1 PASSAGE CONTROL

PC 1 (PK 105) (Refuelling Bikes)

OPENING NOTES

The wind has blown again in this area as yesterday, in a lot of places.
You will have to follow the traces with attentiveness when it's less visible.
The navigation is still tricky in some part on the special stage.
Nice stage, various landscape with dunes crossing.

BRIEFING NOTES

- Stage 95% sandy surface
- Mainly on a main track but again erased by the wind of last days. Follow the caps trying to keep the bearing even if the track is missing.
- Generally, portions of main track not visible between dunes and dunettes.
- The dunes that cross partially the main track are in some places quite demanding. Specially around km 80, km 187
- Some camel camps detected while opening and were marked on modifications notes. Attention while driving next to camps, animals and locals moving around.
- Refueling have to be done in the neutralisation zone not before and not after close to CP and Firemen.
