## Appendix 7 – Safety Tracking System

1. The PZM-GPS safety tracking system unit is installed by the PZM-GPS service team.
2. The PZM-GPS safety tracking system unit is owned by PZM and will be removed after the end of the Rally.
3. You will be given a receipt that will authorize you to collect the documents from the Rally's Office.
4. In case a team withdraws from the Rally the PZM-GPS safety tracking system unit should be returned to the PZM-GPS servicemen who will be available at the Service Park or it should be delivered to the Rally's Office.

### Mode of operation PZM-GPS safety tracking system

The PZM-GPS safety tracking system installed in your vehicle during the Rally sends a signal to the Rally Command Centre (RCC). The system is working only on Special Stages and is activated automatically, so it doesn't need any operation before start and after finish the SS.

In case of stopping the car on the SS system is sending the warning signal to the car unit. The lamps in manipulator panel (Green and Red) start blinking. That means that operator of RCC see the car standing on the SS and expect to have the information from the crew. Within 1 minute from stopping over the Special Stage the driver or the pilot should press the proper button to clarify the situation.

**PRESSING the GREEN BUTTON** means that there is **NO NEED** to send the emergency service (OK).

*To avoid accidental activation, the GREEN button must be depressed for 2 seconds. Correctly pressing the green button will be confirmed by short blink of green lamp in the button and acoustic signal (two short loud beeps).*

**NOT PRESSING the GREEN BUTTON** within 1 minute after stop on the SS means the necessity of an assistance and it will initiate the intervention of the emergency service.

In case of emergency, when the crew would need any help form RCC the **RED BUTTON** should be pressed. Depressing the **RED BUTTON** means the emergency and the crew need help for themselves or for somebody else (for example, if they noticed any dangerous situation over the SS).

*To avoid accidental activation, the RED button must be depressed for 2 seconds. Correctly pressing the red button will be confirmed by short blink of red lamp in the button and acoustic signal (two short loud beeps)*

Within few second after depressing any button, the lamp inside them will light constantly. That means the information from the car is received by RCC and the status of the car is known by the RCC operator.

In case of any needs the operator of Rally Control Centre can send to the Rally crew a reminding signal (series of short beeps) and blinking the **YELLOW LAMP**. The reminding signal can be cancelled by pressing any proper button on manipulation panel.

In case of any problems with the PZM-GPS safety tracking system the PZM-GPS service team will help you in the Service Park.
