; ip dhcp relay server 192.168.1.11 using DHCP server 192.168.1.11.</pre>						

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ip dhcp relay server</b> command has been introduced.

## 3.32 ip dhcp relay wan

**Description**

Specify the network interface through which DHCP relay will interact with higher level *DHCP server*. There can be only one interface of such type in the system. If exact address of the server is not specified (see **ip dhcp relay server**), the requests will be broadcasted. It is recommended to specify server address.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> ip dhcp relay wan <interface>
(config)> no ip dhcp relay wan [ <interface> ]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	<i>Interface</i>	Full name or an alias of Ethernet interface, on which requests from the DHCP clients will be sent.

**Example**

```
(config)> ip dhcp relay wan FastEthernet0/Vlan2
using WAN interface FastEthernet0/Vlan2.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ip dhcp relay wan</b> command has been introduced.

## 3.33 ip esp alg enable

**Description**

Enable *IPsec Passthrough* mode for *IPsec ESP* tunnel. By default, the setting is disabled.

Command with **no** prefix disables the feature.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> ip esp alg enable
```

```
(config)> no ip esp alg enable
```

**Example**

```
(config)> ip esp alg enable
Esp::Alg: Enabled.
```

```
(config)> no ip esp alg enable
Esp::Alg: Disabled.
```

**History**

Version	Description
3.05	The <b>ip esp alg enable</b> command has been introduced.

## 3.34 ip flow-cache timeout active

**Description** Set timeout of active sessions in cache. By default, the value 10 is used.

Command with **no** prefix resets the setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> ip flow-cache timeout active <timeout>
```

```
(config)> no ip flow-cache timeout active
```

**Arguments**

Argument	Value	Description
timeout	<i>Integer</i>	The timeout value, in minutes. Can take values in the range from 1 to 30.

**Example**

```
(config)> ip flow-cache timeout active 1
Netflow::Manager: Active timeout set to "1" min.
```

```
(config)> no ip flow-cache timeout active
Netflow::Manager: Active timeout reset to "10" min.
```

**History**

Version	Description
2.11	The <b>ip flow-cache timeout active</b> command has been introduced.

## 3.35 ip flow-cache timeout inactive

**Description** Set timeout of inactive sessions in cache. By default, the value 20 is used.

Command with **no** prefix resets the setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>ip flow-cache timeout inactive &lt;timeout&gt;</b>
(config)>	<b>no ip flow-cache timeout inactive</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	timeout	<i>Integer</i>	The timeout value, in seconds. Can take values in the range from 1 to 600.

**Example**

(config)>	<b>ip flow-cache timeout inactive 1</b>
	Netflow::Manager: Inactive timeout set to "1" s.

(config)>	<b>no ip flow-cache timeout inactive</b>
	Netflow::Manager: Inactive timeout reset to "20" s.

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.11	The <b>ip flow-cache timeout inactive</b> command has been introduced.

## 3.36 ip flow-export destination

**Description** Set parameters of *NetFlow* collector.

Command with **no** prefix removes collector's parameters.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>ip flow-export destination &lt;address&gt; &lt;port&gt;</b>
(config)>	<b>no ip flow-export destination</b>

Arguments	Argument	Value	Description
	address	<i>IP address</i>	IP address of the data collector.
	port	<i>Integer</i>	Collector's UDP port number. Can take values 2055, 2056, 4432, 4739, 9025, 9026, 9995, 9996, 6343.

**Example**

```
(config)> ip flow-export destination 192.168.101.31 4739
Netflow::Manager: Export destination is set to ▶
192.168.101.31:4739.
```

```
(config)> no ip flow-export destination
Netflow::Manager: Export destination is unset.
```

History	Version	Description
	2.11	The <b>ip flow-export destination</b> command has been introduced.

## 3.37 ip flow-export version

**Description** Set version of *NetFlow* collector. By default, 5 value is used.

Command with **no** prefix resets version to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> ip flow-export version <version>
(config)> no ip flow-export version
```

Arguments	Argument	Value	Description
	version	<i>String</i>	Version of protocol.

**Example**

```
(config)> ip flow-export version 9
Netflow::Manager: Set export protocol version to 9.
```

```
(config)> no ip flow-export version
Netflow::Manager: Reset export version to 5.
```

History	Version	Description
	3.05	The <b>ip flow-export version</b> command has been introduced.

## 3.38 ip host

**Description** Add a domain name and address as a DNS-record.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config)> ip host <domain> <address>
(config)> no ip host [<domain> <address>]
```

**Arguments**

Argument	Value	Description
domain	<i>String</i>	A domain name of a host.
address	<i>IP address</i>	An IP address of a host.

**Example**

```
(config)> ip host keenetic.local 192.168.1.22
Dns::Manager: Added static record for "keenetic.local", address ▶
192.168.1.22.
```

```
(config)> no ip host keenetic.local 192.168.1.22
Dns::Manager: Record "keenetic.local", address 192.168.1.22 ▶
deleted.
```

**History**

Version	Description
2.00	The <b>ip host</b> command has been introduced.

## 3.39 ip hotspot

**Description** Access to a group of commands for Hotspot configuration.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** IP

**Group entry** (config-hotspot)

**Synopsis**

```
(config)> ip hotspot
```

**Example**

```
(config)> ip hotspot
(config-hotspot)>
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>ip hotspot</b> command has been introduced.

### 3.39.1 ip hotspot auto-scan interface

**Description** Enable subnetwork passive scanning on interface. By default is enabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** IP

**Synopsis**

```
(config-hotspot)> auto-scan interface <interface>
(config-hotspot)> no auto-scan interface <interface>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	Interface	Full interface name or an alias.

**Example**

```
(config-hotspot)> auto-scan interface WifiMaster0/AccessPoint1
Hotspot::Discovery::Manager: Subnetwork scanning on interface >
"WifiMaster0/AccessPoint1" is unchanged.
```

```
(config-hotspot)> auto-scan interface WifiMaster0/AccessPoint1
Hotspot::Discovery::Manager: Subnetwork scanning on interface >
"WifiMaster0/AccessPoint1" is disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip hotspot auto-scan interface</b> command has been introduced.

### 3.39.2 ip hotspot auto-scan interval

**Description** Set interval for probes of online hosts. By default, the value 30 is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

<b>Interface type</b>	IP						
<b>Synopsis</b>	<pre>(config-hotspot)&gt; auto-scan interval &lt;interval&gt; (config-hotspot)&gt; no auto-scan interval</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>interval</td><td><i>Integer</i></td><td>Auto-scan probe interval in seconds.</td></tr> </tbody> </table>	Argument	Value	Description	interval	<i>Integer</i>	Auto-scan probe interval in seconds.
Argument	Value	Description					
interval	<i>Integer</i>	Auto-scan probe interval in seconds.					
<b>Example</b>	<pre>(config-hotspot)&gt; auto-scan interval 10 Hotspot::Discovery::Manager: Auto-scan probe interval is set to ▶ 10 s.  (config-hotspot)&gt; no auto-scan interval Hotspot::Discovery::Manager: Auto-scan probe interval reset to ▶ default.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.08</td><td>The <b>ip hotspot auto-scan interval</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.08	The <b>ip hotspot auto-scan interval</b> command has been introduced.		
Version	Description						
2.08	The <b>ip hotspot auto-scan interval</b> command has been introduced.						

### 3.39.3 ip hotspot auto-scan passive

<b>Description</b>	Set passive autoscan rate in hosts per seconds. By default, the value 3 is used.  Command with <b>no</b> prefix resets setting to default.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	IP						
<b>Synopsis</b>	<pre>(config-hotspot)&gt; auto-scan passive &lt;rate&gt; hps (config-hotspot)&gt; no auto-scan passive</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>rate</td><td><i>Integer</i></td><td>Passive autoscan rate.</td></tr> </tbody> </table>	Argument	Value	Description	rate	<i>Integer</i>	Passive autoscan rate.
Argument	Value	Description					
rate	<i>Integer</i>	Passive autoscan rate.					
<b>Example</b>	<pre>(config-hotspot)&gt; auto-scan passive 5 hps Hotspot::Discovery::Manager: Auto-scan rate is set to 5 hps.  (config-hotspot)&gt; no auto-scan passive Hotspot::Discovery::Manager: Auto-scan rate reset to default.</pre>						

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip hotspot auto-scan passive</b> command has been introduced.

### 3.39.4 ip hotspot auto-scan timeout

**Description** Set offline timeout for hosts. After the specified time, the missing host is removed from the online host list. By default, the value 35 is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
(config-hotspot)> auto-scan timeout <timeout>
(config-hotspot)> no auto-scan timeout
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
timeout	<i>Integer</i>	Offline timeout in seconds.

**Example**

```
(config-hotspot)> auto-scan timeout 31
Hotspot::Discovery::Manager: Auto-scan host offline timeout is set to 31 s.
```

```
(config-hotspot)> no auto-scan timeout
Hotspot::Discovery::Manager: Auto-scan host offline timeout reset to default.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip hotspot auto-scan timeout</b> command has been introduced.

### 3.39.5 ip hotspot default-policy

**Description** Define the Hotspot policy for all interfaces or assign IP Policy. Policy applies to all hosts that have no explicitly configured access rule, [ip hotspot policy](#).

Default policy: permit.

Command with **no** prefix resets policy to default.

<b>Prefix no</b>	Yes											
<b>Change settings</b>	Yes											
<b>Multiple input</b>	Yes											
<b>Interface type</b>	IP											
<b>Synopsis</b>	<pre>(config-hotspot)&gt; <b>default-policy</b> (&lt;access&gt;   &lt;policy&gt;) (config-hotspot)&gt; <b>no default-policy</b></pre>											
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td rowspan="2">access</td><td>permit</td><td>Permit access to the internet.</td></tr> <tr> <td>deny</td><td>Deny access to the internet.</td></tr> <tr> <td>policy</td><td><i>Policy</i></td><td>Name of IP Policy profile.</td></tr> </tbody> </table>	Argument	Value	Description	access	permit	Permit access to the internet.	deny	Deny access to the internet.	policy	<i>Policy</i>	Name of IP Policy profile.
Argument	Value	Description										
access	permit	Permit access to the internet.										
	deny	Deny access to the internet.										
policy	<i>Policy</i>	Name of IP Policy profile.										
<b>Example</b>	<pre>(config-hotspot)&gt; <b>default-policy permit</b> FHotspot::Manager: Default policy "permit" applied.</pre> <pre>(config-hotspot)&gt; <b>default-policy deny</b> Hotspot::Manager: Default policy "deny" applied.</pre> <pre>(config-hotspot)&gt; <b>default-policy Policy0</b> Hotspot::Manager: Default policy "Policy0" applied.</pre> <pre>(config-hotspot)&gt; <b>no default-policy</b> Hotspot::Manager: Default policy cleared.</pre>											
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.09</td><td>The <b>ip hotspot default-policy</b> command has been introduced.</td></tr> <tr> <td>2.12</td><td>Argument <i>policy</i> was added.</td></tr> </tbody> </table>	Version	Description	2.09	The <b>ip hotspot default-policy</b> command has been introduced.	2.12	Argument <i>policy</i> was added.					
Version	Description											
2.09	The <b>ip hotspot default-policy</b> command has been introduced.											
2.12	Argument <i>policy</i> was added.											

### 3.39.6 ip hotspot host

<b>Description</b>	Setup bypass or block rules for specific Hotspot clients. Host rules override interface based policy (see <a href="#">ip hotspot policy</a> command).
	Command with <b>no</b> prefix removes the setting.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Interface type</b>	IP

**Synopsis**

```
(config-hotspot)> host <mac> <access> | schedule <schedule> | policy <policy>
(config-hotspot)> no host <mac> <access> | schedule | policy
```

**Arguments**

Argument	Value	Description
mac	MAC address	Host MAC address. Host must be registered via <b>known host</b> in advance.
access	permit	Permit access to the internet.
	deny	Deny access to the internet.
schedule	Schedule	The name of the schedule that was created with <b>schedule</b> group of commands.
policy	Policy	Name of IP Policy profile.

**Example**

```
(config)> known host MYTEST 54:e4:3a:8a:f3:a7
Hotspot::Manager: Policy "permit" applied to interface "Home".

(config-hotspot)> host 54:e4:3a:8a:f3:a7 permit
Hotspot::Manager: Rule "permit" applied to host ▶
"54:e4:3a:8a:f3:a7".

(config-hotspot)> host 54:e4:3a:8a:f3:a7 deny
Hotspot::Manager: Rule "deny" applied to host "54:e4:3a:8a:f3:a7".

(config-hotspot)> host 54:e4:3a:8a:f3:a7 schedule MYSCHEDULE
Hotspot::Manager: Schedule "MYSCHEDULE" applied to host ▶
"54:e4:3a:8a:f3:a7".

(config-hotspot)> no host 54:e4:3a:8a:f3:a7 schedule
Hotspot::Manager: Host "54:e4:3a:8a:f3:a7" schedule disabled.

(config-hotspot)> host 54:e4:3a:8a:f3:a7 policy Policy0
Hotspot::Manager: Policy "Policy0" applied to host ▶
"54:e4:3a:8a:f3:a7".

(config-hotspot)> no host 54:e4:3a:8a:f3:a7 policy
Hotspot::Manager: Policy removed from host "54:e4:3a:8a:f3:a7".
```

**History**

Version	Description
2.06	The <b>ip hotspot host</b> command has been introduced.
2.12	Arguments permit, deny, schedule, policy were added.

## 3.39.7 ip hotspot host priority

**Description**

Assign a specific priority to all traffic bound to a registered host. Registration of a host is performed in advance by the **known host** command.

Command with **no** prefix removes the priority.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

(config-hotspot)>	<b>host &lt;mac&gt; priority &lt;priority&gt;</b>
(config-hotspot)>	<b>no host &lt;mac&gt; priority</b>

**Arguments**

Argument	Value	Description
mac	<i>MAC address</i>	Host MAC address.
priority	1	Top.
	2	Critical.
	3	High.
	4	Medium-high.
	5	Medium.
	6	Normal (Default).
	7	Low.

**Example**

```
(config-hotspot)> host 04:d2:c1:14:bc:59 priority 7
Hotspot::Manager: Applied priority "7" to host ▶
"04:d2:c1:14:bc:59".
```

```
(config-hotspot)> no host 04:d2:c1:14:bc:59 priority
Hotspot::Manager: Removed priority from host "04:d2:c1:14:bc:59".
```

**History**

Version	Description
3.08	The <b>ip hotspot host priority</b> command has been introduced.

## 3.39.8 ip hotspot policy

**Description** Define the Hotspot policy for a specific interface. Policy applies to all hosts that have no explicitly configured access rule, [ip hotspot host](#).

Default policy: permit.

Command with **no** prefix resets policy to default.

**Prefix no** Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

IP

**Synopsis**

```
(config-hotspot)> policy <interface> (<access> | <policy>)
```

```
(config-hotspot)> no policy <interface>
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Ethernet interface full name or an alias.
access	permit	Permit access to the internet.
	deny	Deny access to the internet.
policy	<i>Policy</i>	Name of IP Policy profile.

**Example**

```
(config-hotspot)> policy Home permit
Hotspot::Manager: Policy "permit" applied to interface "Home".
```

```
(config-hotspot)> policy Home deny
Hotspot::Manager: Policy "deny" applied to interface "Home".
```

```
(config-hotspot)> policy Home Policy0
Hotspot::Manager: Policy "Policy0" applied to interface "Home".
```

```
(config-hotspot)> no policy Home
Hotspot::Manager: Interface "Home" policy cleared.
```

**History**

Version	Description
2.06	The <b>ip hotspot policy</b> command has been introduced.
2.12	Argument policy was added.

## 3.39.9 ip hotspot priority

**Description**

Assign a specific priority to all traffic bound to the interface.

Command with **no** prefix removes the priority.**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

IP

**Synopsis**

```
(config-hotspot)> priority <interface> <priority>
```

(config-hotspot)> **no priority** <interface>

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Full interface name or an alias.
priority	1	Top.
	2	Critical.
	3	High.
	4	Medium-high.
	5	Medium.
	6	Normal (Default).
	7	Low.

**Example**

```
(config-hotspot)> priority Home 7
Hotspot::Manager: Applied priority "7" to interface "Home".
```

```
(config-hotspot)> no priority Home
Hotspot::Manager: Removed priority from interface "Home".
```

**History**

Version	Description
3.08	The <b>ip hotspot priority</b> command has been introduced.

## 3.39.10 ip hotspot wake

**Description** Send Wake-on-LAN packet to private and protected interfaces of the host.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** IP

**Synopsis** (config-hotspot)> **wake** <mac>

**Arguments**

Argument	Value	Description
mac	<i>MAC address</i>	Host MAC address.

**Example**

```
(config-hotspot)> wake a8:1e:84:11:f1:22
Hotspot::Manager: WoL sent to host: a8:1e:84:11:f1:22.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip hotspot wake</b> command has been introduced.

## 3.40 ip http lockout-policy

**Description**

Set HTTP bruteforce detection parameters for public interfaces. By default, feature is enabled. If you use 0 as an argument, all bruteforce detection parameters will be reset to default.

Command with **no** prefix disables bruteforce detection.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config)> ip http lockout-policy <threshold> [<duration> [<observation-window> ]]  
(config)> no ip http lockout-policy
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
threshold	<i>Integer</i>	The number of failed attempts to log in. By default, 5 value is used. Can take values in the range from 4 to 20.
duration	<i>Integer</i>	An authorization ban duration for the specified IP in minutes. By default, 15 value is used. Can take values in the range from 1 to 60.
observation-window	<i>Integer</i>	Duration of suspicious activity observation in minutes. By default, 3 value is used. Can take values in the range from 1 to 10.

**Example**

```
(config)> ip http lockout-policy 10 30 2  
Http::Manager: Bruteforce detection is enabled.
```

```
(config)> no ip http lockout-policy  
Http::Manager: Bruteforce detection is disabled.
```

```
(config)> ip http lockout-policy 0  
Http::Manager: Bruteforce detection reset to default.
```

History	Version	Description
	2.08	The <b>ip http lockout-policy</b> command has been introduced.

## 3.41 ip http log access

<b>Description</b>	Enable debug mode for web server (nginx). By default, feature is disabled.  Command with <b>no</b> prefix disables the debug mode.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config)&gt; ip http log access (config)&gt; no ip http log access</pre>
<b>Example</b>	<pre>(config)&gt; ip http log access Http::Manager: Enabled access logging.  (config)&gt; no ip http log access Http::Manager: Disabled access logging.</pre>

History	Version	Description
	3.00	The <b>ip http log access</b> command has been introduced.

## 3.42 ip http log auth

<b>Description</b>	Enable logging of failed authorization attempts to the system. By default, feature is disabled.  Command with <b>no</b> prefix disables logging.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config)&gt; ip http log auth</pre>

```
| (config)> no ip http log auth
```

**Example**

```
(config)> ip http log auth
Http::Manager: Auth logging enabled.
```

```
(config)> no ip http log auth
Http::Manager: Auth logging disabled.
```

**History**

Version	Description
2.08	The <b>ip http log auth</b> command has been introduced.

## 3.43 ip http log webdav

**Description** Enable logging of failed connection attempts to the [WebDAV](#) server. By default, feature is disabled.

Command with **no** prefix disables logging.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
| (config)> ip http log webdav
```

```
| (config)> no ip http log webdav
```

**Example**

```
(config)> ip http log webdav
WebDav::Server: Enabled request tracing.
```

```
(config)> no ip http log webdav
WebDav::Server: Disabled request tracing.
```

**History**

Version	Description
3.04	The <b>ip http log webdav</b> command has been introduced.

## 3.44 ip http port

**Description** Assign HTTP port for Web interface of Explorer. By default, 80 value is used.

Command with **no** prefix resets HTTP port to default.

**Prefix no** Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Interface type</b>	IP						
<b>Synopsis</b>	<pre>(config)&gt; ip http port &lt;port&gt; (config)&gt; no ip http port</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>port</td> <td><i>Integer</i></td> <td>New HTTP port.</td> </tr> </tbody> </table>	Argument	Value	Description	port	<i>Integer</i>	New HTTP port.
Argument	Value	Description					
port	<i>Integer</i>	New HTTP port.					
<b>Example</b>	<pre>(config)&gt; ip http port 8080 Http::Manager: Port changed to 8080.  (config)&gt; no ip http port Http::Manager: Port reset to 80.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.08</td> <td>The <b>ip http port</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.08	The <b>ip http port</b> command has been introduced.		
Version	Description						
2.08	The <b>ip http port</b> command has been introduced.						

## 3.45 ip http proxy

<b>Description</b>	Access to a group of commands to configure HTTP proxy. If the proxy is not found, the command tries to create it.  Command with <b>no</b> prefix removes the proxy.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Interface type</b>	IP						
<b>Group entry</b>	(config-http-proxy)						
<b>Synopsis</b>	<pre>(config)&gt; ip http proxy &lt;name&gt; (config)&gt; no ip http proxy &lt;name&gt;</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>name</td> <td><i>String</i></td> <td>HTTP proxy name.</td> </tr> </tbody> </table>	Argument	Value	Description	name	<i>String</i>	HTTP proxy name.
Argument	Value	Description					
name	<i>String</i>	HTTP proxy name.					

**Example**

```
(config)> ip http proxy TEST
Http::Manager: Proxy "TEST" successfully created.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip http proxy</b> command has been introduced.

### 3.45.1 ip http proxy auth

**Description** Enable authorization for HTTP proxy. By default, the setting is disabled.

Command with **no** prefix disables HTTP proxy authorization.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

(config-http-proxy)> auth
(config-http-proxy)> no auth

**Example**

```
(config-http-proxy)> auth
Http::Manager: Proxy password auth is enabled.
```

```
(config-http-proxy)> no auth
Http::Manager: Proxy password auth is disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>ip http proxy auth</b> command has been introduced.

### 3.45.2 ip http proxy domain

**Description** Set domain name that specifies the *FQDN* of the virtual host.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

(config-http-proxy)> domain static <domain>
---

```
(config-http-proxy)> no domain
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
domain	<i>String</i>	A domain name.

**Example**

```
(config-http-proxy)> domain static example.net
Http::Manager: Configured base domain for proxy: test.
```

```
(config-http-proxy)> no domain
Http::Manager: Removed ndns domain for proxy: test.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip http proxy domain</b> command has been introduced.

### 3.45.3 ip http proxy domain ndns

**Description** Set HTTP proxy domain through NDNS. If enabled, setting [ip http proxy domain](#) is deleted.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
(config-http-proxy)> domain ndns
(config-http-proxy)> no domain ndns
```

**Example**

```
(config-http-proxy)> domain ndns
Http::Manager: Configured ndns domain for proxy: test.
```

```
(config-http-proxy)> no domain
Http::Manager: Removed ndns domain for proxy: test.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip http proxy domain ndns</b> command has been introduced.

### 3.45.4 ip http proxy force-host

**Description** Enable the Host header rewriting for the upstream.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
| (config-http-proxy)> force-host <force-host>
| (config-http-proxy)> no force-host
```

Arguments	Argument	Value	Description
	force-host	String	IP address or domain name.

**Example**

```
(config-http-proxy)> force-host 192.168.8.1
Http::Proxy: "modem": enabled Host header enforcing to ▶
"192.168.8.1".
```

```
(config-http-proxy)> force-host modem.keenetic.pro
Http::Proxy: "modem": enabled Host header enforcing to ▶
"modem.keenetic.pro".
```

```
(config-http-proxy)> no force-host
Http::Proxy: "modem": disabled Host header enforcing.
```

History	Version	Description
	3.06	The <b>ip http proxy force-host</b> command has been introduced.

### 3.45.5 ip http proxy preserve-host

**Description** Set option to save the original header for the host when passing through a proxy.

Command with **no** prefix disable option.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

<b>Synopsis</b>	<pre>(config-http-proxy)&gt; <b>preserve-host</b> </pre> <pre>(config-http-proxy)&gt; <b>no preserve-host</b></pre>				
<b>Example</b>	<pre>(config-http-proxy)&gt; <b>preserve-host</b> Http::Manager: Proxy HTTP Host header preservation is enabled.</pre> <pre>(config-http-proxy)&gt; <b>no preserve-host</b> Http::Manager: Proxy HTTP Host header preservation is disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.13</td><td>The <b>ip http proxy preserve-host</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.13	The <b>ip http proxy preserve-host</b> command has been introduced.
Version	Description				
2.13	The <b>ip http proxy preserve-host</b> command has been introduced.				

### 3.45.6 ip http proxy security-level

<b>Description</b>	Set the security level for HTTP proxy service. By default, <b>private</b> value is set.  Command with <b>no</b> prefix resets setting to default.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	No									
<b>Interface type</b>	IP									
<b>Synopsis</b>	<pre>(config-http-proxy)&gt; <b>security-level (public   private)</b> </pre> <pre>(config-http-proxy)&gt; <b>no security-level</b></pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td><b>public</b></td><td><i>Keyword</i></td><td>Access to the HTTP proxy is allowed for public, private and protected interfaces.</td></tr> <tr> <td><b>private</b></td><td><i>Keyword</i></td><td>Access to the HTTP proxy is allowed for private interfaces only.</td></tr> </tbody> </table>	Argument	Value	Description	<b>public</b>	<i>Keyword</i>	Access to the HTTP proxy is allowed for public, private and protected interfaces.	<b>private</b>	<i>Keyword</i>	Access to the HTTP proxy is allowed for private interfaces only.
Argument	Value	Description								
<b>public</b>	<i>Keyword</i>	Access to the HTTP proxy is allowed for public, private and protected interfaces.								
<b>private</b>	<i>Keyword</i>	Access to the HTTP proxy is allowed for private interfaces only.								
<b>Example</b>	<pre>(config-http-proxy)&gt; <b>security-level public</b> Http::Proxy: "test1": set public security level.</pre> <pre>(config-http-proxy)&gt; <b>no security-level</b> Http::Proxy: "test1": unset public security level.</pre>									
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>3.05</td><td>The <b>ip http proxy security-level</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	3.05	The <b>ip http proxy security-level</b> command has been introduced.					
Version	Description									
3.05	The <b>ip http proxy security-level</b> command has been introduced.									

## 3.45.7 ip http proxy ssl redirect

<b>Description</b>	Enable automatic redirection on domains with SSL certificate for HTTP proxy service. By default, the redirection is enabled.
	Command with <b>no</b> prefix disables redirection.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config-http-proxy)&gt; <b>ssl redirect</b> (config-http-proxy)&gt; <b>no ssl redirect</b></pre>
<b>Example</b>	<pre>(config)&gt; <b>ip http ssl redirect</b> Http::Proxy: "mytest": enabled SSL redirect.  (config)&gt; <b>no ip http ssl redirect</b> Http::Proxy: "mytest": disabled SSL redirect.</pre>

History	Version	Description
	4.00	The <b>ip http proxy ssl redirect</b> command has been introduced.

## 3.45.8 ip http proxy upstream

<b>Description</b>	Set HTTP or HTTPS server address for request redirecting.		
	Command with <b>no</b> prefix removes the setting.		
<b>Prefix no</b>	Yes		
<b>Change settings</b>	Yes		
<b>Multiple input</b>	No		
<b>Interface type</b>	IP		
<b>Synopsis</b>	<pre>(config-http-proxy)&gt; <b>upstream(http   https)(&lt;mac&gt;   &lt;ip&gt;   &lt;fqdn&gt;) [&lt;port&gt;]</b> (config-http-proxy)&gt; <b>no upstream</b></pre>		
<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	http	Keyword	HTTP server.

Argument	Value	Description
https	<i>Keyword</i>	HTTPS server.
mac	<i>MAC address</i>	MAC address of server.
ip	<i>IP address</i>	IP address of server.
fqdn	<i>FQDN</i>	Full domain name of server.
port	<i>Integer</i>	The port number.

**Example**

```
(config-http-proxy)> upstream http 192.168.1.1 8080
Http::Manager: Proxy "TEST" upstream was set.
```

```
(config-http-proxy)> upstream https google.com 443
Http::Proxy: "modem": set https upstream google.com, port 443.
```

```
(config-http-proxy)> no upstream
Http::Manager: Remove upstream info for proxy "test".
```

**History**

Version	Description
2.08	The <b>ip http proxy upstream</b> command has been introduced.
3.05	<b>https</b> keyword was added.

### 3.45.9 ip http proxy x-real-ip

**Description** Enable X-Real-IP and X-Forwarded-For header support for HTTP proxy.

Command with **no** prefix disables headers.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
| (config-http-proxy)> x-real-ip
| (config-http-proxy)> no x-real-ip
```

**Example**

```
(config-http-proxy)> x-real-ip
Http::Proxy: "test1": enabled X-Real-IP and X-Forwarded-For ►
headers.
```

```
(config-http-proxy)> no x-real-ip
Http::Proxy: "test1": disabled X-Real-IP and X-Forwarded-For ►
headers.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>ip http proxy x-real-ip</b> command has been introduced.

## 3.46 ip http security-level

**Description** Set the security level for remote access to the Keenetic web interface. By default, **private** value is set.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis** (config)> **ip http security-level (public [ssl] | private | protected)**

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
public	<i>Keyword</i>	Access to the web interface is allowed for public, private and protected interfaces via HTTP and HTTPS.
private	<i>Keyword</i>	Access to the web interface is allowed for private interfaces.
protected	<i>Keyword</i>	Access to the web interface is allowed for private and protected interfaces.
ssl	<i>Keyword</i>	Access to the web interface is allowed for public interfaces via HTTPS only.

**Example**

```
(config)> ip http security-level protected
Http::Manager: Security level changed to protected.
```

```
(config)> ip http security-level public ssl
Http::Manager: Security level set to public SSL.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip http security-level</b> command has been introduced.
3.00	Parameter <b>ssl</b> was added.

## 3.47 ip http ssl acme ecdsa

**Description** Enable support for certificates based on ECDSA cryptography.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> ip http ssl acme ecdsa
(config)> no ip http ssl acme ecdsa
```

**Example**

```
(config)> ip http ssl acme ecdsa
Acme::Client: Enabled ECDSA chain.

(config)> no ip http ssl acme ecdsa
Acme::Client: Disabled ECDSA chain.
```

History	Version	Description
	3.09	The <b>ip http ssl acme ecdsa</b> command has been introduced.

## 3.48 ip http ssl acme get

**Description** Generate and sign SSL certificate for the specified domain name (by default, KeenDNS). Access from the Internet should be granted.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> ip http ssl acme get [<domain>]
```

Arguments	Argument	Value	Description
	domain	String	KeenDNS domain name.

**Example**

```
(config)> ip http ssl acme get mytest.keenetic.pro
Acme::Client: Obtaining certificate for domain ▶
"mytest.keenetic.pro" is started.
```

History	Version	Description
	2.11	The <b>ip http ssl acme get</b> command has been introduced.

## 3.49 ip http ssl acme revoke

**Description** Revoke and remove SSL certificate for the specified domain name (KeenDNS, by default).

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (config)> **ip http ssl acme revoke <domain>**

**Arguments**

Argument	Value	Description
domain	String	KeenDNS domain name.

**Example**

```
(config)> ip http ssl acme revoke mytest.keenetic.pro
Acme::Client: Revoking certificate for domain ▶
"mytest.keenetic.pro" is started.
```

**History**

Version	Description
2.11	The <b>ip http ssl acme revoke</b> command has been introduced.

## 3.50 ip http ssl acme list

**Description** Show a list of free Let`s Encrypt certificates in the system.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (config)> **ip http ssl acme list**

**Example**

```
(config)> ip http ssl acme list
certificate:
    domain: cc6b5a71a7644903b51a5454.keenetic.io
    should-be-renewed: no
    is-expired: no
    issue-time: 2018-06-20T09:16:30.000Z
    expiration-time: 2018-09-17T09:16:30.000Z

certificate:
    domain: mytest.keenetic.pro
    should-be-renewed: no
    is-expired: no
```

```
issue-time: 2018-06-28T16:36:56.000Z
expiration-time: 2018-09-25T16:36:56.000Z
```

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>ip http ssl acme list</b> command has been introduced.

## 3.51 ip http ssl enable

**Description**

Enable HTTP SSL server. By default, the server is disabled.

Command with **no** prefix disables SSL server.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config)> ip http ssl enable
(config)> no ip http ssl enable
```

**Example**

```
(config)> ip http ssl enable
Http::Manager: Enabled SSL service.
```

```
(config)> no ip http ssl enable
Http::Manager: Disabled SSL service.
```

**History**

<b>Version</b>	<b>Description</b>
2.07	The <b>ip http ssl enable</b> command has been introduced.

## 3.52 ip http ssl port

**Description**

Assign HTTPS port for Web interface of Explorer. By default, 443 value is used.

Command with **no** prefix resets HTTPS port to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config)> ip http ssl port <port>
```

```
(config)> no ip http ssl port
```

**Arguments**

Argument	Value	Description
port	<i>Integer</i>	New HTTPS port.

**Example**

```
(config)> ip http ssl port 4343
Http::Manager: SSL port changed to 4343.
```

```
(config)> no ip http ssl port
Http::Manager: SSL port reset to 443.
```

**History**

Version	Description
4.00	The <b>ip http ssl port</b> command has been introduced.

## 3.53 ip http ssl redirect

**Description** Enable automatic redirection on domains with SSL certificate. By default, the redirection is enabled.

Command with **no** prefix disables redirection.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
(config)> ip http ssl redirect
```

```
(config)> no ip http ssl redirect
```

**Example**

```
(config)> ip http ssl redirect
Http::Manager: Redirect to SSL is enabled.
```

```
(config)> no ip http ssl redirect
Http::Manager: Redirect to SSL is disabled.
```

**History**

Version	Description
2.11	The <b>ip http ssl redirect</b> command has been introduced.

## 3.54 ip http x-frame-options

**Description** Set X-Frame-Options header value for web server (nginx) in Home network segment.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

(config)>	<b>ip http x-frame-options &lt;x-frame-options&gt;</b>
(config)>	<b>no ip http x-frame-options &lt;x-frame-options&gt;</b>

Arguments	Argument	Value	Description
	x-frame-options	<i>String</i>	The X-Frame-Option value.

**Example**

```
(config)> ip http x-frame-options DENY
Http::Manager: Set X-Frame-Options to "DENY".
```

```
(config)> no ip http x-frame-options DENY
Http::Manager: Disabled X-Frame-Options header.
```

History	Version	Description
	3.05	The <b>ip http x-frame-options</b> command has been introduced.

## 3.55 ip name-server

**Description** Configure DNS server IP addresses. Addresses saved in this fashion are called static as opposite to dynamic — as registered by [PPP](#) or [DHCP](#) services.

Active, that addressed being used are the ones that have been registered most recently as compared to the others. Usually, the system uses the addresses which were obtained by several recent successfully connected [PPP](#) or [DHCP](#) services. If none of the services registers [DNS](#) addresses, static settings will be active. However, if after registering dynamic addresses the static settings are changed by the user, they become active until the new dynamic addresses are registered.

**ip name-server** command can be entered multiple times if several DNS-server addresses need to be setup. Moreover, each entered address can be associated with one or more domain names for working with specific areas, such as local names in the corporate network.

Command with **no** prefix removes the specified DNS server address from the static and the active lists if the command is furnished with arguments. If you use no arguments, the entire list of static addresses will be removed.

<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config)&gt; ip name-server &lt;address&gt;[:&lt;port&gt;][&lt;domain&gt;[on&lt;interface&gt;]]</pre> <pre>(config)&gt; no ip name-server [&lt;address&gt;[:&lt;port&gt;]][&lt;domain&gt;[on&lt;interface&gt;]]</pre>

Arguments	Argument	Value	Description
	address	<i>IP address</i>	Name server address.
	port	<i>Integer</i>	Name server port.
	domain	<i>String</i>	Domain for which the server will be used. In resolving names the DNS-proxy first selects the address of the server with name best matching the requested domain. If the domain is not specified, the server will be used for all requests. Use "" as default domain. The maximum number of domains per one DNS entry is 16.
	interface	<i>Interface</i>	Interface name to configure.

<b>Example</b>	<pre>(config)&gt; ip name-server 8.8.8.8 "" on ISP Dns::InterfaceSpecific: Name server 8.8.8.8 added, domain &gt; (default), interface ISP.</pre> <pre>(config)&gt; no ip name-server Dns::Manager: Static name server list cleared.</pre>
----------------	---

History	Version	Description
	2.00	The <b>ip name-server</b> command has been introduced.
	2.14	Argument port was added.

## 3.56 ip nat

<b>Description</b>	Enable translation of "local" addresses of network <i>network</i> or network behind the interface <i>interface</i> . For example, command <b>ip nat Home</b> means that
--------------------	---

all packets from the network Home, passing through the router will undergo IP spoofing.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type** IP

**Synopsis**

(config)>	<b>ip nat</b> ( <i>&lt;interface&gt;</i>   <i>&lt;address&gt; &lt;mask&gt;</i> )
(config)>	<b>no ip nat</b> ( <i>&lt;interface&gt;</i>   <i>&lt;address&gt; &lt;mask&gt;</i> )

Arguments	Argument	Value	Description
	interface	<i>Interface</i>	Source interface name (full name or an alias).
	address	<i>IP address</i>	Together with mask <i>mask</i> sets the range of source IP addresses to be translated.
	mask	<i>IP-mask</i>	Mask of a translation range. There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).

**Example**

(config)>	<b>ip nat</b> Home
	Network:::Nat: A NAT rule added.

(config)>	<b>no ip nat</b> Home
	Network:::Nat: A NAT rule removed.

History	Version	Description
	2.00	The <b>ip nat</b> command has been introduced.

## 3.57 ip nat full-cone

**Description** Enable mode *Full Cone NAT*. By default, the mode is disabled.

Command with **no** prefix disables the mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

(config)>	<b>ip nat full-cone</b>
-----------	-------------------------

```
(config)> no ip nat full-cone
```

**Example**

```
(config)> ip nat full-cone
Network::Nat: Full cone mode enabled.
```

```
(config)> no ip nat full-cone
Network::Nat: Full cone mode disabled.
```

**History**

Version	Description
3.01	The <b>ip nat full-cone</b> command has been introduced.

## 3.58 ip nat restricted-cone

**Description**

Enable mode *Restricted NAT*. By default, the mode is disabled.

Command with **no** prefix disables the mode.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config)> ip nat restricted-cone
```

```
(config)> no ip nat restricted-cone
```

**Example**

```
(config)> ip nat restricted-cone
Network::Nat: Restricted cone mode enabled.
```

```
(config)> no ip nat restricted-cone
Network::Nat: Restricted cone mode disabled.
```

**History**

Version	Description
3.01	The <b>ip nat restricted-cone</b> command has been introduced.

## 3.59 ip nat sstp

**Description**

Enable translation for *SSTP* clients.

Note:           Command is available if the *SSTP* VPN server component is installed.

Command with **no** prefix removes the rule.

<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	IP				
<b>Synopsis</b>	<pre>  (config)&gt; ip nat sstp   (config)&gt; no ip nat sstp</pre>				
<b>Example</b>	<pre>(config)&gt; ip nat sstp SstpServer::Nat: SSTP VPN NAT enabled.</pre> <pre>(config)&gt; no ip nat sstp SstpServer::Nat: SSTP VPN NAT disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.12</td> <td>The <b>ip nat sstp</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.12	The <b>ip nat sstp</b> command has been introduced.
Version	Description				
2.12	The <b>ip nat sstp</b> command has been introduced.				

## 3.60 ip nat vpn

<b>Description</b>	Enable translation for PPTP clients.
<b>Note:</b>	Command is available if the PPTP VPN server component is installed.
	Command with <b>no</b> prefix removes the rule.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>  (config)&gt; ip nat vpn   (config)&gt; no ip nat vpn</pre>
<b>Example</b>	<pre>(config)&gt; ip nat vpn VpnServer::Nat: PPTP VPN NAT enabled.</pre> <pre>(config)&gt; no ip nat vpn VpnServer::Nat: PPTP VPN NAT disabled.</pre>

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>ip nat vpn</b> command has been introduced.

## 3.61 ip policy

**Description**

Access to a group of commands to configure IP Policy — a default route selection rules for hosts and home network segments. If the IP Policy profile is not found, the command tries to create it. You can enter up to 16 profiles.

Command with **no** prefix removes the defined IP Policy profile from the list.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-policy)

**Synopsis**

```
(config)> ip policy <name>
```

```
(config)> no ip policy <name>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	Policy	IP Policy name. Latin letters, numbers, hyphens and underscores are acceptable. Not more than 32 characters.

**Example**

```
(config)> ip policy Policy0
```

```
Network:::PolicyTable: Created policy "Policy0".
```

```
(config)> no ip policy Policy0
```

```
Network:::PolicyTable: Removed policy "Policy0".
```

**History**

<b>Version</b>	<b>Description</b>
2.12	The <b>ip policy</b> command has been introduced.

### 3.61.1 ip policy description

**Description**

Assign an arbitrary description to the specified IP Policy profile.

Command with **no** prefix removes description.

**Prefix no**

Yes

**Change settings**

Yes

<b>Multiple input</b>	No						
<b>Interface type</b>	IP						
<b>Synopsis</b>	<pre>(config-policy)&gt; <b>description</b> &lt;description&gt; (config-policy)&gt; <b>no description</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>description</td><td><i>String</i></td><td>An arbitrary description of the IP Policy. Latin letters, numbers, hyphens and underscores are acceptable. Not more than 256 characters.</td></tr> </tbody> </table>	Argument	Value	Description	description	<i>String</i>	An arbitrary description of the IP Policy. Latin letters, numbers, hyphens and underscores are acceptable. Not more than 256 characters.
Argument	Value	Description					
description	<i>String</i>	An arbitrary description of the IP Policy. Latin letters, numbers, hyphens and underscores are acceptable. Not more than 256 characters.					
<b>Example</b>	<pre>(config-policy)&gt; <b>description</b> PolicyOne Network:::PolicyTable: "Policy0": updated description.  (config-policy)&gt; <b>no description</b> Network:::PolicyTable: "Policy0": updated description.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.12</td><td>The <b>ip policy description</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.12	The <b>ip policy description</b> command has been introduced.		
Version	Description						
2.12	The <b>ip policy description</b> command has been introduced.						

## 3.61.2 ip policy multipath

<b>Description</b>	Enable the function of simultaneous use of WAN connections in the balancing mode.  Command with <b>no</b> prefix disables the function.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config-policy)&gt; <b>multipath</b> (config-policy)&gt; <b>no multipath</b></pre>
<b>Example</b>	<pre>(config-policy)&gt; <b>multipath</b> Network:::PolicyTable: "Policy0": enable multipath.  (config-policy)&gt; <b>no multipath</b> Network:::PolicyTable: "Policy0": disable multipath.</pre>

**History**

<b>Version</b>	<b>Description</b>
2.14	The <b>ip policy multipath</b> command has been introduced.

### 3.61.3 ip policy permit

**Description**

Permit IP Policy for the global interface. If single IP Policy is permitted for multiple interfaces, you can specify a priority for each of them.

Command with **no** prefix denies the IP Policy for specified interface. If you use no arguments, IP Policy will be denied for the entire list of interfaces.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

IP

**Synopsis**

```
(config-policy)> permit global <interface> [ order <order> ]
```

```
(config-policy)> no permit [ global <interface> ]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	Interface	Full interface name or an alias.
order	Integer	The priority of global interface to which the IP Policy is permitted. Can take values in the range from 1 to 65534, but not more than the number of global interfaces.

**Example**

```
(config-policy)> permit global L2TP0 order 0
Network:::PolicyTable: "Policy0": set permission to use L2TP0.
```

```
(config-policy)> no permit global L2TP0
Network:::PolicyTable: "Policy0": set no permission to use L2TP0.
```

**History**

<b>Version</b>	<b>Description</b>
2.12	The <b>ip policy permit</b> command has been introduced.

### 3.61.4 ip policy permit auto

**Description**

Permit new connections for the IP Policy automatically. By default, the feature is disabled.

Command with **no** prefix removes auto permission.

**Prefix no**

Yes

<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Interface type</b>	IP				
<b>Synopsis</b>	<pre>(config-policy)&gt; <b>permit auto</b> </pre> <pre>(config-policy)&gt; <b>no permit auto</b></pre>				
<b>Example</b>	<pre>(config-policy)&gt; <b>permit auto</b> Network:::PolicyTable: "Policy0": set auto permission.</pre> <pre>(config-policy)&gt; <b>no permit auto</b> Network:::PolicyTable: "Policy0": set auto permission.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.12</td> <td>The <b>ip policy permit auto</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.12	The <b>ip policy permit auto</b> command has been introduced.
Version	Description				
2.12	The <b>ip policy permit auto</b> command has been introduced.				

### 3.61.5 ip policy rate-limit input

<b>Description</b>	Add the input rate-limiting parameters to global interfaces of the IP Policy.  Command with <b>no</b> prefix removes the setting.												
<b>Prefix no</b>	Yes												
<b>Change settings</b>	Yes												
<b>Multiple input</b>	No												
<b>Interface type</b>	IP												
<b>Synopsis</b>	<pre>(config-policy)&gt; <b>rate-limit &lt;interface&gt; input (&lt;rate&gt;   auto)</b> </pre> <pre>(config-policy)&gt; <b>no rate-limit &lt;interface&gt; input</b></pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>interface</td> <td><i>Interface</i></td> <td>The name of a global IP interface to rate-limit its traffic for a group of policy assignees.</td> </tr> <tr> <td>rate</td> <td><i>Integer</i></td> <td>The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.</td> </tr> <tr> <td>auto</td> <td><i>Keyword</i></td> <td>Auto-ingress mode.</td> </tr> </tbody> </table>	Argument	Value	Description	interface	<i>Interface</i>	The name of a global IP interface to rate-limit its traffic for a group of policy assignees.	rate	<i>Integer</i>	The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.	auto	<i>Keyword</i>	Auto-ingress mode.
Argument	Value	Description											
interface	<i>Interface</i>	The name of a global IP interface to rate-limit its traffic for a group of policy assignees.											
rate	<i>Integer</i>	The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.											
auto	<i>Keyword</i>	Auto-ingress mode.											
<b>Example</b>	<pre>(config-policy)&gt; <b>rate-limit WifiMaster1/WifiStation0 input auto</b> Network:::PolicyTable: "Policy0": set input rate limit to "auto".</pre>												

```
(config-policy)> rate-limit WifiMaster1/WifiStation0 input 100000
Network:::PolicyTable: "Policy0": set input rate limit to "100000" ▶
kbps.
```

```
(config-policy)> rate-limit WifiMaster1/WifiStation0 no input
Network:::PolicyTable: "Policy0": reset input rate limit.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>ip policy rate-limit input</b> command has been introduced.

### 3.61.6 ip policy rate-limit output

**Description** Add output rate-limiting parameters to global interfaces of the IP Policy.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

<pre>(config-policy)&gt; <b>rate-limit &lt;interface&gt; output (&lt;rate&gt;   auto)</b></pre>
<pre>(config-policy)&gt; <b>no rate-limit &lt;interface&gt; output</b></pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	<i>Interface</i>	The name of a global IP interface to rate-limit its traffic for a group of policy assignees.
rate	<i>Integer</i>	The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.
auto	<i>Keyword</i>	Auto-ingress mode.

**Example**

```
(config-policy)> rate-limit ISP output auto
Network:::PolicyTable: "Policy0": set output rate limit to "auto".
```

```
(config-policy)> rate-limit ISP output 1000
Network:::PolicyTable: "Policy0": set output rate limit to "1000" ▶
kbps.
```

```
(config-policy)> rate-limit ISP no output
Network:::PolicyTable: "Policy0": reset ouput rate limit.
```

History	Version	Description
	3.05	The <b>ip policy rate-limit output</b> command has been introduced.
	3.08	The <b>auto</b> argument has been added.

## 3.62 ip route

<b>Description</b>	Add a static route to the routing table to describe a rule of IP-packets transmission through a particular gateway or network interface.  As the destination network, one can specify <b>default</b> keyword. In this case, a default route will be created.  Command with <b>no</b> prefix removes the route with the specified parameters.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config)&gt; ip route (&lt;network&gt; &lt;mask&gt;   &lt;host&gt;   <b>default</b>)(&lt;gateway&gt;  &lt;interface&gt;   &lt;interface&gt;) [<b>auto</b>] [<b>metric</b>] [<b>reject</b>]</pre> <pre>(config)&gt; <b>no</b> ip route (&lt;network&gt; &lt;mask&gt;   &lt;host&gt;   <b>default</b>) [&lt;gateway&gt;   &lt;interface&gt;] [<b>metric</b>]</pre>

Arguments	Argument	Value	Description
	network	<i>IP address</i>	IP address of the destination network.
	mask	<i>IP-mask</i>	Mask of the destination network. There are two ways to enter the mask: in the canonical form (for example, 255.255.255.0) and in the form of prefix bit length (for example, /24).
	host	<i>IP address</i>	IP address of the destination node.
	default	<i>Keyword</i>	Helps specify default routes.
	interface	<i>Interface</i>	Interface full name or an alias. Specified as the direction of the packet transferring, if the interface has a point-to-point channel connected that requires no additional addressing within the channel.  If priority <b>interface ip global</b> is set on the interface, the route is added to the system table only if there is no other higher priority route with the same address.

Argument	Value	Description
gateway	<i>IP address</i>	IP address of the router in a directly connected network. Can be specified along with the interface name, if it is required to specify <b>interface ip global</b> priority. If no interface is specified, the systemd determines it automatically based on the current IP settings.
auto	<i>Keyword</i>	Allows you to apply the route when specified gateway becomes available.
metric	<i>Integer</i>	Route metrics. Ignored in the current implementation.
reject	<i>Keyword</i>	Enable route to use only the selected interface for routing the traffic to the specified destination. If the specified interface is not active, the traffic is not sent via other possible routes. This option works only when using the auto option and cannot be applied to the default route.

**Example**

```
(config)> ip route default Home
Network:::RoutingTable: Added static route: 0.0.0.0/0 via Home.

(config)> ip route 123.123.123.123 Wireguard1 auto reject
Network:::RoutingTable: Added static route: 123.123.123.123/32 ▶
via Wireguard1.

(config)> no ip route 123.123.123.123 Wireguard1
Network:::RoutingTable: Deleted static route: 123.123.123.123/32 ▶
via Wireguard1.

(config)> no ip route default
Network:::RoutingTable: No such route: 0.0.0.0/0.
```

**History**

Version	Description
2.00	The <b>ip route</b> command has been introduced.
3.08	The reject option was added.

## 3.63 ip search-domain

**Description** Assign search domain to resolve hostnames that are not fully qualified.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> ip search-domain <domain>
(config)> no ip search-domain
```

**Arguments**

Argument	Value	Description
domain	String	The domain name to assign.

**Example**

```
(config)> ip search-domain my.example
(config)> no ip search-domain my.example
```

**History**

Version	Description
2.00	The <b>ip search-domain</b> command has been introduced.

## 3.64 ip sip alg direct-media

**Description**

Replace IP address in Owner field of SDP. This feature is used to not configure port forwarding separately for VoIP traffic. By default, the setting is disabled.

Command with **no** prefix disables the feature.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> ip sip alg direct-media
(config)> no ip sip alg direct-media
```

**Example**

```
(config)> ip sip alg direct-media
Sip::Alg: Direct media enabled.

(config)> no ip sip alg direct-media
Sip::Alg: Direct media disabled.
```

**History**

Version	Description
2.11	The <b>ip sip alg direct-media</b> command has been introduced.

## 3.65 ip sip alg port

**Description**

Specify a port number for SIP messages other than the default port. By default, port number is 5060.

Command with **no** prefix resets port to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>ip sip alg port &lt;port&gt;</b>
(config)>	<b>no ip sip alg port</b>

Arguments	Argument	Value	Description
	port	<i>Integer</i>	The port number.

**Example**

(config)>	<b>ip sip alg port 7090</b>
	Sip::Alg: Port set to 7090.

(config)>	<b>no ip sip alg port</b>
	Sip::Alg: Port reset to default.

History	Version	Description
	2.12	The <b>ip sip alg port</b> command has been introduced.

## 3.66 ip ssh

**Description** Access to a group of commands to manage SSH-server.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** IP

**Group entry** (config-ssh)

**Synopsis**

(config)>	<b>ip ssh</b>
-----------	---------------

**Example**

(config)>	<b>ip ssh</b>
	(config-ssh)>

History	Version	Description
	2.12	The <b>ip ssh</b> command has been introduced.

## 3.66.1 ip ssh cipher

<b>Description</b>	Set a symmetric key cipher for SSH session. Command with <b>no</b> prefix removes the specified cipher.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config-ssh)&gt; cipher &lt;cipher&gt; (config-ssh)&gt; no cipher &lt;cipher&gt;</pre>

Arguments	Argument	Value	Description
	cipher	chacha20-poly1305@openssh.com	An encryption algorithm ChaCha20-Poly1305.
		aes128-ctr	An encryption algorithm AES128-CTR.
		aes256-ctr	An encryption algorithm AES1256-CTR.
		aes128-gcm@openssh.com	An encryption algorithm AES128-GCM.
		aes256-gcm@openssh.com	An encryption algorithm AES256-GCM.

<b>Example</b>	<pre>(config-ssh)&gt; cipher chacha20-poly1305@openssh.com Ssh::Manager: Added cipher "chacha20-poly1305@openssh.com".</pre>
	<pre>(config-ssh)&gt; no cipher chacha20-poly1305@openssh.com Ssh::Manager: Use default ciphers.</pre>

<b>History</b>	Version	Description
	3.04	The <b>ip ssh cipher</b> command has been introduced.
	3.05	New encryption algorithms aes128-gcm@openssh.com, aes256-gcm@openssh.com were added.

## 3.66.2 ip ssh keygen

<b>Description</b>	Regeneration of a given type key.
--------------------	-----------------------------------

<b>Prefix no</b>	No																											
<b>Change settings</b>	Yes																											
<b>Multiple input</b>	No																											
<b>Interface type</b>	IP																											
<b>Synopsis</b>	<pre>(config-ssh)&gt; keygen &lt;keygen&gt;</pre>																											
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>keygen</td><td>default</td><td>Automatic generation of a new open key RSA2048 + ECDSA-NISTP521.</td></tr> <tr> <td></td><td>rsa-1024</td><td>Automatic generation of a new open RSA-key with a length of 1024 bits.</td></tr> <tr> <td></td><td>rsa-2048</td><td>Automatic generation of a new open RSA-key with a length of 2048 bits.</td></tr> <tr> <td></td><td>rsa-4096</td><td>Automatic generation of a new open RSA-key with a length of 4096 bits.</td></tr> <tr> <td></td><td>ecdsa-nistp256</td><td>Automatic generation of a new open ECDSA-key with a length of 256 bits.</td></tr> <tr> <td></td><td>ecdsa-nistp384</td><td>Automatic generation of a new open ECDSA-key with a length of 384 bits.</td></tr> <tr> <td></td><td>ecdsa-nistp521</td><td>Automatic generation of a new open ECDSA-key with a length of 521 bits.</td></tr> <tr> <td></td><td>ed25519</td><td>Automatic generation of a new open ED25519 key with a length of 256 bits.</td></tr> </tbody> </table>	Argument	Value	Description	keygen	default	Automatic generation of a new open key RSA2048 + ECDSA-NISTP521.		rsa-1024	Automatic generation of a new open RSA-key with a length of 1024 bits.		rsa-2048	Automatic generation of a new open RSA-key with a length of 2048 bits.		rsa-4096	Automatic generation of a new open RSA-key with a length of 4096 bits.		ecdsa-nistp256	Automatic generation of a new open ECDSA-key with a length of 256 bits.		ecdsa-nistp384	Automatic generation of a new open ECDSA-key with a length of 384 bits.		ecdsa-nistp521	Automatic generation of a new open ECDSA-key with a length of 521 bits.		ed25519	Automatic generation of a new open ED25519 key with a length of 256 bits.
Argument	Value	Description																										
keygen	default	Automatic generation of a new open key RSA2048 + ECDSA-NISTP521.																										
	rsa-1024	Automatic generation of a new open RSA-key with a length of 1024 bits.																										
	rsa-2048	Automatic generation of a new open RSA-key with a length of 2048 bits.																										
	rsa-4096	Automatic generation of a new open RSA-key with a length of 4096 bits.																										
	ecdsa-nistp256	Automatic generation of a new open ECDSA-key with a length of 256 bits.																										
	ecdsa-nistp384	Automatic generation of a new open ECDSA-key with a length of 384 bits.																										
	ecdsa-nistp521	Automatic generation of a new open ECDSA-key with a length of 521 bits.																										
	ed25519	Automatic generation of a new open ED25519 key with a length of 256 bits.																										
<b>Example</b>	<pre>(config-ssh)&gt; keygen default Ssh::Manager: Key generation is in progress...</pre>																											
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.12</td><td>The ip ssh keygen command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.12	The ip ssh keygen command has been introduced.																							
Version	Description																											
2.12	The ip ssh keygen command has been introduced.																											

### 3.66.3 ip ssh lockout-policy

<b>Description</b>	Set SSH bruteforce detection parameters for public interfaces. By default, feature is enabled. If you use 0 as an argument, all bruteforce detection parameters will be reset to default.  Command with <b>no</b> prefix disables bruteforce detection.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

<b>Interface type</b>	IP												
<b>Synopsis</b>	<pre>(config-ssh)&gt; <b>lockout-policy</b> &lt;threshold&gt; [&lt;duration&gt; [&lt;observation-window&gt; ]] (config-ssh)&gt; <b>no lockout-policy</b></pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>threshold</td><td><i>Integer</i></td><td>The number of failed attempts to log in. By default, 5 value is used. Can take values in the range from 4 to 20.</td></tr> <tr> <td>duration</td><td><i>Integer</i></td><td>An authorization ban duration for the specified IP in minutes. By default, 15 value is used. Can take values in the range from 1 to 60.</td></tr> <tr> <td>observation-window</td><td><i>Integer</i></td><td>Duration of suspicious activity observation in minutes. By default, 3 value is used. Can take values in the range from 1 to 10.</td></tr> </tbody> </table>	Argument	Value	Description	threshold	<i>Integer</i>	The number of failed attempts to log in. By default, 5 value is used. Can take values in the range from 4 to 20.	duration	<i>Integer</i>	An authorization ban duration for the specified IP in minutes. By default, 15 value is used. Can take values in the range from 1 to 60.	observation-window	<i>Integer</i>	Duration of suspicious activity observation in minutes. By default, 3 value is used. Can take values in the range from 1 to 10.
Argument	Value	Description											
threshold	<i>Integer</i>	The number of failed attempts to log in. By default, 5 value is used. Can take values in the range from 4 to 20.											
duration	<i>Integer</i>	An authorization ban duration for the specified IP in minutes. By default, 15 value is used. Can take values in the range from 1 to 60.											
observation-window	<i>Integer</i>	Duration of suspicious activity observation in minutes. By default, 3 value is used. Can take values in the range from 1 to 10.											

<b>Example</b>	<pre>(config-ssh)&gt; <b>lockout-policy 10 30 2</b> Ssh::Manager: Bruteforce detection is reconfigured.</pre>
	<pre>(config-ssh)&gt; <b>no lockout-policy</b> Ssh::Manager: Bruteforce detection is disabled.</pre>
	<pre>(config-ssh)&gt; <b>lockout-policy 0</b> Ssh::Manager: Bruteforce detection reset to default.</pre>

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.12</td><td>The <b>ip ssh lockout-policy</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.12	The <b>ip ssh lockout-policy</b> command has been introduced.
Version	Description				
2.12	The <b>ip ssh lockout-policy</b> command has been introduced.				

## 3.66.4 ip ssh port

<b>Description</b>	Specify port number for SSH connection. By default, 22 port number is used.  Command with <b>no</b> prefix resets port number to default.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config-ssh)&gt; <b>port</b> &lt;number&gt;</pre>

(config-ssh)> **no port**

**Arguments**

Argument	Value	Description
number	<i>Integer</i>	Port number. Can take values in the range from 1 to 65535 inclusively.

**Example**

```
(config-ssh)> port 2626
Ssh::Manager: Port changed to 2626.
```

```
(config-ssh)> no port
Ssh::Manager: Port reset to 22.
```

**History**

Version	Description
2.12	The <b>ip ssh port</b> command has been introduced.

### 3.66.5 ip ssh security-level

**Description** Set SSH security level. By default, private value is set.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis** (config-ssh)> **security-level (public | private | protected)**

**Arguments**

Argument	Value	Description
public	<i>Keyword</i>	Access to the SSH server is allowed for public, private and protected interfaces.
private	<i>Keyword</i>	Access to the SSH server is allowed for private interfaces.
protected	<i>Keyword</i>	Access to the SSH server is allowed for private and protected interfaces.

**Example**

```
(config-ssh)> security-level protected
Ssh::Manager: Security level changed to protected.
```

**History**

Version	Description
2.12	The <b>ip ssh security-level</b> command has been introduced.

## 3.66.6 ip ssh session timeout

**Description** Set the lifetime of inactive session for SSH connection. By default, 300 value is used, i.e. the function of activity tracking within a session is disabled.

Command with **no** prefix resets timeout to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

(config-ssh)>	<b>session timeout &lt;timeout&gt;</b>
---------------	--

(config-ssh)>	<b>no session timeout</b>
---------------	---------------------------

Arguments	Argument	Value	Description
	timeout	<i>Integer</i>	The lifetime of inactive session. Can take values in the range from 5 to $2^{32}-1$ seconds inclusively.

**Example**

(config-ssh)>	<b>session timeout 123456</b>
---------------	-------------------------------

Ssh::Manager: A session timeout value set to 123456 seconds.

(config-ssh)>	<b>no session timeout</b>
---------------	---------------------------

Ssh::Manager: A session timeout reset.

History	Version	Description
	3.03	The <b>ip ssh session timeout</b> command has been introduced.

## 3.67 ip static

**Description** Define translation rule for global and local IP addresses. If *interface* or *network* corresponds to the interface with **security level** public, then the destination address translation (DNAT) will occur. If *to-address* corresponds to the interface with **security level** public, then source address translation (SNAT) will occur. TCP/UDP port number is always treated as the destination port.

If *network* corresponds to a single address and this address is equal to *to-address*, then this rule will prohibit the translation of the specified address, which could have been done based on the specified rules **ip nat**.

**ip static** rules have higher priority than the **ip nat** rules.

When using the translation rule, the router opens access to the specified port, so there is no need to make additional configuration of the firewall.

Command with **no** prefix enables the rule or removes the rule.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

IP

**Synopsis**

```
(config)> ip static [<protocol>](<interface> | (<address> <mask>) )
    (<port> through <end-port>(<to-address> | <to-host> |
    <to-interface>) |
    <port>(<to-address> | <to-host> | <to-interface>) [<to-port>] |
    <to-address> | <to-host> | <to-interface>)

(config)> no ip static [<protocol>](<interface> | (<address> <mask>) )
    (<port> through <end-port>(<to-address> | <to-host> |
    <to-interface>) |
    <port>(<to-address> | <to-host> | <to-interface>) [<to-port>] |
    <to-address> | <to-host> | <to-interface>)]
```

**Arguments**

Argument	Value	Description
protocol	tcp	TCP protocol.
	udp	UDP protocol.
	icmp	ICMP protocol.
	tcpudp	TCP and UDP protocols.
	gre	GRE protocol.
	ipip	IP in IP protocol.
interface	Interface	Input interface name (full name or alias).
comment	String	User's notes with symbol ! before them.
address	IP address	Along with mask mask sets the range of destination IP addresses that are to be translated.
mask	IP-mask	Translation range mask. There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).
port	Integer	TCP/UDP port number for which a translation request comes. If not specified, all incoming requests will be translated.
end-port	Integer	The end of the range of ports.
to-address	IP address	The destination address after translation.

Argument	Value	Description
to-host	MAC address	The destination MAC address after translation. Only MAC address from known hosts are accepted. If the known host is deleted, then the associated rules will be deleted too.
to-port	Integer	TCP/UDP port number after translation. If not specified, the destination port remains the same.
to-interface	Interface	Interface name after translation.

**Example**

Let there be a router between the “local” network 172.16.1.0/24 ([security level private](#)) and “global” network 10.0.0.0/16 ([security level public](#)). It is required that all requests coming to the “global” interface of this router on port 80 to be broadcast to the “local” server with the address 172.16.1.33. The sequence of commands to implement the required schema might look like this:

```
(config)> interface Home ip address 192.168.1.1/24
Network::Interface::Ip: "Bridge0": IP address is 192.168.1.1/24.

(config)> ip static tcp ISP 80 172.16.1.33 80
Network::StaticNat: Static NAT rule has been added.

(config)> ip static tcp ISP 21 00:0e:c6:a1:22:11 !test
Network::StaticNat: Static NAT rule is already there.

(config)> ip static disable
Network::StaticNat: Static NAT disable unchanged.

(config)> no ip static disable
Network::StaticNat: Static NAT rule enabled.

(config)> no ip static
Network::StaticNat: Static NAT rules have been removed.
```

**History**

Version	Description
2.00	The <b>ip static</b> command has been introduced.
2.06	The <b>to-host</b> argument has been added.

## 3.68 ip static rule

<b>Description</b>	Disable IP address translation rule or set rule operation time by schedule.  Command with <b>no</b> prefix enables the rule or removes the rule schedule.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

<b>Multiple input</b>	Yes												
<b>Interface type</b>	IP												
<b>Synopsis</b>	<pre>(config)&gt; ip static rule &lt;index&gt; (disable   schedule &lt;schedule&gt;) (config)&gt; no ip static rule &lt;index&gt; (disable   schedule)</pre>												
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>index</td><td><i>Integer</i></td><td>The translation rule number.</td></tr> <tr> <td>disable</td><td><i>Keyword</i></td><td>Disable the translation rule.</td></tr> <tr> <td>schedule</td><td><i>Schedule</i></td><td>The name of the schedule that was created with <b>schedule</b> group of commands.</td></tr> </tbody> </table>	Argument	Value	Description	index	<i>Integer</i>	The translation rule number.	disable	<i>Keyword</i>	Disable the translation rule.	schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.
Argument	Value	Description											
index	<i>Integer</i>	The translation rule number.											
disable	<i>Keyword</i>	Disable the translation rule.											
schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.											
<b>Example</b>	<pre>(config)&gt; ip static rule 0 schedule test_schedule Network::StaticNat: Static NAT rule schedule applied.  (config)&gt; ip static rule 0 disable Network::StaticNat: Static NAT rule disabled.  (config)&gt; no ip static rule 0 disable Network::StaticNat: Static NAT rule enabled.  (config)&gt; no ip static rule 0 schedule Network::StaticNat: Static NAT rule schedule removed.</pre>												
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.08</td><td>The <b>ip static rule</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.08	The <b>ip static rule</b> command has been introduced.								
Version	Description												
2.08	The <b>ip static rule</b> command has been introduced.												

## 3.69 ip telnet

<b>Description</b>	Access to a group of commands to manage Telnet server.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Interface type</b>	IP
<b>Group entry</b>	(config-telnet)
<b>Synopsis</b>	<pre>(config)&gt; ip telnet</pre>
<b>Example</b>	<pre>(config)&gt; ip telnet (config-telnet)&gt;</pre>

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip telnet</b> command has been introduced.

## 3.69.1 ip telnet lockout-policy

**Description**

Set Telnet bruteforce detection parameters for public interfaces. By default, feature is enabled. If you use 0 as an argument, all bruteforce detection parameters will be reset to default.

Command with **no** prefix disables bruteforce detection.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config-telnet)> lockout-policy <threshold> [<duration> [<observation-window> ]]
(cconfig-telnet)> no lockout-policy
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
threshold	<i>Integer</i>	The number of failed attempts to log in. By default, 5 value is used. Can take values in the range from 4 to 20.
duration	<i>Integer</i>	An authorization ban duration for the specified IP in minutes. By default, 15 value is used. Can take values in the range from 1 to 60.
observation-window	<i>Integer</i>	Duration of suspicious activity observation in minutes. By default, 3 value is used. Can take values in the range from 1 to 10.

**Example**

```
(config-telnet)> lockout-policy 10 30 2
Telnet::Server: Bruteforce detection is reconfigured.
```

```
(config-telnet)> no lockout-policy
Telnet::Server: Bruteforce detection is disabled.
```

```
(config-telnet)> lockout-policy 0
Telnet::Server: Bruteforce detection is enabled.
```

History	Version	Description
	2.08	The <b>ip telnet lockout-policy</b> command has been introduced.

## 3.69.2 ip telnet port

**Description** Specify port number for telnet connection. By default, 23 port number is used.

Command with **no** prefix resets port number to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

(config-telnet)>	<b>port &lt;number&gt;</b>
(config-telnet)>	<b>no port</b>

**Arguments**

Argument	Value	Description
number	<i>Integer</i>	Port number. Can take values in the range from 1 to 65535 inclusively.

**Example**

(config-telnet)>	<b>port 2525</b>
(config-telnet)>	Telnet::Server: Port unchanged.

(config-telnet)>	<b>no port</b>
(config-telnet)>	Telnet::Server: Port unchanged.

**History**

Version	Description
2.08	The <b>ip telnet port</b> command has been introduced.

## 3.69.3 ip telnet security-level

**Description** Set Telnet security level. By default, private value is set.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
(config-telnet)> security-level (public | private | protected)
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
<b>public</b>	<i>Keyword</i>	Access to the Telnet server is allowed for public, private and protected interfaces.
<b>private</b>	<i>Keyword</i>	Access to the Telnet server is allowed for private interfaces.
<b>protected</b>	<i>Keyword</i>	Access to the Telnet server is allowed for private and protected interfaces.

**Example**

```
(config-telnet)> security-level protected
Telnet::Manager: Security level changed to protected.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip telnet security-level</b> command has been introduced.

### 3.69.4 ip telnet session max-count

**Description**

Set the maximal number of simultaneous sessions for telnet connection. By default, 4 value is used.

Command with **no** prefix resets count to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config-telnet)> session max-count <count>
```

```
(config-telnet)> no session max-count
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
<b>count</b>	<i>Integer</i>	The maximal number of simultaneous sessions. Can take values in the range from 1 to 4 inclusively.

**Example**

```
(config-telnet)> session max-count 4
Telnet::Server: The maximum session count set to 4.
```

```
(config-telnet)> no session max-count
Telnet::Server: The maximum session count reset to 4.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip telnet session max-count</b> command has been introduced.

## 3.69.5 ip telnet session timeout

**Description**

Set the lifetime of inactive session for telnet connection. By default, 300 value is used which means that the function of activity tracking within a session is disabled.

Command with **no** prefix resets timeout to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config-telnet)> session timeout <timeout>
```

```
(config-telnet)> no session timeout
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
timeout	<i>Integer</i>	The lifetime of inactive session. Can take values in the range from 5 to $2^{32}$ - 1 seconds inclusively.

**Example**

```
(config-telnet)> session timeout 600
```

Telnet::Server: A session timeout value set to 600 seconds.

```
(config-telnet)> no session timeout
```

Telnet::Server: A session timeout reset.

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>ip telnet session timeout</b> command has been introduced.

## 3.70 ip traffic-shape host

**Description**

Set the limit of data rate on a specified known host in both directions. By default speed is not limited.

Command with **no** prefix removes the setting for specified host. If you use no arguments, the entire list of rate limits for all hosts will be removed.

<b>Prefix no</b>	Yes															
<b>Change settings</b>	Yes															
<b>Multiple input</b>	Yes															
<b>Interface type</b>	IP															
<b>Synopsis</b>	<pre>(config)&gt; ip traffic-shape host &lt;mac&gt; rate &lt;rate&gt; [ asymmetric &lt;upstream-rate&gt; ] [ schedule &lt;schedule&gt; ] (config)&gt; no ip traffic-shape host [ &lt;mac&gt; ]</pre>															
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>mac</td><td>MAC address</td><td>MAC address of the known host.</td></tr> <tr> <td>rate</td><td>Integer</td><td>Value of data download rate in Kbps. Limit should be in the range from 64 Kbps to 1 Gbps.</td></tr> <tr> <td>upstream-rate</td><td>Integer</td><td>Data upload rate in Kbps. Value can be in the range from 64 Kbps to 1 Gbps.</td></tr> <tr> <td>schedule</td><td>Schedule</td><td>The name of the schedule that was created with <b>schedule</b> group of commands.</td></tr> </tbody> </table>	Argument	Value	Description	mac	MAC address	MAC address of the known host.	rate	Integer	Value of data download rate in Kbps. Limit should be in the range from 64 Kbps to 1 Gbps.	upstream-rate	Integer	Data upload rate in Kbps. Value can be in the range from 64 Kbps to 1 Gbps.	schedule	Schedule	The name of the schedule that was created with <b>schedule</b> group of commands.
Argument	Value	Description														
mac	MAC address	MAC address of the known host.														
rate	Integer	Value of data download rate in Kbps. Limit should be in the range from 64 Kbps to 1 Gbps.														
upstream-rate	Integer	Data upload rate in Kbps. Value can be in the range from 64 Kbps to 1 Gbps.														
schedule	Schedule	The name of the schedule that was created with <b>schedule</b> group of commands.														
<b>Example</b>	<pre>(config)&gt; ip traffic-shape host a8:1e:82:81:f1:21 rate 80 TrafficControl::Manager: "a8:1e:82:81:f1:21" host rate limited ▶ to DL 80 / UL 80 Kbits/sec.  (config)&gt; ip traffic-shape host a8:1e:82:81:f1:21 rate 80 ▶ asymmetric 64 TrafficControl::Manager: "a8:1e:82:81:f1:21" host rate limited ▶ to DL 80 / UL 64 Kbits/sec..  (config)&gt; ip traffic-shape host a8:1e:82:81:f1:21 rate 80 ▶ asymmetric 64 schedule Update TrafficControl::Manager: "a8:1e:82:81:f1:21" host rate limited ▶ to DL 80 / UL 64 Kbits/sec (controlled by schedule Update).  (config)&gt; no ip traffic-shape host a8:1e:82:81:f1:21 TrafficControl::Manager: Rate limit removed for host ▶ "a8:1e:82:81:f1:21".  (config)&gt; no ip traffic-shape host a8:1e:82:81:f1:21 TrafficControl::Manager: Rate limit removed for host ▶ "a8:1e:82:81:f1:21".  (config)&gt; no ip traffic-shape host TrafficControl::Manager: Rate limits for all hosts removed.</pre>															
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.05</td><td>The <b>ip traffic-shape host</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.05	The <b>ip traffic-shape host</b> command has been introduced.											
Version	Description															
2.05	The <b>ip traffic-shape host</b> command has been introduced.															

2.08	The <b>schedule</b> argument was added.
3.04	The <b>upstream-rate</b> argument was added.

## 3.71 ip traffic-shape unknown-host

**Description** Set the data rate limitation for unregistered devices in both directions. By default, speed is unlimited.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** IP

**Synopsis**

```
(config)> ip traffic-shape unknown-host rate <rate> [ asymmetric
<upstream-rate> ]
(config)> no ip traffic-shape unknown-host rate
```

**Arguments**

Argument	Value	Description
rate	<i>Integer</i>	The data download rate in Kbps. Value should be in the range from 64 Kbps to 1 Gbps.
upstream-rate	<i>Integer</i>	Data upload rate in Kbps. Value can be in the range from 64 Kbps to 1 Gbps.

**Example**

```
(config)> ip traffic-shape unknown-host rate 80
TrafficControl::Manager: Rate limit for unknown hosts set to 80 ▶
Kbits/sec.
```

```
(config)> ip traffic-shape unknown-host rate 80 asymmetric 64
TrafficControl::Manager: Rate limit for unknown hosts set to ▶
80/64 Kbits/sec.
```

```
(config)> no ip traffic-shape unknown-host rate
TrafficControl::Manager: Rate limit for unknown hosts removed.
```

**History**

Version	Description
2.09	The <b>ip traffic-shape unknown-host</b> command has been introduced.
3.04	The <b>upstream-rate</b> argument was added.

## 3.72 ipv6 local-prefix

**Description** Configure a local (ULA) prefix. Argument can be a literal prefix or **default**, which generates a persistent unique prefix automatically.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>ipv6 local-prefix (default   &lt;prefix&gt;)</b>
-----------	---

(config)>	<b>no ipv6 local-prefix [default   &lt;prefix&gt;]</b>
-----------	--

**Arguments**

Argument	Value	Description
default	Keyword	Generate persistent unique prefix.
prefix	Prefix	Local ULA prefix. Must be a valid prefix in the block fd00::/8 with a prefix length no longer than 48.

**Example**

(config)>	<b>ipv6 local-prefix default</b>
-----------	----------------------------------

	Ip6::Prefixes: Default ULA prefix enabled.
--	--

(config)>	<b>ipv6 local-prefix fd01:db8:43::/48</b>
-----------	---

	Ip6::Prefixes: Added static prefix: fd01:db8:43::/48.
--	---

(config)>	<b>no ipv6 local-prefix default</b>
-----------	-------------------------------------

	Ip6::Prefixes: Default ULA prefix disabled.
--	---

(config)>	<b>no ipv6 local-prefix fd01:db8:43::/48</b>
-----------	--

	Ip6::Prefixes: Deleted static prefix: fd01:db8:43::/48.
--	---

**History**

Version	Description
2.00	The <b>ipv6 local-prefix</b> command has been introduced.

## 3.73 ipv6 name-server

**Description** Configure DNS server IPv6-addresses. Addresses saved in this fashion are called static as opposite to dynamic — as registered by **PPP** or **DHCP** services.

**ipv6 name-server** command can be entered multiple times if several DNS server addresses need to be setup.

Command with **no** prefix removes the specified DNS server address from the static and the active lists if the command is furnished with arguments, or clears the list of static addresses if the command has no arguments.

<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Synopsis</b>	<pre>(config)&gt; ipv6 name-server &lt;address&gt; [&lt;domain&gt; [ on &lt;interface&gt; ] ] (config)&gt; no ipv6 name-server [&lt;address&gt; [&lt;domain&gt; [ on &lt;interface&gt; ] ]]</pre>

Arguments	Argument	Value	Description
	address	<i>IPv6-address</i>	Name server address.
	domain	<i>String</i>	Domain for which the server will be used. In resolving names the DNS-proxy first selects the address of the server with name best matching the requested domain. If the domain is not specified, the server will be used for all requests. Use "" as default domain.
	interface	<i>Interface</i>	Interface name to configure.

<b>Example</b>	<pre>(config)&gt; ipv6 name-server 2001:4860:4860::8888 Dns::Manager: Name server 2001:4860:4860::8888 added, domain ▶ (default).</pre>
	<pre>(config)&gt; ipv6 name-server 123::456 "" on ISP Dns::InterfaceSpecific: "GigabitEthernet1": name server 123::456 ▶ added, domain (default).</pre>
	<pre>(config)&gt; ipv6 name-server 2001:4860:4860::8888 google.com Dns::Manager: Name server 2001:4860:4860::8888 added, domain ▶ google.com.</pre>
	<pre>(config)&gt; no ipv6 name-server 2001:4860:4860::8888 Dns::Manager: Name server 2001:4860:4860::8888, domain (default) ▶ deleted.</pre>
	<pre>(config)&gt; no ipv6 name-server 123::456 "" on ISP Dns::InterfaceSpecific: Name server 123::456 deleted, domain ▶ (default).</pre>
	<pre>(config)&gt; no ipv6 name-server 2001:4860:4860::8888 google.com Dns::Manager: Name server 2001:4860:4860::8888, domain google.com ▶ deleted.</pre>
	<pre>(config)&gt; no ipv6 name-server Dns::Manager: Static name server list cleared.</pre>

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ipv6 name-server</b> command has been introduced.
4.00	The <b>interface</b> argument was added.

## 3.74 ipv6 pass

**Description**

Enable Pass Through mode on the router for IPv6-packets. By default, the feature is disabled.

Command with **no** prefix disables the function.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> ipv6 pass through <wan-iface> <lan-iface>
(config)> no ipv6 pass
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
wan-iface	Interface	Full WAN-interface name or an alias.
lan-iface	Interface	Full LAN-interface name or an alias.

**Example**

```
(config)> ipv6 pass through ISP Home
Ip6::Pass: Configured pass from "GigabitEthernet1" to "Bridge0".
(config)> no ipv6 pass
Ip6::Pass: Disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>ipv6 pass</b> command has been introduced.

## 3.75 ipv6 route

**Description**

Add a static route to the routing table to describe a rule of IPv6-packets transmission through a particular gateway or network interface.

As the destination network keyword **default** can be specified. In this case, a default route will be created.

Command with **no** prefix removes the route with the specified parameters.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config)> ipv6 route (<prefix> | default)(<interface> [<gateway>] | <gateway>)
```

```
(config)> no ipv6 route (<prefix> | default)(<interface> [<gateway>] | <gateway>)
```

**Arguments**

Argument	Value	Description
prefix	<i>Prefix</i>	IPv6 prefix.
default	<i>Keyword</i>	Default prefix.
interface	<i>Interface</i>	Full interface name or an alias.
gateway	<i>IP address</i>	IP address of the router in a directly connected network.

**Example**

```
(config)> ipv6 route 2002:c100:aeb5::/48 ISP
route added
```

```
(config)> no ipv6 route 2002:c100:aeb5::/48 ISP
route erased
```

```
(config)> ipv6 route 2002:c100:aeb5:100::/56 2002:c100:aeb5::33
route added
```

```
(config)> no ipv6 route 2002:c100:aeb5:100::/56 2002:c100:aeb5::33
route erased
```

**History**

Version	Description
2.00	The <b>ipv6 route</b> command has been introduced.
2.11	gateway argument has been added.

## 3.76 ipv6 static

**Description**

Define the rule to allow incoming connection to a specified port of a registered home network device.

Command with **no** prefix removes the rule.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> ipv6 static <protocol>(<interface> <mac> | <mac>) [<port> [through <end-port>]]
```

```
(config)> no ipv6 static [<protocol>(<interface> <mac> | <mac>) [<port> [through <end-port>]]]
```

**Arguments**

Argument	Value	Description
protocol	tcp	<i>TCP</i> protocol.
	udp	<i>UDP</i> protocol.
	tcpudp	<i>TCP</i> and <i>UDP</i> protocol.
	icmp6	<i>ICMPv6</i> protocol.
interface	<i>Interface</i>	Input interface name (full name or an alias).
mac	<i>MAC address</i>	MAC address of host.
port	<i>Integer</i>	TCP/UDP port number for which incoming request comes.
end-port	<i>Integer</i>	The end of the range of ports.

**Example**

```
(config)> ipv6 static tcp ISP 04:d1:c3:24:bc:19 81
Ip6::Firewall: Static rule added.
```

```
(config)> ipv6 static tcp 04:d1:c3:24:bc:19 8080
Ip6::Firewall: Static rule added.
```

```
(config)> ipv6 static tcp ISP 04:d1:c3:24:bc:19 8080 through 8081
Ip6::Firewall: Static rule added.
```

```
(config)> ipv6 static icmpv6 ISP 04:d1:c3:24:bc:19
Ip6::Firewall: Static rule added.
```

```
(config)> no ipv6 static icmpv6 ISP 04:d1:c3:24:bc:19
Ip6::Firewall: Static rule removed.
```

```
(config)> no ipv6 static
Ip6::Firewall: Static rules cleared.
```

**History**

Version	Description
2.12	The <b>ipv6 static</b> command has been introduced.
4.00	The <b>icmpv6</b> argument was added.

## 3.77 ipv6 subnet

**Description**

Access to a group of commands to configure a LAN IPv6 segment. If the segment is not found, the command tries to create it.

**Prefix no**

Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Group entry</b>	(config-subnet)						
<b>Synopsis</b>	<pre>(config)&gt; ipv6 subnet &lt;name&gt; (config)&gt; no ipv6 subnet [&lt;name&gt;]</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>name</td> <td><i>String</i></td> <td>Subnet name or an alias.</td> </tr> </tbody> </table>	Argument	Value	Description	name	<i>String</i>	Subnet name or an alias.
Argument	Value	Description					
name	<i>String</i>	Subnet name or an alias.					

<b>Example</b>	<pre>(config)&gt; ipv6 subnet Default (config-subnet)&gt;</pre>
----------------	---

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>ipv6 subnet</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>ipv6 subnet</b> command has been introduced.
Version	Description				
2.00	The <b>ipv6 subnet</b> command has been introduced.				

## 3.77.1 ipv6 subnet bind

<b>Description</b>	Bind the subnet to an interface.  Command with <b>no</b> prefix cancels binding.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-subnet)&gt; bind &lt;bind&gt; (config-subnet)&gt; no bind</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>bind</td> <td><i>Interface</i></td> <td>Full interface name or an alias.</td> </tr> </tbody> </table>	Argument	Value	Description	bind	<i>Interface</i>	Full interface name or an alias.
Argument	Value	Description					
bind	<i>Interface</i>	Full interface name or an alias.					

<b>Example</b>	<pre>(config-subnet)&gt; bind WifiMaster0/AccessPoint1 Ip6::Subnets: Interface "WifiMaster0/AccessPoint1" bound to ▶ subnet "Default".</pre>
	<pre>(config-subnet)&gt; no bind Ip6::Subnets: Interface unbound from subnet "Default".</pre>

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ipv6 subnet bind</b> command has been introduced.

## 3.77.2 ipv6 subnet mode

**Description**

Select the address configuration mode for hosts in the subnet. Exclusive options are **dhcp** and **slaac**. The former will enable a local DHCPv6 server for the purposes of address assignment, and the latter will enable SLAAC (Stateless Address Autoconfiguration).

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-subnet)> mode <mode>
(config-subnet)> no mode
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
mode	slaac	Enable SLAAC (stateless autoconfiguration).
	dhcp	Enable DHCPv6 server (stateful autoconfiguration).

**Example**

```
(config-subnet)> mode dhcp
Ip6::Subnets: Subnet "Default" enabled as DHCP.
```

```
(config-subnet)> no mode
Ip6::Subnets: Subnet "Default" disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ipv6 subnet mode</b> command has been introduced.

## 3.77.3 ipv6 subnet number

**Description** Assign the subnet ID, which will determine the advertised prefix for the segment. Must be unique across subnets.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-subnet)> number <number>
```

**Arguments**

Argument	Value	Description
number	<i>Integer</i>	Unique subnet ID.

**Example**

```
(config-subnet)> number 2
Ip6::Subnets: Number 2 assigned to subnet "Default".
```

**History**

Version	Description
2.00	The <b>ipv6 subnet number</b> command has been introduced.

## 3.77.4 ipv6 subnet prefix delegate

**Description** Set delegated prefix length.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config-subnet)> prefix delegate <delegate>
```

```
(config-subnet)> no prefix delegate
```

**Arguments**

Argument	Value	Description
delegate	<i>Integer</i>	The value must be less than prefix length.

**Example**

```
(config-subnet)> prefix delegate 63
Network::Ip6::Subnets: Delegate length is /63 assigned to subnet ▶
"Default".
```

```
(config-subnet)> no prefix delegate
```

Network::Ip6::Subnets: Prefix delegation disabled for subnet ▶  
"Default".

**History**

Version	Description
4.00	The <b>ipv6 subnet prefix delegate</b> command has been introduced.

## 3.77.5 ipv6 subnet prefix length

**Description** Set subnet prefix length. By default, /64 prefix length is set.

Command with **no** prefix resets to default.

<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-subnet)&gt; <b>prefix length &lt;length&gt;</b>           (config-subnet)&gt; <b>no prefix length</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>length</td> <td><i>Integer</i></td> <td>Prefix length can take values in the range from /32 to /64.</td> </tr> </tbody> </table>	Argument	Value	Description	length	<i>Integer</i>	Prefix length can take values in the range from /32 to /64.
Argument	Value	Description					
length	<i>Integer</i>	Prefix length can take values in the range from /32 to /64.					
<b>Example</b>	<pre>(config-subnet)&gt; <b>prefix length 62</b> Network::Ip6::Subnets: Length is /62 assigned to subnet "Default". (config-subnet)&gt; <b>no prefix length</b> Network::Ip6::Subnets: Length reset to defalut for subnet ▶ "Default".</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>4.00</td> <td>The <b>ipv6 subnet prefix length</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	4.00	The <b>ipv6 subnet prefix length</b> command has been introduced.		
Version	Description						
4.00	The <b>ipv6 subnet prefix length</b> command has been introduced.						

## 3.78 isolate-private

<b>Description</b>	Prohibit data transfer between any interfaces with <b>security level private</b> . Enabled by default.  Command with <b>no</b> prefix cancels the command, allowing data transfer between private interfaces.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config)&gt; <b>isolate-private</b>           (config)&gt; <b>no isolate-private</b></pre>
<b>Example</b>	<pre>(config)&gt; <b>isolate-private</b> Netfilter::Manager: Private networks isolated. (config)&gt; <b>no isolate-private</b> Netfilter::Manager: Private networks not isolated.</pre>

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>isolate-private</b> command has been introduced.

## 3.79 kabinet

**Description** Access to a group of commands to configure KABiNET authenticator parameters.

Command with **no** prefix resets all parameters to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Group entry** (kabinet)

**Synopsis**

```
| (config)> kabinet
| (config)> no kabinet
```

**Example**

```
(config)> kabinet
(kabinet)>
```

```
(config)> no kabinet
Kabinet::Authenticator: A configuration reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.02	The <b>kabinet</b> command has been introduced.

### 3.79.1 kabinet access-level

**Description** Set an access level for KABiNET authenticator. By default, access level **internet** is used.

Command with **no** prefix resets level to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
| (kabinet)> access-level <level>
| (kabinet)> no access-level
```

**Arguments**

Argument	Value	Description
level	lan	Access level value.
	internet	

**Example**

```
(kabinet)> access-level lan
Kabinet::Authenticator: An access level set to "lan".
```

```
(kabinet)> access-level internet
Kabinet::Authenticator: An access level set to "internet".
```

```
(kabinet)> no access-level
Kabinet::Authenticator: An access level reset to "internet".
```

**History**

Version	Description
2.02	The <b>kabinet access-level</b> command has been introduced.

## 3.79.2 kabinet interface

**Description** Bind KABiNET authenticator to the specified interface.

Command with **no** prefix unbinds interface.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(kabinet)> interface <interface>
(kabinet)> no interface
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Full interface name or an alias. You can see the list of available interfaces with help of <b>interface [Tab]</b> command.

**Example**

```
(kabinet)> interface [Tab]
```

Usage template:  
    **interface {interface}**

Choose:  
    GigabitEthernet1  
                 ISP  
    WifiMaster0/AccessPoint2  
    WifiMaster1/AccessPoint1  
    WifiMaster0/AccessPoint3

```
WifiMaster0/AccessPoint0
```

```
AccessPoint
```

```
(kabinet)> interface ISP
```

```
Kabinet::Authenticator: Bound to GigabitEthernet1.
```

```
(kabinet)> no interface
```

```
Kabinet::Authenticator: Interface binding cleared.
```

#### History

Version	Description
2.02	The <b>kabinet interface</b> command has been introduced.

### 3.79.3 kabinet password

**Description** Set a password for KABiNET authenticator. By default, password is not set.

Command with **no** prefix clears the password.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(kabinet)&gt; <b>password &lt;password&gt;</b></pre>
<pre>(kabinet)&gt; <b>no password</b></pre>

#### Arguments

Argument	Value	Description
password	String	The password for authentication.

#### Example

```
(kabinet)> password 123456789
```

```
Kabinet::Authenticator: A password set.
```

```
(kabinet)> no password
```

```
Kabinet::Authenticator: A password cleared.
```

#### History

Version	Description
2.02	The <b>kabinet password</b> command has been introduced.

### 3.79.4 kabinet port

**Description** Set the server port for KABiNET authenticator. By default, values 8314 or 8899 are used.

Command with **no** prefix resets port to default.

<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(kabinet)&gt; port &lt;port&gt; (kabinet)&gt; no port</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>port</td><td><i>Integer</i></td><td>The port number.</td></tr> </tbody> </table>	Argument	Value	Description	port	<i>Integer</i>	The port number.
Argument	Value	Description					
port	<i>Integer</i>	The port number.					
<b>Example</b>	<pre>(kabinet)&gt; port 12345 Kabinet::Authenticator: A server port set.  (kabinet)&gt; no port Kabinet::Authenticator: A server port reset.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.14</td><td>The <b>kabinet port</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.14	The <b>kabinet port</b> command has been introduced.		
Version	Description						
2.14	The <b>kabinet port</b> command has been introduced.						

## 3.79.5 kabinet protocol-version

<b>Description</b>	Set version of KABiNET authenticator protocol. By default, protocol version 2 is used.						
	Command with <b>no</b> prefix resets protocol to default.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(kabinet)&gt; protocol-version &lt;version&gt; (kabinet)&gt; no protocol-version</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>version</td><td><i>String</i></td><td>Version of protocol.</td></tr> </tbody> </table>	Argument	Value	Description	version	<i>String</i>	Version of protocol.
Argument	Value	Description					
version	<i>String</i>	Version of protocol.					
<b>Example</b>	<pre>(kabinet)&gt; protocol-version 1 Kabinet::Authenticator: A protocol version set to "1".  (kabinet)&gt; no protocol-version Kabinet::Authenticator: A protocol version reset to "2".</pre>						

**History**

<b>Version</b>	<b>Description</b>
2.02	The <b>kabinet protocol-version</b> command has been introduced.

## 3.79.6 kabinet server

**Description** Set an IP address of KABiNET authentication server. By default, IP 10.0.0.1 is used.

Command with **no** prefix resets the address.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(kabinet)>	<b>server</b> <address>
(kabinet)>	<b>no server</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
address	<i>IP address</i>	Authentication server address.

**Example**

(kabinet)>	<b>server</b> 77.222.111.1
Kabinet::Authenticator: A server address set.	

(kabinet)>	<b>no server</b>
Kabinet::Authenticator: A server address reset.	

**History**

<b>Version</b>	<b>Description</b>
2.02	The <b>kabinet server</b> command has been introduced.

## 3.80 known host

**Description** Set known host.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config)>	<b>known host</b> <name> <mac>
(config)>	<b>no known host</b> [ <i>mac</i> ]

**Arguments**

Argument	Value	Description
name	<i>String</i>	Arbitrary host name.
mac	<i>MAC address</i>	MAC address.

**Example**

```
(config)> known host MY 00:0e:c6:a2:22:a1
Core::KnownHosts: New host "MY" has been created.
```

```
(config)> no known host 00:0e:c6:a2:22:a1
Core::KnownHosts: Host 00:0e:c6:a1:26:a8 has been removed.
```

**History**

Version	Description
2.00	The <b>known host</b> command has been introduced.

## 3.81 mws acquire

**Description**

Attach new device to [MWS](#).

Command with **no** prefix stops the acquisition.

**Prefix no**

Yes

**Change settings**

No

**Multiple input**

No

**Synopsis**

```
(config)> mws acquire <candidate> [eula-accept] [dpn-accept]
[no-update]
```

```
(config)> no mws acquire <candidate>
```

**Arguments**

Argument	Value	Description
candidate	<i>String</i>	Device ID — MAC address or CID.
eula-accept	<i>Keyword</i>	Send <a href="#">eula accept</a> command.
dpn-accept	<i>Keyword</i>	Send Device Privacy Notice accept.
no-update	<i>Keyword</i>	Acquisition without firmware update confirmation.

**Example**

```
(config)> mws acquire ab1409a2-0f87-11e8-8f23-3d5f5921b253 >
eula-accept
Mws::Controller: Candidate "ab1409a2-0f87-11e8-8f23-3d5f5921b253" >
acquire started.
```

```
(config)> mws acquire 7207838e-af7d-11e6-8029-25463bd03811 >
eula-accept dpn-accept no-update
Mws::Controller: Candidate "7207838e-af7d-11e6-8029-25463bd03811" >
acquire started.
```

```
(config)> no mws acquire 60:31:97:3f:36:00
Mws::Controller: Candidate "60:31:97:3f:36:00" acquire stopped.
```

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>mws acquire</b> command has been introduced.

## 3.82 mws auto-ap-shutdown

**Description**

Enable automatic shutdown of the Wi-Fi System Extenders when communication with the Controller is inaccessible. By default, the setting is disabled.

Command with **no** prefix disables the feature.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> mws auto-ap-shutdown
```

```
(config)> no mws auto-ap-shutdown
```

**Example**

```
(config)> mws auto-ap-shutdown
Mws::Controller: Automatic access points shutdown enabled.
```

```
(config)> no mws auto-ap-shutdown
Mws::Controller: Automatic access points shutdown disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>mws auto-ap-shutdown</b> command has been introduced.

## 3.83 mws backhaul shutdown

**Description**

Disable hidden wireless backhaul access points for [MWS](#) service. By default, the setting is enabled.

Command with **no** prefix enables hidden wireless backhaul access points.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> mws backhaul shutdown
```

```
(config)> no mws backhaul shutdown
```

**Example**

```
(config)> mws backhaul shutdown
Mws::Controller: Backhaul disabled.
```

```
(config)> no mws backhaul shutdown
Mws::Controller: Backhaul enabled.
```

**History**

Version	Description
3.04	The <b>mws backhaul shutdown</b> command has been introduced.

## 3.84 mws log stp

**Description**

Enable STP logging for the interface. Allows you to track sent and received BPDU packets.

Command with **no** prefix disables logging for specified interface. If you use no argument, the entire list of STP logging will be removed.

**Prefix no**

Yes

**Change settings**

No

**Multiple input**

Yes

**Synopsis**

```
(config)> mws log stp <interface>
```

```
(config)> no mws log stp [<interface>]
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Full interface name or an alias. You can see the list of available interfaces with help of <b>interface [Tab]</b> command.

**Example**

```
(config)> mws log stp Bridge0
Network::Interface::Rtx::WifiController: Enabled STP logging for >
"Bridge0".
```

```
(config)> no mws log stp Bridge0
Network::Interface::Rtx::WifiController: Disabled STP logging >
for "Bridge0".
```

```
(config)> no mws log stp
Network::Interface::Rtx::WifiController: Disabled all STP logging.
```

**History**

<b>Version</b>	<b>Description</b>
3.06	The <b>mws log stp</b> command has been introduced.

## 3.85 mws member

**Description** Command with **no** prefix removes *MWS* member. If you use no argument, the entire list of members will be cleared.

**Prefix no** Yes

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> no mws member [ member ]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
<i>member</i>	<i>String</i>	Device ID — MAC address or CID.

**Example**

```
(config)> mws no member 2937a388-0d00-11e7-8029-7119319f930e
Mws::MemberList: Member 2937a388-0d00-11e7-8029-7119319f930e ▶
pending factory reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>mws member</b> command has been introduced.

## 3.86 mws member debug

**Description** Enable *MWS* member debug. By default, setting is disabled.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> mws member <member> debug
(config)> no mws member <member> debug
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
<i>member</i>	<i>String</i>	Device ID — MAC address or CID.

**Example**

```
(config)> mws member 60:31:97:3c:11:12 debug
Mws::MemberList: Member "60:31:97:3c:11:12" ▶
(7207838e-af7d-11e6-8011-25463bd03812) RCI debug enabled.
```

```
(config)> no mws member 60:31:97:3c:11:12 debug
Mws::MemberList: Member "60:31:97:3c:11:12" ▶
(7207838e-af7d-11e6-8011-25463bd03812) RCI debug disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>mws member debug</b> command has been introduced.

## 3.87 mws member dpn-accept

**Description** Accept *DPN* for *MWS* member.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis**

```
(config)> mws member <member> dpn-accept
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
member	String	Device ID — MAC address or CID.

**Example**

```
(config)> mws member 7207838e-af7d-11e6-8029-25463bd03828 ▶
dpn-accept
Mws::Controller: Candidate "ab1409a2-0f87-11e8-8f23-3d5f5921b253" ▶
acquire started.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>mws member dpn-accept</b> command has been introduced.

## 3.88 mws member reboot

**Description** Reboot the *MWS* member. The process of rebooting extenders should be displayed in the **show mws member** command output.**Prefix no** No**Change settings** No**Multiple input** No

**Synopsis**

```
(config)> mws member <member> reboot [<interval>]
```

**Arguments**

Argument	Value	Description
member	String	Device ID — MAC-address or CID.
interval	Integer	Timeout for reboot in seconds. Can take values in the range from 0 to 60 inclusively). If not specified, the reboot will be executed immediately.

**Example**

```
(config)> mws member 7207838e-af7d-11e6-8029-25463bd03828 reboot >
10
Mws::MemberList: Member "50:ff:21:1a:b1:f2" >
(7207838e-af7d-11e6-8029-25463bd03828) pending reboot.
```

**History**

Version	Description
3.08	The <b>mws member reboot</b> command has been introduced.

## 3.89 mws member update check

**Description** Check for an update for the [MWS](#) member.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> mws member <member> update check
```

**Arguments**

Argument	Value	Description
member	String	Device ID — MAC address or CID.

**Example**

```
(config)> mws member 21:ff:22:32:18:af update check
Mws::Controller::Updater: "21:ff:22:32:18:af": checking for an >
update.
```

**History**

Version	Description
4.00	The <b>mws member update check</b> command has been introduced.

## 3.90 mws member update start

**Description** Start the *MWS* member update.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> mws member <member> update start
```

**Arguments**

Argument	Value	Description
member	String	Device ID — MAC address or CID.

**Example**

```
(config)> mws member 21:ff:22:32:18:af update start
Mws::Controller::Updater: "21:ff:22:32:18:af": pending update, ▶
"(auto)" sandbox.
```

**History**

Version	Description
4.00	The <b>mws member update start</b> command has been introduced.

## 3.91 mws member update stop

**Description** Stop the *MWS* member update.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> mws member <member> update stop
```

**Arguments**

Argument	Value	Description
member	String	Device ID — MAC address or CID.

**Example**

```
(config)> mws member 21:ff:22:32:18:af update stop
Mws::Controller::Updater: "21:ff:22:32:18:af": update stopped.
```

**History**

Version	Description
4.00	The <b>mws member update stop</b> command has been introduced.

## 3.92 mws reboot

**Description** Reboot the whole *MWS*.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> mws reboot
```

**Example**

```
(config)> mws reboot
Mws::Controller: Pending reboot Modular Wi-Fi System in 10 ▶
seconds.
```

**History**

	<b>Version</b>	<b>Description</b>
	3.08	The <b>mws reboot</b> command has been introduced.

## 3.93 mws revisit

**Description** Re-read status of potential *MWS* member.

**Prefix no** Yes

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> mws revisit <candidate>
(config)> no mws revisit <candidate>
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
candidate	<i>String</i>	Device ID — MAC address or CID.

**Example**

```
(config)> mws revisit 50:ff:20:08:71:62
Mws::Controller: Candidate "50:ff:20:08:71:62" revisit started.
```

```
(config)> mws no revisit 50:ff:20:08:71:62
Mws::Controller: Candidate "50:ff:20:08:71:62" revisit stopped.
```

**History**

	<b>Version</b>	<b>Description</b>
	2.15	The <b>mws revisit</b> command has been introduced.

## 3.94 mws stp priority

**Description** Set the STP Bridge Priority. By default, the value 32768 is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** No

**Multiple input** Yes

**Synopsis**

```
(config)> mws stp priority <priority>
(config)> no mws stp priority
```

**Arguments**

Argument	Value	Description
priority	0	The STP Bridge Priority value.
	4096	
	8192	
	12288	
	16384	
	20480	
	24576	
	28672	
	32768	
	36864	
	40960	
	45056	
	49152	
	53248	

**Example**

```
(config)> mws stp priority 4096
Mws::Controller::Manager: Applied STP priority 4096.
```

```
(config)> no mws stp priority
Mws::Controller::Manager: STP priority reset to default (32768).
```

**History**

Version	Description
4.01	The <b>mws stp priority</b> command has been introduced.

## 3.95 mws update start

**Description** Start the *MWS* update.

If there are updates for members, then the members are updated sequentially. Then, if there is an update for the controller, then the controller update is started. If there are no updates, then nothing happens.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> mws update start [controller | members]
```

**Arguments**

Argument	Value	Description
controller	Keyword	Update the controller, don't try to update members. If members update is running, the controller will be updated after them.
members	Keyword	Update a members, don't try to update the controller.

**Example**

```
(config)> mws update start
Mws::Controller::Manager: Updating MWS.
```

```
(config)> mws update start controller
Mws::Controller::Manager: Updating controller.
```

```
(config)> mws update stop
Mws::Controller::Manager: Updating members.
```

**History**

Version	Description
4.00	The <b>mws update start</b> command has been introduced.

## 3.96 mws update stop

**Description** Stop the *MWS* update.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(config)> mws update stop
```

**Example**

```
(config)> mws update stop
Mws::Controller::Manager: Update stopped.
```

**History**

Version	Description
4.00	The <b>mws update stop</b> command has been introduced.

## 3.97 mws zone

**Description** Limit the connection area of the client device within the specified *MWS* members.

Command with **no** prefix removes the specified setting. If you use no arguments, the entire list of restrictions will be removed.

**Prefix no** Yes

**Change settings** No

**Multiple input** Yes

**Synopsis**

<pre>(config)&gt; mws zone &lt;mac&gt; &lt;cid&gt;</pre>
<pre>(config)&gt; no mws zone [ &lt;mac&gt; &lt;cid&gt; ]</pre>

**Arguments**

Argument	Value	Description
mac	MAC address	MAC address of client device. It must be listed as a known host.
cid	CID	Identifier of <i>MWS</i> member.

**Example**

```
(config)> mws zone 11:22:33:ec:58:e2 ▶
12298f60-d886-11e7-9396-176971eeb8d6
Mws::Controller: Added zone 11:22:33:ec:58:e2 ▶
12298f60-d886-11e7-9396-176971eeb8d6.
```

```
(config)> no mws zone 11:22:33:ec:58:e2 ▶
12298f60-d886-11e7-9396-176971eeb8d6
Mws::Controller: Deleted zone 11:22:33:ec:58:e2 ▶
12298f60-d886-11e7-9396-176971eeb8d6.
```

```
(config)> no mws zone
Mws::Controller: Cleared all zones.
```

**History**

Version	Description
3.06	The <b>mws zone</b> command has been introduced.

## 3.98 nextdns

**Description** Access to a group of commands to configure *NextDNS* profiles.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (nextdns)

**Synopsis**

```
(config)> nextdns
```

**Example**

```
(config)> nextdns
Core::Configurator: Done.
(nextdns)>
```

History	Version	Description
	3.08	The <b>netxdns</b> command has been introduced.

### 3.98.1 nextdns assign

**Description** Assign profile of protection to the host. By default System profile is used for all hosts and local network segments.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(nextdns)> assign <host> <token> | interface <iface> <token>
(nextdns)> no assign [<host> | interface <iface> ]
```

Arguments	Argument	Value	Description
	host	MAC address	MAC address to assign.
	token	Integer	Authentication token (ID).
	iface	Interface	Full interface name or an alias.

**Example**

```
(nextdns)> assign 11:24:c4:54:bc:59 1f2a36
NextDns::Client: Reassociated host "11:24:c4:54:bc:59" with ▶
profile "1f2a36".
```

```
(nextdns)> assign interface Home 1f2a36
NextDns::Client: Associated interface "Home" with profile ▶
"1f2a36".
```

```
(nextdns)> no assign 11:24:c4:54:bc:59
NextDns::Client: Removed profile for host "11:24:c4:54:bc:59".
```

```
(nextdns)> no assign Bridge0
NextDns::Client: Removed profile for interface "Bridge0".
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>nextdns assign</b> command has been introduced.

## 3.98.2 nextdns authenticate

**Description** Specify login for *NextDNS* account.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(nextdns)> authenticate <login> <password> [<pin>]
(nextdns)> no authenticate
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
login	<i>String</i>	Login to <i>NextDNS</i> account.
password	<i>String</i>	Password to <i>NextDNS</i> account.
pin	<i>String</i>	Pin to <i>NextDNS</i> account.

**Example**

```
(nextdns)> authenticate account@gmail.com 123456789 1234
NextDns::Client: Authenticated successfully.
```

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>nextdns authenticate</b> command has been introduced.

## 3.98.3 nextdns authtoken

**Description** Specify authentication token for *NextDNS* account.

Command with **no** prefix removes the token.

**Prefix no** Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**(nextdns)> **authtoken** <authtoken>(nextdns)> **no authtoken****Arguments**

Argument	Value	Description
authtoken	String	Authentication token (ID) for <i>NextDNS</i> account.

**Example**(nextdns)> **authtoken** 1f2a36

NextDns::Client: Set authentication token.

(nextdns)> **no authtoken**

NextDns::Client: Cleared authentication token.

**History**

Version	Description
3.08	The <b>nextdns authtoken</b> command has been introduced.

## 3.98.4 nextdns check-availability

**Description**Check availability of *NextDNS* service.**Prefix no**

No

**Change settings**

No

**Multiple input**

No

**Synopsis**(nextdns)> **check-availability****Example**(nextdns)> **check-availability**

NextDns::Client: NextDNS DNS-over-HTTPS is available.

**History**

Version	Description
3.08	The <b>nextdns check-availability</b> command has been introduced.

## 3.99 ndns

**Description**

Access to a group of commands to manage KeenDNS service.

**Prefix no**

No

**Change settings**

No

<b>Multiple input</b>	No				
<b>Group entry</b>	(ndns)				
<b>Synopsis</b>	<code>(config)&gt; ndns</code>				
<b>Example</b>	<pre>(config)&gt; ndns Core::Configurator: Done.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.07</td> <td>The <b>ndns</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.07	The <b>ndns</b> command has been introduced.
Version	Description				
2.07	The <b>ndns</b> command has been introduced.				

## 3.99.1 ndns book-name

<b>Description</b>	Reserve Public DNS device hostname allocation.  For hostname transmission to another Keenetic device transfer-code parameter is used.
	To transfer hostname it is necessary:
	1. Execute command with transfer-code on the transmitting side.
	2. Execute the same command with the same parameters on the receiving side.
	Lifetime of transfer-code is 1 week.
<b>Prefix no</b>	No
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<code>(ndns)&gt; book-name &lt;name&gt; &lt;domain&gt; [&lt;access&gt; [ipv6 &lt;access6&gt;]   &lt;transfer-code&gt; ]</code>

Arguments	Argument	Value	Description
	name	<i>String</i>	The hostname for allocation.
	domain	<i>String</i>	Second-level domain.
	access	auto	Automatic access type.
		cloud	Hostname is registered on the cloud server IP address, HTTP traffic is tunneled to the Explorer.
		direct	Hostname is registered on the Explorer WAN-address.
	access6	cloud	Enable cloud mode for IPv6 address.

Argument	Value	Description
transfer-code	Hex	Code for domain transmission to another Keenetic device. The length is 32 symbols.

**Example**

```
(ndns)> book-name myhome23 keenetic.pro

```

History	Version	Description
	2.07	The <b>ndns get-update</b> command has been introduced.
	2.14	Parameter <b>ipv6</b> was added.

## 3.100 ntce

**Description** Access to a group of commands to configure the **NTCE** service.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (config-ntce)

**Synopsis** (config)> **ntce**

**Example** (config)> **ntce**  
(config-ntce)>

History	Version	Description
	3.07	The <b>ntce</b> command has been introduced.

### 3.100.1 ntce debug

**Description** Enable debug for the **NTCE** service. By default, setting is disabled.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config-ntce)&gt; debug</pre> <pre>(config-ntce)&gt; no debug</pre>				
<b>Example</b>	<pre>(config-ntce)&gt; debug Ntce::Manager: Enabled debug.</pre> <pre>(config-ntce)&gt; no debug Ntce::Manager: Disabled debug.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.07</td> <td>The <b>ntce debug</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	3.07	The <b>ntce debug</b> command has been introduced.
Version	Description				
3.07	The <b>ntce debug</b> command has been introduced.				

### 3.100.2 ntce memory-watcher

<b>Description</b>	Enable the memory pressure watcher mechanism for the <i>NTCE</i> service. By default, setting is enabled.  Command with <b>no</b> prefix disables the feature.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config-ntce)&gt; memory-watcher</pre> <pre>(config-ntce)&gt; no memory-watcher</pre>				
<b>Example</b>	<pre>(config-ntce)&gt; memory-watcher Ntce::Manager: Enabled automatic memory pressure handler.</pre> <pre>(config-ntce)&gt; no memory-watcher Ntce::Manager: Disabled automatic memory pressure handler.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.08</td> <td>The <b>ntce memory-watcher</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	3.08	The <b>ntce memory-watcher</b> command has been introduced.
Version	Description				
3.08	The <b>ntce memory-watcher</b> command has been introduced.				

### 3.100.3 ntce qos category priority

<b>Description</b>	Set priorities for traffic categories.  Command with <b>no</b> prefix resets setting to default.
--------------------	--

<b>Prefix no</b>	Yes																					
<b>Change settings</b>	Yes																					
<b>Multiple input</b>	No																					
<b>Synopsis</b>	<pre>(config-ntce)&gt; qos category &lt;category&gt; priority &lt;priority&gt; (config-ntce)&gt; qos category &lt;category&gt; no priority</pre>																					
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td rowspan="6">category</td><td>calling</td><td>① Top.</td></tr> <tr> <td>gaming</td><td>② Critical.</td></tr> <tr> <td>streaming</td><td>③ High.</td></tr> <tr> <td>work</td><td>④ Medium-high.</td></tr> <tr> <td>surfing</td><td>⑤ Medium.</td></tr> <tr> <td>other</td><td>⑥ Normal (Default).</td></tr> <tr> <td>filetransferring</td><td>⑦ Low.</td></tr> <tr> <td>priority</td><td><i>Integer</i></td><td>Priority value. Can take values in the range from 1 to 7.</td></tr> </tbody> </table>	Argument	Value	Description	category	calling	① Top.	gaming	② Critical.	streaming	③ High.	work	④ Medium-high.	surfing	⑤ Medium.	other	⑥ Normal (Default).	filetransferring	⑦ Low.	priority	<i>Integer</i>	Priority value. Can take values in the range from 1 to 7.
Argument	Value	Description																				
category	calling	① Top.																				
	gaming	② Critical.																				
	streaming	③ High.																				
	work	④ Medium-high.																				
	surfing	⑤ Medium.																				
	other	⑥ Normal (Default).																				
filetransferring	⑦ Low.																					
priority	<i>Integer</i>	Priority value. Can take values in the range from 1 to 7.																				
<b>Example</b>	<pre>(config-ntce)&gt; qos category work priority 7 Ntce::Manager: Set category "work" priority to "7".</pre> <pre>(config-ntce)&gt; qos category other no priority Ntce::Manager: Reset QoS priority for category "work".</pre>																					
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>3.08</td><td>The ntce qos category priority command has been introduced.</td></tr> </tbody> </table>	Version	Description	3.08	The ntce qos category priority command has been introduced.																	
Version	Description																					
3.08	The ntce qos category priority command has been introduced.																					

## 3.100.4 ntce qos enable

<b>Description</b>	Enable IntelliQoS, which ensures inbound, and outbound bandwidth for prioritized applications and tasks via pre-defined category groups presets. By default the service is disabled.  Command with <b>no</b> prefix disables the feature.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No

**Synopsis**

```
(config-ntce)> qos enable
```

```
(config-ntce)> no qos enable
```

**Example**

```
(config-ntce)> qos enable  
Ntce::Manager: Enabled QoS.
```

```
(config-ntce)> no qos enable  
Ntce::Manager: Disabled QoS.
```

**History**

Version	Description
3.07	The <b>ntce qos enable</b> command has been introduced.

### 3.100.5 ntce upstream rate-limit input

**Description**

Add limitation on the inbound traffic for specified interface.

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-ntce)> upstream rate-limit <interface> input (<rate> | auto)
```

```
(config-ntce)> no upstream rate-limit <interface> input
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	The name of a global interface to rate-limit.
rate	<i>Integer</i>	The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.
auto	<i>Keyword</i>	Auto-ingress mode.

**Example**

```
(config-ntce)> upstream rate-limit ISP input auto  
Ntce::Upstreams: Set ISP input rate limit to "auto".
```

```
(config-ntce)> upstream rate-limit ISP input 1000000  
Ntce::Upstreams: Set ISP input rate limit to "1000000" kbps.
```

```
(config-ntce)> no upstream rate-limit ISP input  
Ntce::Upstreams: Reset ISP input rate limit.
```

History	Version	Description
	4.01	The <b>ntce upstream rate-limit input</b> command has been introduced.

## 3.100.6 ntce upstream rate-limit output

<b>Description</b>	Add limitation on the outbound traffic for specified interface.  Command with <b>no</b> prefix removes the setting.													
<b>Prefix no</b>	Yes													
<b>Change settings</b>	Yes													
<b>Multiple input</b>	No													
<b>Synopsis</b>	<pre>(config-ntce)&gt; upstream rate-limit &lt;interface&gt; output (&lt;rate&gt;   auto)</pre> <pre>(config-ntce)&gt; no upstream rate-limit &lt;interface&gt; output</pre>													
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>interface</td> <td><i>Interface</i></td> <td>The name of a global interface to rate-limit.</td> </tr> <tr> <td>rate</td> <td><i>Integer</i></td> <td>The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.</td> </tr> <tr> <td>auto</td> <td><i>Keyword</i></td> <td>Auto-ingress mode.</td> </tr> </tbody> </table>		Argument	Value	Description	interface	<i>Interface</i>	The name of a global interface to rate-limit.	rate	<i>Integer</i>	The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.	auto	<i>Keyword</i>	Auto-ingress mode.
Argument	Value	Description												
interface	<i>Interface</i>	The name of a global interface to rate-limit.												
rate	<i>Integer</i>	The ingress rate limit in kbps. Can take values in the range from 64 to 1000000.												
auto	<i>Keyword</i>	Auto-ingress mode.												
<b>Example</b>	<pre>(config-ntce)&gt; upstream rate-limit ISP output auto</pre> <p>Ntce::Upstreams: Set ISP output rate limit to "auto".</p> <pre>(config-ntce)&gt; upstream rate-limit ISP output 1000000</pre> <p>Ntce::Upstreams: Set ISP output rate limit to "1000000" kbps.</p> <pre>(config-ntce)&gt; no upstream rate-limit ISP output</pre> <p>Ntce::Upstreams: Reset ISP output rate limit.</p>													

History	Version	Description
	4.01	The <b>ntce upstream rate-limit output</b> command has been introduced.

## 3.101 ntp

<b>Description</b>	Access to configure <a href="#">NTP</a> client.  Command with <b>no</b> prefix resets <a href="#">NTP</a> client configuration to default.
<b>Prefix no</b>	Yes

<b>Change settings</b>	No				
<b>Multiple input</b>	No				
<b>Synopsis</b>	(config)> <b>no ntp</b>				
<b>Example</b>	(config)> <b>no ntp</b> Ntp::Client: Configuration reset.				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.00</td> <td>The <b>ntp</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.00	The <b>ntp</b> command has been introduced.
Version	Description				
2.00	The <b>ntp</b> command has been introduced.				

## 3.102 ntp master

<b>Description</b>	Enable <i>SNTP</i> server in private and protected network segments.  Command with <b>no</b> prefix stops the service.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	(config)> <b>ntp master</b>  (config)> <b>no ntp master</b>
<b>Example</b>	(config)> <b>ntp master</b> Ntp::Server: Enabled master mode.  (config)> <b>no ntp master</b> Ntp::Server: Disabled master mode.

### History

Version	Description
3.09	The <b>ntp master</b> command has been introduced.

## 3.103 ntp server

<b>Description</b>	Add a new <i>NTP</i> server to the list. You can enter up to 8 <i>NTP</i> servers.  Command with <b>no</b> prefix deletes <i>NTP</i> server from the list. If you use no argument, the entire list of <i>NTP</i> servers will be removed.
<b>Prefix no</b>	Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config)> ntp server <server>
```

```
(config)> no ntp server [<server>]
```

**Arguments**

Argument	Value	Description
server	<i>String</i>	Host of <i>NTP</i> server.

**Example**

```
(config)> ntp server pool.ntp.org
Ntp::Client: Server "pool.ntp.org" has been added.
```

```
(config)> no ntp server
Ntp::Client: All NTP servers removed.
```

**History**

Version	Description
2.00	The <b>ntp server</b> command has been introduced.

## 3.104 ntp source

**Description**Set a specific source IP address for *NTP* service.Command with **no** prefix removes the setting.**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Synopsis**

```
(config)> ntp source <address>
```

```
(config)> no ntp source
```

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	The source IP address for all NTP packets.

**Example**

```
(config)> ntp source 192.168.2.2
Ntp::Client: Source has been set.
```

```
(config)> no ntp source
Ntp::Client: Source has been reset.
```

**History**

<b>Version</b>	<b>Description</b>
4.01	The <b>ntp source</b> command has been introduced.

## 3.105 ntp sync-period

**Description**

Set a period for time synchronization. By default, 1 week is used.

Command with **no** prefix resets time synchronization to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> ntp sync-period <period>
```

```
(config)> no ntp sync-period
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
period	<i>Integer</i>	Time synchronization, in minutes. Can take values in the range from 60 minutes to 1 month.

**Example**

```
(config)> ntp sync-period 60
Ntp::Client: A synchronization period set to 60 minutes.
```

```
(config)> no ntp sync-period
Ntp::Client: Synchronization period value reset.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>ntp sync-period</b> command has been introduced.

## 3.106 object-group ip

**Description**

Create an object group of IP type, which can store IPv4 subnets with optional L4 protocol and port range info.

Command with **no** prefix removes the group.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Interface type**

IP

<b>Group entry</b>	(config-ogrp-ip)						
<b>Synopsis</b>	<pre>(config)&gt; object-group ip &lt;name&gt; (config)&gt; no object-group ip &lt;name&gt;</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>name</td><td>String</td><td>Name of the IPv4 object group.</td></tr> </tbody> </table>	Argument	Value	Description	name	String	Name of the IPv4 object group.
Argument	Value	Description					
name	String	Name of the IPv4 object group.					
<b>Example</b>	<pre>(config)&gt; object-group ip test Network::ObjectGroup: "test": group created.</pre> <pre>(config)&gt; no object-group ip test Network::ObjectGroup: "test": group removed.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>4.00</td><td>The <b>object-group ip</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	4.00	The <b>object-group ip</b> command has been introduced.		
Version	Description						
4.00	The <b>object-group ip</b> command has been introduced.						

## 3.106.1 object-group ip exclude

**Description** Add or remove non-matching element of the object group.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config-ogrp-ip)> exclude <proto> <address> [<port> [<end-port>]]
```

```
(config-ogrp-ip)> no exclude <proto> <address> [<port> [<end-port>]]
```

Arguments	Argument	Value	Description
proto	ip	IP protocol (include <i>TCP</i> , <i>UDP</i> , <i>ICMP</i> and other).	
	tcp	<i>TCP</i> protocol.	
	udp	<i>UDP</i> protocol.	
	tcpudp	<i>TCP</i> and <i>UDP</i> protocols.	
	icmp	<i>ICMP</i> protocol.	
	esp	<i>ESP</i> protocol.	
	gre	<i>GRE</i> protocol.	

Argument	Value	Description
	ipip	<i>IP in IP</i> protocol.
address	<i>String</i>	IP address or subnet (in the form of prefix bit length (e.g. 1.2.3.0/24)).
port	<i>Integer</i>	TCP/UDP port number for which a translation request comes. If not specified, all incoming requests will be translated.
end-port	<i>Integer</i>	The end of the range of ports.

**Example**

```
(config-ogrp-ip)> exclude tcpudp 1.2.3.0/24 70 80
Network::ObjectGroup: "test": added exclude tcpudp 1.2.3.0/24 ▶
70-80.
```

```
(config-ogrp-ip)> no exclude tcpudp 1.2.3.0/24 70 80
Network::ObjectGroup: "test": removed exclude tcpudp 1.2.3.0/24 ▶
70-80.
```

**History**

Version	Description
4.00	The <b>object-group ip exclude</b> command has been introduced.

## 3.106.2 object-group ip include

**Description** Add or remove matching element of the object group.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

```
(config-ogrp-ip)> include <proto> <address> [<port> [<end-port>]]
```

```
(config-ogrp-ip)> no include <proto> <address> [<port> [<end-port>]]
```

**Arguments**

Argument	Value	Description
proto	ip	<i>IP</i> protocol (include <b>TCP</b> , <b>UDP</b> , <b>ICMP</b> and other).
	tcp	<b>TCP</b> protocol.
	udp	<b>UDP</b> protocol.
	tcpudp	<b>TCP</b> and <b>UDP</b> protocols.
	icmp	<b>ICMP</b> protocol.

Argument	Value	Description
	esp	<i>ESP</i> protocol.
	gre	<i>GRE</i> protocol.
	ipip	<i>IP in IP</i> protocol.
address	<i>String</i>	IP address or subnet (in the form of prefix bit length (e.g. 1.2.3.0/24)).
port	<i>Integer</i>	TCP/UDP port number for which a translation request comes. If not specified, all incoming requests will be translated.
end-port	<i>Integer</i>	The end of the range of ports.

**Example**

```
(config-ogrp-ip)> include tcpudp 1.2.3.0/24 75 80
Network::ObjectGroup: "test": added include tcpudp 1.2.3.0/24 ▶
75-80.
```

```
(config-ogrp-ip)> no include tcpudp 1.2.3.0/24 75 80
Network::ObjectGroup: "test": removed include tcpudp 1.2.3.0/24 ▶
75-80.
```

**History**

Version	Description
4.00	The <b>object-group ip include</b> command has been introduced.

## 3.107 ping-check profile

**Description**

Access to a group of commands to configure *Ping Check* profile. If the profile is not found, the command tries to create it.

Command with **no** prefix removes *Ping Check* profile.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-pchk)

**Synopsis**

```
(config)> ping-check profile <name>
(config)> no ping-check profile <name>
```

**Arguments**

Argument	Value	Description
name	<i>String</i>	<i>Ping Check</i> profile name. You can see the list of available profiles with help of <b>ping-check profile</b> [Tab] command.

**Example**

```
(config)> ping-check profile [Tab]
```

Usage template:  
profile {name}

Choose:  
TEST  
MYMY

```
(config)> ping-check profile new_prof
```

PingCheck::Client: Profile "new\_prof" has been created.  
(config-pchk)>

```
(config)> no ping-check profile new_prof
```

PingCheck::Client: Profile "new\_prof" has been deleted.

**History**

Version	Description
2.04	The <b>ping-check profile</b> command has been introduced.

### 3.107.1 ping-check profile host

**Description** Assign hostname for testing. By default, hostname is assigned according to country code.

Command with **no** prefix removes the hostname.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config-pchk)&gt; host &lt;host&gt;</pre>
<pre>(config-pchk)&gt; no host [&lt;host&gt;]</pre>

**Arguments**

Argument	Value	Description
host	<i>Hostname</i>	Name or address of remote host.

**Example**

```
(config-pchk)> host 8.8.8.8
```

PingCheck::Profile: "test": add host "8.8.8.8" for testing.

```
(config-pchk)> host google.com
```

PingCheck::Profile: "test": add host "google.com" for testing.

```
(config-pchk)> no host
```

PingCheck::Profile: "test": hosts cleared.

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>ping-check profile host</b> command has been introduced.

## 3.107.2 ping-check profile max-fails

**Description**

Specify the number of consecutive failed requests to a remote host by obtaining of which the Internet at the interface considered absent. By default, value 5 is used.

Command with **no** prefix resets setting to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
| (config-pchk)> max-fails <count>
```

```
| (config-pchk)> no max-fails
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
count	<i>Integer</i>	Amount of failed requests. Can take values in the range from 1 to 10 inclusively.

**Example**

```
(config-pchk)> max-fails 7
PingCheck::Profile: "test": uses 7 fail count for disabling ▶
interface.
```

```
(config-pchk)> no max-fails
PingCheck::Profile: "test": fail count is reset to 5.
```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>ping-check profile max-fails</b> command has been introduced.

## 3.107.3 ping-check profile min-success

**Description**

Specify the number of consecutive success requests to a remote host by obtaining of which the Internet at the interface considered present. By default, value 5 is used.

Command with **no** prefix resets setting to default.

**Prefix no**

Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-pchk)&gt; min-success &lt;count&gt; (config-pchk)&gt; no min-success</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>count</td><td><i>Integer</i></td><td>Amount of success requests. Can take values in the range from 1 to 10 inclusively.</td></tr> </tbody> </table>	Argument	Value	Description	count	<i>Integer</i>	Amount of success requests. Can take values in the range from 1 to 10 inclusively.
Argument	Value	Description					
count	<i>Integer</i>	Amount of success requests. Can take values in the range from 1 to 10 inclusively.					
<b>Example</b>	<pre>(config-pchk)&gt; min-success 3 PingCheck::Profile: "test": uses 3 success count for enabling ▶ interface.  (config-pchk)&gt; no min-success PingCheck::Profile: "test": success count is reset to 5.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.04</td><td>The <b>ping-check profile min-success</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.04	The <b>ping-check profile min-success</b> command has been introduced.		
Version	Description						
2.04	The <b>ping-check profile min-success</b> command has been introduced.						

### 3.107.4 ping-check profile mode

<b>Description</b>	Set <i>Ping Check</i> mode. By default, icmp value is used.															
<b>Prefix no</b>	No															
<b>Change settings</b>	Yes															
<b>Multiple input</b>	No															
<b>Synopsis</b>	<pre>(config-pchk)&gt; mode &lt;mode&gt;</pre>															
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>mode</td><td>icmp</td><td>The availability testing of remote host will be done by ICMP-echo request (ping) sending.</td></tr> <tr> <td></td><td>connect</td><td>The availability testing of remote host will be done by TCP-connection establishing to specified port.</td></tr> <tr> <td></td><td>tls</td><td>The availability testing of remote host will be done by TLS-connection.</td></tr> <tr> <td></td><td>uri</td><td>The availability testing of remote host will be done by URI checking.</td></tr> </tbody> </table>	Argument	Value	Description	mode	icmp	The availability testing of remote host will be done by ICMP-echo request (ping) sending.		connect	The availability testing of remote host will be done by TCP-connection establishing to specified port.		tls	The availability testing of remote host will be done by TLS-connection.		uri	The availability testing of remote host will be done by URI checking.
Argument	Value	Description														
mode	icmp	The availability testing of remote host will be done by ICMP-echo request (ping) sending.														
	connect	The availability testing of remote host will be done by TCP-connection establishing to specified port.														
	tls	The availability testing of remote host will be done by TLS-connection.														
	uri	The availability testing of remote host will be done by URI checking.														

**Example**

```
(config-pchk)> mode tls
PingCheck::Profile: "test": uses tls mode.
```

**History**

Version	Description
2.04	The <b>ping-check profile mode</b> command has been introduced.
3.09	The <b>tls</b> argument was added.
4.00	The <b>uri</b> argument was added.

### 3.107.5 ping-check profile port

**Description**

Specify port for connection to the remote host. Setting has a meaning for connect mode of *Ping Check* (see **ping-check profile mode** command).

Command with **no** prefix removes the setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-pchk)> port <port>
(config-pchk)> no port
```

**Arguments**

Argument	Value	Description
port	<i>Integer</i>	Port number. Can take values in the range from 1 to 65534 inclusively.

**Example**

```
(config-pchk)> port 80
PingCheck::Profile: "test": uses port 80 for testing.
```

```
(config-pchk)> no port
PingCheck::Profile: "test": port is cleared.
```

**History**

Version	Description
2.04	The <b>ping-check profile port</b> command has been introduced.

### 3.107.6 ping-check profile timeout

**Description**

Set the maximum response time of the remote host for a single request in seconds. By default, 2 value is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-pchk)>	<b>timeout &lt;timeout&gt;</b>
(config-pchk)>	<b>no timeout</b>

Arguments	Argument	Value	Description
	timeout	<i>Integer</i>	Response time in seconds. Can take values in the range from 1 to 10 inclusively.

**Example**

(config-pchk)>	<b>timeout 4</b> PingCheck::Profile: "test": timeout is changed to 4 seconds.
(config-pchk)>	<b>no timeout</b> PingCheck::Profile: "test": timeout is reset to 2.

History	Version	Description
	2.04	The <b>ping-check profile timeout</b> command has been introduced.

### 3.107.7 ping-check profile update-interval

**Description** Set periodicity of [Ping Check](#) performing.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-pchk)>	<b>update-interval &lt;seconds&gt;</b>
----------------	--

Arguments	Argument	Value	Description
	seconds	<i>Integer</i>	Refresh period in seconds. Can take values in the range from 3 to 3600 inclusively.

**Example**

(config-pchk)>	<b>update-interval 60</b> PingCheck::Profile: "test": update interval is changed to 60 ► seconds.
----------------	--

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>ping-check profile update-interval</b> command has been introduced.

## 3.107.8 ping-check profile uri

**Description**

Assign URI ([Uniform Resource Identifier](#)<sup>6</sup>) host for testing.

Command with **no** prefix removes the host.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config-pchk)> uri <uri>
(config-pchk)> no uri [ <uri> ]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
uri	<i>Hostname</i>	Name or address of remote HTTP or HTTPS host.

**Example**

```
(config-pchk)> uri http://localhost:8888/
PingCheck::Profile: "TEST": add URI "http://localhost:8888/" for ▶
testing.
```

```
(config-pchk)> uri https://localhost:4343/
PingCheck::Profile: "TEST": add URI "https://localhost:4343/" ▶
for testing.
```

```
(config-pchk)> no uri http://localhost:8888/
PingCheck::Profile: "TEST": URIs cleared.
```

```
(config-pchk)> no uri
PingCheck::Profile: "TEST": URIs cleared.
```

**History**

<b>Version</b>	<b>Description</b>
4.00	The <b>ping-check profile uri</b> command has been introduced.

## 3.108 ppe

**Description**

Enable Packet Processing Engine. By default, the setting is turned on.

<sup>6</sup> [https://en.wikipedia.org/wiki/Uniform\\_Resource\\_Identifier](https://en.wikipedia.org/wiki/Uniform_Resource_Identifier)

Command with **no** prefix disables specified accelerator.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>ppe &lt;engine&gt;</b>
(config)>	<b>no ppe [&lt;engine&gt;]</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	engine	software	Software accelerator.

**Example**

(config)>	<b>ppe software</b>
Network::Interface::Rtx::Ppe: Software PPE enabled.	

(config)>	<b>no ppe</b>
Network::Interface::Rtx::Ppe: All PPE disabled.	

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.00	The <b>ppe</b> command has been introduced.
	2.05	Argument engine was implemented.

## 3.109 pppoe pass

**Description** Enable PPPoE Pass Through function. You can enter up to 10 network nodes.  
Command with **no** prefix disables the function.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Interface type** Ethernet

**Synopsis**

(config)>	<b>pppoe pass through &lt;wan-iface&gt;&lt;lan-iface&gt;</b>
(config)>	<b>no pppoe pass through</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	wan-iface	Interface	The starting interface — full WAN-interface name or an alias.

Argument	Value	Description
lan-iface	Interface	The finishing interface — full LAN-interface name or an alias.

**Example**

```
(config)> pppoe pass through Home ISP
Pppoe::Pass: Configured pass from "Bridge0" to "GigabitEthernet1".

(config)> no pppoe pass
Pppoe::Pass: Disabled.
```

**History**

Version	Description
2.00	The <b>pppoe pass</b> command has been introduced.

## 3.110 schedule

**Description** Access to a group of commands to configure the schedule. If the schedule is not found, the command tries to create it.

Command with **no** prefix deletes the schedule.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Group entry** (config-sched)

**Synopsis**

(config)> <b>schedule &lt;name&gt;</b>
(config)> <b>no schedule &lt;name&gt;</b>

**Arguments**

Argument	Value	Description
name	String	A schedule name.

**History**

Version	Description
2.06	The <b>schedule</b> command has been introduced.

### 3.110.1 schedule action

**Description** Specify the actions to be performed according to the selected schedule.

Command with **no** prefix cancels the action.

**Prefix no** Yes

<b>Change settings</b>	Yes																	
<b>Multiple input</b>	Yes																	
<b>Synopsis</b>	<pre>(config-sched)&gt; <b>action</b> &lt;action&gt; &lt;min&gt; &lt;hour&gt; &lt;dow&gt;</pre> <pre>(config-sched)&gt; <b>no action</b> [ &lt;action&gt; &lt;min&gt; &lt;hour&gt; &lt;dow&gt; ]</pre>																	
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td rowspan="2">action</td><td>start</td><td>Action of the beginning.</td></tr> <tr> <td>stop</td><td>Action of the end.</td></tr> <tr> <td>min</td><td><i>Integer</i></td><td>The minutes.</td></tr> <tr> <td>hour</td><td><i>Integer</i></td><td>The hours.</td></tr> <tr> <td>dow</td><td><i>Integer</i></td><td>Days of the week, separated by commas. 0 and 7 mean Sunday. * means daily.</td></tr> </tbody> </table>	Argument	Value	Description	action	start	Action of the beginning.	stop	Action of the end.	min	<i>Integer</i>	The minutes.	hour	<i>Integer</i>	The hours.	dow	<i>Integer</i>	Days of the week, separated by commas. 0 and 7 mean Sunday. * means daily.
Argument	Value	Description																
action	start	Action of the beginning.																
	stop	Action of the end.																
min	<i>Integer</i>	The minutes.																
hour	<i>Integer</i>	The hours.																
dow	<i>Integer</i>	Days of the week, separated by commas. 0 and 7 mean Sunday. * means daily.																
<b>Example</b>	<pre>(config-sched)&gt; <b>action start 0 9 1,2,3,4,5</b></pre> Core::Schedule::Manager: Updated schedule "WIFI".																	
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.06</td><td>The <b>schedule action</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.06	The <b>schedule action</b> command has been introduced.													
Version	Description																	
2.06	The <b>schedule action</b> command has been introduced.																	

## 3.110.2 schedule description

<b>Description</b>	Set description for the selected schedule.  Command with <b>no</b> prefix deletes the description.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	No						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config-sched)&gt; <b>description</b> &lt;description&gt;</pre> <pre>(config-sched)&gt; <b>no description</b></pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>description</td><td><i>String</i></td><td>Text of the description.</td></tr> </tbody> </table>	Argument	Value	Description	description	<i>String</i>	Text of the description.
Argument	Value	Description					
description	<i>String</i>	Text of the description.					
<b>Example</b>	<pre>(config-sched)&gt; <b>description "Schedule for on/off Access Point"</b></pre> Core::Schedule::Manager: Updated description of schedule "WIFI".						

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>schedule led</b> command has been introduced.

### 3.110.3 schedule led

**Description** Set LED indication for the scheduled events. SelectedSchedule control should be chosen with [system led](#) command.

Command with **no** prefix removes LED indication.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-sched)>	<b>led &lt;action&gt;</b>
(config-sched)>	<b>no led</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
action	start	LED shows the beginning of the scheduled event.
	stop	LED shows the end of the scheduled event.

**Example**

```
(config-sched)> led start
Core::Schedule::Led: Selected schedule "111".
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>schedule led</b> command has been introduced.

### 3.111 service dhcp

**Description** Enable [DHCP server](#). If there is not enough settings to start the service (see [ip dhcp pool](#)), the service will not respond to the network. As soon as there are enough settings, the service will be enabled automatically.

Command with **no** prefix stops the service.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> service dhcp
```

```
(config)> no service dhcp
```

**Example**

```
(config)> service dhcp
service enabled.
```

**History**

Version	Description
2.00	The <b>service dhcp</b> command has been introduced.

## 3.112 service dhcp-relay

**Description**

Enable DHCP-relay. If there are not enough settings to start the service (see [ip dhcp relay lan](#), [ip dhcp relay server](#), [ip dhcp relay wan](#)), it will not respond within the network. As soon as there are enough settings, the service will be enabled automatically.

Command with **no** prefix stops the service.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> service dhcp-relay
```

```
(config)> no service dhcp-relay
```

**Example**

```
(config)> service dhcp-relay
service enabled.
```

**History**

Version	Description
2.00	The <b>service dhcp-relay</b> command has been introduced.

## 3.113 service dns-proxy

**Description**

Enable DNS-proxy. To configure the parameters of the service, use [Section 3.17 on page 100](#) group of commands.

**Prefix no**

No

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(config)> service dns-proxy
```

**Example**

```
(config)> service dns-proxy
Dns::Manager: DNS proxy enabled.
```

**History**

Version	Description
2.00	The <b>service dns-proxy</b> command has been introduced.

## 3.114 service http

**Description** Enable HTTP server that provides the user with Web-interface to configure Explorer.

Command with **no** prefix stops the service.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(config)> service http
```

```
(config)> no service http
```

**Example**

```
(config)> service http
HTTP server enabled.
```

**History**

Version	Description
2.00	The <b>service http</b> command has been introduced.

## 3.115 service igmp-proxy

**Description** Enable IGMP-proxy. For the service functioning it is necessary to have one upstream interface and at least one downstream interface. If there are not enough settings to run the service, the service will not function. As soon as there are enough settings, the service will start automatically.

Command with **no** prefix stops the service.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

<b>Synopsis</b>	<pre>(config)&gt; service igmp-proxy (config)&gt; no service igmp-proxy</pre>				
<b>Example</b>	<pre>(config)&gt; service igmp-proxy IGMP proxy enabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>service igmp-proxy</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>service igmp-proxy</b> command has been introduced.
Version	Description				
2.00	The <b>service igmp-proxy</b> command has been introduced.				

## 3.116 service internet-checker

<b>Description</b>	Enable the Internet-checker to monitor the state of Internet connection on the device. By default, service is enabled.  Command with <b>no</b> prefix stops the service.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config)&gt; service internet-checker (config)&gt; no service internet-checker</pre>				
<b>Example</b>	<pre>(config)&gt; service internet-checker Network::InternetChecker: Hosts check enabled.  (config)&gt; no service internet-checker Network::InternetChecker: Hosts check disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.13</td><td>The <b>service internet-checker</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.13	The <b>service internet-checker</b> command has been introduced.
Version	Description				
2.13	The <b>service internet-checker</b> command has been introduced.				

## 3.117 service ipsec

<b>Description</b>	Enable <b>IPsec</b> service. By default, service is disabled.  Command with <b>no</b> prefix stops the service.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config)&gt; service ipsec (config)&gt; no service ipsec</pre>				
<b>Example</b>	<pre>(config)&gt;service ipsec IpSec::Manager: Service enabled.</pre>				
<b>History</b>	<table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.06</td><td>The <b>service ipsec</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.06	The <b>service ipsec</b> command has been introduced.
Version	Description				
2.06	The <b>service ipsec</b> command has been introduced.				

## 3.118 service kabinet

<b>Description</b>	Enable KABiNET authenticator service. By default it is disabled.  Command with <b>no</b> prefix stops the service.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config)&gt; service kabinet (config)&gt; no service kabinet</pre>				
<b>Example</b>	<pre>(config)&gt; service kabinet Kabinet::Authenticator: Authenticator enabled.</pre> <pre>(config)&gt; service kabinet Kabinet::Authenticator: Authenticator disabled.</pre>				
<b>History</b>	<table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.02</td><td>The <b>service kabinet</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.02	The <b>service kabinet</b> command has been introduced.
Version	Description				
2.02	The <b>service kabinet</b> command has been introduced.				

## 3.119 service mws

<b>Description</b>	Enable <b>MWS</b> service. By default, service is disabled.  Command with <b>no</b> prefix stops the service.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config)&gt; service mws</pre> <pre>(config)&gt; no service mws</pre>				
<b>Example</b>	<pre>(config)&gt; service mws Mws::Controller: Enabled.</pre> <pre>(config)&gt; no service mws Mws::Controller: Disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.15</td> <td>The <b>service mws</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.15	The <b>service mws</b> command has been introduced.
Version	Description				
2.15	The <b>service mws</b> command has been introduced.				

## 3.120 service ntce

<b>Description</b>	Enable <i>NTCE</i> service. By default it is disabled.  Command with <b>no</b> prefix stops the service.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config)&gt; service ntce</pre> <pre>(config)&gt; no service ntce</pre>
<b>Example</b>	<pre>(config)&gt; service ntce Ntce::Manager: Enabled.</pre>

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.09</td><td>The <b>service ntce</b> command has been introduced. Previous command name is <b>service dpi</b>.</td></tr> </tbody> </table>	Version	Description	2.09	The <b>service ntce</b> command has been introduced. Previous command name is <b>service dpi</b> .
Version	Description				
2.09	The <b>service ntce</b> command has been introduced. Previous command name is <b>service dpi</b> .				

## 3.121 service ntp

<b>Description</b>	Enable <i>NTP</i> service. By default it is enabled.  Command with <b>no</b> prefix stops the service.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

**Multiple input**

No

**Synopsis**(config)> **service ntp**(config)> **no service ntp****Example**

```
(config)> service ntp
Ntp::Client: NTP service enabled.
```

```
(config)> no service ntp
Ntp::Client: NTP service disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.09	The <b>service ntp</b> command has been introduced. Previous command name is <b>service ntp-client</b> .

## 3.122 service snmp

**Description**Enable **SNMP** service. By default, the service is disabled.Command with **no** prefix stops the service.**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**(config)> **service snmp**(config)> **no service snmp****Example**

```
(config)> service snmp
Snmp::Manager: SNMP service was enabled.
(config)> no service snmp
Snmp::Manager: SNMP service was disabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>service snmp</b> command has been introduced.

## 3.123 service ssh

**Description**

Enable the SSH server that provides the user with command line interface to configure the device.

Command with **no** prefix stops the service.

<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config)&gt; service ssh</pre> <pre>(config)&gt; no service ssh</pre>				
<b>Example</b>	<pre>(config)&gt; service ssh Ssh::Manager: SSH server enabled.</pre> <pre>(config)&gt; no service ssh Ssh::Manager: SSH server disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.12</td> <td>The <b>service ssh</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.12	The <b>service ssh</b> command has been introduced.
Version	Description				
2.12	The <b>service ssh</b> command has been introduced.				

## 3.124 service sstp-server

<b>Description</b>	Enable <i>SSTP</i> server. Command with <b>no</b> prefix stops the service.				
<b>Prefix no</b>	Yes				
<b>Change settings</b>	Yes				
<b>Multiple input</b>	No				
<b>Synopsis</b>	<pre>(config)&gt; service sstp-server</pre> <pre>(config)&gt; no service sstp-server</pre>				
<b>Example</b>	<pre>(config)&gt; service sstp-server SstpServer::Manager: Service enabled.</pre> <pre>(config)&gt; no service sstp-server SstpServer::Manager: Service disabled.</pre>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.12</td> <td>The <b>service sstp-server</b> command has been introduced.</td> </tr> </tbody> </table>	Version	Description	2.12	The <b>service sstp-server</b> command has been introduced.
Version	Description				
2.12	The <b>service sstp-server</b> command has been introduced.				

## 3.125 service telnet

<b>Description</b>	Enable the telnet server that provides the user with command line interface to configure the device.
	Command with <b>no</b> prefix stops the service.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config)&gt; <b>service telnet</b> (config)&gt; <b>no service telnet</b></pre>
<b>Example</b>	<pre>(config)&gt; <b>service tel</b> Telnet server enabled.</pre>

History	Version	Description
	2.00	The <b>service telnet</b> command has been introduced.

## 3.126 service udpfy

<b>Description</b>	Enable <i>udpfy</i> service.
	Command with <b>no</b> prefix stops the service.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(config)&gt; <b>service udpfy</b> (config)&gt; <b>no service udpfy</b></pre>
<b>Example</b>	<pre>(config)&gt; <b>service udpfy</b> Udpfy::Manager: a service enabled.</pre>

History	Version	Description
	2.03	The <b>service udpfy</b> command has been introduced.

## 3.127 service upnp

**Description** Enable *UPnP* service.  
Command with **no** prefix stops the service.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>service upnp</b>
(config)>	<b>no service upnp</b>

History	Version	Description
	2.00	The <b>service upnp</b> command has been introduced.

## 3.128 service vpn-server

**Description** Enable VPN server.  
Command with **no** prefix stops the service.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>service vpn-server</b>
(config)>	<b>no service vpn-server</b>

**Example**

(config)>	<b>service vpn-server</b>
VpnServer::Manager: Service enabled.	
(config)>	<b>no service vpn-server</b>
VpnServer::Manager: Service disabled.	

History	Version	Description
	2.04	The <b>service vpn-server</b> command has been introduced.

## 3.129 show

<b>Description</b>	Access to a group of commands to display various diagnostic information about system. All commands of this group do not change system settings.				
<b>Prefix no</b>	No				
<b>Change settings</b>	No				
<b>Multiple input</b>	No				
<b>Group entry</b>	(show)				
<b>Synopsis</b>	(config)> <b>show</b>				
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.00</td><td>The <b>show</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.00	The <b>show</b> command has been introduced.
Version	Description				
2.00	The <b>show</b> command has been introduced.				

### 3.129.1 show acme

<b>Description</b>	Show <i>ACME</i> client status.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Synopsis</b>	(show)> <b>acme</b>
<b>Example</b>	<pre>(show)&gt; acme       acme:           real-time: yes           ndns-domain: mytest.keenetic.pro           ndns-domain-acme: yes           ndns-domain-error: no           default-domain: cc6b5a71a7644903b51a5454.keenetic.io           account-pending: no           account-running: no           get-pending: no           get-running: no           revoke-pending: no           revoke-running: no           reissue-queue-size: 0           revoke-queue-size: 0           retries: 0           checker-timer: 82499           apply-timer: 0           acme-account: 36902346</pre>

**History**

<b>Version</b>	<b>Description</b>
2.11	The <b>show acme</b> command has been introduced.

## 3.129.2 show associations

**Description** Show list of wireless stations associated with an access point. If you use no argument, the entire list of wireless stations will be displayed.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** Access Point

**Synopsis**

(show)>	<b>associations</b> [ <name> ]
---------	--------------------------------

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	String	An access point name. You can see the list of available access points with help of <b>associations</b> [Tab] command.

**Example**

```
(show)> associations [Tab]
```

```
Usage template:  
    associations [{name}]
```

```
Choose:  
WifiMaster0/AccessPoint2  
WifiMaster1/AccessPoint1  
WifiMaster0/AccessPoint3  
WifiMaster0/AccessPoint0  
          AccessPoint  
WifiMaster1/AccessPoint2  
WifiMaster0/AccessPoint1  
          GuestWiFi  
WifiMaster1/AccessPoint3  
WifiMaster1/AccessPoint0  
          AccessPoint_5G
```

```
(show)> associations WifiMaster0/AccessPoint0
```

```
station:  
    mac: ec:1f:72:d3:6d:3f  
    ap: WifiMaster0/AccessPoint0  
authenticated: 1  
txrate: 130
```

```

        uptime: 3804
        txbytes: 2058837
        rxbytes: 25023483
            ht: 20
            mode: 11n
            gi: 800
            rssi: -26
            mcs: 15

    station:
        mac: 20:aa:4b:5c:09:0e
        ap: WifiMaster0/AccessPoint0
    authenticated: 1
        txrate: 270
        uptime: 19662
        txbytes: 19450396
        rxbytes: 70800065
            ht: 40
            mode: 11n
            gi: 800
            rssi: -41
            mcs: 15

```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show associations</b> command has been introduced.

### 3.129.3 show button

**Description** Show information about specified system button. If you use no argument, the entire list of all buttons on the device will be displayed. Available buttons depend on hardware configuration.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **button** [<name>]

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>String</i>	The button name.

**Example**

```
(show)> button FN1

    buttons:
        button, name = FN1:
            is_switch: no
            position: 2
```

```
position_count: 2
clicks: 0
elapsed: 0
hold_delay: 3000
```

History	Version	Description
	2.00	The <b>show button</b> command has been introduced.

### 3.129.4 show button bindings

**Description** Show a list of actions associated with device buttons.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **button bindings**

**Example**

```
(show)> button bindings

bindings:

    binding, index = 0:
        button: RESET
        action: click
        active_handler: Reboot
        default_handler: Reboot
        protected: yes

    binding, index = 1:
        button: RESET
        action: hold
        active_handler: FactoryReset
        default_handler: FactoryReset
        protected: yes

    binding, index = 2:
        button: WLAN
        action: click
        active_handler: WpsStartMainAp
        default_handler: WpsStartMainAp
        protected: no

    binding, index = 3:
        button: WLAN
        action: double-click
        active_handler: WpsStartMainAp5
        default_handler: WpsStartMainAp5
```

```
protected: no

binding, index = 4:
    button: WLAN
    action: hold
active_handler: WifiToggle
default_handler: WifiToggle
protected: no

binding, index = 5:
    button: FN1
    action: click
active_handler: UnmountUsb1
default_handler: UnmountUsb1
protected: no

binding, index = 6:
    button: FN1
    action: double-click
active_handler:
default_handler:
protected: no

binding, index = 7:
    button: FN1
    action: hold
active_handler:
default_handler:
protected: no

binding, index = 8:
    button: FN2
    action: click
active_handler: UnmountUsb2
default_handler: UnmountUsb2
protected: no

binding, index = 9:
    button: FN2
    action: double-click
active_handler:
default_handler:
protected: no

binding, index = 10:
    button: FN2
    action: hold
active_handler:
default_handler:
protected: no
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>show button bindings</b> command has been introduced.

### 3.129.5 show button handlers

**Description** Show a list of available button handlers in the system.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **button handlers**

**Example**

```
(show)> button handlers

    handlers:
        handler, name = LedToggle:
            short_description: toggle system LED states
                protected: no
                switch_related: no

        handler, name = FactoryReset:
            short_description: reset a configuration to factory defaults
                protected: yes
                switch_related: no

        handler, name = UnmountUsb1:
            short_description: unmount USB 1 port storages
                protected: no
                switch_related: no

        handler, name = UnmountUsb2:
            short_description: unmount USB 2 port storages
                protected: no
                switch_related: no

        handler, name = Reboot:
            short_description: reboot the system
                protected: yes
                switch_related: no

        handler, name = DlnaDirectoryRescan:
            short_description: rescan DLNA directory for newer media files
                protected: no
                switch_related: no
```

```
        handler, name = DlnaDirectoryFullRescan:  
        short_description: remove a DLNA database and rescan a ►  
DLNA directory  
            protected: no  
            switch_related: no  
  
        handler, name = DectHandsetRegistrationToggle:  
        short_description: toggle a DECT handset registration  
            protected: no

        short_description: start WPS (5 GHz Wi-Fi station)
            protected: no
            switch_related: no
    
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>show button handlers</b> command has been introduced.

## 3.129.6 show chilli profiles

**Description** Show the list of available *RADIUS* server profiles.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **chilli profiles**

**Example**

```
(show)> chilli profiles

    profile:
        name: Iron Wi-Fi
        url: https://www.ironwifi.com/
        description: Hosted RADIUS and Captive Portal

        preset:
        uamserver: ▶
https://europe-west3.ironwifi.com/api/pages/uam/

        radius:
        server1: 35.198.88.176

    radiuslocationid:

        dns:
        dns1: 8.8.8.8
        dns2: 8.8.4.4

        custom: uamsecret

        custom: radiussecret

        custom: radiusnasid
```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>show chilli profiles</b> command has been introduced.

### 3.129.7 show clock date

**Description** Show the current system date.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis** (show)> **clock date****Example**

```
(show)> clock date

    weekday: 4
        day: 18
        month: 1
        year: 2018
        hour: 8
        min: 46
        sec: 2
        msec: 660
        dst: inactive

        tz:
        locality: GMT
        stdoffset: 0
        dstoffset: 0
        usesdst: no
        rule: GMT0
        custom: no
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show clock date</b> command has been introduced.

### 3.129.8 show clock timezone-list

**Description** Show the list of available timezones.**Prefix no** No**Change settings** No**Multiple input** No

**Synopsis**

```
(show)> clock timezone-list
```

**Example**

```
(show)> clock timezone-list
```

```
timezones:
    tz:
        locality: Adak
        stdoffset: -36000
        dstoffset: -32400
    tz:
        locality: Aden
        stdoffset: 10800
        dstoffset: -1
    tz:
        locality: Almaty
        stdoffset: 21600
        dstoffset: -1
    tz:
        locality: Amsterdam
        stdoffset: 3600
        dstoffset: 7200
    tz:
        locality: Anadyr
        stdoffset: 43200
        dstoffset: -1
    ...
    ...
    ...
```

**History**

Version	Description
2.00	The <b>show clock timezone-list</b> command has been introduced.

### 3.129.9 show components status

**Description** Display components updates status.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(show)> component status
```

**Example**

```
(show)> components status
```

```
update:
    state: idle
```

```
(show)> components status
    update:
        state: running
        progress: 41
```

History	Version	Description
	4.00	The <b>show components status</b> command has been introduced.

### 3.129.10 show configurator status

**Description** Show information about system configurator.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **configurator status**

**Example** (show)> **configurator status**

```
touch: Thu, 18 Oct 2018 14:37:25 GMT
    header, name = Model: Keenetic Giga
    header, name = Version: 2.06.1

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>show eula list</b> command has been introduced.

## 3.129.26 show interface

**Description** Show information of specified interface. If you use no argument, the entire list of all network interfaces will be displayed.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** IP

**Synopsis**

(show)>	<b>interface &lt;name&gt;</b>
---------	-------------------------------

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>Interface</i>	Full name or an alias of the interface to display.

**Example**

### Example 3.1. Review the status of switch ports

The command **show interface** displays different information depending on the interface type. In particular, for FastEthernet0 switch it shows current state of physical ports, speed and duplex, on top of general information.

```
(config)> show interface FastEthernet0

        id: GigabitEthernet0
        index: 0
        type: GigabitEthernet
    description:
interface-name: GigabitEthernet0
        link: up
    connected: yes
        state: up
        mtu: 1500
    tx-queue: 2000

        port, name = 1:
            id: GigabitEthernet0/0
            index: 0
    interface-name: 1
        type: Port
        link: up
        speed: 1000
        duplex: full
    auto-negotiation: on
        flow-control: on
            eee: off
        last-change: 4578.185413
    last-overflow: 0
        public: no

        port, name = 2:
            id: GigabitEthernet0/1
            index: 1
    interface-name: 2
        type: Port
        link: down
        last-change: 4590.205656
    last-overflow: 0
        public: no

        port, name = 3:
            id: GigabitEthernet0/2
            index: 2
    interface-name: 3
        type: Port
        link: up

        role, for = GigabitEthernet0/Vlan2: inet

        speed: 100
        duplex: full
    auto-negotiation: on
        flow-control: off
            eee: off
        last-change: 4570.078144
    last-overflow: 0
```

```

        public: yes

        port, name = 4:
            id: GigabitEthernet0/3
            index: 3
        interface-name: 4
            type: Port
            link: down
            last-change: 4590.202571
        last-overflow: 0
        public: no
    
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show interface</b> command has been introduced.

**3.129.27 show interface bridge****Description** Display interface bridge status.**Prefix no** No**Change settings** No**Multiple input** No**Interface type** Bridge**Synopsis** (show)> **interface <name> bridge****Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>Interface</i>	Full name or an alias of the interface to display.

**Output**

<b>Element</b>	<b>Value</b>
members	Root node.
interface	Interface name.
link	Link state of interface.
inherited	Attribute of inheritance.

**Example**(show)> **interface Bridge1 bridge**

```

members:
    interface, link = no, inherited = yes:
        WiFiMaster0/AccessPoint2
    interface, link = yes: UsbLte0

```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>show interface bridge</b> command has been introduced.

**3.129.28 show interface channel-utilization rrd****Description** Show specific data from the channel utilization monitor.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis**

```
(show)> interface <name>channel-utilization rrd <attribute> [<detail>]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>Interface</i>	Full name or an alias of the Wi-Fi interface.
attribute	load	Channel load percentage.
	valid	The data is valid.
detail	0	RRD detalization level 64 x 3-seconds. It is used by default if the parameter is not specified.
	1	RRD detalization level 64 x 1-minutes.
	2	RRD detalization level 64 x 3-minutes.
	3	RRD detalization level 64 x 30-minutes.

**Example**

```
(show)> interface WifiMaster1 channel-utilization rrd load 1
```

```
data:
t: 578928.500000
v: 0
```

```
data:
t: 578868.500000
v: 1
```

```
data:

**History**

Version	Description
3.09	The <b>show interface channel-utilization rrd</b> command has been introduced.

## 3.129.29 show interface channels

**Description** Show information about the specified wireless interface channels.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** Radio

**Synopsis**

(show)>	<b>interface &lt;name&gt; channels</b>
---------	--

**Arguments**

Argument	Value	Description
name	<i>Interface</i>	Full name or an alias of the interface to display.

**Output**

Element	Value
channels	Root node.
channel, index	Record number in the list.
number	Channel number.
ext-40-above	Ability to expand channel above.
ext-40-below	Ability to expand channel below.
vhc-80	Ability to expand channel up to 80 MHz.

**Example**

```
(show)> interface WifiMaster0 channels
```

```

channels:
    channel, index = 0:
        number: 1
        ext-40-above: yes
        ext-40-below: no
        vht-80: yes

    channel, index = 1:
        number: 2
        ext-40-above: yes
        ext-40-below: yes
        vht-80: yes

    channel, index = 2:
        number: 3
        ext-40-above: yes
        ext-40-below: yes
        vht-80: yes

    channel, index = 3:
```

```

        number: 4
ext-40-above: yes
ext-40-below: yes
vht-80: yes

channel, index = 4:
    number: 5
ext-40-above: yes
ext-40-below: yes
vht-80: yes

channel, index = 5:
    number: 6
ext-40-above: yes
ext-40-below: yes
vht-80: yes

channel, index = 6:
    number: 7
ext-40-above: yes
ext-40-below: yes
vht-80: yes

channel, index = 7:
    number: 8
ext-40-above: yes
ext-40-below: yes
vht-80: yes

...
...
...

```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>show interface channels</b> command has been introduced.

**3.129.30 show interface chilli**

**Description** Show information about statistics of connected clients to the **RADIUS** hotspot.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **interface <name> chilli**

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>Interface</i>	Full name or an alias of the interface.

**Example**

```
(show)> interface Chilli0 chilli

    host:
        session-id: 4bf7c55f00000006
            user: 44w3c1
                ip: 10.1.30.3
                    mac: 55:a3:f9:51:b4:11
        start-time: 3884
            end-time: 0
            idle-time: 9
        idle-time-limit: 0
            tx-bytes: 695682
        tx-bytes-limit: 0
            rx-bytes: 1627453
        rx-bytes-limit: 0
            tx-speed: 0
        tx-speed-limit: 0
            rx-speed: 0
        rx-speed-limit: 0
```

**History**

Version	Description
2.10	The <b>show interface chilli</b> command has been introduced.

### 3.129.31 show interface country-codes

**Description** Show the list of available country codes on a radio interface.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** Radio

**Synopsis**

```
(show)> interface <name> country-codes
```

**Arguments**

Argument	Value	Description
name	<i>Interface</i>	Full name or an alias of the interface to display.

**Output**

Element	Value
country-codes	Root node.
code	Country code.
country	Country name.

**Example**

```
(show)> interface WifiMaster0 country-codes

country-codes:
    country-code:
        code: AL
        country: Albania

    country-code:
        code: DZ
        country: Algeria

    country-code:
        code: AR
        country: Argentina

    country-code:
        code: AM
        country: Armenia

    country-code:
        code: AU
        country: Australia

...
...
...
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>show interface country-codes</b> command has been introduced.

### 3.129.32 show interface mac

**Description** Show the table of MAC addresses of the switch.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** Switch

**Synopsis** (show)> **interface <name> mac**

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>Interface</i>	Full name or an alias of the interface to display.

**Example**

```
(show)> interface FastEthernet0 mac
=====
Port   MAC                               Aging
=====

**History**

Version	Description
2.04	The <b>show interface rf e2p</b> command has been introduced.

### 3.129.35 show interface rrd

**Description** Show network interface loading on the principle of Round Robin Database.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(show)>	<b>interface &lt;name&gt;rrd &lt;attribute&gt; [&lt;detail&gt;]</b>
---------	---

**Arguments**

Argument	Value	Description
name	<i>Interface</i>	Full name or an alias of the interface.
attribute	rxspeed	Value of data rate type.
	txspeed	
detail	0	Level of detail is 1 second.
	1	Level of detail is 2 seconds.
	2	Level of detail is 3 seconds.
	3	Level of detail is 5 seconds.
	4	Level of detail is 15 seconds.
	5	Level of detail is 30 seconds.
	6	Level of detail is 1 minute.
	7	Level of detail is 2 minutes.
	8	Level of detail is 3 minutes.
	9	Level of detail is 5 minutes.
	10	Level of detail is 15 minutes.
	11	Level of detail is 30 minutes.

**Example**

```

```

**History**

Version	Description
3.08	The <b>show interface spectrum rrd</b> command has been introduced.

### 3.129.37 show interface stat

**Description** Show interface statistics.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(show)>	<b>interface &lt;name&gt; stat</b>
---------	------------------------------------

**Arguments**

Argument	Value	Description
name	<i>Interface</i>	Full name or an alias of the interface.

**Example**

```
(show)> interface WifiMaster0/AccessPoint0 stat
```

```

    rxpackets: 137033
        rxbytes: 23915722
        rxerrors: 0
        rxdropped: 0
        txpackets: 847802
            txbytes: 1192583473
            txerrors: 0
            txdropped: 0
            timestamp: 11754.721178

```

**History**

Version	Description
2.00	The <b>show interface stat</b> command has been introduced.

### 3.129.38 show interface wps pin

**Description** Show the access point WPS PIN.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** WiFi

**Synopsis**

(show)>	<b>interface &lt;name&gt; wps pin</b>
---------	---------------------------------------

**Arguments**

Argument	Value	Description
name	<i>Interface</i>	Full name or an alias of the interface.

Output	Element	Value
	pin	Pin number.

**Example**

```
(show)> interface WifiMaster0/AccessPoint0 wps pin
pin: 60180360
```

History	Version	Description
	2.00	The <b>show interface wps pin</b> command has been introduced.

### 3.129.39 show interface wps status

**Description** Show the access point WPS status.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** WiFi

**Synopsis**

```
(show)> interface <name> wps status
```

Arguments	Argument	Value	Description
	name	Interface	Full name or an alias of the interface.

Output	Element	Value
	wps	Root node.
	configured	WPS is configured for Access Point.
	auto-self-pin	Auto-self-pin mode state.
	status	disabled enabled active
	direction	send receive
	mode	pbc self-pin peer

Element	Value
left	Time to session closure in seconds.

**Example**

```
(show)> interface WifiMaster0/AccessPoint0 wps status

History	Version	Description
	2.00	The <b>show ip arp</b> command has been introduced.

### 3.129.43 show ip dhcp bindings

**Description** Show *DHCP server* status. If you use no argument, the entire list of issued IPs for all pools will be displayed.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ip dhcp bindings [ <pool> ]**

Arguments	Argument	Value	Description
	pool	String	The pool name.

**Example** (show)> **ip dhcp bindings \_WEBADMIN**

```

lease:
    ip: 192.168.15.211
    mac: 00:26:c7:4a:e0:16
    expires: 289
    hostname: lenovo
lease:
    ip: 192.168.15.208
    mac: 00:19:d2:48:d6:dc
    expires: 258
    hostname: evo
...
...
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show ip dhcp bindings</b> command has been introduced.

### 3.129.44 show ip dhcp pool

**Description** Show information about specified pool. If you use no argument, the information about all system pools will be displayed.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ip dhcp pool** [*<pool>*]

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
pool	<i>String</i>	The pool name.

**Example**

```
(show)> ip dhcp pool 123
pool, name = 123:
interface, binding = auto:
    network: 0.0.0.0/0
    begin: 0.0.0.0
    end: 0.0.0.0
router, default = yes: 0.0.0.0
lease, default = yes: 25200
state: down
debug: no
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>show ip dhcp pool</b> command has been introduced.

### 3.129.45 show ip hotspot

**Description** Show hotspot hosts.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ip hotspot**

**Example**

```
(show)> ip hotspot

```

History	Version	Description
	2.14	The <b>show ip hotspot rrd</b> command has been introduced.

### 3.129.47 show ip hotspot summary

<b>Description</b>	Show the information about traffic usage for several registered hosts according to Round Robin Database. Sorting is in descending order.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No

**Synopsis**

```
(show)> ip hotspot summary <attribute>[ detail <detail> ][ count <count> ]
```

**Arguments**

Argument	Value	Description
attribute	rxspeed	Value of data rate type.
	txspeed	
	rxbytes	
	txbytes	
detail	0	Level of detail is 3 seconds.
	1	Level of detail is 60 seconds.
	2	Level of detail is 180 seconds.
	3	Level of detail is 1440 seconds.
count	<i>Integer</i>	The number of hosts. If not specified, the entire list of hosts is displayed.

**Example**

```
(show)> ip hotspot summary rxspeed
```

```
t: 255
```

```
host:
  active: yes
    name: toshiba
  rxspeed: 143964
```

```
host:
  active: yes
    name: lnx
  rxspeed: 24749
```

```
host:
  active: yes
    name: oneplus6
  rxspeed: 2558
```

```
(show)> ip hotspot summary rxspeed detail 0
```

```
t: 0
```

```
host:
  active: yes
    name: toshiba
  rxspeed: 186519
```

```
host:
  active: yes
    name: oneplus6
  rxspeed: 94298
```

```

host:
  active: yes
  name: lnx
  rxspeed: 8237

```

```
(show)> ip hotspot summary rxspeed count 3
```

```
    t: 255
```

```

host:
  active: yes
  name: toshiba
  rxspeed: 390322

```

```

host:
  active: yes
  name: lnx
  rxspeed: 53518

```

```

host:
  active: yes
  name: oneplus6
  rxspeed: 5284

```

**History**

<b>Version</b>	<b>Description</b>
2.14	The <b>show ip hotspot summary</b> command has been introduced.

**3.129.48 show ip http proxy**

**Description** Show HTTP proxy status.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> ip http proxy

**Example** (show)> ip http proxy

```

proxy:
  name: modem
  domain: myhomemodem.keenetic.link
  upstream: http://192.168.8.1:80
  allow: public
  ndns: yes

```

**History**

<b>Version</b>	<b>Description</b>
2.09	The <b>show ip http proxy</b> command has been introduced.

### 3.129.49 show ip name-server

**Description** Show a list of current IPv4 and IPv6 addresses of DNS servers in order of decreasing priority.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ip name-server**

**Example**

```
(show)> ip name-server

server:
    address: 1.1.1.1
        port: 0
        domain:
        global: 0
        service: Dns::Manager
    interface:

server:
    address: 9.9.9.9

**History**

Version	Description
2.00	The <b>show ip nat</b> command has been introduced.

### 3.129.51 show ip neighbour

**Description** Show the list of discovered hosts on the network at the OSI model network level.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ip neighbour [alive]**

**Arguments**

Argument	Value	Description
alive	<i>Keyword</i>	Show active hosts.

**Example**

```
(show)> ip neighbour

neighbour:
    id: 1
    via: b8:88:e1:2b:30:af
    mac: b8:88:e1:2b:30:af
    address-family: ipv4
        address: 192.168.22.16
        interface: Bridge0
        first-seen: 251387
        last-seen: 0
        leasetime: 7372
        expired: no
        wireless: no

neighbour:
    id: 4
    via: b8:88:e2:4b:30:af
    mac: b8:88:e2:4b:30:af
    address-family: ipv6
```

```

addresses:
address:
    address: fe80::a022:a505:fae6:c891
    status: active
    last-seen: 3

interface: Bridge0
first-seen: 251371
last-seen: 251371
leasetime: 0
expired: no
wireless: no

```

**History**

<b>Version</b>	<b>Description</b>
2.10	The <b>show ip neighbour</b> command has been introduced.

### 3.129.52 show ip policy

**Description** Show the IP Policy profile status.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ip policy** [<policy>]

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
policy	<i>Policy</i>	Name of IP Policy profile.

**Example**

```

(show)> ip policy
policy, name = Policy0, description = VPN-OpenVPN:
    mark: fffffd00
    table: 42

    route:
    destination: 10.1.30.0/24
        gateway: 0.0.0.0

Version	Description
2.12	The <b>show ip policy</b> command has been introduced.

## 3.129.53 show ip route

**Description** Show the current routing table.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(show)>	<b>ip route</b> [table <table>] [sort <criteria> <direction>]
---------	---

**Arguments**

Argument	Value	Description
table	<i>Integer</i>	The route number.
criteria	interface	Sorting criteria is the interface name.
	gateway	Sorting criteria is the gateway address.
	destination	Sorting criteria is the destination address.
direction	ascending	Routing table records are sorted in ascending order.
	descending	Routing table records are sorted in descending order.

**Example**

(show)> **ip route table 254**

    expires: 299

```

History	Version	Description
	4.00	The <b>show ipv6 dhcp bindings</b> command has been introduced.

### 3.129.58 show ipv6 prefixes

**Description** Show a list of current IPv6-prefixes.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ipv6 prefixes**

**Example** (show)> **ipv6 prefixes**

```

prefix:
    prefix: 2001:db8::/64
    interface: ISP
    valid-lifetime: infinite
    preferred-lifetime: infinite
    prefix:
        prefix: fd3c:4268:1559::/48
        interface:
        valid-lifetime: infinite
        preferred-lifetime: infinite
        prefix:
            prefix: fd01:db8:43::/48
            interface:
            valid-lifetime: infinite
            preferred-lifetime: infinite

```

History	Version	Description
	2.00	The <b>show ipv6 prefixes</b> command has been introduced.

## 3.129.59 show ipv6 route

<b>Description</b>	Show a list of current IPv6-routes.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Synopsis</b>	(show)> <b>ipv6 route [table &lt;table&gt;] [sort &lt;criteria&gt; &lt;direction&gt;]</b>

Arguments	Argument	Value	Description
	table	<i>Integer</i>	The route number.
criteria	interface		Sorting criteria is the interface name.
	gateway		Sorting criteria is the gateway address.
	destination		Sorting criteria is the destination address.
direction	ascending		Routing table records are sorted in ascending order.
	descending		Routing table records are sorted in descending order.

<b>Example</b>	(show)> <b>ipv6 route table 42</b>
	<pre> route6: destination: 2a02:290:2:65d:52ff:20ff:fe00:1e86/128     gateway: ::     interface: Home     metric: 256     flags: U     rejecting: no     proto: boot     floating: no     static: no </pre>
	(show)> <b>ipv6 route sort interface ascending</b>
	<pre> route6: destination: 2a02:290:2:65d:52ff:20ff:fe00:1e86/128     gateway: ::     interface: Home     metric: 256     flags: U     rejecting: no     proto: kernel     floating: no     static: no </pre>
	(show)> <b>ipv6 route sort gateway descending</b>

```

route6:
destination: ::/0
    gateway: fe80::66a0:e7ff:fef5:6392
    interface: ISP
    metric: 1024
    flags: U
    rejecting: no
    proto: boot
    floating: no
    static: no

```

History	Version	Description
	2.00	The <b>show ipv6 routes</b> command has been introduced.
	4.00	New command name is <b>show ipv6 route</b> .

## 3.129.60 show ipv6 subnets

**Description** Show a list of current IPv6-subnets.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ipv6 subnets**

**Example** (show)> **ipv6 subnets**

```

subnet:
    name: Default
    interface: Home

    prefixes:
        prefix: 2a0d:8140:2ba1::/64
        interface: TunnelSixInFour0
        valid-lifetime: infinite
        preferred-lifetime: 0
        global: no

```

History	Version	Description
	4.01	The <b>show ipv6 subnets</b> command has been introduced.

## 3.129.61 show kabinet status

**Description** Check for the status and configuration of КАБиNET authenticator.

<b>Prefix no</b>	No				
<b>Change settings</b>	No				
<b>Multiple input</b>	No				
<b>Synopsis</b>	(show)> <b>kabinet status</b>				
<b>Example</b>	(show)> <b>kabinet status</b>  kabinet: enabled: yes wan: yes state: STOPPED server: 10.0.0.1 access-level: internet protocol-version: 2				
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.02</td><td>The <b>show kabinet status</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.02	The <b>show kabinet status</b> command has been introduced.
Version	Description				
2.02	The <b>show kabinet status</b> command has been introduced.				

### 3.129.62 show last-change

<b>Description</b>	Show when and who made the latest changes in the settings.				
<b>Prefix no</b>	No				
<b>Change settings</b>	No				
<b>Multiple input</b>	No				
<b>Synopsis</b>	(show)> <b>last-change</b>				
<b>Example</b>	(show)> <b>last-change</b>  date: Thu, 12 Jul 2012 10:01:47 GMT  agent: cli				
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.00</td><td>The <b>show last-change</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.00	The <b>show last-change</b> command has been introduced.
Version	Description				
2.00	The <b>show last-change</b> command has been introduced.				

### 3.129.63 show led

<b>Description</b>	Show information about specified LED in the system. If you use no argument, the entire list of all LEDs on the device will be displayed. Available LEDs depend on hardware configuration.
--------------------	---

<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Synopsis</b>	(show)> <b>led</b> [ <name> ]

Arguments	Argument	Value	Description
	name	SYS	The LED name. The number of available indicators depends on the selected device.
		FN	
		FW_UPD	
		ACT_ACK	
		WAN	
		DSL	
		WLAN	
		WLAN5	
		WPS_1	
		WPS_2	
		WPS_3	
		WPS_4	
		WPS5_1	
		WPS5_2	
		WPS5_3	
		WPS5_4	
		USB_1	
		USB_2	
		LTE	

**Example** (show)> **led FN\_1**

```

        leds:
          led, index = 0:
            name: FN_1
        user_configurable: yes
        virtual: no
    
```

History	Version	Description
	2.05	The <b>show led</b> command has been introduced.

## 3.129.64 show led bindings

**Description** Show the control associated with the specified LED. If you use no argument, the entire list of all LEDs with theirs controls will be displayed.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(show)>	<b>led [ &lt;name&gt; ]bindings</b>
---------	-------------------------------------

**Arguments**

Argument	Value	Description
name	SYS	The LED name. Set of available indicators depends on the selected device.
	FN	
	FW_UPD	
	ACT_ACK	
	WAN	
	DSL	
	WLAN	
	WLAN5	
	WPS_1	
	WPS_2	
	WPS_3	
	WPS_4	
	WPS5_1	
	WPS5_2	
	WPS5_3	
	WPS5_4	
	USB_1	
	USB_2	
	LTE	

**Example**

```
(show)> led bindings

        bindings:

            binding, index = 0:
                led: SYS

    gi: 800
    rssi: -27
    mcs: 7
    txss: 2
    ebf: yes
    mu: yes

```

**History**

Version	Description
3.01	The <b>show mws associations</b> command has been introduced.

## 3.129.68 show mws candidate

**Description** Show the list of candidates or the description of specified candidate by the given identifier.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(show)>	<b>mws candidate [ &lt;candidate&gt; ]</b>
---------	--

**Arguments**

Argument	Value	Description
candidate	String	Device ID — MAC address or CID.

**Example**

(show)>	<b>mws candidate 50:ff:20:08:71:61</b>
---------	--

```

candidate:
    mac: 50:ff:20:08:71:61
    cid:
    mode:

```

```

model:
state: DISCONNECTED

(show)> mws candidate 50:ff:20:08:71:61

candidate:
    mac: 50:ff:20:08:71:61
    cid: ab1409a2-0f87-11e8-8f23-3d5f5921b253
    mode: ap
    model: Extra (KN-1710)
    state: COMPATIBLE
    fw: 2.15.A.4.0-1
    fw-available: 2.15.A.4.0-1
    license: 273720056272398

```

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>show mws candidate</b> command has been introduced.

**3.129.69 show mws log**

**Description** Show log of connections and transitions from one Access Point to another within [MWS](#). The command executes in the background, that is, until forced to stop by the user pressing [Ctrl]+[C].

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **mws log** [*<max-lines>*] [**once**]

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
max-lines	<i>Integer</i>	Limit of entries in the response.
once	<i>Keyword</i>	Show recent entries in the log.

**Example**

```

(show)> mws log 1

Time          Message
[Jan 17 15:04:58] : 64:a2:f9:51:b1:82: associated -> ▶
50:ff:20:00:11:82 (5 GHz)

(show)> mws log once

Time          Message

```

```
[Jan 17 14:46:37] : 64:a2:f9:51:b1:82: associated -> ►
50:ff:20:00:11:82 (5 GHz)
[Jan 17 15:04:50] : 64:a2:f9:51:b1:82: 50:ff:20:00:11:82 (5 ►
GHz) -> disassociated
[Jan 17 15:04:58] : 64:a2:f9:51:b1:82: associated -> ►
50:ff:20:00:11:82 (5 GHz)
```

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>show mws log</b> command has been introduced.

## 3.129.70 show mws member

**Description** Show the list of members or the description of specified member by the given identifier.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **mws member [ <member> ]**

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
member	<i>String</i>	Device ID — MAC address or CID.

**Example**

```
(show)> mws member 40f829b8-71a8-11ec-9396-5fb681ed4743

        member:
                cid: 40f829b8-71a8-11ec-9396-5fb681ed4743

        bridge: 8000.50:ff:21:69:21:7d
        cost: 5
        speed: 1000
        duplex: full

        rci:
        errors: 0
    
```

History	Version	Description
	2.15	The <b>show mws member</b> command has been introduced.

### 3.129.71 show ndns

**Description** Show KeenDNS parameters from the latest request to the server (see [ndns get-booked](#) and [ndns get-update](#) commands).

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ndns**

**Example**

```

        name: testname
        booked: testname
        domain: mykeenetic.com
        address: 41.189.34.56
        updated: yes
        access: direct
    
```

```

    ttp:
      direct: yes
    interface: GigabitEthernet1
      address: 41.189.34.56
  
```

History	Version	Description
	2.07	The <b>show ndns</b> command has been introduced.

## 3.129.72 show netfilter

<b>Description</b>	Show information about the firewall working. Need to provide remote technical support.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Synopsis</b>	(show)> <b>netfilter</b>

History	Version	Description
	2.00	The <b>show netfilter</b> command has been introduced.

## 3.129.73 show nextdns availability

<b>Description</b>	Check and show <i>NextDNS</i> availability.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Synopsis</b>	(show)> <b>nextdns availability</b>

<b>Example</b>	(show)> <b>nextdns availability</b>
	<pre>         available: yes           port: 53       doh-supported: yes       doh-available: yes     </pre>

History	Version	Description
	3.08	The <b>show nextdns availability</b> command has been introduced.

### 3.129.74 show nextdns profiles

<b>Description</b>	Show <i>NextDNS</i> profiles.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Synopsis</b>	(show)> <b>nextdns profiles</b>

<b>Example</b>	(show)> <b>nextdns profiles</b>  profiles: profile: name: No filtering token: 0  profile: name: My First Configuration token: 1f3a36  NextDns::Client: Loaded profiles.
----------------	--

<b>History</b>	<b>Version</b>	<b>Description</b>
	3.08	The <b>show nextdns profiles</b> command has been introduced.

### 3.129.75 show ntce applications

<b>Description</b>	Show the list of applications supported by the <i>NTCE</i> service.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No
<b>Synopsis</b>	(show)> <b>ntce applications</b>

<b>Example</b>	(show)> <b>ntce applications</b>  application: id-num: 1 short: facebook long: Facebook group-id: 2065 group-long: Social groupset-id: 4
----------------	--

```
groupset-short-id: surfing
groupset-long-id: Web surfing

application:
    id-num: 2
        short: magicjack
        long: magicJack

No

**Synopsis**(show)> **ntce attributes****Example**(show)> **ntce attributes**

attribute:

id-num: 1

short: encrypted

    long: Indicates that the current connection is ►  
        encrypted traffic.

attribute:

id-num: 2

short: audio

    long: Indicates that the current connection is ►  
        an audio or voice signal.

attribute:

id-num: 3

short: out

    long: Indicates that the current connection is ►  
        a landline call, e.g. a call to a home phone.

attribute:

id-num: 4

short: video

    long: Indicates that the current connection is ►  
        a video signal.

attribute:

id-num: 5

short: file-transfer

    long: Indicates that the current connection is ►  
        a file transfer.

attribute:

id-num: 6

short: web

    long: Indicates that the current connection is ►  
        a surf the Internet session.

attribute:

id-num: 7

short: chat

    long: Indicates that the current connection is ►  
        a chat session.

attribute:

id-num: 8

short: mail

    long: Indicates that the current connection is ►  
        mail traffic.

```
attribute:  
    id-num: 9  
    short: stream  
    long: Indicates that the current connection is ►  
a continues unidirectional stream of audio and / or video.  
  
attribute:  
    id-num: 10  
    short: android  
    long: Indicates that the client side uses the ►  
operating system Android.  
  
attribute:  
    id-num: 11  
    short: ios  
    long: Indicates that the client side uses the ►  
operating system iOS.  
  
attribute:  
    id-num: 12  
    short: windows-mobile  
    long: Indicates that the client side uses the ►  
operating system Windows Mobile.  
  
attribute:  
    id-num: 13  
    short: blackberry  
    long: Indicates that the client side uses the ►  
operating system Blackberry.  
  
attribute:  
    id-num: 14  
    short: picture  
    long: Indicates that the current connection ►  
transfers pictures.  
  
attribute:  
    id-num: 15  
    short: ddl  
    long: Indicates that the current connection is ►  
a Direct Download Hoster.  
  
attribute:  
    id-num: 16  
    short: google  
    long: Indicates that the current connection is ►  
a Google service.  
  
attribute:  
    id-num: 17  
    short: outlook_web_access  
    long: Indicates that the current connection ►  
uses the Microsoft Exchange Outlook Web Access as authentication ►
```

```
mechanism.

attribute:
    id-num: 18
        short: amazon-cloud
        long: Indicates that the current connection is ▶
a service of Amazon Cloud.

attribute:
    id-num: 19
        short: apache
        long: Indicates that the server side is an ▶
Apache server.

attribute:
    id-num: 20
        short: mysql-server
        long: Indicates that the server side is a MySQL ▶
database server.

attribute:
    id-num: 21
        short: mariadb-server
        long: Indicates that the server side is a ▶
MariaDB database server.

attribute:
    id-num: 22
        short: ntlm
        long: Current connection uses NTLM as ▶
authentication mechanism.

attribute:
    id-num: 23
        short: microsoft-windows
        long: Indicates that the client side is the ▶
operating system Microsoft Windows.

attribute:
    id-num: 24
        short: chrome
        long: Indicates that the client side is the ▶
operating system Chrome.

attribute:
    id-num: 25
        short: akamai-cloud
        long: Indicates that the current connection is ▶
a service of Akamai Cloud.

attribute:
    id-num: 26
        short: dox
        long: Indicates that the current connection is ▶
```

```
DoT (DNS over TLS) or DoH (DNS over HTTPS).

attribute:
    id-num: 27
    short: rcs
    long: Indicates that the current connection is ►
RCS (Rich Communication Services).
```

3.07	The <b>show ntce status</b> command has been introduced.

## 3.129.82 show ntp status

**Description** Show *NTP* system settings.

**NTP state general info**

- ① The time elapsed since the last synchronization in seconds.
- ② The indicator of the last synchronization.
- ③ The indicator of the initial synchronization.
- ④ Time is taken from NDSS server.
- ⑤ Time is set by the user manually.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **ntp status**

**Example** (show)> **ntp status**

```

status:
elapsed: 435146 ①
server: 1.pool.ntp.org
accurate: yes ②
synchronized: yes ③
ndsstime: no ④
usertime: no ⑤

```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show ntp status</b> command has been introduced.

## 3.129.83 show ping-check

**Description** Show *Ping Check* profile status. If you use no arguments, the command displays information about all profiles.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(show)>	<b>ping-check</b> [ <i>&lt;profile_name&gt;</i> ]
---------	---

**Arguments**

Argument	Value	Description
profile_name	<i>String</i>	Profile name.

**Example**

```
(show)> ping-check

    pingcheck:
        profile: TEST
            host: 8.8.8.8
            port: 80
            max-fails: 7
            timeout: 1
            mode: connect

        interface: ISP
            fail count: 0
            status: pass

    pingcheck:
        profile: TEST1
            mode: icmp

    pingcheck:
        profile: TEST2
            mode: icmp
```

**History**

Version	Description
2.04	The <b>show ping-check</b> command has been introduced.

## 3.129.84 show processes

**Description** Show statistics of CPU usage by services and processes.

**Prefix no** No

**Change settings** No

**Multiple input**

No

**Synopsis**(show)> **processes****Example**

```
(show)> processes
```

```
process, id = NETBIOS browser:
```

```

### 3.129.86 show schedule

**Description** Show parameters of defined schedule. If you use no argument, the entire list of system schedules will be displayed.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **schedule** [*<name>*]

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	<i>String</i>	A schedule name.

**Example**

```
(show)> schedule 123

        schedule, name = 123:
            action, type = start, left = 561514, next = yes:
                dow: Tue
                time: 01:29

            action, type = stop, left = 564274:
                dow: Tue
                time: 02:15
```

**History**

<b>Version</b>	<b>Description</b>
2.06	The <b>show schedule</b> command has been introduced.

## 3.129.87 show self-test

**Description** Show summary information about system activity. Need to provide remote technical support.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **self-test**

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show self-test</b> command has been introduced.

## 3.129.88 show site-survey

**Description** Show available wireless networks.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Interface type** Radio

**Synopsis** (show)> **site-survey <name>**

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
name	Interface	Full name or an alias of the interface. You can see the list of available interfaces with help of <b>site-survey [Tab]</b> command.

**Example**

(show)> <b>site-survey WifiMaster0</b>

            txbytes: 48265
            txerrors: 0
            txdropped: 0
            timestamp: 104530.202229
            last-overflow: 0.000000

```

**History**

<b>Version</b>	<b>Description</b>
2.12	The <b>show sstp-server</b> command has been introduced.

## 3.129.92 show system

**Description**

Show the general state of the system.

**System state general info**

- ① CPU load, percentage.
- ② Occupied and available memory info, kilobytes.
- ③ Swap file usage info, kilobytes.
- ④ System uptime from the start, seconds.

**Prefix no**

No

**Change settings**

No

**Multiple input**

No

**Synopsis**

```
(show)> system
```

**Example**

```
(config)> show system
```

```

hostname: Undefined
domainname: WORKGROUP
cpuload: 0 ①
memory: 13984/28976 ②
swap: 0/0 ③
uptime: 153787 ④

```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show system</b> command has been introduced.

## 3.129.93 show system country

**Description** Show country-specific configuration status depending on the factory region.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **system country**

**Example**

```
(show)> system country

    factory: EA
    selected: KZ
    default-language: ru

    country:
        code: AM
        short-name: Armenia
    default-language: en

    country:
        code: AZ
        short-name: Azerbaijan
    default-language: en

    country:
        code: BY
        short-name: Belarus
    default-language: ru

    country:
        code: KG
        short-name: Kyrgyzstan
    default-language: en

    country:
        code: KZ
        short-name: Kazakhstan
    default-language: ru

    country:
        code: RU
        short-name: Russian Federation
    default-language: ru
```

```

country:
  code: UZ
  short-name: Uzbekistan
  default-language: en

```

History	Version	Description
	4.00	The <b>show system country</b> command has been introduced.

### 3.129.94 show system cpustat

**Description** Show device CPU usage.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **system cpustat**

**Example** (show)> **system cpustat**

```

interval: 36

  busy:
    cur: 1
    min: 0
    max: 11
    avg: 2

  user:

    avg: 0

  system:
    cur: 0
    min: 0
    max: 2
    avg: 0

  iowait:

```

```

        cur: 0
        min: 0
        max: 0
        avg: 0

    irq:
        cur: 0
        min: 0
        max: 0
        avg: 0

    sirq:
        cur: 0
        min: 0
        max: 0
        avg: 0

```

History	Version	Description
	2.09	The <b>show system cpustat</b> command has been introduced.

### 3.129.95 show tags

**Description** Show available authentication tags.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **tags**

**Example** (show)> **tags**

```

tag: cli
tag: readonly
tag: http-proxy
tag: http
tag: printers
tag: cifs
tag: ftp
tag: ipsec-xauth
tag: ipsec-l2tp
tag: opt
tag: sstp
tag: torrent
tag: vpn

```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>show tags</b> command has been introduced.

## 3.129.96 show threads

**Description** Show the list of active threads in NDM.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **threads**

**Example**

```
(show)> threads

        thread:
            name: Cloud agent service
            tid: 518
            lock_list_complete: yes
            locks:

            statistics:
                interval: 30

            cpu:
                now: 17771.481435
                min: 0
                max: 0
                avg: 0
                cur: 0

        thread:
            name: FTP brute force detection
            tid: 519
            lock_list_complete: yes
            locks:

            statistics:
                interval: 30

            cpu:
                now: 17771.481440
                min: 0
                max: 0
                avg: 0
                cur: 0
```

**History**

<b>Version</b>	<b>Description</b>
2.09	The <b>show threads</b> command has been introduced.

## 3.129.97 show torrent status

**Description** Show BitTorrent client status.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis** (show)> **torrent status****Example**

```
(show)> torrent status
state: running
rpc-port: 8090
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>show torrent status</b> command has been introduced.

## 3.129.98 show upnp redirect

**Description** Show **UPnP** port translation rules. If you use no arguments, the entire list of translation rules will be displayed.**Prefix no** No**Change settings** No**Multiple input** No**Interface type** IP**Synopsis** (show)> **upnp redirect** [(<protocol><interface><port>) | <index> ]**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
protocol	tcp	Rules with <b>TCP</b> protocol will be displayed.
	udp	Rules with <b>UDP</b> protocol will be displayed.
interface	Interface	Rules with specified interface name will be displayed.
port	Integer	Rules with specified port will be displayed.
index	Integer	Rule with specified number in the list will be displayed.

**Example**

```
(show)> upnp redirect udp ISP 11175

    entry:
        index: 1
        interface: ISP
        protocol: udp
        port: 11175
        to-address: 192.168.15.206
        to-port: 11175
        description: Skype UDP at 192.168.12.286:11175 (2024)
        packets: 0
        bytes: 0
```

History	Version	Description
	2.00	The <b>show upnp redirect</b> command has been introduced.

## 3.129.99 show version

**Description** Show firmware version.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(show)> version
```

**Example**

```
(show)> version

    release: 2.10.C.1.0-0
    arch: mips

    ndm:
        exact: 0-d32118a
        cdate: 11 Dec 2017

    bsp:
        exact: 0-cbe0525

    vendor: Keenetic
    series: KN
        model: Start (KN-1110)
    hw_version: 10118000
        hw_id: KN-1110
    device: Start
    class: Internet Center

```

History	Version	Description
	2.00	The <b>show version</b> command has been introduced.

## 3.129.100 show vpn-server

**Description** Show current connections to the VPN server.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (show)> **vpn-server**

**Example** (show)> **vpn-server**

```

tunnel:
clientaddress: 172.16.1.33
    username: test
    uptime: 3

statistic:
    rxpackets: 51
    rx-multicast-packets: 0
    rx-broadcast-packets: 0
        rxbytes: 5440
        rxerrors: 0
        rxdropped: 0
        txpackets: 46
    tx-multicast-packets: 0
    tx-broadcast-packets: 0
        txbytes: 9229
        txerrors: 0
        txdropped: 0
        timestamp: 146237.254244
        last-overflow: 0.000000

```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>show vpn-server</b> command has been introduced.

## 3.130 snmp community

**Description** Set new name for **SNMP** community. By default, common name **public** is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>snmp community &lt;community&gt;</b>
(config)>	<b>no snmp community</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
community	<i>String</i>	New community name.

**Example**

```
(config)> snmp community Co_test
Snmp::Manager: SNMP community set to "Co_test".
(config)> no snmp community
Snmp::Manager: SNMP community reset to "public".
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>snmp community</b> command has been introduced.

## 3.131 snmp contact

**Description** Assign the contact name of **SNMP** agent. By default, the name is not defined.

Command with **no** prefix resets setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config)>	<b>snmp contact &lt;contact&gt;</b>
(config)>	<b>no snmp contact</b>

**Arguments**

Argument	Value	Description
contact	<i>String</i>	<a href="#">SNMP</a> contact info.

**Example**

```
(config)> snmp contact Cont_test
Snmp::Manager: SNMP contact info set to "Cont_test".
(config)> no snmp contact
Snmp::Manager: SNMP community info reset.
```

**History**

Version	Description
2.08	The <b>snmp contact</b> command has been introduced.

## 3.132 snmp location

**Description** Assign the location of [SNMP](#) agent. By default, the location is not defined.

Command with **no** prefix resets setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config)&gt; snmp location &lt;location&gt;</pre>
<pre>(config)&gt; no snmp location</pre>

**Arguments**

Argument	Value	Description
location	<i>String</i>	<a href="#">SNMP</a> device location.

**Example**

```
(config)> snmp location Odintsovo
Snmp::Manager: SNMP device location set to "Odintsovo".
(config)> no snmp location
Snmp::Manager: SNMP device location reset.
```

**History**

Version	Description
2.08	The <b>snmp location</b> command has been introduced.

## 3.133 snmp view

**Description** Create [SNMP](#) community with restricted access.

Command with **no** prefix removes community.

<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	Yes						
<b>Synopsis</b>	<pre>(config)&gt; snmp view &lt;name&gt; (config)&gt; no snmp view &lt;name&gt;</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>name</td><td><i>String</i></td><td>Community name in reduced form, not more than 32 characters. The maximum number of communities is 4.</td></tr> </tbody> </table>	Argument	Value	Description	name	<i>String</i>	Community name in reduced form, not more than 32 characters. The maximum number of communities is 4.
Argument	Value	Description					
name	<i>String</i>	Community name in reduced form, not more than 32 characters. The maximum number of communities is 4.					
<b>Example</b>	<pre>(config)&gt; snmp view client Snmp::Manager: Created view "client". (config)&gt; no snmp view client Snmp::Manager: Removed view "client".</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>4.01</td><td>The <b>snmp view</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	4.01	The <b>snmp view</b> command has been introduced.		
Version	Description						
4.01	The <b>snmp view</b> command has been introduced.						

## 3.134 snmp view exclude

<b>Description</b>	Add subtree exclusion from <a href="#">SNMP view</a> .  Command with <b>no</b> prefix removes the setting.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(config)&gt; snmp view exclude &lt;oid&gt; (config)&gt; no snmp view exclude [&lt;oid&gt;]</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>oid</td><td><i>String</i></td><td>Object identifier.</td></tr> </tbody> </table>	Argument	Value	Description	oid	<i>String</i>	Object identifier.
Argument	Value	Description					
oid	<i>String</i>	Object identifier.					
<b>Example</b>	<pre>(config)&gt; snmp view client exclude mgmt Snmp::Manager: "client": added excluded OID "mgmt".</pre>						

```
(config)> no snmp view client exclude mgmt
Snmp::Manager: "client": removed excluded OID "mgmt".
```

**History**

<b>Version</b>	<b>Description</b>
4.01	The <b>snmp view exclude</b> command has been introduced.

## 3.135 snmp view include

**Description** Add include subtree for **SNMP** view.

Command with **no** prefix removes the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(config)&gt; snmp view include &lt;oid&gt;</pre>
<pre>(config)&gt; no snmp view include [ &lt;oid&gt; ]</pre>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
oid	String	Object identifier.

**Example**

```
(config)> snmp view client include internet
Snmp::Manager: "client": added included OID "internet".
```

```
(config)> no snmp view client include internet
Snmp::Manager: "client": removed included OID "internet".
```

**History**

<b>Version</b>	<b>Description</b>
4.01	The <b>snmp view include</b> command has been introduced.

## 3.136 sstp-server

**Description** Access to a group of commands to configure **SSTP** server parameters.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (sstp-server)

**Synopsis**

(config)>	<b>sstp-server</b>
-----------	--------------------

**History**

Version	Description
2.12	The <b>sstp-server</b> command has been introduced.

### 3.136.1 sstp-server allow-bridging

**Description** Enable Ethernet bridging mode for *SSTP* server. By default, this mode is disabled.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(sstp-server)>	<b>allow-bridging</b>
----------------	-----------------------

(sstp-server)>	<b>no allow-bridging</b>
----------------	--------------------------

**Example**

(sstp-server)>	<b>allow-bridging</b>
SstpServer::Manager: Enabled Ethernet mode.	

(sstp-server)>	<b>no allow-bridging</b>
SstpServer::Manager: Disabled Ethernet mode.	

**History**

Version	Description
3.09	The <b>sstp-server allow-bridging</b> command has been introduced.

### 3.136.2 sstp-server dhcp route

**Description** Assign a route which is transmitted in DHCP INFORM messages to the *SSTP* server clients.

Command with **no** prefix cancels the specified route. If you use no arguments, the entire list of routes will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(sstp-server)>	<b>dhcp route &lt;address&gt; &lt;mask&gt;</b>
----------------	--

```
(sstp-server)> no dhcp route [<address><mask>]
```

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	Network client address.
mask	<i>IP-mask</i>	Network client mask. There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).

**Example**

```
(sstp-server)> dhcp route 192.168.2.0/24
SstpServer::Manager: Added DHCP INFORM route to ▶
192.168.2.0/255.255.255.0.
```

```
(sstp-server)> no dhcp route
SstpServer::Manager: Cleared DHCP INFORM routes.
```

**History**

Version	Description
2.12	The <b>sstp-server dhcp route</b> command has been introduced.

### 3.136.3 sstp-server interface

**Description** Bind *SSTP* server to the specified interface.

Command with **no** prefix unbinds the interface.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(sstp-server)> interface <interface>
(sstp-server)> no interface
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Full interface name or an alias. You can see the list of available interfaces with help of <b>interface</b> [Tab] command.

**Example**

```
(sstp-server)> interface [Tab]
```

Usage template:  
    interface {interface}

Choose:

```
GigabitEthernet1
ISP
WifiMaster0/AccessPoint2
WifiMaster1/AccessPoint1
WifiMaster0/AccessPoint3
WifiMaster0/AccessPoint0
AccessPoint
WifiMaster1/AccessPoint2
WifiMaster0/AccessPoint1
GuestWiFi
```

```
(sstp-server)> interface Bridge0
SstpServer::Manager: Bound to Bridge0.
```

**History**

<b>Version</b>	<b>Description</b>
2.12	The <b>sstp-server interface</b> command has been introduced.

### 3.136.4 sstp-server ipv6cp

**Description** Enable IPv6 support. DHCP IPv6 pools are created for each *SSTP* server. By default, the setting is disabled.

Command with **no** prefix disables IPv6 support.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(sstp-server)> ipv6cp
(sstp-server)> no ipv6cp
```

**Example**

```
(sstp-server)> ipv6cp
SstpServer::Manager: IPv6 control protocol enabled.
```

```
(sstp-server)> no ipv6cp
SstpServer::Manager: IPv6 control protocol disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.00	The <b>sstp-server ipv6cp</b> command has been introduced.

### 3.136.5 sstp-server lcp echo

**Description** Specify the testing rules of the SSTP-connections with *LCP* echo tools.

Command with **no** prefix disables *LCP* echo.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(sstp-server)>	<b>lcp echo &lt;interval&gt; &lt;count&gt; [adaptive]</b>
(sstp-server)>	<b>no lcp echo</b>

Arguments	Argument	Value	Description
	interval	<i>Integer</i>	Interval between sending <i>LCP</i> echo, in seconds. If within the specified time interval there is no <i>LCP</i> echo request from the remote location, the same request will be sent there asking for response <i>LCP</i> reply.
	count	<i>Integer</i>	The number of consecutive requests <i>LCP</i> echo sent, for which no response <i>LCP</i> reply was received. If count of <i>LCP</i> echo requests goes unanswered, the connection is terminated.
	adaptive	<i>Keyword</i>	Pppd will send LCP echo-request frames only if no traffic was received from the peer since the last echo-request was sent.

**Example**

(sstp-server)>	<b>lcp echo 5 3</b>
(sstp-server)>	SstpServer::Manager: LCP echo parameters updated.

History	Version	Description
	2.12	The <b>sstp-server lcp echo</b> command has been introduced.

### 3.136.6 sstp-server lcp force-pap

**Description** Enforce the *PAP* authentication only for *SSTP* server.

Command with **no** prefix disables *PAP* authentication.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(sstp-server)>	<b>lcp force-pap</b>
----------------	----------------------

```
(sstp-server)> no lcp force-pap
```

**Example**

```
(sstp-server)> lcp force-pap
```

SstpServer::Manager: Forced PAP-only authentication.

```
(sstp-server)> no lcp force-pap
```

SstpServer::Manager: Disabled forcing PAP-only authentication.

**History**

Version	Description
3.05	The <b>sstp-server lcp force-pap</b> command has been introduced.

## 3.136.7 sstp-server mru

**Description**

Set **MRU** value to be transmitted to **SSTP** server. By default, 1350 value is used.

Command with **no** prefix resets value to default.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**

```
(sstp-server)> mru <value>
```

```
(sstp-server)> no mru
```

**Arguments**

Argument	Value	Description
value	<i>Integer</i>	<b>MRU</b> value. Can take values in the range from 128 to 1500 inclusively.

**Example**

```
(sstp-server)> mru 200
```

SstpServer::Manager: MRU set to 200.

**History**

Version	Description
2.12	The <b>sstp-server mru</b> command has been introduced.

## 3.136.8 sstp-server mtu

**Description**

Set **MTU** value to be transmitted to **SSTP** server. By default, 1350 value is used.

Command with **no** prefix resets value to default.

**Prefix no**

Yes

<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>(sstp-server)&gt; mtu &lt;value&gt; (sstp-server)&gt; no mtu</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>value</td><td><i>Integer</i></td><td>MTU value. Can take values in the range from 128 to 1500 inclusively.</td></tr> </tbody> </table>	Argument	Value	Description	value	<i>Integer</i>	MTU value. Can take values in the range from 128 to 1500 inclusively.
Argument	Value	Description					
value	<i>Integer</i>	MTU value. Can take values in the range from 128 to 1500 inclusively.					
<b>Example</b>	<pre>(sstp-server)&gt; mtu 200 SstpServer::Manager: MTU set to 200.</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.12</td><td>The sstp-server mtu command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.12	The sstp-server mtu command has been introduced.		
Version	Description						
2.12	The sstp-server mtu command has been introduced.						

### 3.136.9 sstp-server multi-login

<b>Description</b>	Allow connection to <i>SSTP</i> server for multiple users from one account.  Command with <b>no</b> prefix disables this feature.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	No
<b>Synopsis</b>	<pre>(sstp-server)&gt; multi-login (sstp-server)&gt; no multi-login</pre>
<b>Example</b>	<pre>(sstp-server)&gt; multi-login SstpServer::Manager: Enabled multiple login.</pre>

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.12</td><td>The sstp-server multi-login command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.12	The sstp-server multi-login command has been introduced.
Version	Description				
2.12	The sstp-server multi-login command has been introduced.				

### 3.136.10 sstp-server pool-range

<b>Description</b>	Assign a pool of addresses for the clients that connect to the <i>SSTP</i> server. By default, pool size 10 is used.
--------------------	--

Command with **no** prefix removes a pool.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(sstp-server)>	<b>pool-range &lt;begin&gt; [&lt;size&gt;]</b>
(sstp-server)>	<b>no pool-range</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	begin	<i>IP address</i>	Start address of pool.
	size	<i>Integer</i>	Pool size.

**Example**

```
(sstp-server)> pool-range 192.168.1.22 7
SstpServer::Manager: Configured pool range 192.168.1.22 to ▶
192.168.1.28.
```

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.12	The <b>sstp-server pool-range</b> command has been introduced.

### 3.136.11 sstp-server static-ip

**Description** Bind IP address to the user. User account must have sstp tag.

Command with **no** prefix removes binding.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(sstp-server)>	<b>static-ip &lt;name&gt; &lt;address&gt;</b>
(sstp-server)>	<b>no static-ip &lt;name&gt;</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	name	<i>String</i>	Username.
	address	<i>IP address</i>	IP address to bind.

**Example**

```
(sstp-server)> static-ip admin 192.168.1.22
SstpServer::Manager: Static IP 192.168.1.22 assigned to user >
"admin".
```

**History**

<b>Version</b>	<b>Description</b>
2.12	The <b>sstp-server static-ip</b> command has been introduced.

## 3.137 system

**Description** Access to a group of commands to configure global parameters.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (system)

**Synopsis** (config)> **system**

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>system</b> command has been introduced.

### 3.137.1 system button

**Description** Configure device buttons to handle specific actions. Available handlers depend on hardware configuration and installed modules.

Command with **no** prefix remove setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis** (system)> **button** <button> **on** <action> **do** <handler>  
(system)> **no button** <button>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
button	RESET	RESET button.
	WLAN	Wireless LAN button.
action	click	Single click.
	double-click	Double click.

Argument	Value	Description
	hold	Push and hold for 3 seconds. RESET button hold is 10 seconds.
	trigger	Toggle switchers position change.
handler	FactoryReset	Reset system to factory defaults.
	Reboot	System reboot.
	WifiToggle	Switch Wi-Fi on/off.
	WifiGuestApToggle	Switch Guest Wi-Fi on/off.
	WpsStartMainAp	Start WPS (2.4GHz only).
	WpsStartMainAp5	Start WPS (5GHz only).
	WpsStartAllMainAp	Start WPS (all frequency bands).
	WifiSwitch	Toggle Wi-Fi on/off.

**Example**

```
(system)> button WLAN on double-click do WifiGuestApToggle
Peripheral::Manager: "WLAN/double-click" handler set.
```

**History**

Version	Description
2.03	The <b>system button</b> command has been introduced.

## 3.137.2 system caption

**Description** Set the Web interface title and header for ease of navigation.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis** (system)> **caption <template>**

**Arguments**

Argument	Value	Description
template	default	Combination of Brand and Model (for example, Keenetic Speedster).
	product	The Model name (for example, Speedster).
	description	The System description (for example, Speedster (KN-3010)).
	hwid	The Model identifier (for example, KN-3010).

Argument	Value	Description
	hostname	The System name (for example, Keenetic-Speedster).
	ndns-domain	The KeenDNS name (for example, mywork.keenetic.name).
	default-ssid	The Default Wi-Fi name (for example, Keenetic-8665).

**Example**

```
(system)> caption product
Core::System::Caption: Template set to product.
```

**History**

Version	Description
3.08	The <b>system caption</b> command has been introduced.

### 3.137.3 system clock date

**Description** Adjust system date and time.**Prefix no** No**Change settings** Yes**Multiple input** No**Synopsis**

```
(system)> clock date <date-and-time>
```

**Arguments**

Argument	Value	Description
date-and-time	String	Current date and time in DD MM YYYY HH:MM:SS format.

**Example**

```
(system)> clock date 18 07 2012 09:52:33
System date and time has been changed.
```

**History**

Version	Description
2.00	The <b>system clock date</b> command has been introduced.

### 3.137.4 system clock timezone

**Description** Set the system timezone.Command with **no** prefix resets timezone to default (GMT).**Prefix no** Yes

**Change settings**

Yes

**Multiple input**

No

**Synopsis**(system)> **clock timezone <locality>**(system)> **no clock timezone <locality>****Arguments**

Argument	Value	Description
locality	String	Name of the city, indicating the time zone.

**Example**(system)> **clock timezone Dublin**  
the system timezone is set to "Dublin".**History**

Version	Description
2.00	The <b>system clock timezone</b> command has been introduced.

### 3.137.5 system configuration factory-reset

**Description**

Reset configuration to the factory settings for all modes.

**Prefix no**

No

**Change settings**

Yes

**Multiple input**

No

**Synopsis**(system)> **configuration factory-reset****Example**(system)> **configuration factory-reset**  
Core::Configuration: the system configuration reset to factory ▶ defaults.**History**

Version	Description
2.00	The <b>system configuration factory-reset</b> command has been introduced.

### 3.137.6 system configuration fail-safe commit

**Description**

Commit all unsaved changes and stop the timer.

**Prefix no**

No

**Change settings**

No

<b>Multiple input</b>	No				
<b>Synopsis</b>	(system)> <b>configuration fail-safe commit</b>				
<b>Example</b>	(system)> <b>configuration fail-safe commit</b> Core::System::Mtd::ConfigStorage: Committed fail-safe ► configuration changes.				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.08</td> <td>The <b>system configuration fail-safe commit</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	3.08	The <b>system configuration fail-safe commit</b> command has been introduced.
Version	Description				
3.08	The <b>system configuration fail-safe commit</b> command has been introduced.				

### 3.137.7 system configuration fail-safe keep-alive

<b>Description</b>	Silently restart the fail-safe timer.  If the fail-safe mode is inactive or there are no configuration changes the command does nothing.				
<b>Prefix no</b>	No				
<b>Change settings</b>	No				
<b>Multiple input</b>	No				
<b>Synopsis</b>	(system)> <b>configuration fail-safe keep-alive</b>				
<b>Example</b>	(system)> <b>configuration fail-safe keep-alive</b>				
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3.08</td> <td>The <b>system configuration fail-safe keep-alive</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	3.08	The <b>system configuration fail-safe keep-alive</b> command has been introduced.
Version	Description				
3.08	The <b>system configuration fail-safe keep-alive</b> command has been introduced.				

### 3.137.8 system configuration fail-safe rollback

<b>Description</b>	Rollback all unsaved changes and reboot the system. The system brings to a special rollback state while rebooting. In this state commit and timer reconfiguration actions are blocked, except timer disable.  If there are no configuration changes the command does nothing.
<b>Prefix no</b>	No
<b>Change settings</b>	No
<b>Multiple input</b>	No

**Synopsis**

(system)>	<b>configuration fail-safe rollback</b>
-----------	---

**Example**

(system)>	<b>configuration fail-safe rollback</b> Core::System::Mtd::ConfigStorage: Ignored a fail-safe rollback: ▶ no pending changes.
-----------	--

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>system configuration fail-safe rollback</b> command has been introduced.

### 3.137.9 system configuration fail-safe timer

**Description** Setup or cancel the fail-safe timer. The command configures (or reconfigures) a timer state that is permanent between reboots — it does not require explicit configuration saving. Implemented for the router mode only.

Command with **no** prefix disables the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(system)>	<b>configuration fail-safe timer &lt;action&gt; &lt;interval&gt;</b>
-----------	--

(system)>	<b>no configuration fail-safe timer</b>
-----------	---

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
action	reboot	Action when the timer expires.
interval	<i>Integer</i>	Timer value in the range from 60 to 86400 seconds.

**Example**

(system)>	<b>configuration fail-safe timer reboot 60</b> Core::System::Mtd::ConfigStorage: Enabled a 60-second fail-safe ▶ "reboot" timer.
-----------	---

(system)>	<b>no configuration fail-safe timer</b> Core::System::Mtd::ConfigStorage: Turned off the fail-safe mode.
-----------	---

**History**

<b>Version</b>	<b>Description</b>
3.08	The <b>system configuration fail-safe timer</b> command has been introduced.

### 3.137.10 system configuration save

**Description** Save the system configuration asynchronously.

**Prefix no** No

**Change settings** Yes

**Multiple input** No

**Synopsis**

(system)> <b>configuration save</b>
-------------------------------------

**Example**

(system)> <b>configuration save</b>
-------------------------------------

Saving configuration.

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.05.B.1	The <b>system configuration save</b> command has been introduced.

### 3.137.11 system country

**Description** Select a country from the list of countries available in the factory region. The selected country is permanently stored in the persistent storage and does not require configuration save commands.

The country setting affects all system modes.

Command with **no** prefix resets the setting.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(system)> <b>country &lt;country&gt;</b>
--

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	country	String	The country code from ISO 3166-1 alpha-2 <sup>7</sup> .

**Example**

(system)> <b>country EN</b>
-----------------------------

Core::System::Country: Set the system country code to "EN".

(system)> <b>no country</b>
-----------------------------

Core::System::Country: Reset the system country code.

<sup>7</sup> [https://en.wikipedia.org/wiki/ISO\\_3166-1\\_alpha-2](https://en.wikipedia.org/wiki/ISO_3166-1_alpha-2)

**History**

<b>Version</b>	<b>Description</b>
4.00	The <b>system country</b> command has been introduced.

### 3.137.12 system debug

**Description** Enable system debug. By default, setting is disabled.

Command with **no** prefix disables the feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(system)>	<b>debug</b>
(system)>	<b>no debug</b>

**Example**

(system)>	<b>debug</b>
Core::Debug: System debug enabled.	

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>system debug</b> command has been introduced.

### 3.137.13 system description

**Description** Set the system description as an arbitrary string. By default, description Explorer (KN-1613) is used.

Command with **no** prefix resets description to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(system)>	<b>description &lt;description&gt;</b>
(system)>	<b>no description</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
description	<i>String</i>	System description no longer than 256 bytes.

**Example**

```
(system)> description DEVICE
Core::System::Info: Description saved.
```

```
(config)> show version
...
    manufacturer: Keenetic Ltd.
        vendor: Keenetic
        series: KN
            model: Ultra (KN-1810)
    hw_version: 10188000
        hw_id: KN-1810
        device: Ultra
        class: Internet Center
        region: RU
    description: DEVICE
```

```
(config)> show running-config
...
    set vm.swappiness 60
    set vm.overcommit_memory 0
    set vm.vfs_cache_pressure 1000
    set dev.usb.force_usb2 0
    domainname WORKGROUP
    hostname Keenetic_Ultra
    description DEVICE
...
```

```
(system)> no description
Core::System::Info: Description reset to default.
```

```
(config)> show version
...
    manufacturer: Keenetic Ltd.
        vendor: Keenetic
        series: KN
            model: Ultra (KN-1810)
    hw_version: 10188000
        hw_id: KN-1810
        device: Ultra
        class: Internet Center
        region: RU
    description: Keenetic Ultra (KN-1810)
```

**History**

<b>Version</b>	<b>Description</b>
2.15	The <b>system description</b> command has been introduced.

### 3.137.14 system domainname

**Description**

Assign domain name for the system.

Command with **no** prefix removes domain name.

<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>  (system)&gt; domainname &lt;domain&gt;   (system)&gt; no domainname</pre>						
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>domain</td><td><i>String</i></td><td>The domain name to assign.</td></tr></tbody></table>	Argument	Value	Description	domain	<i>String</i>	The domain name to assign.
Argument	Value	Description					
domain	<i>String</i>	The domain name to assign.					
<b>Example</b>	<pre>(system)&gt; domainname keenetic Domainname saved.</pre>						
<b>History</b>	<table border="1"><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.00</td><td>The system <b>domainname</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.00	The system <b>domainname</b> command has been introduced.		
Version	Description						
2.00	The system <b>domainname</b> command has been introduced.						

### 3.137.15 system hostname

<b>Description</b>	Set the host name. Host name used to identify a node in the network. It is required to enable some of the built-in services, such as CIFS.  Command with <b>no</b> prefix sets the default value, which depends on the model name.						
<b>Prefix no</b>	Yes						
<b>Change settings</b>	Yes						
<b>Multiple input</b>	No						
<b>Synopsis</b>	<pre>  (system)&gt; hostname &lt;hostname&gt;   (system)&gt; no hostname</pre>						
<b>Arguments</b>	<table border="1"><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>hostname</td><td><i>String</i></td><td>Name of the host.</td></tr></tbody></table>	Argument	Value	Description	hostname	<i>String</i>	Name of the host.
Argument	Value	Description					
hostname	<i>String</i>	Name of the host.					
<b>Example</b>	<pre>(system)&gt; hostname KN1010 Core::System::Hostname: The host name set.  (system)&gt; no hostname Core::System::Hostname: The host name reset.</pre>						

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>system hostname</b> command has been introduced.

## 3.137.16 system led

**Description** Configure general purpose LEDs. By default, LED FN shows the updates for your device are available.

Command with **no** prefix resets the setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(system)>	<b>led &lt;led&gt; indicate &lt;control&gt;</b>
(system)>	<b>no led [&lt;led&gt; [ indicate ]]</b>

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
led	FN	LED name.
control	UpdatesAvailable	LED notifies you the updates for your device are available.
	BackupWan	LED shows that backup connection is active at the moment.
	SelectedWan	LED shows status of the interface defined with <b>interface led wan</b> command.
	SelectedSchedule	LED shows status of scheduled event assigned with <b>schedule led</b> command.
indicate	<i>Keyword</i>	Turn off the indicator completely.

**Example**

```
(system)> led FN indicate SelectedWan
Peripheral::Manager: "SelectedWan" control bound to "FN" LED.
```

```
(system)> no led FN indicate
Peripheral::Manager: "FN" LED control binding removed.
```

**History**

<b>Version</b>	<b>Description</b>
2.08	The <b>system led</b> command has been introduced.

### 3.137.17 system led power schedule

**Description** Assign a schedule for the LEDs on the device. Schedule must be created and customized with **schedule action** command before execution.

Command with **no** prefix unbinds the schedule.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(system)> led power schedule <schedule>
(system)> no led power schedule
```

Arguments	Argument	Value	Description
	schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.

**Example**

```
(system)> led power schedule schedule1
Core::Peripheral::Manager: Set LED power schedule "schedule1".
```

```
(system)> no led power schedule
Core::Peripheral::Manager: Clear LED power schedule.
```

History	Version	Description
	3.06	The <b>system led power schedule</b> command has been introduced.

### 3.137.18 system led power shutdown

**Description** Shutdown the LEDs on the device.

Command with **no** prefix turns LEDs on.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(system)> led power shutdown <mode>
(system)> no led power shutdown
```

**Arguments**

Argument	Value	Description
mode	all	Shutdown all the LEDs.
	front	Shutdown the LEDs on the front panel.
	back	Shutdown the LEDs on the back panel.

**Example**

```
(system)> led power shutdown all
Core::Peripheral::Manager: Set LED shutdown mode to "all".
```

```
(system)> no led power shutdown
Core::Peripheral::Manager: Set LED shutdown mode to "none".
```

**History**

Version	Description
3.06	The <b>system led power shutdown</b> command has been introduced. Previous command name is <b>system led shutdown</b> .

### 3.137.19 system log clear

**Description** Clear the system log.**Prefix no** No**Change settings** No**Multiple input** No**Synopsis** (system)> log clear**Example** (system)> log clear
Syslog: the system log has been cleared.**History**

Version	Description
2.00	The <b>system log clear</b> command has been introduced.

### 3.137.20 system log reduction

**Description** Enable repeated message reduction. By default, the setting is enabled.Command with **no** prefix disables the feature.**Prefix no** Yes**Change settings** Yes**Multiple input** No

<b>Synopsis</b>	(system)> <b>log reduction</b> (system)> <b>no log reduction</b>				
<b>Example</b>	(system)> <b>log reduction</b> (system)> <b>no log reduction</b>				
<b>History</b>	<table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.04</td><td>The <b>system log reduction</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.04	The <b>system log reduction</b> command has been introduced.
Version	Description				
2.04	The <b>system log reduction</b> command has been introduced.				

## 3.137.21 system log server

<b>Description</b>	Add remote log server.									
<b>Prefix no</b>	Yes									
<b>Change settings</b>	Yes									
<b>Multiple input</b>	Yes									
<b>Synopsis</b>	(system)> <b>log server</b> <address> [:<port>] (system)> <b>no log server</b> [<address> [:<port>]]									
<b>Arguments</b>	<table><thead><tr><th>Argument</th><th>Value</th><th>Description</th></tr></thead><tbody><tr><td>address</td><td><i>IP address</i></td><td>Remote log server address.</td></tr><tr><td>port</td><td><i>Integer</i></td><td>Remote log server port.</td></tr></tbody></table>	Argument	Value	Description	address	<i>IP address</i>	Remote log server address.	port	<i>Integer</i>	Remote log server port.
Argument	Value	Description								
address	<i>IP address</i>	Remote log server address.								
port	<i>Integer</i>	Remote log server port.								
<b>Example</b>	(system)> <b>log server</b> 192.168.1.1:8080 Syslog: server 192.168.1.1:8080 added.									
<b>History</b>	<table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>2.00</td><td>The <b>system log server</b> command has been introduced.</td></tr></tbody></table>	Version	Description	2.00	The <b>system log server</b> command has been introduced.					
Version	Description									
2.00	The <b>system log server</b> command has been introduced.									

## 3.137.22 system log suppress

<b>Description</b>	Add message suppression rule.  Command with <b>no</b> prefix removes the rule.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes

<b>Multiple input</b>	Yes						
<b>Synopsis</b>	<pre>(system)&gt; log suppress &lt;ident&gt; (system)&gt; no log suppress [&lt;ident&gt;]</pre>						
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>ident</td><td>String</td><td>Process ID which messages need to suppress.</td></tr> </tbody> </table>	Argument	Value	Description	ident	String	Process ID which messages need to suppress.
Argument	Value	Description					
ident	String	Process ID which messages need to suppress.					
<b>Example</b>	<pre>(system)&gt; log suppress kernel Core::Syslog: Added suppression "kernel".</pre> <pre>(system)&gt; no log suppress kernel Core::Syslog: Deleted suppression "kernel".</pre> <pre>(system)&gt; log suppress transmissiond Core::Syslog: Added suppression "transmissiond".</pre> <pre>(system)&gt; no log suppress transmissiond Core::Syslog: Deleted suppression "transmissiond".</pre>						
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.04</td><td>The system <b>log suppress</b> command has been introduced.</td></tr> </tbody> </table>	Version	Description	2.04	The system <b>log suppress</b> command has been introduced.		
Version	Description						
2.04	The system <b>log suppress</b> command has been introduced.						

### 3.137.23 system mode

<b>Description</b>	Select system operating mode for Explorer.															
<b>Prefix no</b>	No															
<b>Change settings</b>	Yes															
<b>Multiple input</b>	No															
<b>Synopsis</b>	<pre>(system)&gt; mode &lt;mode&gt;</pre>															
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>mode</td><td>router</td><td>Main mode.</td></tr> <tr> <td></td><td>client</td><td>Network adapter mode to connect Ethernet devices to Wi-Fi network.</td></tr> <tr> <td></td><td>repeater</td><td>Repeater mode to extend Wi-Fi network using a wireless connection.</td></tr> <tr> <td></td><td>ap</td><td>Access point mode to extend Wi-Fi network using a wired Ethernet connection.</td></tr> </tbody> </table>	Argument	Value	Description	mode	router	Main mode.		client	Network adapter mode to connect Ethernet devices to Wi-Fi network.		repeater	Repeater mode to extend Wi-Fi network using a wireless connection.		ap	Access point mode to extend Wi-Fi network using a wired Ethernet connection.
Argument	Value	Description														
mode	router	Main mode.														
	client	Network adapter mode to connect Ethernet devices to Wi-Fi network.														
	repeater	Repeater mode to extend Wi-Fi network using a wireless connection.														
	ap	Access point mode to extend Wi-Fi network using a wired Ethernet connection.														

**Example**

```
(system)> mode repeater
Core::Mode: The system switched to "repeater" mode, reboot the ►
device to apply the settings.
```

**History**

<b>Version</b>	<b>Description</b>
2.05	The <b>system mode</b> command has been introduced.

### 3.137.24 system ndss dump-report disable

**Description** Disable product improvement program. By default, setting is enabled.

Command with **no** prefix enables the program.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(system)> ndss dump-report disable
```

```
(system)> no ndss dump-report disable
```

**Example**

```
(system)> ndss dump-report disable
Core::Ndss: Dump-reporting disabled.
```

```
(system)> no ndss dump-report disable
Core::Ndss: Dump-reporting enabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.05	The <b>system ndss dump-report disable</b> command has been introduced. Previous command name is <b>system dump-report disable</b> .

### 3.137.25 system reboot

**Description** Reboot the system. If the parameter is set, reboot is executed after a timeout, in seconds. If the timer is already set, using of the command replaces the old value of the timer to the new one.

Using a scheduled reboot is convenient in the case when the device is under remote control, and the user doesn't understand the effect of the commands he/she is trying. The user can turn on a scheduled reboot for fear of losing control over the device. After reboot the system will return to its original state and become available.

Command with **no** prefix cancels reboot or removes the reboot on schedule.

<b>Prefix no</b>	Yes									
<b>Change settings</b>	No									
<b>Multiple input</b>	No									
<b>Synopsis</b>	<pre>(system)&gt; reboot [&lt;interval&gt;   schedule &lt;schedule&gt;]   (system)&gt; no reboot [ schedule ]</pre>									
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th><th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>interval</td><td><i>Integer</i></td><td>Timeout for reboot, in seconds. If not specified, the reboot will be executed immediately.</td></tr> <tr> <td>schedule</td><td><i>Schedule</i></td><td>The name of the schedule that was created with <b>schedule</b> group of commands.</td></tr> </tbody> </table>	Argument	Value	Description	interval	<i>Integer</i>	Timeout for reboot, in seconds. If not specified, the reboot will be executed immediately.	schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.
Argument	Value	Description								
interval	<i>Integer</i>	Timeout for reboot, in seconds. If not specified, the reboot will be executed immediately.								
schedule	<i>Schedule</i>	The name of the schedule that was created with <b>schedule</b> group of commands.								

<b>Example</b>	<pre>(system)&gt; reboot 20 Core::System::RebootManager: Rebooting in 20 seconds.</pre>
	<pre>(system)&gt; no reboot Core::System::RebootManager: Reboot cancelled.</pre>
	<pre>(system)&gt; reboot schedule rebootroute Core::System::RebootManager: Set reboot schedule "rebootroute".</pre>
	<pre>(system)&gt; no reboot schedule Core::System::RebootManager: Schedule disabled.</pre>

<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>2.00</td><td>The <b>system reboot</b> command has been introduced.</td></tr> <tr> <td>2.12</td><td>The <b>schedule</b> argument has been added.</td></tr> </tbody> </table>	Version	Description	2.00	The <b>system reboot</b> command has been introduced.	2.12	The <b>schedule</b> argument has been added.
Version	Description						
2.00	The <b>system reboot</b> command has been introduced.						
2.12	The <b>schedule</b> argument has been added.						

## 3.137.26 system set

<b>Description</b>	Set the value of the specified system parameter and save it in the current settings.  Command with <b>no</b> prefix returns the default value to the specified parameter (before the first change).
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Synopsis</b>	<pre>(system)&gt; set &lt;name&gt; &lt;value&gt;</pre>

(system)> **no set** <name>

**Arguments**

Argument	Value	Description
name	<i>String</i>	Identifier of the system parameter.
value	<i>String</i>	New value of the system parameter.

**Example**

```
(config)> system
(system)> set net.ipv4.ip_forward 1
(system)> set net.ipv4.tcp_fin_timeout 30
(system)> set net.ipv4.tcp_keepalive_time 120
(system)> set >
net.ipv4.netfilter.ip_conntrack_tcp_timeout_established 1200
(system)> set net.ipv4.netfilter.ip_conntrack_udp_timeout 60
(system)> set net.ipv4.netfilter.ip_conntrack_max 4096
(system)> exit
(config)> show running-config
system
set net.ipv4.ip_forward 1
    set net.ipv4.tcp_fin_timeout 30

```

**History**

Version	Description
2.00	The <b>system set</b> command has been introduced.

### 3.137.27 system trace lock threshold

**Description**

Set a trace lock threshold for the system threads. If the threshold value is exceeded, information about this thread (for example, SCGI session) is saved in the system log. By default, setting is disabled.

Command with **no** prefix disables the trace lock threshold feature.

**Prefix no**

Yes

**Change settings**

No

**Multiple input**

No

**Synopsis**

(system)> **system trace lock threshold** <threshold>

(system)> **no system trace lock threshold**

Arguments	Argument	Value	Description
	threshold	<i>String</i>	Threshold value in milliseconds. Can take values in the range from 100 to 100000000 inclusively. The threshold value is not saved into startup-config.

Example	(system)> <b>system trace lock threshold 100</b> Lockable: Set threshold to 100 ms.
	(system)> <b>no trace lock threshold</b> Lockable: Reset threshold.

History	Version	Description
	3.03	The <b>system trace lock threshold</b> command has been introduced.

## 3.138 tools

**Description** Access to a group of commands to test the environment.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (tools)

**Synopsis** (config)> **tools**

History	Version	Description
	2.00	The <b>tools</b> command has been introduced.

### 3.138.1 tools arping

**Description** Command action is analogous to **tools ping** command, but operates at the link layer of the OSI model using the **ARP** protocol.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis** (tools)> **arping <address> source-interface <source-interface> [ count <count> ] [ wait-time <wait-time> ]**

**Arguments**

Argument	Value	Description
address	<i>IP address</i>	IP address of the respondent.
source-interface	<i>Interface</i>	Name of source-interface.
count	<i>Integer</i>	Quantity of requests. If not specified, the command will run until interrupted by the user.
wait-time	<i>Integer</i>	The maximum response time, in milliseconds.

**Example**

```
(tools)> arping 192.168.15.51 source-interface Home count 4 >
wait-time 3000
Starting the ARP ping to "192.168.15.51"...
ARPING 192.168.15.51 from 192.168.15.1 br0.
Unicast reply from 192.168.15.51 [9c:b7:0d:ce:51:6a] 1.884 ms.
Unicast reply from 192.168.15.51 [9c:b7:0d:ce:51:6a] 1.831 ms.
Sent 4 probes, received 2 responses.
Process terminated.
```

**History**

Version	Description
2.00	The tools <b>arping</b> command has been introduced.

## 3.138.2 tools ping

**Description**

Send Echo-Request requests of ICMP protocol to specified network node and register received Echo Reply responses. The time between sending request and receiving the response Round Trip Time (RTT) allows you to define double ended delays on the route and frequency of packet losses, that is, indirectly determine loading on the channels of data transmission and intermediate devices.

Total absence of ICMP Replies can also mean that the remote node (or any of the intermediate routers) blocks ICMP Echo Reply or ignores ICMP Echo Request.

**Prefix no**

No

**Change settings**

No

**Multiple input**

No

**Synopsis**

```
(tools)> ping <host>[ count <count> ][ size <packetsize> ][ sequence-id
<sequence-id> ][ source( <source-interface> | <source-address> ) ][ tos
<tos> ][ ttl <ttl> ]
```

**Arguments**

Argument	Value	Description
host	<i>String</i>	Domain name or host IP address.

Argument	Value	Description
count	<i>Integer</i>	Quantity of ICMP Echo Requests. If not specified, the command will run until interrupted by the user.
packetsize	<i>Integer</i>	Size of the ICMP Echo Request data field in bytes. By default, 56 value is used. Can take values in the range from 28 to 65535 inclusively.
sequence-id	<i>Integer</i>	Sequence number to aid in matching Echo Request and Echo Reply. By default, 0 value is used. Can take values in the range from 0 to 65535 inclusively.
source	source-address	Address of the outgoing interface.
	source-interface	Interface to be used as the source interface in outgoing probe packets.
tos	<i>Integer</i>	Type Of Service. By default, 0 value is used. Can take values in the range from 0 to 63 inclusively.
ttl	<i>Integer</i>	Maximum number of hops (max time-to-live value) traceroute will probe. By default, 30 value is used. Can take values in the range from 1 to 255 inclusively.

**Example**

```
(tools)> ping 8.8.8.8 count 5 size 100
Sending ICMP ECHO request to 192.168.1.33
PING 192.168.1.33 (192.168.1.33) 72 (100) bytes of data.
100 bytes from 192.168.1.33: icmp_req=1, ttl=128, time=2.35 ms.
100 bytes from 192.168.1.33: icmp_req=2, ttl=128, time=1.07 ms.
100 bytes from 192.168.1.33: icmp_req=3, ttl=128, time=1.06 ms.
--- 192.168.1.33 ping statistics ---
3 packets transmitted, 3 packets received, 0% packet loss,
0 duplicate(s), time 2002.65 ms.
Round-trip min/avg/max = 1.06/1.49/2.35 ms.
Process terminated.
```

```
(tools)> ping 8.8.8.8 source Wireguard1
sending ICMP ECHO request to 8.8.8.8...
PING 8.8.8.8 (8.8.8.8) 72 (100) bytes of data.
96 bytes from 8.8.8.8: icmp_req=1, ttl=108, time=17.58 ms. ▶
(truncated).
96 bytes from 8.8.8.8: icmp_req=2, ttl=108, time=17.62 ms. ▶
(truncated).
96 bytes from 8.8.8.8: icmp_req=3, ttl=108, time=17.29 ms. ▶
(truncated).
96 bytes from 8.8.8.8: icmp_req=4, ttl=108, time=17.17 ms. ▶
(truncated).
96 bytes from 8.8.8.8: icmp_req=5, ttl=108, time=17.41 ms. ▶
(truncated).
```

```
--- 8.8.8.8 ping statistics ---
5 packets transmitted, 5 packets received, 0% packet loss,
0 duplicate(s), time 4019.72 ms.
Round-trip min/avg/max = 17.17/17.41/17.62 ms.
```

History	Version	Description
	2.00	The <b>tools ping</b> command has been introduced.
	4.01	New values address and interface were added to the source argument.

### 3.138.3 tools ping6

**Description** Send Echo-Request requests of ICMPv6 protocol to specified network node and register received Echo Reply responses. The time between sending request and receiving the response Round Trip Time (RTT) allows you to define double ended delays on the route and frequency of packet losses, that is, indirectly determine loading on the channels of data transmission and intermediate devices.

Total absence of ICMP Replies can also mean that the remote node (or any of the intermediate routers) blocks ICMP Echo Reply or ignores ICMP Echo Request.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

(tools)> ping6 <host>[ count <count>][ size <packetsize> ][ sequence-id <sequence-id> ][ source(<source-interface>   <source-address>)][ tos <tos> ][ ttl <ttl> ]
---

Arguments	Argument	Value	Description
	host	<i>String</i>	Domain name or host IPv6-address.
	count	<i>Integer</i>	Quantity of ICMPv6 Echo Requests. If not specified, the command will run until interrupted by the user.
	packetsize	<i>Integer</i>	Size of the ICMPv6 Echo Request data field in bytes. By default, 56 value is used. Can take values in the range from 28 to 65535 inclusively.
	sequence-id	<i>Integer</i>	Sequence number to aid in matching Echo Request and Echo Reply. By default, 0 value is used. Can take values in the range from 0 to 65535 inclusively.
	source	source-address	Address of the outgoing interface.

Argument	Value	Description
	source-interface	Interface to be used as the source interface in outgoing probe packets.
tos	<i>Integer</i>	Type Of Service. By default, 0 value is used. Can take values in the range from 0 to 63 inclusively.
ttl	<i>Integer</i>	Maximum number of hops (max time-to-live value) traceroute will probe. By default, 30 value is used. Can take values in the range from 1 to 255 inclusively.

**Example**

```
(tools)> ping6 2001:4860:4860::8888 count 5 size 111
sending ICMPv6 ECHO request to 2001:4860:4860::8888...
PING 2001:4860:4860::8888 (2001:4860:4860::8888) 63 (111) bytes ▶
of data.
71 bytes from 2001:4860:4860::8888: icmp_req=1, ttl=108, ▶

```
0 duplicate(s), time 6221.53 ms.
Round-trip min/avg/max = 19.64/19.75/19.90 ms.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>tools ping6</b> command has been introduced.
4.01	New values address and interface were added to the source argument.

## 3.138.4 tools traceroute

**Description** Show the route to a network host.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Synopsis**

```
(tools)> traceroute <host> [count <count>] [interval <interval>]
      [wait-time <wait-time>] [packet-size <packet-size>]
      [max-ttl <max-ttl>] [port <port>] [source-address <source-address>]
      [source-interface <source-interface>] [type <type>] [tos <tos>]
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
host	<i>String</i>	Name of the target host.
count	<i>Integer</i>	Number of probe packets per hop. Default value — 3. Value must be in the range [1;10].
interval	<i>Integer</i>	Time in seconds between sending packets. Default value — 0. Value must be in the range [0;15].
wait-time	<i>Integer</i>	Time to wait for a response to a probe (in seconds). Default value — 1. Value must be in the range [1;15].
packet-size	<i>Integer</i>	Size of packet according to the protocol type.  For tcp type default packet size is 52. Range of values [52].  For udp and icmp types default packet size is 60. Range of values [28;65535].
max-ttl	<i>Integer</i>	Maximum number of hops (max time-to-live value) traceroute will probe. Default value — 30. Value must be in the range [1;255].
port	<i>Integer</i>	Destination port.

Argument	Value	Description
		For tcp type default port is 80.
		For udp type default port is 33434.
		For icmp type default port is 1.
source-address	<i>String</i>	Address of the outgoing interface.
source-interface	<i>String</i>	Interface to be used as the source interface in outgoing probe packets.
type	tcp	<i>TCP</i> protocol.
	udp	<i>UDP</i> protocol. Used by default.
	icmp	<i>ICMP</i> protocol.
tos	<i>Integer</i>	Type Of Service. Default value — 0. Value must be in the range [0;255].

**Example**

```
(tools)> traceroute google.com count 5 interval 5
starting traceroute to google.com...
traceroute to google.com (64.233.161.113), 30 hops maximum, 60 ▶
byte packets.
 1 192.168.233.1 (192.168.233.1) 2.742 ms 2.406 ms 2.460 ms ▶
 2.191 ms 2.957 ms
 2 10.77.140.1 (10.77.140.1) 3.301 ms 3.847 ms 3.839 ms
process terminated
```

**History**

Version	Description
2.00	The <b>tools traceroute</b> command has been introduced.

## 3.139 udpxy

**Description** Access to a group of commands to configure *udpxy* parameters.**Prefix no** No**Change settings** No**Multiple input** No**Group entry** (*udpxy*)**Synopsis** (config)> **udpxy****History**

Version	Description
2.03	The <b>udpxy</b> command has been introduced.

### 3.139.1 udpxy buffer-size

<b>Description</b>	Set <i>udp</i> buffer size. By default, 2048 value is used.							
	Command with <b>no</b> prefix resets buffer size to default.							
<b>Prefix no</b>	Yes							
<b>Change settings</b>	Yes							
<b>Multiple input</b>	No							
<b>Synopsis</b>	<pre>(udp) &gt; buffer-size &lt;size&gt; (udp) &gt; no buffer-size</pre>							
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>size</td> <td><i>Integer</i></td> <td>Buffer size in bytes. Can take values in the range from 1 to 1048576.</td> </tr> </tbody> </table>		Argument	Value	Description	size	<i>Integer</i>	Buffer size in bytes. Can take values in the range from 1 to 1048576.
Argument	Value	Description						
size	<i>Integer</i>	Buffer size in bytes. Can take values in the range from 1 to 1048576.						
<b>Example</b>	<pre>(udp) &gt; buffer-size 500 Udp: a buffer size set to 500 bytes.</pre>							
<b>History</b>	<table border="1"> <thead> <tr> <th>Version</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2.04</td> <td>The <b>udp</b> <b>buffer-size</b> command has been introduced.</td> </tr> </tbody> </table>		Version	Description	2.04	The <b>udp</b> <b>buffer-size</b> command has been introduced.		
Version	Description							
2.04	The <b>udp</b> <b>buffer-size</b> command has been introduced.							

### 3.139.2 udp buffer-timeout

<b>Description</b>	Set <i>udp</i> timeout to hold data in the buffer. By default, 1 value is used.							
	Command with <b>no</b> prefix resets timeout to default.							
<b>Prefix no</b>	Yes							
<b>Change settings</b>	Yes							
<b>Multiple input</b>	No							
<b>Synopsis</b>	<pre>(udp) &gt; buffer-timeout &lt;timeout&gt; (udp) &gt; no buffer-timeout</pre>							
<b>Arguments</b>	<table border="1"> <thead> <tr> <th>Argument</th> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>timeout</td> <td><i>Integer</i></td> <td>Timeout value in seconds. Can take values in the range from -1 to 60. -1 — unlimited timeout.</td> </tr> </tbody> </table>		Argument	Value	Description	timeout	<i>Integer</i>	Timeout value in seconds. Can take values in the range from -1 to 60. -1 — unlimited timeout.
Argument	Value	Description						
timeout	<i>Integer</i>	Timeout value in seconds. Can take values in the range from -1 to 60. -1 — unlimited timeout.						

**Example**

```
(udpsty)> buffer-timeout 10
Udpsty::Manager: a hold data timeout set to 10 sec.
```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>udpsty buffer-timeout</b> command has been introduced.

### 3.139.3 udpsty interface

**Description** Bind **udpxy** to the specified interface. By default, current default gateway is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(udpxy)> interface <interface>
(udpxy)> no interface
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	<i>Interface</i>	Full interface name or an alias. You can see the list of available interfaces with help of <b>interface [Tab]</b> command.

**Example**

```
(udpxy)> interface [Tab]
Usage template:
    interface {interface}

Choose:
    GigabitEthernet1
    ISP
    WifiMaster0/AccessPoint2
    WifiMaster1/AccessPoint1
    WifiMaster0/AccessPoint3
    WifiMaster0/AccessPoint0
    AccessPoint
```

```
(udpxy)> interface ISP
Udpsty::Manager: bound to FastEthernet0/Vlan2.
```

**History**

<b>Version</b>	<b>Description</b>
2.02	The <b>udpxy interface</b> command has been introduced.

### 3.139.4 udpxy port

**Description** Specify port for HTTP requests. By default, 4022 value is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(udpxy)> **port** <port>

(udpxy)> **no port**

**Arguments**

Argument	Value	Description
port	<i>Integer</i>	Port number. Can take values in the range from 0 to 65535.

**Example**

(udpxy)> **port** 2323  
Udpxy::Manager: a port set to 2323.

**History**

Version	Description
2.03	The <b>udpxy port</b> command has been introduced.

### 3.139.5 udpuy renew-interval

**Description** Set renew interval of subscription to the multicast channel. By default, 0 value is used, i.e. the subscription is not renewed.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(udpxy)> **renew-interval** <renew-interval>

(udpxy)> **no renew-interval**

**Arguments**

Argument	Value	Description
renew-interval	<i>Integer</i>	Renew interval of subscription in seconds. Can take values in the range from 0 to 3600.

**Example**

```
(udpxy)> renew-interval 120
Udpxy::Manager: a renew subscription interval value set to 120 ► sec.
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>udpxy renew-interval</b> command has been introduced.

## 3.139.6 udpxy timeout

**Description** Set connection timeout. By default, 5 value is used.

Command with **no** prefix resets setting to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(udpxy)> timeout <timeout>
(udpxy)> no timeout

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
timeout	<i>Integer</i>	Timeout in seconds. Can take values in the range from 5 to 60.

**Example**

```
(udpxy)> timeout 10
Udpxy::Manager: a stream timeout set to 10 sec.
```

**History**

<b>Version</b>	<b>Description</b>
2.03	The <b>udpxy timeout</b> command has been introduced.

## 3.140 upnp forward

**Description** Add *UPnP* forwarding rule.

Command with **no** prefix removes rule from the list.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Interface type**

IP

**Synopsis**

```
(config)> upnp forward <protocol> [interface] <address> <port>
(config)> no upnp forward [<index> | (<protocol> <address> <port>)]
```

**Arguments**

Argument	Value	Description
protocol	tcp	Rule for <i>TCP</i> protocol will be added/deleted.
	udp	Rule for <i>UDP</i> protocol will be added/deleted.
interface	<i>Interface</i>	Rule for specified interface name will be added.
address	<i>IP address</i>	Rule for specified IP address will be added/deleted.
port	<i>Integer</i>	Rule for specified port will be added/deleted.
index	<i>Integer</i>	Rule with specified number in the list will be removed.

**History**

Version	Description
2.00	The <b>upnp forward</b> command has been introduced.

## 3.141 upnp lan

**Description**

Set LAN interface where the *UPnP* service is running. The service works for one network segment only.

Command with **no** prefix removes setting.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

No

**Interface type**

IP

**Synopsis**

```
(config)> upnp lan <interface>
(config)> no upnp lan
```

**Arguments**

Argument	Value	Description
interface	<i>Interface</i>	Full interface name or an alias. You can see the list of available interfaces with help of <b>interface</b> [Tab] command.

**Example**

```
(config)> upnp lan [Tab]

Usage template:
    lan {interface}

Choose:
    GigabitEthernet1
        ISP
    WiFiMaster0/AccessPoint2
    WiFiMaster1/AccessPoint1
    WiFiMaster0/AccessPoint3
    WiFiMaster0/AccessPoint0
        AccessPoint
    WiFiMaster1/AccessPoint2
    WiFiMaster0/AccessPoint1
        GuestWiFi

(config)> upnp lan PPTP0
using LAN interface: PPTP0.
```

History	Version	Description
	2.00	The <b>upnp lan</b> command has been introduced.

## 3.142 upnp redirect

<b>Description</b>	Add <a href="#">UPnP</a> port translation rule.  Command with <b>no</b> prefix removes rule from the list. If you use no arguments, the entire list of rules will be removed.
<b>Prefix no</b>	Yes
<b>Change settings</b>	Yes
<b>Multiple input</b>	Yes
<b>Interface type</b>	IP
<b>Synopsis</b>	<pre>(config)&gt; upnp redirect &lt;protocol&gt; &lt;interface&gt; &lt;port&gt; &lt;to-address&gt; [     to-port ] (config)&gt; no upnp redirect [and forward   [ &lt;index&gt;   (&lt;protocol&gt; &lt;port&gt;)     ]]</pre>

Arguments	Argument	Value	Description
<b>protocol</b>	tcp	Rule for <a href="#">TCP</a> protocol will be added/deleted.	
	udp	Rule for <a href="#">UDP</a> protocol will be added/deleted.	
	<i>interface</i>	<i>Interface</i>	Rule for specified interface name will be added.

Argument	Value	Description
port	<i>Integer</i>	Rule for specified port will be added/deleted.
to-address	<i>IP address</i>	Rule for specified destination address will be added.
to-port	<i>Integer</i>	Rule for specified destination port will be added.
and forward	<i>Keyword</i>	Lists of forwarding and redirecting rules will be cleared.
index	<i>Integer</i>	Rule with specified number in the list will be removed.

**History**

Version	Description
2.00	The <b>upnp redirect</b> command has been introduced.

## 3.143 user

**Description**

Access to a group of commands to configure user account parameters. If specified user is not found, the command tries to create it.

**Note:** Account with reserved name **admin** can not be removed. In addition, the **admin** user can not lose the access right to command line.

Command with **no** prefix removes user account.

**Prefix no**

Yes

**Change settings**

Yes

**Multiple input**

Yes

**Group entry**

(config-user)

**Synopsis**

```
| (config)> user <name>
| (config)> no user <name>
```

**Arguments**

Argument	Value	Description
name	<i>String</i>	The user name.

**History**

Version	Description
2.00	The <b>user</b> command has been introduced.

### 3.143.1 user password

**Description** Set the user password. The password is stored as MD5-hash, computed from the “*user:realm:password*” string. *realm* is the device model name from *startup-config.txt* file.

The command takes open string or hash-function value as argument. Saved password is used for user authentication.

Command with **no** prefix removes the password so that the user can access to the device unauthenticated.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(config-user)>	<b>password</b> ( <b>md5</b> <hash>   <password>)
(config-user)>	<b>no password</b>

<b>Arguments</b>	<b>Argument</b>	<b>Value</b>	<b>Description</b>
	hash	<i>String</i>	MD5-hash value.
	password	<i>String</i>	Value of the password in open form, from which the hash value is calculated automatically.

**Example**

```
(config-user)> password 1111
Core::Authenticator: Password set has been changed for user ▶
"test".
```

<b>History</b>	<b>Version</b>	<b>Description</b>
	2.00	The <b>user password</b> command has been introduced.

### 3.143.2 user tag

**Description** Assign a special tag to the user account, which presence is checked at the time of user authorization as well as performing any action in the system. Set of permitted tag values depends on the system functionality. The full list is shown in the table below.

Several different tags can be assigned to one account by entering the command several times. Each tag can be viewed as granting or revoking certain permissions.

Command with **no** prefix removes the specified tag.

**Note:** The admin account can not be untagged cli.

The admin account can not be untagged http in Repeater mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(config-user)>	<b>tag &lt;tag&gt;</b>
(config-user)>	<b>no tag [ &lt;tag&gt; ]</b>

**Arguments**

Argument	Value	Description
tag	cli	Access to the command line (TELNET and SSH).
	readonly	Restrict commands that change the settings.
	http-proxy	Access to the HTTP proxy.
	http	Access to the Web-interface.
	afp	Access to USB drives via Apple File Protocol.
	printers	Access to USB printers via SMB/CIFS.
	cifs	Connection to the Windows files and printers service.
	vpn-dlna	Access to the <a href="#">DLNA</a> for PPTP, L2TP/IPSec, SSTP tunnels.
	ftp	Connection to an integrated FTP server.
	ipsec-xauth	Connection to an integrated IPsec/XAuth server.
	ipsec-l2tp	Connection to an integrated L2TP/IPSec server.
	opt	Access to services managed by OptWare.
	sftp	Access to SFTP file server.
	sstp	Connection to an integrated SSTP server.
	torrent	Access to the BitTorrent client GUI.
	vpn	Connection to an integrated PPTP server.
	webdav	Access to WebDAV file server.

**Example**

```
(config-user)> tag cli
Core::Authenticator: User "test" tagged with "cli".
```

```
(config-user)> tag readonly
Core::Authenticator: User "test" tagged with "readonly".
```

```
(config-user)> tag http-proxy
Core::Authenticator: User "test" tagged with "http-proxy".
```

```
(config-user)> tag http
Core::Authenticator: User "test" tagged with "http".
```

```
(config-user)> tag afp
Core::Authenticator: User "test" tagged with "afp".
```

```
(config-user)> tag printers
Core::Authenticator: User "test" tagged with "printers".
```

```
(config-user)> tag cifs
Core::Authenticator: User "test" tagged with "cifs".
```

```
(config-user)> tag vpn-dlna
Core::Authenticator: User "test" tagged with "vpn-dlna".
```

```
(config-user)> tag ftp
Core::Authenticator: User "test" tagged with "ftp".
```

```
(config-user)> tag ipsec-xauth
Core::Authenticator: User "test" tagged with "ipsec-xauth".
```

```
(config-user)> tag ipsec-l2tp
Core::Authenticator: User "test" tagged with "ipsec-l2tp".
```

```
(config-user)> tag opt
Core::Authenticator: User "test" tagged with "opt".
```

```
(config-user)> tag sftp
Core::Authenticator: User "test" tagged with "sftp".
```

```
(config-user)> tag sstp
Core::Authenticator: User "test" tagged with "sstp".
```

```
(config-user)> tag torrent
Core::Authenticator: User "test" tagged with "torrent".
```

```
(config-user)> tag vpn
Core::Authenticator: User "test" tagged with "vpn".
```

```
(config-user)> tag webdav
Core::Authenticator: User "test" tagged with "webdav".
```

```
(config-user)> no tag readonly
Core::Authenticator: User "test": "readonly" tag deleted.
```

**History**

<b>Version</b>	<b>Description</b>
2.00	The <b>user tag</b> command has been introduced.
2.04	The <b>vpn</b> tag has been added.
2.06	The <b>opt</b> , <b>ipsec-xauth</b> tags have been added.
2.10	The <b>http-proxy</b> tag has been added.
2.11	The <b>ipsec-l2tp</b> tag has been added.
2.12	The <b>sstp</b> tag has been added.

3.04

The **vpn-dlna sftp** and **webdav** tags have been added.

## 3.144 vpn-server

**Description** Access to a group of commands to configure VPN server parameters.

**Prefix no** No

**Change settings** No

**Multiple input** No

**Group entry** (vpn-server)

**Synopsis**

(config)>	vpn-server
-----------	------------

**History**

Version	Description
2.04	The <b>vpn-server</b> command has been introduced.

### 3.144.1 vpn-server dhcp route

**Description** Assign a route which is transmitted in DHCP INFORM messages to the VPN server clients.

Command with **no** prefix cancels the specified route. If you use no arguments, the entire list of routes will be cleared.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

(vpn-server)>	dhcp route <address> <mask>
	(vpn-server)> no dhcp route [<address> <mask>]

**Arguments**

Argument	Value	Description
address	IP address	Network client address.
mask	IP-mask	Network client mask. There are two ways to enter the mask: the canonical form (for example, 255.255.255.0) and the form of prefix bit length (for example, /24).

**Example**

(vpn-server)> dhcp route 192.168.2.0/24
VpnServer::Manager: Added DHCP INFORM route to ▶
192.168.2.0/255.255.255.0.

```
(vpn-server)> no dhcp route
VpnServer::Manager: Cleared DHCP INFORM routes.
```

**History**

<b>Version</b>	<b>Description</b>
2.12	The <b>vpn-server dhcp route</b> command has been introduced.

## 3.144.2 vpn-server interface

**Description** Bind VPN server to the specified interface.  
Command with **no** prefix unbinds the interface.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(vpn-server)> interface <interface>
(vpn-server)> no interface
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interface	<i>Interface</i>	Full interface name or an alias. You can see the list of available interfaces with help of <b>interface [Tab]</b> command.

**Example**

```
(vpn-server)> interface [Tab]
```

Usage template:  
    **interface {interface}**

Choose:  
    GigabitEthernet1  
                ISP  
    WifiMaster0/AccessPoint2  
    WifiMaster1/AccessPoint1  
    WifiMaster0/AccessPoint3  
    WifiMaster0/AccessPoint0  
                AccessPoint

```
(vpn-server)> interface FastEthernet0/Vlan1
VpnServer::Manager: Bound to FastEthernet0/Vlan1
```

```
(vpn-server)> no interface
VpnServer::Manager: Reset interface binding.
```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>vpn-server interface</b> command has been introduced.

### 3.144.3 vpn-server ipv6cp

**Description** Enable IPv6 support. DHCP IPv6 pools are created for each VPN server. By default, the setting is disabled.

Command with **no** prefix disables IPv6 support.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(vpn-server)> ipv6cp
```

```
(vpn-server)> no ipv6cp
```

**Example**

```
(vpn-server)> ipv6cp
VpnServer::Manager: IPv6 control protocol enabled.
```

```
(vpn-server)> no ipv6cp
VpnServer::Manager: IPv6 control protocol disabled.
```

**History**

<b>Version</b>	<b>Description</b>
3.00	The <b>vpn-server ipv6cp</b> command has been introduced.

### 3.144.4 vpn-server lcp echo

**Description** Specify the testing rules of the PPTP connections with *LCP* echo tools.

Command with **no** prefix disables *LCP* echo.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(vpn-server)> lcp echo <interval> <count> [adaptive]
```

```
(vpn-server)> no lcp echo
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
interval	<i>Integer</i>	Interval between sending <i>LCP</i> echo, in seconds. If within the specified time interval there is no

Argument	Value	Description
		<i>LCP</i> echo request from the remote location, the same request will be sent there asking for response <i>LCP</i> reply.
count	<i>Integer</i>	The number of consecutive requests <i>LCP</i> echo sent, for which no response <i>LCP</i> reply was received. If count of <i>LCP</i> echo requests goes unanswered, the connection is terminated.
adaptive	<i>Keyword</i>	Pppd will send LCP echo-request frames only if no traffic was received from the peer since the last echo-request was sent.

**Example**

```
(vpn-server)> lcp echo 5 3
LCP echo parameters updated.
```

**History**

Version	Description
2.06	The <b>vpn-server lcp echo</b> command has been introduced.

### 3.144.5 vpn-server lockout-policy

**Description** Set VPN server bruteforce detection parameters. By default, feature is enabled. If you use 0 as an argument, all bruteforce detection parameters will be reset to default.

Command with **no** prefix disables bruteforce detection.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

<pre>(vpn-server)&gt; lockout-policy &lt;threshold&gt; [&lt;duration&gt; [&lt;observation-window&gt; ]]</pre>
<pre>(vpn-server)&gt; no lockout-policy</pre>

**Arguments**

Argument	Value	Description
threshold	<i>Integer</i>	The number of failed attempts to log in. By default, 5 value is used. Can take values in the range from 2 to 20.
duration	<i>Integer</i>	An authorization ban duration for the specified IP in minutes. By default, 15 value is used. Can take values in the range from 1 to 120.

Argument	Value	Description
observation-window	Integer	Duration of suspicious activity observation in minutes. By default, 3 value is used. Can take values in the range from 1 to 20.

**Example**

```
(vpn-server)> lockout-policy 10 30 2
VpnServer::Manager: Bruteforce detection is reconfigured.
```

```
(vpn-server)> no lockout-policy
VpnServer::Manager: Bruteforce detection is disabled.
```

```
(vpn-server)> lockout-policy 0
VpnServer::Manager: Bruteforce detection reset to default.
```

**History**

Version	Description
3.01	The <b>vpn-server lockout-policy</b> command has been introduced.

### 3.144.6 vpn-server mppe

**Description** Set mode for **MPPE** encryption. 40-bit key is used by default.

Command with **no** prefix disables selected mode.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** Yes

**Synopsis**

<pre>(vpn-server)&gt; <b>mppe &lt;mode&gt;</b></pre>
<pre>(vpn-server)&gt; <b>no mppe &lt;mode&gt;</b></pre>

**Arguments**

Argument	Value	Description
mode	40	Length of the encryption key is 40 bits.
	128	Length of the encryption key is 128 bits.

**Example**

```
(vpn-server)> mppe 40
VpnServer::Manager: Set encryption 40.
```

**History**

Version	Description
2.05	The <b>vpn-server mppe</b> command has been introduced.

## 3.144.7 vpn-server mppe-optional

**Description** Allow connections without **MPPE** encryption. By default, the feature is enabled.  
Command with **no** prefix deny unencrypted connections.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(vpn-server)>	<b>mppe-optional</b>
(vpn-server)>	<b>no mppe-optional</b>

**Example**

(vpn-server)>	<b>mppe-optional</b>
VpnServer::Manager: Unencrypted connections enabled.	

(vpn-server)>	<b>no mppe-optional</b>
VpnServer::Manager: Unencrypted connections disabled.	

History	Version	Description
	2.04	The <b>vpn-server mppe-optional</b> command has been introduced.

## 3.144.8 vpn-server mru

**Description** Set **MRU** value to be transmitted to PPTP server. By default, 1350 value is used.  
Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

(vpn-server)>	<b>mru &lt;value&gt;</b>
(vpn-server)>	<b>no mru</b>

Arguments	Argument	Value	Description
	value	<i>Integer</i>	<b>MRU</b> value. Can take values in the range from 128 to 1500 inclusively.

**Example**

(vpn-server)>	<b>mru 200</b>
VpnServer::Manager: mru set to 200.	

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>vpn-server mru</b> command has been introduced.

### 3.144.9 vpn-server mtu

**Description** Set **MTU** value to be transmitted to PPTP server. By default, 1350 value is used.

Command with **no** prefix resets value to default.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(vpn-server)> mtu <value>
(vpn-server)> no mtu
```

**Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
value	<i>Integer</i>	<b>MTU</b> value. Can take values in the range from 128 to 1500 inclusively.

**Example**

```
(vpn-server)> mtu 200
VpnServer::Manager: mtu set to 200.
```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>vpn-server mtu</b> command has been introduced.

### 3.144.10 vpn-server multi-login

**Description** Allow connection to VPN server for multiple users from one account.

Command with **no** prefix disables this feature.

**Prefix no** Yes

**Change settings** Yes

**Multiple input** No

**Synopsis**

```
(vpn-server)> multi-login
(vpn-server)> no multi-login
```

**Example**

```
(vpn-server)> multi-login
VpnServer::Manager: multi login enabled.
```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>vpn-server multi-login</b> command has been introduced.

### 3.144.11 vpn-server pool-range

**Description** Assign a pool of addresses for the clients that connect to the VPN server.Command with **no** prefix removes a pool.**Prefix no** Yes**Change settings** Yes**Multiple input** No**Synopsis**(vpn-server)> **pool-range <begin> [<size>]**(vpn-server)> **no pool-range****Arguments**

<b>Argument</b>	<b>Value</b>	<b>Description</b>
begin	<i>IP address</i>	Start address of pool.
size	<i>Integer</i>	Pool size. Can take values in the range from 1 to 64 inclusively. If the size is not specified, it is determined automatically depending on the device.

**Example**

```
(vpn-server)> pool-range 172.168.1.22 20
VpnServer::Manager: Configured pool range 172.168.1.22 to ▶
172.168.1.41.
```

```
(vpn-server)> no pool-range
VpnServer::Manager: Reset pool range.
```

**History**

<b>Version</b>	<b>Description</b>
2.04	The <b>vpn-server pool-range</b> command has been introduced.

### 3.144.12 vpn-server static-ip

**Description** Bind IP address to the user. User account must have vpn tag.Command with **no** prefix removes binding.**Prefix no** Yes**Change settings** Yes

**Multiple input**

Yes

**Synopsis**

```
(vpn-server)> static-ip <name> <address>
(vpn-server)> no static-ip <name>
```

**Arguments**

Argument	Value	Description
name	<i>String</i>	Username.
address	<i>IP address</i>	IP address to bind.

**Example**

```
(vpn-server)> static-ip test 172.16.1.35
VpnServer::Manager: Static IP 172.16.1.35 assigned to user "test".
(vpn-server)> static-ip test
VpnServer::Manager: Static IP address removed for user "test".
```

**History**

Version	Description
2.04	The <b>vpn-server static-ip</b> command has been introduced.

# Glossary

Address and Control Field Compression	<i>LCP</i> configuration option that provides a method to negotiate the compression of the Data Link Layer Address and Control fields.
Address Resolution Protocol	is a protocol for mapping an Internet Protocol address (IP address) to a physical machine address that is recognized in the local network. For example, in IP Version 4, the most common level of IP in use today, an address is 32 bits long. In an Ethernet local area network, however, addresses for attached devices are 48 bits long. (The physical machine address is also known as a Media Access Control or MAC address.) A table, usually called the ARP cache, is used to maintain a correlation between each MAC address and its corresponding IP address. ARP provides the protocol rules for making this correlation and providing address conversion in both directions.
Airtime Fairness	it is a technology intended to increase the overall performance of the wireless network by solving a problem with slow clients. With a high activity of a slow device, the Wi-Fi network bandwidth is reduced. So that fast clients don't have to wait for their data transfer queues, Airtime Fairness technology limits the session of communication with the client device not by the number of packets, but by the time of their transmission.
Authenticated Encryption with Associated Data	this form of encryption which simultaneously assure the confidentiality and authenticity of data. AEAD is a variant of AE that allows a recipient to check the integrity of both the encrypted and unencrypted information in a message.
Automatic Certificate Management Environment	is a communications protocol for automating interactions between certificate authorities and their users' web servers, allowing the automated deployment of public key infrastructure at very low cost. It was designed by the Internet Security Research Group (ISRG) for their Let's Encrypt service.
Band Steering	is a feature that encourages dual-band capable wireless clients to connect to the less crowded 5GHz network, and leave the 2.4GHz network available for those clients who support 2.4GHz only; thus, Wi-Fi performance can be improved for all clients.
Challenge-Handshake Authentication Protocol	widely used algorithm for authentication, which provides the transfer of indirect information about user password. CHAP provides better security than <i>Password Authentication Protocol</i> .
Change of Authorization	is a provides a mechanism for changing RADIUS authentication and authorization session attributes. Allows you to set up an active client session.

Command Line Interface	is a user interface to a computer's operating system or an application in which the user responds to a visual prompt by typing in a command on a specified line, receives a response back from the system, and then enters another command, and so forth.
Common Applications Kept Enhanced	is a shaping-capable queue discipline which uses both AQM and FQ. It combines COBALT, which is an AQM algorithm combining Codel and BLUE, a shaper which operates in deficit mode, and a variant of DRR++ for flow isolation. 8-way set-associative hashing is used to virtually eliminate hash collisions. Priority queuing is available through a simplified diffserv implementation. CAKE uses a deficit-mode shaper, which does not exhibit the initial burst typical of token-bucket shapers. It will automatically burst precisely as much as required to maintain the configured throughput.
Compression Control Protocol	is used for establishing and configuring data compression algorithms over <a href="#">PPP</a> .
Dead Peer Detection	is a method that network devices use to verify the current existence and availability of other peer devices.
Device Privacy Notice	is a Keenetic device privacy notice on data processing.
DHCP	is a network protocol that is used to configure network devices so that they can communicate on an IP network. A DHCP client uses the DHCP protocol to acquire configuration information, such as an IP address, a default route, and one or more DNS server addresses from a DHCP server. The DHCP client then uses this information to configure its host. Once the configuration process is complete, the host is able to communicate on the Internet.
DHCP server	manages a pool of IP addresses and information about client configuration parameters such as default gateway, domain name, the name servers, other servers such as time servers, and so forth. On receiving a valid request, the server assigns the computer an IP address, a lease (length of time the allocation is valid), and other IP configuration parameters, such as the subnet mask and the default gateway. Depending on implementation, the DHCP server may have three methods of allocating IP-addresses:
	<ul style="list-style-type: none"><li>• <i>dynamic allocation</i>: A network administrator assigns a range of IP addresses to DHCP, and each client computer on the LAN is configured to request an IP address from the DHCP server during network initialization. The request-and-grant process uses a lease concept with a controllable time period, allowing the DHCP server to reclaim (and then reallocate) IP addresses that are not renewed.</li><li>• <i>automatic allocation</i>: The DHCP server permanently assigns a free IP address to a requesting client from the range defined by the administrator. This is like dynamic allocation, but the DHCP server keeps a table of past IP address assignments, so that it can preferentially assign to a client the same IP address that the client previously had.</li><li>• <i>static allocation</i>: The DHCP server allocates an IP address based on a table with MAC address/IP address pairs, which are manually filled</li></ul>

	<p>in (perhaps by a network administrator). Only requesting clients with a MAC address listed in this table will be allocated an IP address. This feature (which is not supported by all DHCP servers) is variously called Static DHCP Assignment (by DD-WRT), fixed-address (by the dhcpcd documentation), Address Reservation (by Netgear), DHCP reservation or Static DHCP (by Cisco/Linksys), and IP reservation or MAC/IP binding (by various other router manufacturers).</p>
DHCPv6 server	<p>is a network protocol for configuring Internet Protocol version 6 (IPv6) hosts with IP addresses, IP prefixes, default route, local segment MTU, and other configuration data required to operate in an IPv6 network. IPv6 hosts may automatically generate IP addresses internally using <a href="#">stateless address autoconfiguration</a><sup>1</sup> (SLAAC), or they may be assigned configuration data with DHCPv6.</p>
Diffie-Hellman	<p>is that part of the <a href="#">IKE</a> protocol used for exchanging the material from which the symmetrical keys are built. The Diffie-Hellman algorithm builds an encryption key known as a "shared secret" from the private key of one party and the public key of the other. Since the <a href="#">IPsec</a> symmetrical keys are derived from this DH key shared between the peers, at no point are symmetric keys actually exchanged.</p>
DLNA	<p>standard that allows compatible devices to transfer media content (images, music, videos) over the home network and display it in real time. This technology is to connect home computers, mobile phones, notebooks and home electronics in a single digital network. DLNA-certified devices can be configured and combined in a home network automatically.</p>
Domain Name System	<p>is a hierarchical distributed naming system for computers, services, or any resource connected to the Internet or a private network. It associates various information with domain names assigned to each of the participating entities. A Domain Name Service resolves queries for these names into IP addresses for the purpose of locating computer services and devices worldwide. By providing a worldwide, distributed keyword-based redirection service, the Domain Name System is an essential component of the functionality of the Internet.</p>
DNS over HTTPS	<p>is a domain name system, computer distributed system for obtaining information about domains using secure data transfer between internet nodes resolution via the HTTPS protocol. The method is to increase user privacy and security by preventing eavesdropping and manipulation of DNS data by man-in-the-middle attacks. The standard is described in <a href="#">RFC 8484</a><sup>2</sup>.</p>
DNS over TLS	<p>is a domain name system, computer distributed system for obtaining information about domains using secure data transfer between internet nodes. The standard is described in <a href="#">RFC 7858</a><sup>3</sup> and <a href="#">RFC 8310</a><sup>4</sup>.</p>

<sup>1</sup> [https://en.wikipedia.org/wiki/IPv6#Stateless\\_address\\_autoconfiguration\\_\(SLAAC\)](https://en.wikipedia.org/wiki/IPv6#Stateless_address_autoconfiguration_(SLAAC))

<sup>2</sup> <https://tools.ietf.org/html/rfc8484>

<sup>3</sup> <https://tools.ietf.org/html/rfc7858>

<sup>4</sup> <https://tools.ietf.org/html/rfc8310>

DNS rebinding	is a method of manipulating resolution of domain names. In this attack, a malicious web page causes visitors to run a client-side script that attacks machines elsewhere on the network. This attack can be used to breach a private network by causing the victim's web browser to access computers at private IP addresses and return the results to the attacker.
Encapsulating Security Payload	is a member of the <i>IPsec</i> protocol suite. In IPsec it provides origin authenticity, integrity, and confidentiality protection of packets.
End-user license agreement	is a legal contract between a software application author or publisher and the user of that application.
Fast Transition	is a new concept of roaming where the initial handshake with the new AP is done even before the client roams to the target AP.
Fair Queuing Controlled Delay	is queuing discipline that combines Fair Queuing with the CoDel AQM scheme. FQ_Codel uses a stochastic model to classify incoming packets into different flows and is used to provide a fair share of the bandwidth to all the flows using the queue. Each such flow is managed by the CoDel queuing discipline.
Fully Qualified Domain Name	is a domain name that specifies its exact location in the tree hierarchy of the <i>Domain Name System</i> . It specifies all domain levels, including the top-level domain and the root zone. A fully qualified domain name is distinguished by its lack of ambiguity: it can be interpreted only in one way.
Full Cone NAT	also Static NAT, one to one NAT, port forwarding
	is the only type of NAT where the port is permanently open and allows inbound connections from any external host. A full cone NAT maps a public IP address and port to a LAN IP and port. Any external host can send data to the LAN IP through the mapped NAT IP and port. If it tries to send data through a different port it will fail. Static NAT is required when a network device on a private network must be accessible from the Internet.
Generic Routing Encapsulation	is a tunneling protocol developed by Cisco Systems that can encapsulate a wide variety of network layer protocols inside virtual point-to-point links over an Internet Protocol network.
Hash Message Authentication Code	is a specific construction for calculating a message authentication code (MAC) involving a cryptographic hash function in combination with a secret cryptographic key. As with any MAC, it may be used to simultaneously verify both the data integrity and the authentication of a message. Any cryptographic hash function, such as MD5 or SHA-1, may be used in the calculation of an HMAC; the resulting MAC algorithm is termed HMAC-MD5 or HMAC-SHA1 accordingly. The cryptographic strength of the HMAC depends upon the cryptographic strength of the underlying hash function, the size of its hash output, and on the size and quality of the key.
HTTP Proxy	Hypertext Transfer Protocol (HTTP) and HTTPS (HyperText Transfer Protocol Secure) Proxy is a proxy server that uses the Hypertext Transfer

	Protocol (HTTP) to connect to a web server and a client (browser). HTTPS (HyperText Transfer Protocol Secure) proxies work with SSL (Secure Socket Layer), which is an additional layer of security imposed on HTTP to protect its data. It supports security certificates, which are used to end-to-end encrypt traffic and prevent data interception during transmission. A proxy server that supports SSL establishes a secure connection to the client and to the web server to avoid any outside interference.
Idempotence	is the property of certain operations in computer science, that they can be applied multiple times without changing the result beyond the initial application.
Inter-Access Point Protocol	is a standard IEEE 802.11F protocol exchange of service information for data transfer between access points. The protocol is responsible for combining the wireless network, secure data exchange between the current access point and the new access point in the specified period.
Internet Control Message Protocol	is a message control and error-reporting protocol between a host server and a gateway to the Internet. ICMP uses Internet Protocol (IP) datagrams, but the messages are processed by the IP software and are not directly apparent to the application user.
Internet Control Message Protocol version 6	is the implementation of the Internet Control Message Protocol (ICMP) for Internet Protocol version 6 (IPv6). ICMPv6 is an integral part of IPv6 and performs error reporting and diagnostic functions. ICMPv6 is defined in <a href="#">RFC 4443</a> <sup>5</sup> .
Internet Group Management Protocol	is an Internet protocol that provides a way for an Internet computer to report its multicast group membership to adjacent routers. Multicasting allows one computer on the Internet to send content to multiple other computers. Multicasting can be used for streaming media to an audience that has "tuned in" by setting up a multicast group membership.
Internet Key Exchange	is a standard protocol IPsec, used to ensure the safety of interaction in virtual private networks. IKE purpose is to establish a secure authenticated communication channel by using the <a href="#">Diffie-Hellman</a> key exchange algorithm to generate a shared secret key to encrypt further <a href="#">IPsec</a> communications.
Internet Protocol	is the principal communications protocol in the Internet. The first major version of IP, Internet Protocol Version 4 (IPv4), is the dominant protocol of the Internet. Its successor is Internet Protocol Version 6 (IPv6).
Internet Protocol Control Protocol	is a network control protocol for establishing and configuring Internet Protocol over a <a href="#">Point-to-Point Protocol</a> (PPP) link. IPCP uses the same packet exchange mechanism as the Link Control Protocol. IPCP packets may not be exchanged until PPP has reached the Network-Layer Protocol phase, and any IPCP packets received before this phase is reached should be silently discarded.

<sup>5</sup> <https://datatracker.ietf.org/doc/html/rfc4443>

Internet Protocol Security	commonly called IPsec, is a protocol suite for secure <i>Internet Protocol</i> (IP) communications by authenticating and encrypting each IP packet of a communication session. IPsec includes protocols for establishing mutual authentication between agents at the beginning of the session and negotiation of cryptographic keys to be used during the session. IPsec can be used in protecting data flows between a pair of hosts (host-to-host), between a pair of security gateways (network-to-network), or between a security gateway and a host (network-to-host). Internet Protocol security (IPsec) uses cryptographic security services to protect communications over Internet Protocol (IP) networks. IPsec supports network-level peer authentication, data origin authentication, data integrity, data confidentiality (encryption), and replay protection.
IPsec Passthrough	is technology that allows VPN-traffic to pass through NAT.
IPsec Security Association	is fundamental to IPsec. An SA is a relationship between two or more entities that describes how the entities will use security services to communicate securely. Each IPsec connection can provide encryption, integrity, authenticity, or all three. When the security service is determined, the two IPsec peers must determine exactly which algorithms to use (for example, DES or 3DES for encryption, MD5 or SHA for integrity). After deciding on the algorithms, the two devices must share session keys. The Security Association is the method that IPsec uses to track all the particulars concerning a given IPsec communication session.
IP in IP	is an IP tunneling protocol that encapsulates one IP packet in another IP packet.
IPv6CP	is responsible for configuring, enabling, and disabling the IPv6 protocol modules on both ends of the <i>Point-to-Point</i> (PPP) link. IPv6CP uses the same packet exchange mechanism as the <i>Link Control Protocol</i> . IPv6CP packets may not be exchanged until PPP has reached the Network-Layer Protocol phase. IPv6CP packets received before this phase is reached should be silently discarded.
Layer 2 Tunneling Protocol	is a tunneling protocol used to support virtual private networks (VPNs) or as part of the delivery of services by ISPs. It does not provide any encryption or confidentiality by itself. Rather, it relies on an encryption protocol that it passes within the tunnel to provide privacy.
Link Control Protocol	establishes, configures, and tests data-link Internet connections in the <i>Point-to-Point Protocol</i> (PPP). Before establishing communications over a point-to-point link, each end of the PPP link must send out LCP packets. The LCP packet either accepts or rejects the identity of its linked peer, agrees up on packet size limits, and looks for common misconfiguration errors.  LCP packets are divided into three classes: <ul style="list-style-type: none"><li>• Link configuration packets used to establish and configure a link</li><li>• Link termination packets used to terminate a link</li></ul>

	<ul style="list-style-type: none"><li>Link maintenance packets used to manage and debug a link</li></ul>
Link Layer Discovery Protocol	is a vendor-neutral link layer protocol in the Internet Protocol Suite used by network devices for advertising their identity, capabilities, and neighbors on an IEEE 802 local area network, principally wired Ethernet. Information gathered with LLDP is stored in the device as a management information database (MIB) and can be queried with the Simple Network Management Protocol (SNMP).
Low-Density Parity-Check	is a linear error correcting code, a method of transmitting a message over a noisy transmission channel. An LDPC is constructed using a sparse bipartite graph. LDPC codes are capacity-approaching codes, which means that practical constructions exist that allow the noise threshold to be set very close (or even arbitrarily close on the BEC) to the theoretical maximum (the Shannon limit) for a symmetric memoryless channel. The noise threshold defines an upper bound for the channel noise, up to which the probability of lost information can be made as small as desired. Using iterative belief propagation techniques, LDPC codes can be decoded in time linear to their block length.
Maximum Receive Unit	is the maximum size (in bytes) of the frame, which can be received at the data link layer of communication protocol.
Maximum Segment Size	is a parameter of the options field of the <a href="#">TCP</a> header that specifies the largest amount of data, specified in bytes, that a computer or communications device can receive in a single TCP segment. It does not count the TCP header or the IP header.
Maximum Transmission Unit	is the largest size packet or frame, specified in octets (eight-bit bytes), that can be sent in a packet- or frame-based network such as the Internet. The Internet's Transmission Control Protocol (TCP) uses the MTU to determine the maximum size of each packet in any transmission. Most computer operating systems provide a default MTU value that is suitable for most users. In general, Internet users should follow the advice of their Internet service provider (ISP) about whether to change the default value and what to change it to.
Microsoft Point-to-Point Encryption	encrypts data in <a href="#">Point-to-Point Protocol</a> based dial-up connections or Point-to-Point Tunneling Protocol (PPTP) connections. 128-bit key (strong), 56-bit key, and 40-bit key (standard) MPPE encryption schemes are supported. MPPE provides data security for the PPTP connection that is between the VPN client and the VPN server.
Modular Wi-Fi System	a system that allows several Keenetic devices to be combined into a single Internet space distributed over an area. One of the devices is defined as the controller, the others as the members.
Network Access Control List	rules that are applied to IP interfaces that are available on a router, each with a list of hosts or networks that are permitted or denied to use the service. Access control lists can be configured to control both inbound and outbound traffic.

Network Flow	network protocol for network traffic accounting, uses UDP or SCTP protocols to send traffic data to the collector. Collector is an application that runs on a server and collects statistics received from sensors. A sensor is a device that collects traffic statistics and sends it to a collector. The sensor can be a Cisco third-level router or switch.
NEXTDNS	service of NextDNS protects you from all kinds of security threats, blocks ads and trackers on websites and in apps and provides a safe and supervised Internet for kids — on all devices and on all networks.
Network Time Protocol	is a protocol that is used to synchronize computer clock times in a network of computers. Developed by David Mills at the University of Delaware, NTP is now an Internet standard. In common with similar protocols, NTP uses Coordinated Universal Time (UTC) to synchronize computer clock times to a millisecond, and sometimes to a fraction of a millisecond.
Network Traffic Classification Engine	also DPI, Deep Deep Packet Inspection  is a technology for accumulating statistics and inspecting network packets based on their contents. Deep Packet Inspection analyzes not only packet headers, but also the full content of traffic at OSI layers 2 and above.  Deep Packet Inspection can determine which network application has generated or received data, collecting detailed connection statistics for each device and application individually. With quality of service Deep Packet Inspection controls the transmission speed of individual packets by raising or lowering it.  The Traffic Classification Engine component operates completely independently and does not make any calls to external services.
Opportunistic Wireless Encryption	is an extension of the IEEE 802.11 standard, similar encryption method Simultaneous Authentication of Equals (SAE). This encryption method provides users with better protection when connected to an open Wi-Fi network.
Password Authentication Protocol	is an authentication protocol that uses a password. PAP is used by <a href="#">Point-to-Point Protocol</a> to validate users before allowing them access to the remote network. PAP transmits unencrypted ASCII passwords over the network and is therefore considered insecure.
Protected Extensible Authentication Protocol	is a protocol that encapsulates the Extensible Authentication Protocol (EAP) within an encrypted and authenticated Transport Layer Security (TLS) tunnel. The purpose was to correct deficiencies in EAP; EAP assumed a protected communication channel, such as that provided by physical security, so facilities for protection of the EAP conversation were not provided.
Perfect Forward Secrecy	is a property of secure communication protocols: a secure communication protocol is said to have forward secrecy if compromise of long-term keys does not compromise past session keys. PFS protects past sessions against future compromises of secret keys or passwords.

Ping Check	performs ICMP and TCP based tests to verify if the internet connection is working fine. Test results may be used to switch between primary and backup connections.
Pairwise Master Key	is a cryptographic private key used in wireless networks to establish secure communication between devices. PMK is derived from a pre-shared key (PSK) or another authentication mechanism, and it serves as the foundation for generating encryption keys for pairwise communication. The PMK is primarily used in the IEEE 802.11i standard.
Point-to-Point Protocol	is a protocol used to establish a direct connection between two nodes. It can provide connection authentication, transmission encryption, and compression. PPP is used over many types of physical networks including serial cable, phone line, cellular telephone, specialized radio links, and fiber optic links. After the link has been established, additional network (layer 3) configuration may take place. Most commonly, the <i>Internet Protocol Control Protocol</i> (IPCP) is used.
Preamble	<p>it is the first part of the Physical Layer Convergence Protocol/Procedure (PLCP) Protocol Data Unit (PDU). A header is the remaining part of the data packets and has more information identifying the modulation scheme, transmission rate, and length of time to transmit the whole data frame.</p> <p>The Preamble type in IEEE 802.11 based wireless communication defines the length of the CRC (Cyclic Redundancy Check) block for communication between the Access Point and roaming wireless adapters.</p> <p><b>Long preamble:</b></p> <ul style="list-style-type: none"> <li>• PLCP with long preamble is transmitted at 1 Mbps regardless of transmit rate of data frames</li> <li>• Total long preamble transfer time is a constant at 192 usec</li> <li>• Compatible with legacy IEEE 802.11 systems running at 1 and 2 Mbps</li> </ul> <p><b>Short preamble:</b></p> <ul style="list-style-type: none"> <li>• Preamble is transmitted at 1 Mbps and header at 2 Mbps</li> <li>• Total short preamble transfer time is a constant at 96 usec</li> <li>• Not compatible with legacy IEEE 802.11 systems operating at 1 and 2 Mbps</li> </ul>
Protected Management Frames	IEEE 802.11w is the Protected Management Frames standard for the IEEE 802.11 family of standards. This functionality is necessary to improve security by ensuring data confidentiality in control frames.
Protocol Field Compression	is a method to negotiate the compression of the <i>PPP</i> Protocol field. By default, all implementations MUST transmit packets with two octet PPP Protocol fields.

Pseudo-Random Function	is similar to an integrity algorithm, but instead of being used to authenticate messages, it is only used to provide randomness for purposes such as keying material. PRFs are primarily used with an authenticated encryption algorithm type such as AES-GCM.
Radio Resource Management	is the system level management of co-channel interference, radio resources, and other radio transmission characteristics in wireless communication systems. RRM includes control parameters such as transmit power, user allocation, beamforming, data rates, handover criteria, modulation scheme, coding scheme errors.
Remote Authentication in Dial-In User Service	is a protocol to implement authentication, authorization, and resource collection. It is used for charging the used resources by a specific user. Used to authenticate users on open Wi-Fi wireless networks.
Restricted NAT	also Dynamic NAT  works in the same way as a <i>Full Cone NAT</i> but applies additional restrictions based on an IP address. The internal client must first have sent packets to IP address (X) before it can receive packets from X. In terms of restrictions the only requirement is that packets come in on the mapped port and from an IP address that the internal client has sent packets to.
Secure Socket Tunneling Protocol	is a type of VPN tunnel that utilizes an SSL 3.0 channel to send PPP or L2TP traffic. SSL allows for transmission and data encryption, as well as traffic integrity checking. Due to this, SSTP can pass through most firewalls and proxy servers by using the SSL channel over TCP port 443.
Service Set Identifier	is a sequence of characters that uniquely names a wireless local area network (WLAN). An SSID is sometimes referred to as a "network name". This name allows stations to connect to the desired network when multiple independent networks operate in the same physical area.
Simple Network Management Protocol	is an Internet-standard protocol for collecting and organizing information about managed devices on IP networks and for modifying that information to change device behavior. Devices that typically support SNMP include routers, switches, servers, workstations, printers, modem racks and more.
Simple Network Time Protocol	is an Internet Protocol (IP) used to synchronize the clocks of networks of computers.  SNTP is based upon the TCP/IP protocol suite. It is an application layer time protocol, part of the Network Time Protocol base protocol. Along with NTP, SNTP communicates using the User Datagram Protocol (UDP). By default, UDP port 123 is used.  SNTP can operate on IPv4 and IPv6 networks. The standard is described in <a href="https://www.rfc-editor.org/rfc/rfc4330">RFC 4330</a> <sup>8</sup> .
SOCKS	is an Internet protocol that exchanges network packets between a client and server through a proxy server. SOCKS5 optionally provides authentication so only authorized users may access a server. SOCKS

<sup>8</sup> <https://www.rfc-editor.org/rfc/rfc4330>

	server proxies TCP connections to an arbitrary IP address, and provides a means for UDP packets to be forwarded.
Shared key	is a mode by which a computer can gain access to a wireless network that uses the Wired Equivalent Privacy protocol. With Shared Key, a computer equipped with a wireless modem can fully access any WEP network and exchange encrypted or unencrypted data.
Transmission Control Protocol	is a core protocol of the <i>Internet Protocol</i> suite. TCP provides reliable, ordered, and error-checked delivery of a stream of octets between applications running on hosts communicating over an IP network.
Temporal Key Integrity Protocol	is a security protocol used in the IEEE 802.11 wireless networking standard. TKIP was designed by the IEEE 802.11i task group and the Wi-Fi Alliance as an interim solution to replace WEP without requiring the replacement of legacy hardware.
Universal Access Method	is a method that allows a subscriber to access a wireless Wi-Fi network. The Internet browser will open a login page where the user should fill in his credentials before he can access. UAM uses the RADIUS client and the RADIUS server for authorization.
User Datagram Protocol	is a core protocol of the <i>Internet Protocol</i> suite. UDP uses a simple connectionless transmission model with a minimum of protocol mechanism. It has no handshaking dialogues, and thus exposes the user's program to any unreliability of the underlying network protocol. There is no guarantee of delivery, ordering, or duplicate protection. Time-sensitive applications often use UDP because dropping packets is preferable to waiting for delayed packets, which may not be an option in a real-time system.
udpxy	is a UDP-to-HTTP multicast traffic relay daemon: it forwards UDP traffic from a given multicast subscription to the requesting HTTP client.
Universal Plug and Play	is a standard that uses Internet and Web protocols to enable devices such as PCs, peripherals, intelligent appliances, and wireless devices to be plugged into a network and automatically know about each other. With UPnP, when a user plugs a device into the network, the device will configure itself, acquire a TCP/IP address, and use a discovery protocol based on the HTTP to announce its presence on the network to other devices.
Variable Gain Amplifiers	are signal-conditioning amplifiers with electronically settable voltage gain. Used to improve wireless communication.
Virtual LAN	is a local area network with a definition that maps workstations on some other basis than geographic location (for example, by department, type of user, or primary application). The virtual LAN controller can change or add workstations and manage loadbalancing and bandwidth allocation more easily than with a physical picture of the LAN.
Web Distributed Authoring and Versioning	is a extension of the Hypertext Transfer Protocol (HTTP) that allows clients to perform remote Web content authoring operations. Supports

	<p>web server authentication and SSL encryption for HTTPS using the default TCP port 443.</p>
Web Proxy Auto-Discovery Protocol	<p>is a method used by clients to locate the URL of a configuration file using DHCP and/or DNS discovery methods. Once detection and download of the configuration file is complete, it can be executed to determine the proxy for a specified URL.</p>
WireGuard	<p>is a free and open-source software application and virtual private network (VPN) protocol to create secure point-to-point connections in routed configurations. WireGuard protocol uses modern cryptography options Curve25519 for key exchange, ChaCha20 for encryption, and Poly1305 for data authentication, SipHash for hashtable keys, and BLAKE2s for hashing. Supports layer 3 for both protocols IPv4 and IPv6.</p>
Wi-Fi Multimedia	<p>previously known as Wireless Multimedia Extensions (WME), is a subset of the 802.11e wireless LAN (WLAN) specification that enhances quality of service (QoS) on a network by prioritizing data packets according to four access categories (AC). Ranging from highest priority to lowest, these categories are: voice (AC_VO), video (AC_VI), best effort (AC_BE), and background (AC_BK).</p> <p>WMM also features a Power Save certification that helps small devices on a network conserve battery life. Power Save allows small devices, such as phones and PDAs, to transmit data while in a low-power "dozing" status. The certification gives software developers and hardware manufacturers a way to fine-tune battery use in the ever-increasing number of small devices that have Wi-Fi capabilities.</p>
Wi-Fi Protected Access	<p>Wi-Fi Protected Access II (WPA2), and Wi-Fi Protected Access 3 (WPA3) are three security protocols and security certification programs developed by the Wi-Fi Alliance to secure wireless computer networks. The Alliance defined these in response to serious weaknesses researchers had found in the previous system, WEP. WPA advantages are enhanced data security and tightened access control for wireless networks. Important characteristic is the compatibility between multiple wireless devices at the hardware level as well as at software level.</p> <p>WPA3 uses 128-bit encryption in WPA3-Personal mode (192-bit in WPA3-Enterprise). The WPA3 standard also replaces the Pre-Shared Key exchange with Simultaneous Authentication of Equals as defined in IEEE 802.11-2016 resulting in a more secure initial key exchange in personal mode.</p> <p>WPA Enterprise is a protocol-based authentication mode IEEE 802.1X using an external authentication server RADIUS and local client Suplicant.</p>
Wi-Fi Protected Setup	<p>provides an industry-wide mechanism to set up and configure networks for home and small office (SOHO) environments. Wi-Fi Protected Setup enables typical users who possess little understanding of traditional Wi-Fi configuration and security settings to easily configure new wireless networks, to add new devices and to enable security.</p>

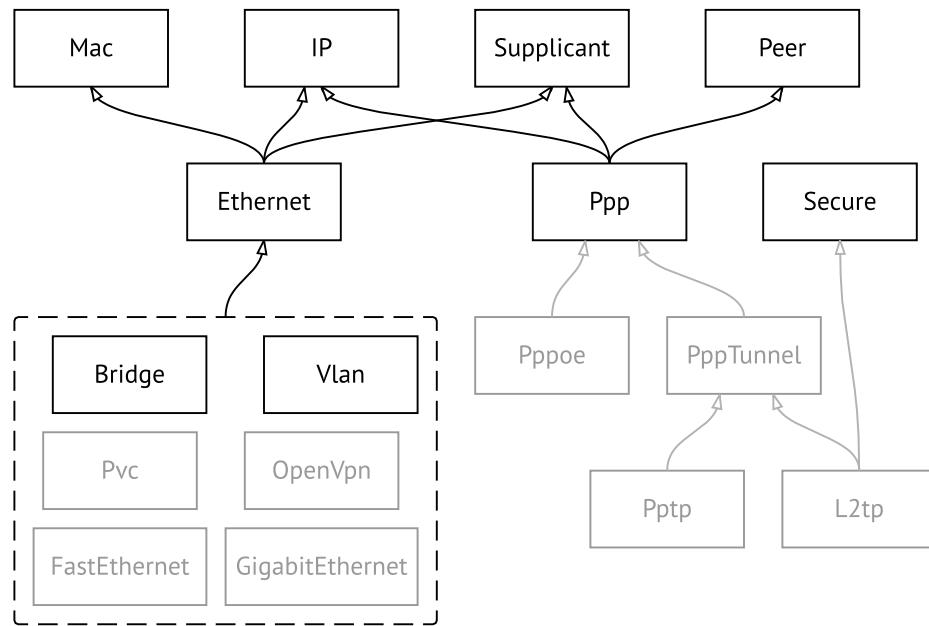

---

Wired Equivalent Privacy	is a security algorithm for IEEE 802.11 wireless networks. WEP, recognizable by the key of 10 or 26 hexadecimal digits, is widely in use and is often the first security choice presented to users by router configuration tools. In 2004, with the ratification of the full 802.11i standard (i.e. <a href="#">WPA2</a> ), the IEEE declared that both WEP-40 and WEP-104 have been deprecated.
Wireless Internet Service Provider	is an Internet service provider (ISP) that allows subscribers to connect to a server at designated hotspots (access points) using a wireless connection such as Wi-Fi. This type of ISP offers Broadband service and allows subscriber computers, called stations, to access the Internet and the Web from anywhere within the zone of coverage provided by the server antenna. This is usually a region with a radius of several kilometers.  The simplest WISP is a basic service set (BSS) consisting of one server and numerous stations all linked to that server by wireless. More sophisticated WISP networks employ the extended service set (ESS) topology, consisting of two or more BSSs linked together at access points (APs). Both BSS and ESS are supported by the IEEE 802.11b specification.
Extended Authentication	or XAUTH, provides an additional level of authentication by allowing the <a href="#">IPsec</a> gateway to request extended authentication from remote users, thus forcing remote users to respond with their credentials before being allowed access to the VPN.
XFRM	is an IP framework for transforming packets (such as encrypting their payloads) and used to implement the IPsec protocol suite. It is also used for the IP Payload Compression Protocol and features of Mobile IPv6.
ZeroTier	is a distributed network hypervisor built atop a cryptographically secure global peer to peer network. It provides advanced network virtualization and management capabilities on par with an enterprise SDN switch, but across both local and wide area networks and connecting almost any kind of app or device.  All traffic is encrypted end to end on OSI layer 1 using 256-bit Salsa20 and authenticated using the Poly1305 message authentication (MAC) algorithm. MAC is computed after encryption (encrypt-then-MAC) and the cipher/MAC composition used is identical to the NaCl reference implementation.  The ZeroTier world is controlled by two types of identifier: 40-bit/10-digit <i>ZeroTier addresses</i> and 64-bit/16-digit <i>network IDs</i> . These identifiers are easily distinguished by their length. A ZeroTier address identifies a node or "device" (laptop, phone, server, VM, app, etc.) while a network ID identifies a virtual Ethernet network that can be joined by devices.  A ZeroTier address looks like 8056c2e21c and a network ID looks like 8056c2e21c000001. Network IDs are composed of the ZeroTier address of that network's primary controller and an arbitrary 24-bit ID that identifies the network on this controller.

# HTTP API

## B.1 REST Core Interface

Explorer HTTP API lets you develop a custom application, that will access Explorer settings using simple HTTP methods, such as GET and POST.

The base URL for all operations is /rci, that simply stands for REST Core Interface. It replaces the [XML Core Interface](#), which is now deprecated but continues to be functional.

### B.1.1 Resource Location

RCI is based on the Explorer command tree. Device settings are mapped to RCI resources in such a way that every "a b c" command corresponds to the /rci/a/b/c URL.

As a result, hereby [Command Reference](#) gives you a complete picture of all RCI resources and their parameters. The words "command" and "resource" are used interchangeably in this manual.

Parameters are listed in the Arguments table of each command. They can be passed as part of the request using HTTP query: /rci/a/b/c?parameter=value. Unless otherwise specified for a certain command, query parameters are optional. Multiple parameters should be separated by ampersand (&) characters.

Parameters can also be passed in the POST request body, as described in [Section B.1.3 on page 614](#).

### B.1.2 Methods

Method semantics depend on the type of resource. There are three types of resources in RCI:

- Settings
- Actions
- Background processes

#### B.1.2.1 Settings

Settings are device configuration elements. You can view, modify, or delete settings using standard HTTP methods.

GET      Retrieve settings.

- POST Create or modify settings.
- DELETE Delete settings (reset to default).

### B.1.2.2 Actions

Actions are commands that do not modify settings. Actions run instantly as opposed to background processes, see also [Section B.1.2.3 on page 614](#)

- GET Mapped to POST for /rci/show. Not applicable to other actions.
- POST Execute a command and return its output.
- DELETE Not applicable.

### B.1.2.3 Background processes

Background processes are instances that can be created and polled for updates. Such processes are bound to a particular session, and cannot be accessed from anywhere else.

- GET Retrieve updates from existing process. Returns 404 if there is no such process.
- POST Create a background process.
- DELETE Terminate a background process.

## B.1.3 Data Format

HTTP POST requests must be submitted in a free-form JSON,<sup>1</sup> that is interpreted as a batch of parameters and nested settings, depending on the data type. Conversely, HTTP GET returns JSON data that was previously POSTed to the specified resource.

The primary data type is Object. This is unordered collection of key-value pairs, enclosed in curly brackets {}. Each key must be unique within an object.

Objects can be put one into another, or be combined in arrays as detailed in [Section B.1.3.2 on page 615](#) and [Section B.1.3.3 on page 615](#)

### B.1.3.1 Parameters

String, boolean and number values of an object are interpreted as parameters of the resource being addressed.

```
{  
    "parameter": value  
}
```

#### Example B.1. Set hotspot policy

Set policy “permit” for the Home network. Refer to [Section 3.39.8 on page 293](#) to see how “interface” and “access” parameters are mentioned in the Arguments table.

---

<sup>1</sup>In compliance with RFC 7159.

```
POST /rcl/ip/hotspot/policy HTTP/1.1
Host: 192.168.1.1
Content-length: 48
Content-type: application/json

{
  "interface": "Home",
  "access": "permit"
}
```

### B.1.3.2 Nested resources

Object and array values of a parent object are interpreted as nested resources.

```
{
  "command": {
    "parameter": value
  }
}
```

In particular, empty object denotes a command with no parameters.

```
{
  "command": {}
}
```

Using this rule, you can address multiple resources at a time. RCI engine will process your request from top to bottom, recursing over the JSON structure. Parameters of a parent resource apply to all nested resources within the nearest surrounding scope.

#### Example B.2. Create and enable a PPP interface

Call “interface” to create a new PPPoE connection, as described in [Section 3.25 on page 126](#), and enable it with “interface up”. The “name” parameter applies to both “interface” and “up”.

```
POST /rcl HTTP/1.1
Host: 192.168.1.1
Content-length: 39
Content-type: application/json

{"interface": {"name": "PPPoE1", "up": {}}}
```

### B.1.3.3 Arrays

Arrays can be used to operate on a specific resource multiple times. The important thing is that arrays preserve the order of their elements, in contrast to object members.

```
{
  "command": [
    {"parameter1": value1},
    {"parameter2": value2}
  ]
}
```

### B.1.3.4 Response structure

The structure of POST output strictly corresponds to input. RCI reproduces input arrays and nested objects, and replaces input parameters with output data. This approach lets you locate any part of the response using a resource name.

#### Example B.3. Show version and interface Home

Run two different "show" commands in a certain order.

```
POST /rci/show HTTP/1.1
Host: 192.168.1.1
Content-length: 46
Content-type: application/json

[{"version":{}}, {"interface":{"name":"Home"}]}
```

Response is an array of two elements, in accordance with the request.

```
[{
  {
    "version": {
      "release": "2.12.A.1.0-1",
      "arch": "mips",
      "ndm": {
        "exact": "0-cbf8590",
        "cdate": "15 Jan 2018"
      },
      "bsp": {
        "exact": "0-06ee10b",
        "cdate": "15 Jan 2018"
      },
      "ndw": {
        "version": "0.2.1",
        "features": "wifi_button,single_usb_port,dual_image",
        "components": "base,cloudcontrol,..."
      },
      "manufacturer": "Keenetic Ltd.",
      "vendor": "Keenetic",
      "series": "KN",
      "model": "4G (KN-1210)",
      "hw_version": "10128000",
      "hw_id": "KN-1210",
      "device": "4G",
      "class": "Internet Center"
    }
  },
  {
    "interface": {
      "id": "Bridge0",
      "index": 0,
      "type": "Bridge",
      "description": "Home network",
      "interface-name": "Home",
    }
  }
]
```

```

    "link": "up",
    "connected": "yes",
    "state": "up",
    "mtu": 1500,
    "tx-queue": 1000,
    "address": "192.168.1.1",
    "mask": "255.255.255.0",
    "uptime": 2621,
    "global": false,
    "security-level": "private",
    "mac": "50:ff:20:00:00:08",
    "auth-type": "none"
  }
}
]

```

## B.2 XML Core Interface

**Warning:** XML Core Interface is deprecated and is maintained for backward compatibility.

Explorer provides an HTTP XML API. The API is implemented as /ci resource that accepts POST XML requests and returns XML after the user agent has been authenticated.

If Explorer is reset to factory defaults, authentication is not required.

### Example B.4. XML API call

Execute the “**show interface**” command for the WAN interface named ISP. This interface exists by default in Explorer.

```

POST /ci HTTP/1.1
Host: 192.168.1.1
Connection: keep-alive
Content-Length: 177
Origin: http://192.168.1.1
User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64)
Content-Type: application/xml
Referer: http://192.168.1.1/

<packet ref="/">
  <request id="1" ref="former.ifaces[load]">
    <command name="show interface">
      <name>ISP</name>
    </command>
  </request>
</packet>

```

The device responds with the current status of ISP:

```

HTTP/1.0 200 OK
Server: Ag [47]
Set-Cookie: _authorized=*[; path=/

```

```
Content-type: text/xml
Content-Length: 760

<packet>
    <response id="1">
        <interface name="ISP">
            <mac>ec:43:f6:d3:22:d9</mac>
            <id>FastEthernet0/Vlan2</id>
            <index>2</index>
            <type>VLAN</type>
            <description>Broadband connection</description>
            <link>down</link>
            <connected>no</connected>
            <state>up</state>
            <mtu>1500</mtu>
            <tx-queue>1000</tx-queue>
            <global>yes</global>
            <defaultgw>no</defaultgw>
            <priority>700</priority>
            <security-level>public</security-level>
            <auth-type>none</auth-type>
        </interface>
        <message code="268370345" ident="Network::Interface::Base"
source="">done</message>
    </response>
</packet>
```

The `<request>` element is always sent from the user agent to the device. The device always responds with a `<response>`. The `id` attribute can be used to establish one-to-one correspondence between them.

### Figure B.1. Request Element

```
<request id="identifier">
    <!-- request content -->
</request>
```

### Figure B.2. Response Element

```
<response id="identifier">
    <!-- response content -->
</response>
```

There are two basic types of XML requests:

Command Request	Execute a specific command on the device. Available commands are described in <a href="#">Chapter 3 on page 33</a>
Configuration Request	Get parameters that have been configured by a specific command.

## B.2.1 Command Request

Command request can be used to execute a specific command on the device.

### Figure B.3. Command Request

```
<request id="identifier">
    <command name="command">
        <no/>
        <argument>value</argument>
        ...
    </command>
</request>
```

*command* Space separated name of the command. Available commands are listed in [Chapter 3 on page 33](#).

*argument* Name of the argument. Available arguments for each command are listed in [Chapter 3 on page 33](#). Some commands do not require any arguments.

*value* Value of the argument.

*no* Optional element that is used to negate the action of the command. It has the same effect as the prefix no, see [Section 2.3 on page 29](#).

## B.2.2 Configuration Request

Configuration request can be used to get configured parameters. Web interface uses this kind of request to fill out the HTML forms.

### Figure B.4. Configuration Request

```
<request id="identifier">
    <config name="command" />
</request>
```

## B.2.3 Request Packet

Multiple requests can be arranged in packets to optimize the performance.

### Figure B.5. Request Packet

```
<packet>
    <request id="1">
        <!-- request content -->
    </request>
    <request id="2">
        <!-- request content -->
    </request>
    ...
</packet>
```

Response elements are returned as a packet. Response identifiers are used to bind response elements to requests. If there is no response, an empty `<response/>` element is returned.

**Figure B.6. Response Packet**

```
<packet>
  <response id="1">
    <!-- response content -->
  </response>
  <response id="2"/>
    <!-- no response for id=2 -->
  ...
</packet>
```

# SNMP MIB

Management Information Bases (MIBs) are read-only.

The following MIBs are supported:

## C.1 SNMPv2-MIB

OID: 1.3.6.1.2.1.1

The following data elements are supported:

- SNMPv2-MIB::sysDescr
- SNMPv2-MIB::sysUpTime
- SNMPv2-MIB::sysContact
- SNMPv2-MIB::sysName
- SNMPv2-MIB::sysLocation
- SNMPv2-MIB::sysServices

## C.2 IF-MIB

OID: 1.3.6.1.2.1.2 and 1.3.6.1.2.1.31

The following data elements are supported:

Basical	OID: 1.3.6.1.2.1.2
	<ul style="list-style-type: none"><li>• IF-MIB::ifNumber</li><li>• IF-MIB::ifIndex</li><li>• IF-MIB::ifDescr</li><li>• IF-MIB::ifType</li><li>• IF-MIB::ifMtu</li><li>• IF-MIB::ifSpeed</li><li>• IF-MIB::ifPhysAddress</li><li>• IF-MIB::ifAdminStatus</li></ul>

- IF-MIB::ifOperStatus
- IF-MIB::ifLastChange
- IF-MIB::ifInOctets
- IF-MIB::ifInUcastPkts
- IF-MIB::ifInDiscards
- IF-MIB::ifInErrors
- IF-MIB::ifOutOctets
- IF-MIB::ifOutUcastPkts
- IF-MIB::ifOutDiscards
- IF-MIB::ifOutErrors

**Advanced**

OID 1.3.6.1.2.1.31

- IF-MIB::ifName
- IF-MIB::ifInMulticastPkts
- IF-MIB::ifInBroadcastPkts
- IF-MIB::ifOutMulticastPkts
- IF-MIB::ifOutBroadcastPkts
- IF-MIB::ifHCInOctets
- IF-MIB::ifHCInUcastPkts
- IF-MIB::ifHCInMulticastPkts
- IF-MIB::ifHCInBroadcastPkts
- IF-MIB::ifHCOutOctets
- IF-MIB::ifHCOutUcastPkts
- IF-MIB::ifHCOutMulticastPkts
- IF-MIB::ifHCOutBroadcastPkts
- IF-MIB::ifLinkUpDownTrapEnable
- IF-MIB::ifHighSpeed
- IF-MIB::ifPromiscuousMode
- IF-MIB::ifConnectorPresent
- IF-MIB::ifAlias

- IF-MIB::ifCounterDiscontinuityTime

Main chipset	Switch	Device	Description
MT7621/RT63368	MT7530	Keenetic Giga III	64-bit per port octet counters. 32-bit per port packet counters. Separate per port broadcast, multicast and unicast packet counters.
	RTL8370M	Keenetic Ultra II Keenetic LTE	
MT7620	RTL8367B	Keenetic Viva	
		Keeentic Extra	
	Integrated	Keenetic 4G III	32-bit per port octet counters & 16-bit per port packet counters. Last counter overflow event time set in IF-MIB::ifCounterDiscontinuityTime.
		Keenetic Lite II	
		Keenetic Lite III	
		Keenetic Omni	
		Keenetic Omni II	
MT7628	Integrated	Keenetic Start II	16-bit per port packet counters only. Last counter overflow event time set in IF-MIB::ifCounterDiscontinuityTime.
		Keenetic Lite III rev.B	
		Keenetic 4G III rev.B	
		Keenetic Air	
		Keenetic Extra II	

## C.3 IP-MIB

OID: 1.3.6.1.2.1.6

The following data elements are supported:

- TCP-MIB::tcpRtoAlgorithm
- TCP-MIB::tcpRtoMin
- TCP-MIB::tcpRtoMax
- TCP-MIB::tcpMaxConn
- TCP-MIB::tcpActiveOpens
- TCP-MIB::tcpPassiveOpens
- TCP-MIB::tcpAttemptFails

- TCP-MIB::tcpEstabResets
- TCP-MIB::tcpCurrEstab
- TCP-MIB::tcpInSegs
- TCP-MIB::tcpOutSegs
- TCP-MIB::tcpRetransSegs
- TCP-MIB::tcpInErrs
- TCP-MIB::tcpOutRsts

## C.4 UDP-MIB

OID: 1.3.6.1.2.1.7

The following data elements are supported:

- UDP-MIB::udpInDatagrams
- UDP-MIB::udpNoPorts
- UDP-MIB::udpInErrors
- UDP-MIB::udpOutDatagrams
- UDP-MIB::udpHCInDatagrams
- UDP-MIB::udpHCOutDatagrams

## C.5 HOST-RESOURCES-MIB

OID: 1.3.6.1.2.1.25

The following data elements are supported:

- HOST-RESOURCES-MIB::hrSystemUptime

## C.6 UCD-SNMP-MIB

OID 1.3.6.1.4.1.2021

The following data elements are supported:

<b>RAM info</b>	<ul style="list-style-type: none"><li>• UCD-SNMP-MIB::memTotalReal</li><li>• UCD-SNMP-MIB::memAvailReal</li><li>• UCD-SNMP-MIB::memShared</li><li>• UCD-SNMP-MIB::memBuffer</li></ul>
-----------------	---

- UCD-SNMP-MIB::memCached
- USB-storage info**
- UCD-SNMP-MIB::dskIndex
  - UCD-SNMP-MIB::dskPath
  - UCD-SNMP-MIB::dskTotal
  - UCD-SNMP-MIB::dskAvail
  - UCD-SNMP-MIB::dskUsed
  - UCD-SNMP-MIB::dskPercent
  - UCD-SNMP-MIB::dskPercentNode
- System load info**
- UCD-SNMP-MIB::laIndex
  - UCD-SNMP-MIB::laNames
  - UCD-SNMP-MIB::laLoad
  - UCD-SNMP-MIB::laConfig
  - UCD-SNMP-MIB::laLoadInt
  - UCD-SNMP-MIB::ssCpuRawUser
  - UCD-SNMP-MIB::ssCpuRawNice
  - UCD-SNMP-MIB::ssCpuRawSystem
  - UCD-SNMP-MIB::ssCpuRawIdle
  - UCD-SNMP-MIB::ssRawInterrupts
  - UCD-SNMP-MIB::ssRawContexts

# IPsec Encryption Levels

The encryption level defines a set of *IKE* and *IPsec SA* algorithms.

Below a complete list of algorithms is displayed for each level in order of decreasing priority, as well as a set of commands **crypto ike proposal** to setup this profile manually.

In the list of algorithms is indicated:

- encryption with key length
- hash function for *HMAC* forming
- *PFS* mode (NO if disabled)

## D.1 weak

Protocol	Encryption	Proposal
IKEv1	AES-128-CBC/SHA1/MODP1024	encryption aes-128-cbc
	AES-128-CBC/SHA1/MODP768	encryption 3des
	AES-128-CBC/MD5/MODP1024	encryption des
	AES-128-CBC/MD5/MODP768	integrity sha1
