

To save vaccine for the last mile transportation

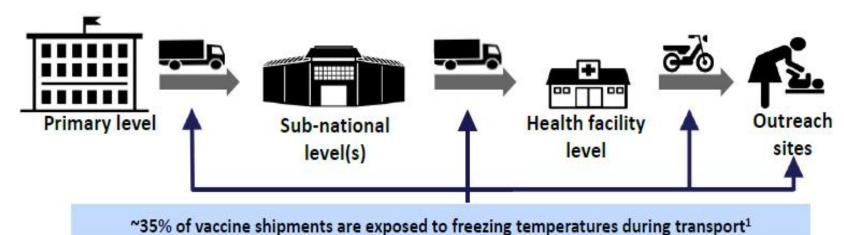

We are always dedicated to be innovated to improve the cold chain solution for vaccine storage and transportation.

Why freeze free

High Freezing risk

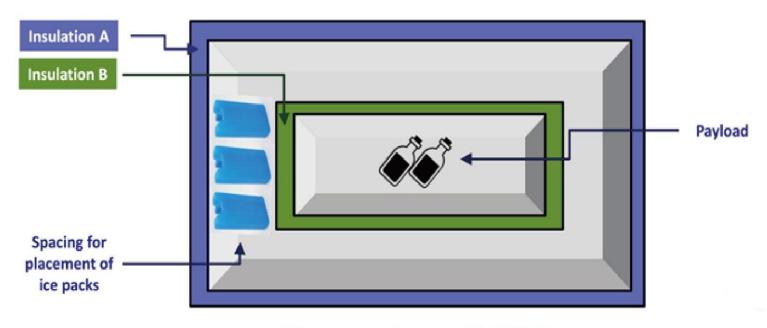

According to WHO research, approx. 35% of vaccines in transport exposed to freeze excursions, due to:

- √ Ice packs not properly preconditioned
- ✓ Ice packs improperly packed in box
- ✓ Ice packs in direct contact with antigens

So WHO PQS has issued new specifications for carriers with freeze prevention technology to encourage manufacturers to develop and the users to select the upgraded models: WHO/PQS/E004/VC02-VP.1

It is the time to make a change.

Fortunately, specialists from some organizations have been developed new technology to make new standard carrier and box to avoid vaccine freezing during transportation, it is named Freeze Free Vaccine Carrier and Freeze Free Cold box.

Picture from PATH

What we have been doing in the process

Upon receiving the new standard, our technicians have been designed the FFVC and FFCB according to new PQS standard. As the first mover of freeze free vaccine packages, we have passed the WHO certified laboratory test and start to promote the new standard products. We believe that our products can help greatly reducing the going-bad rate during vaccine transportation and bring more benefits to people from vaccine big demand area.

What is the difference

Freeze free type:

- ✓ Insulation between vaccine and the ice packs
- ✓ The insulation absorb the excess cool energy from ice pack
- ✓ No need to condition ice pack, direct use from freezer @-25C
- ✓ There is no point inside the vaccine compartment lower than 0C
- √ 100% safe even for unskilled user
- √ 0% waste of precious vaccine

Traditional type:

- ✓ Direct contacts of the vaccine and ice packs
- ✓ The raw ice packs temperature is around -15C
- ✓ Users must condition the ice pack before using by trained user
- ✓ vaccine will be influenced if the ices are not well conditioned
- ✓ High risk of spoil for vaccine during transportation
- ✓ around 35% precious vaccine with high risk to loss effect

VS

✓ No need condition, put ice pack directly

VS

√ 100% sure that no vaccine shall be frozen.

VS

✓ Get immunization without pressure

VS

? Are you sure ice packs conditioned well already

? If you worry ice pack might freeze vaccines inside

? Are you sure my vaccine well kept during transportation

P How many frozen vaccine vials you have to throw today

√ 100% vaccine completely for immunization

What we propose

A safe Freeze Free Vaccine Carrier

What we propose

Our FFVC Advantage:

- ✓ With moulded strong and soft foam pad to hold different size vaccine vials which can be very conveniently to the nurse during immunization process;
- ✓ User friendly designed backpack to hold the carrier which is considerate for the nurse to carry for a long time walk.
- ✓ Furthermore, a light reflection belt can make the doctor much more visible and safer in the night walking;
- ✓ Optional chargeable mono-crystaline high efficient solar panel to charge the nurse's mobile or other electronic devices during vaccination.

What we propose

WHO/PQS Listed:

E004: Insulated containers

PQS code: E004/051

Description: Freeze-Free

Vaccine carrier

Long range

Manufacturer's reference:

FFVC-1.7L

Manufactured in: China; People's Republic of

Company: Qingdao Leff International Trading Co Ltd

Address: C204, #222, Shenzhen Road

Qingdao, China

Telephone: + 86 532 88961819
