EVM

Setting a standard for the
vaccine supply chain

TechNet-21

The Technical Network for
Strengthening Immunization Services

EVM1 Framework

Criteria & Requirements

EVM assesses each level of the supply chain

Primary level (PR):

Vaccine stores that receive vaccine direct from an international vaccine manufacturer or distributors or a local vaccine manufacturer.

Sub-national level (SN):

Vaccine stores that receive vaccine from a primary store or higher level sub-national store. There may be 0, 1, or more SN levels.

Lowest distribution level (LD):

Vaccine stores that receive vaccine from a primary level or a sub-national store and supply vaccine to one or more health facilities.

Service point level (SP):

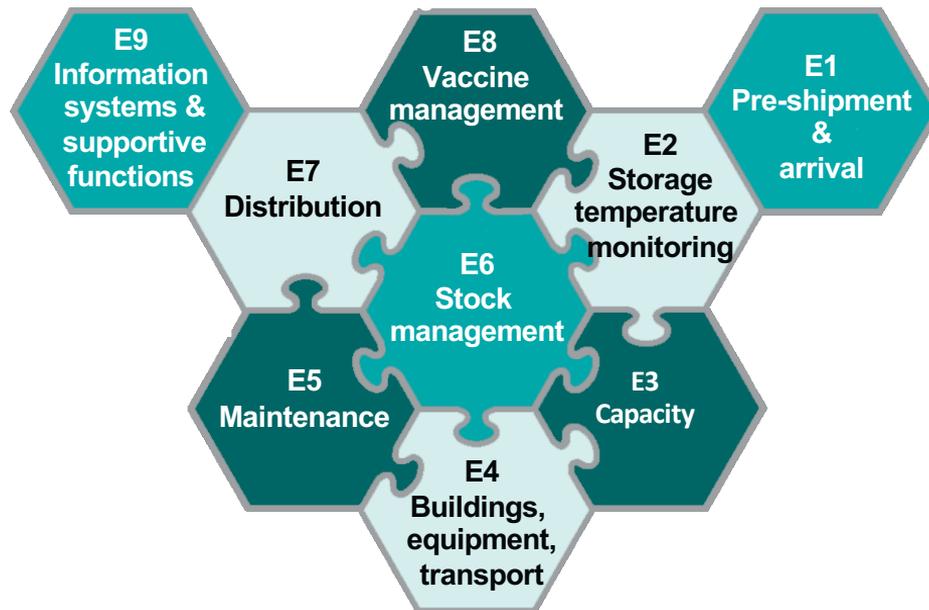

Facilities that receive vaccine from any higher level store and supply immunization services.

Criterion Scores

- A representative sample of sites is selected at each level of the supply chain.
- Each of the 9 EVM Criteria is assessed at each supply chain level by observation, inspection of infrastructure and records, and by interview of staff.
- Inputs, process and performance indicators are evaluated in each of the 9 areas at each level.
- Indicator scores are combined to give criterion scores for each area at each level.
- An area of vaccine management is considered “Effective” if its criterion score is greater than or equal to 80% - the EVM standard.

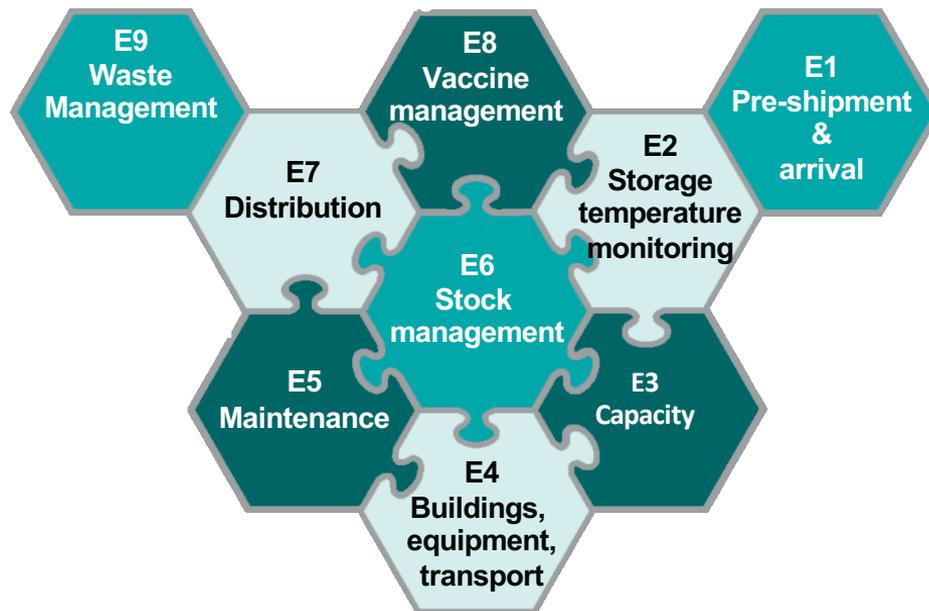

EVM assesses 9 areas of vaccine management – the 9 EVM “Criteria”

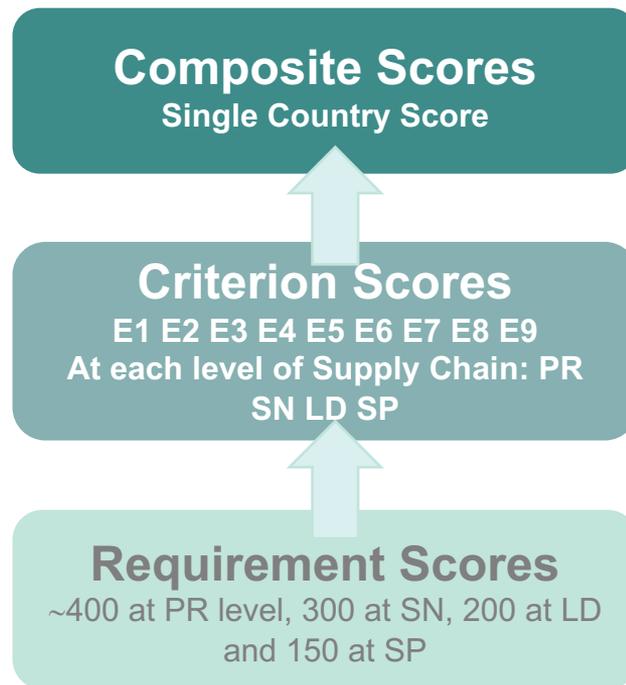

Criterion Scores

EVM1 Global Data Analysis

EVM1 Assessments

Where & When?

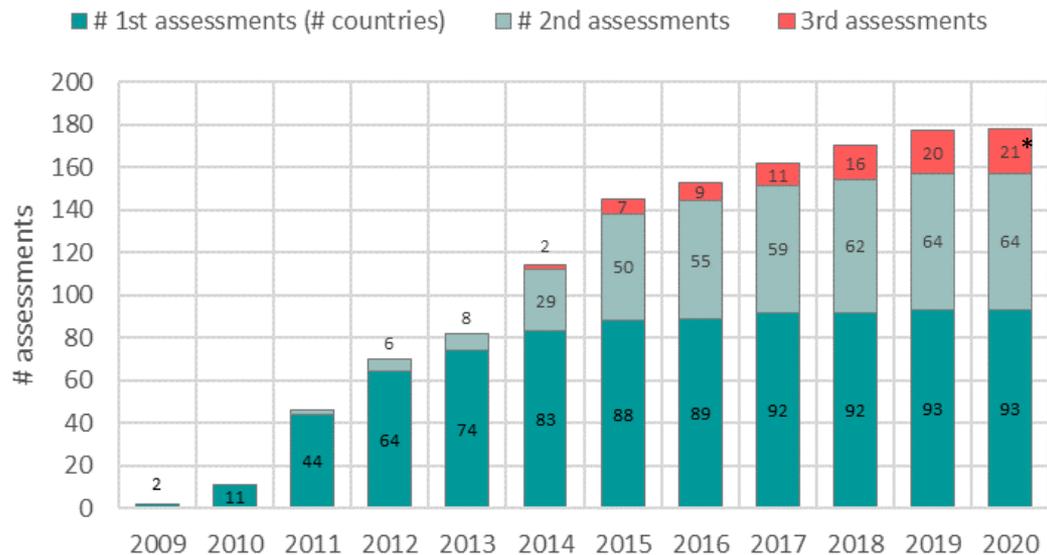

*Where a country has conducted 2 or more assessments, only the most recent is included.

Update: WHO EVM1 database, July 2021

EVM – setting a standard for the vaccine supply chain

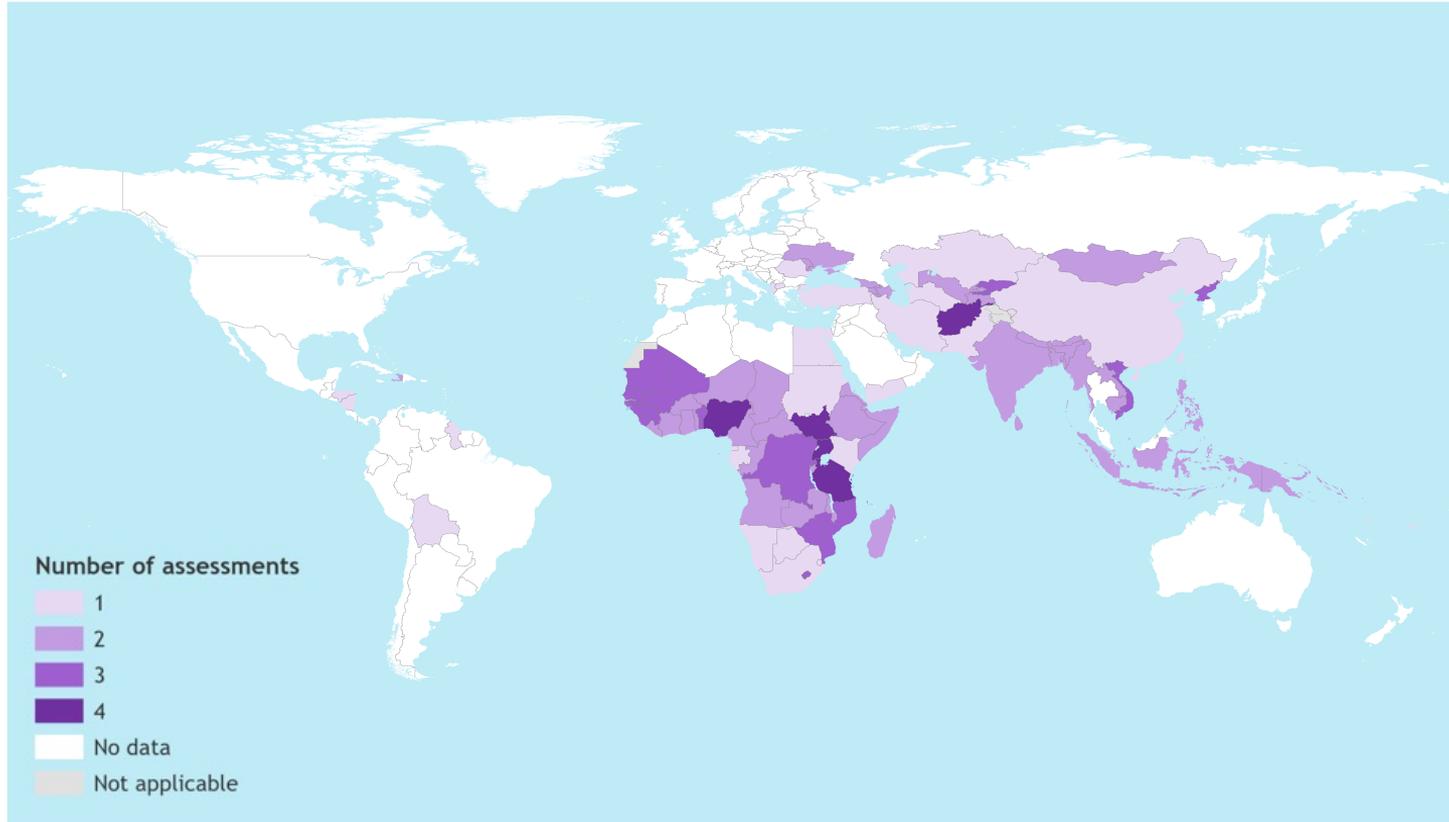

Assessments (2009-2020)

Cumulative number of EVM assessments

*The last EVM1 assessment was in 2020 and the first EVM2 assessment was in 2019 (<https://extranet.who.int/evm2/web/Public>).

Countries (2009-2020): Assessments Completed

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement.

Data Source: EVM Assessments 2009-2020
Map Production: WHO GIS Centre for Health, DNA/DDI

EVM1 Criterion Scores

(most recent assessments only*)

2009-2020

*Where a country has conducted 2 or more assessments, only the most recent is included.

Update: WHO EVM1 database, July 2021

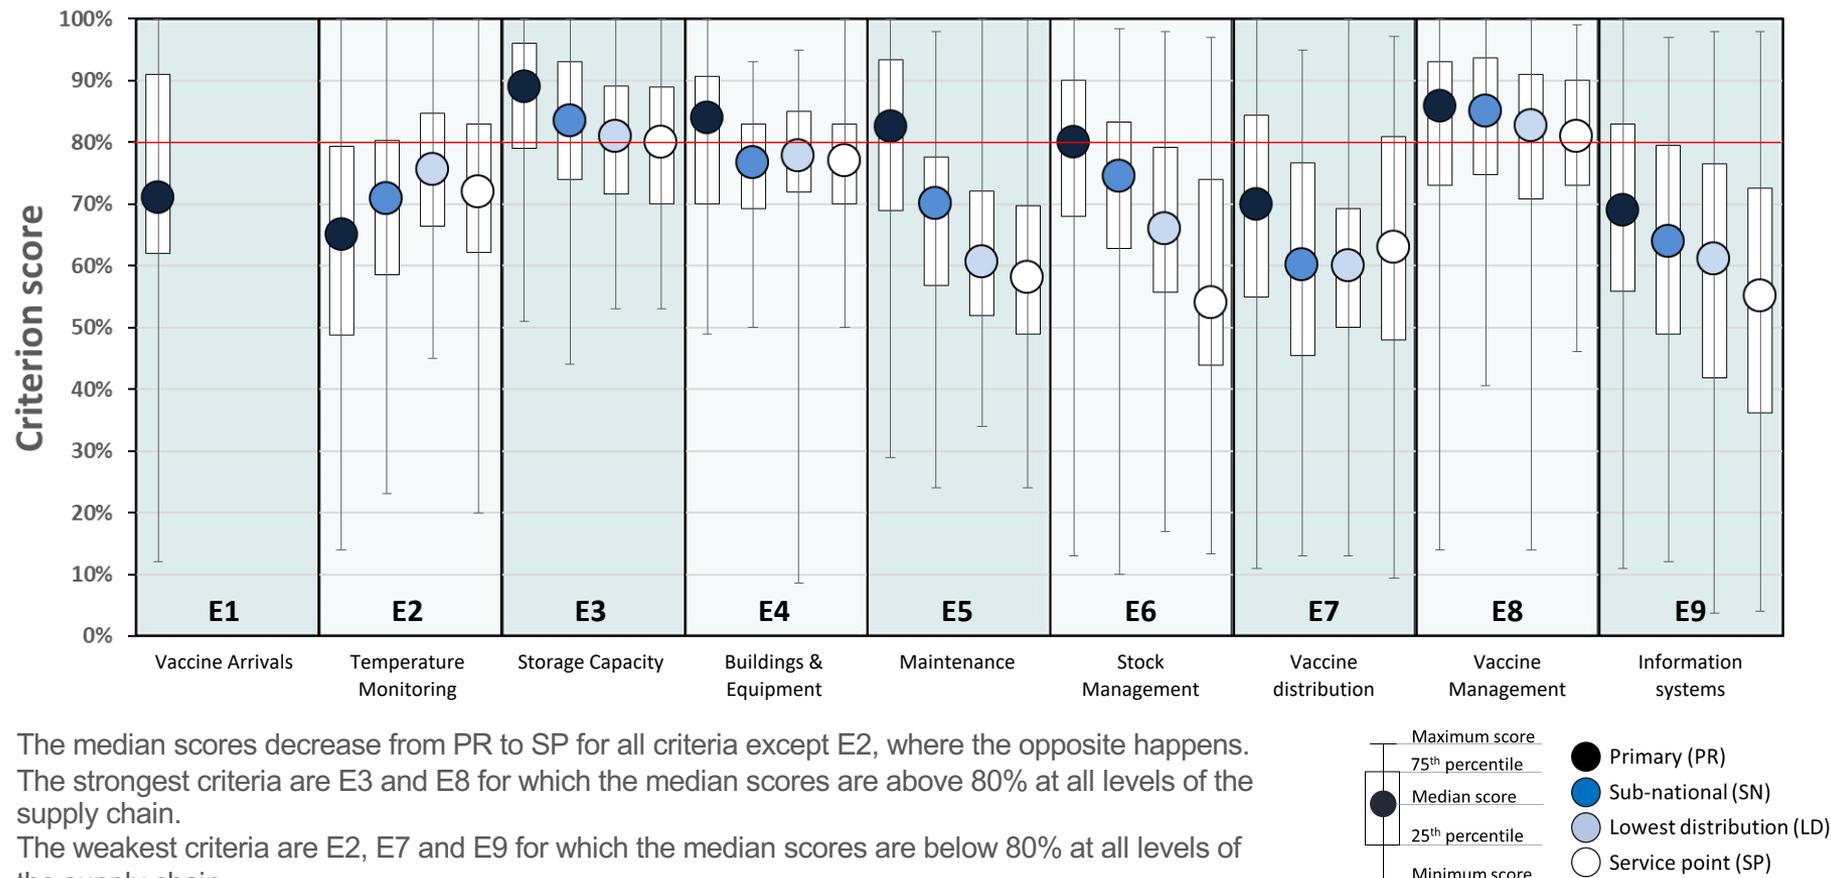

EVM – setting a standard for the vaccine supply chain

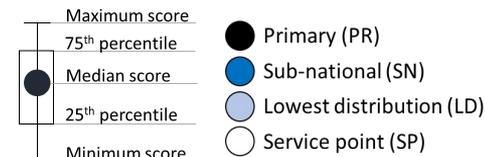

World Health
Organization

unicef 

Criterion Scores (2009-2020)

- ❑ The median scores decrease from PR to SP for all criteria except E2, where the opposite happens.
- ❑ The strongest criteria are E3 and E8 for which the median scores are above 80% at all levels of the supply chain.
- ❑ The weakest criteria are E2, E7 and E9 for which the median scores are below 80% at all levels of the supply chain.

Criterion Scores by Region

(most recent assessments only)

2009-2020

Update: WHO EVM1 database, July 2021

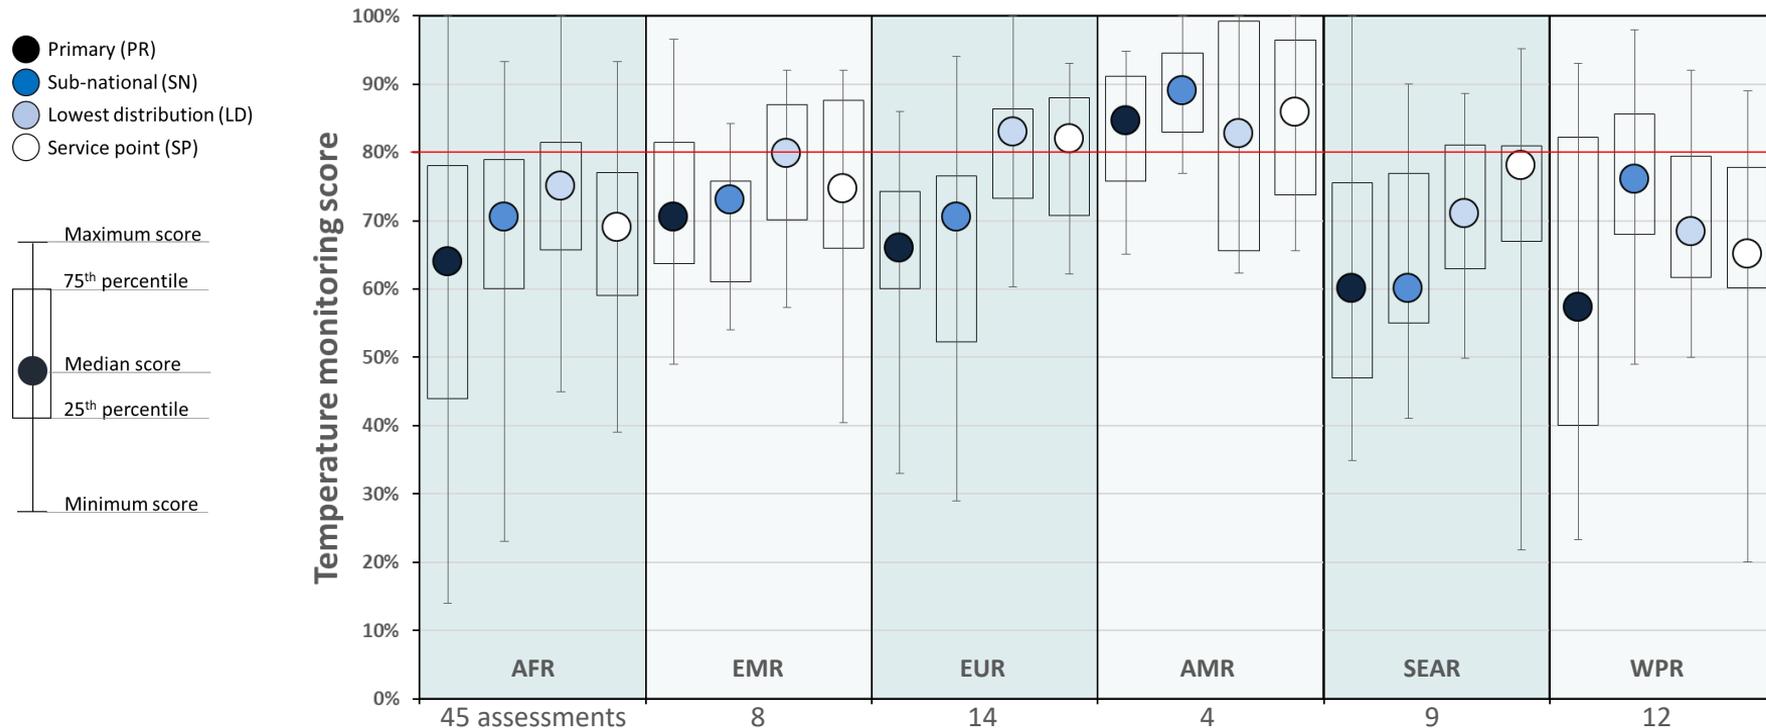

EVM – setting a standard for the vaccine supply chain

World Health
Organization

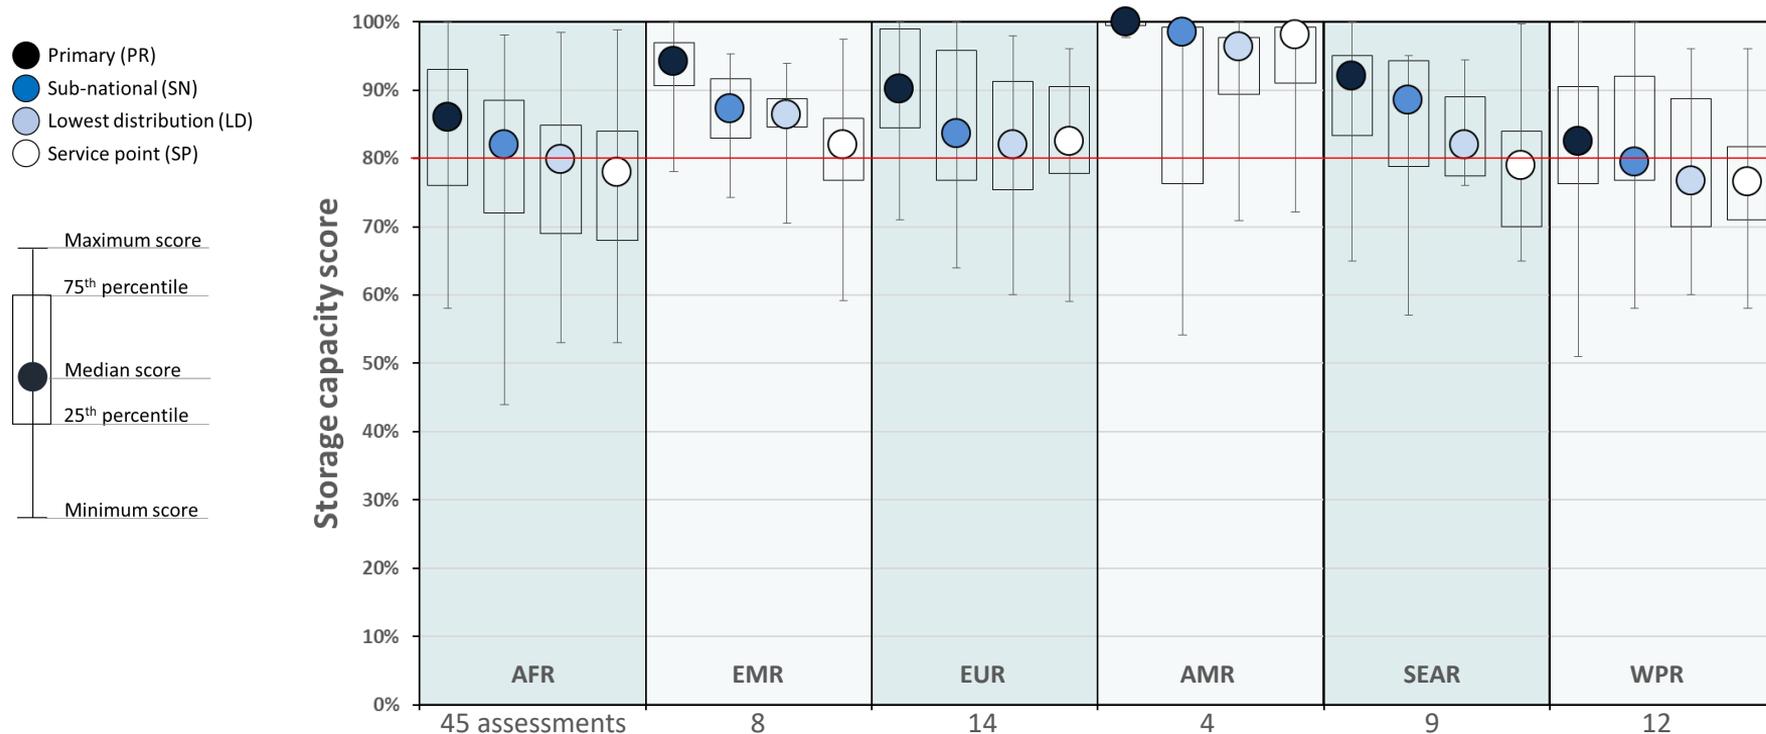

E2 Temperature Monitoring (2009-2020)

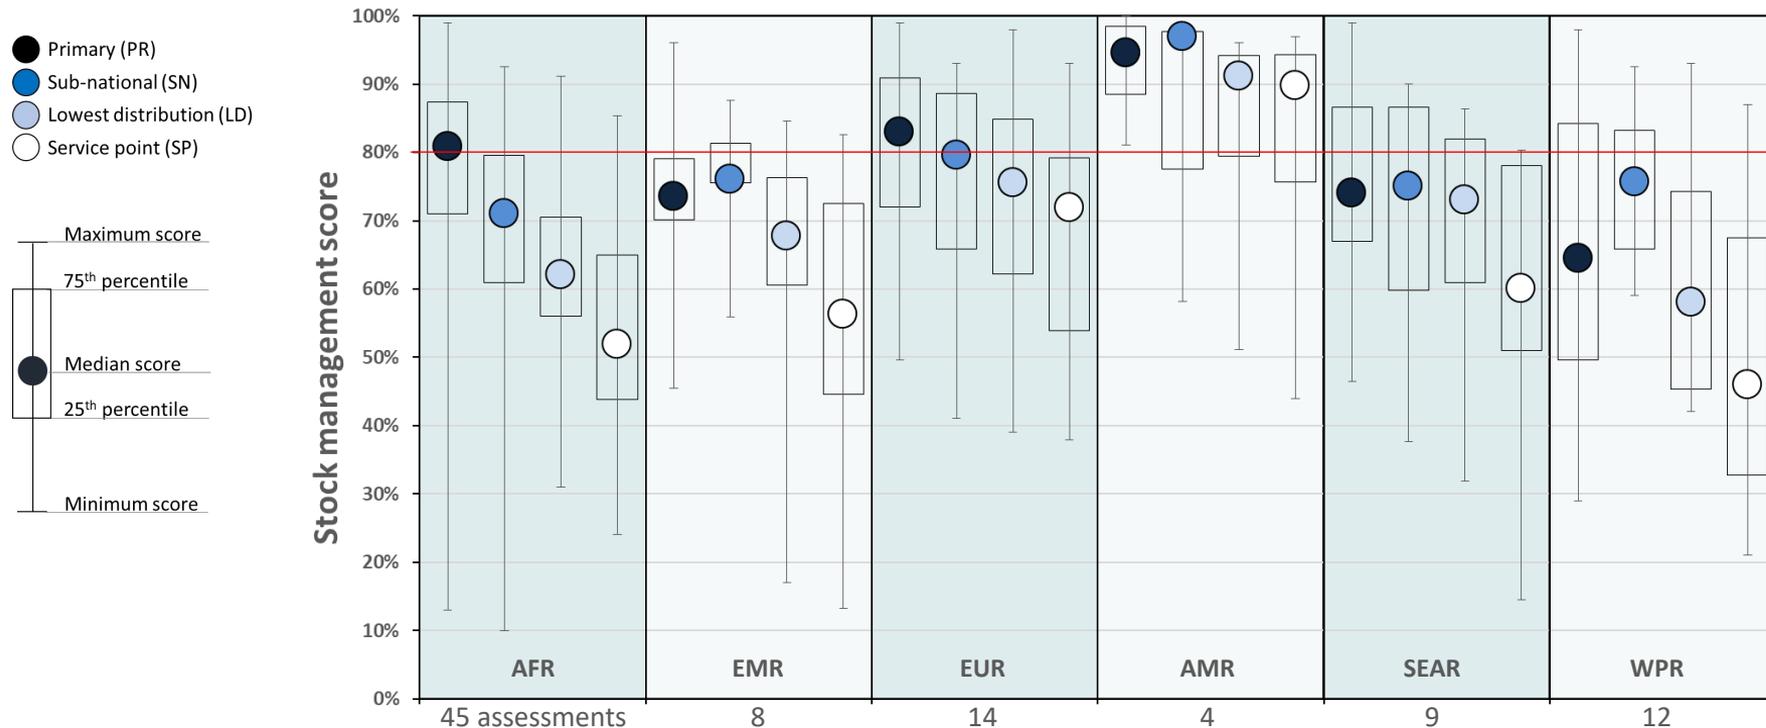

- ❑ Apart from in EUR and AMR, few countries meet the EVM standard for temperature monitoring, at any level.
- ❑ In EUR, more than 50% of the countries assessed meet the standard at LD and SP levels.
- ❑ In AMR, more than 50% of the countries assessed meet the standard at all levels.

E3 Storage and transport capacity (2009-2020)

- ❑ The median scores decrease from PR to SP in all regions.
- ❑ The median scores are above 80% at each supply chain level in all regions except at SP levels in AFR and WPR, and at LD in WPR.

- ❑ The median E6 score decreases from PR to SP in all regions.
- ❑ The median scores are below 80% at all levels in all regions except at PR level in AFR and EUR, and all levels in AMR.

Criterion Scores Evolution

1st assessment versus
last assessment (64 countries)

2009-2020

Update: WHO EVM1 database, July 2021

EVM – setting a standard for the vaccine supply chain

World Health
Organization

unicef 

Mean criterion scores (64 countries)

● 1st Assessments
 ■ Last Assessments

- Moderate improvement at PR, SN and LD levels.
- Little or no improvement at SP level.

- Significant improvement in E3 and E8.
- Moderate improvement in E1, E6 and E7.
- No improvement in E2 and E5.

*The E2 and E9 standards were set higher in 2012.

AFR mean criterion scores (36 countries)

● 1st Assessments
 ■ Last Assessments

Consistent improvement at all levels.

Significant improvement in all criteria.

Selected Indicator Scores

Most recent assessments only

2009-2020

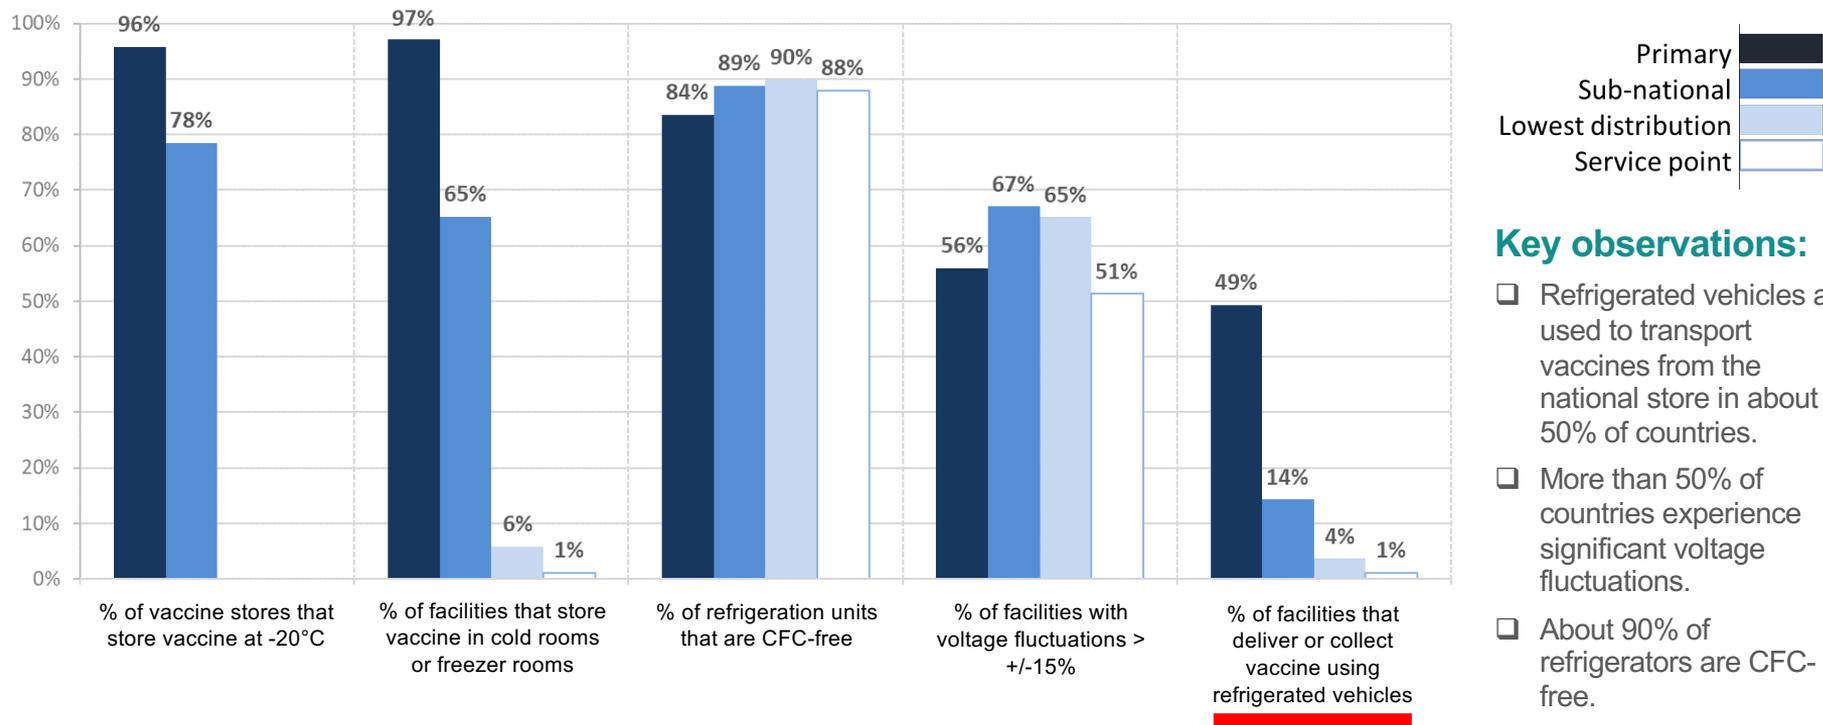

Update: WHO EVM1 database, July 2021

EVM – setting a standard for the vaccine supply chain

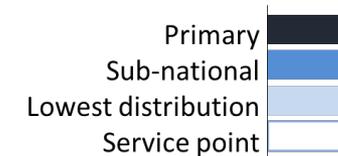

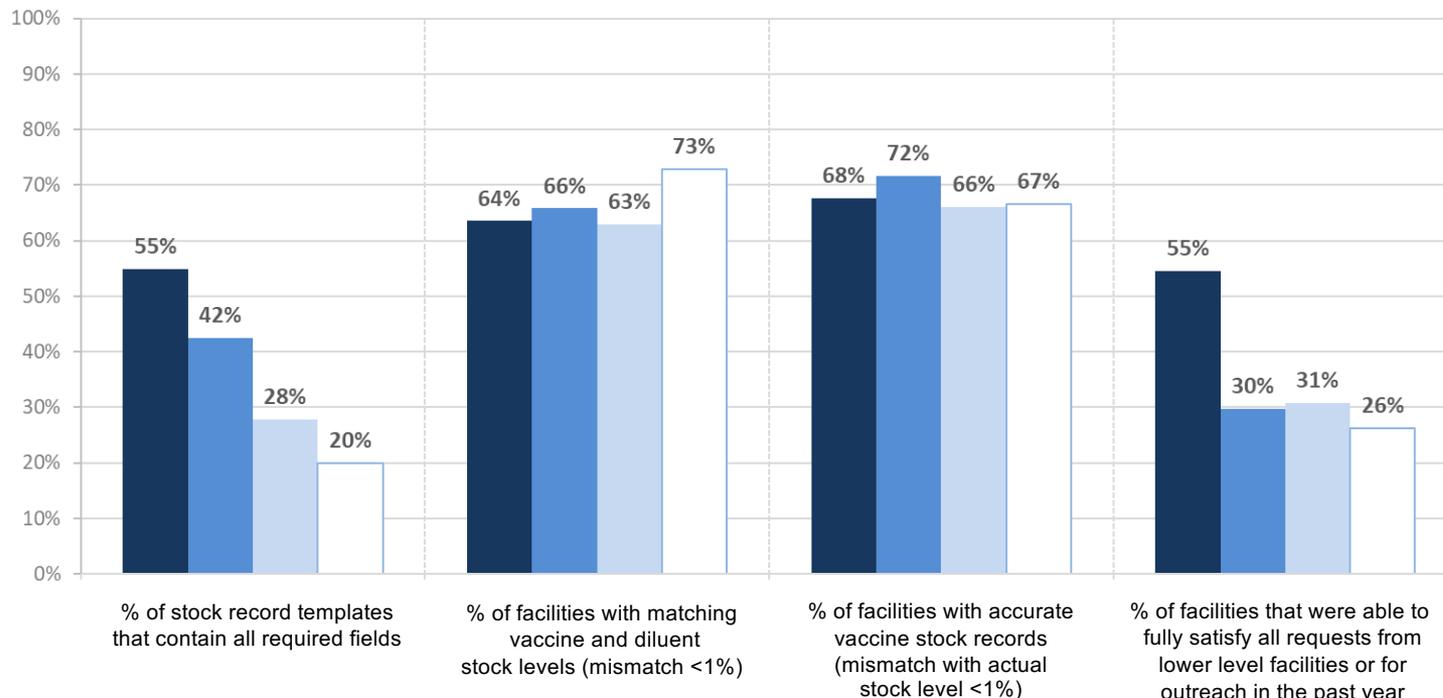

World Health
Organization

unicef 

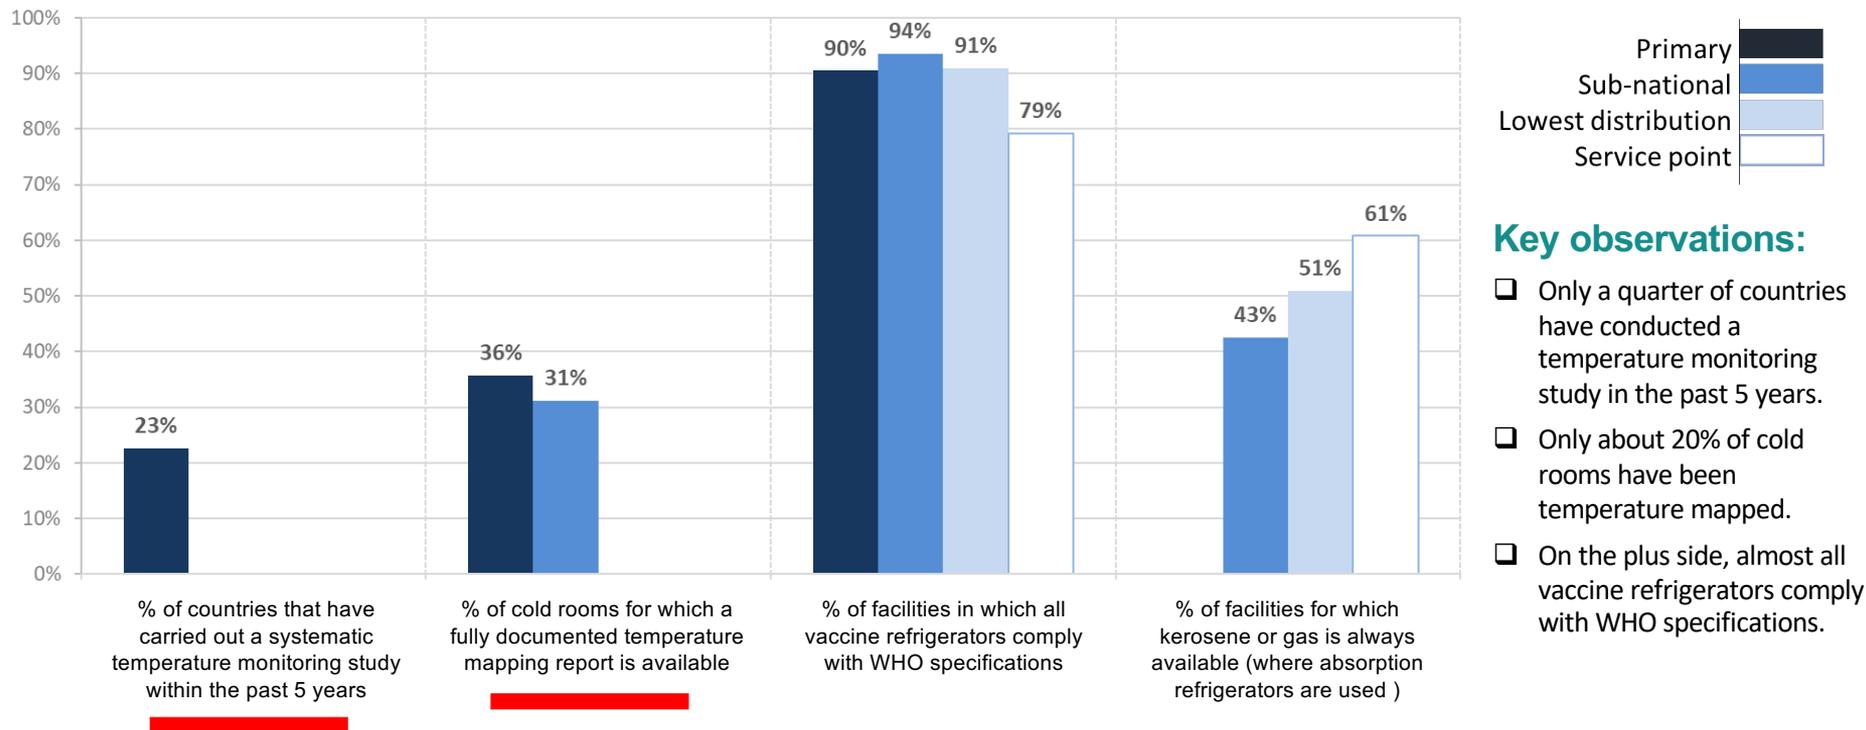

Key observations:

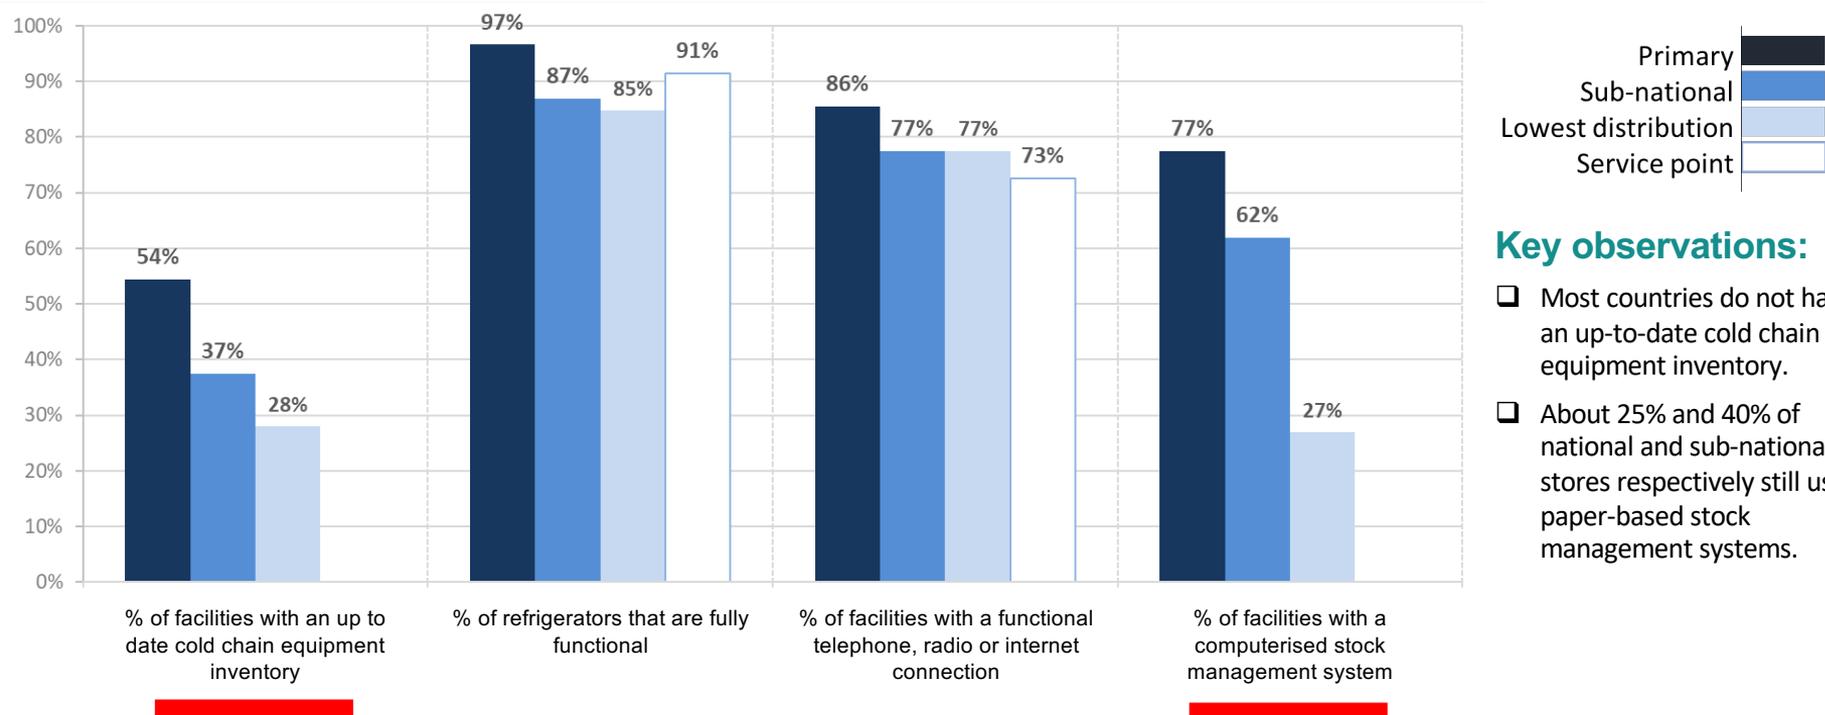

- Refrigerated vehicles are used to transport vaccines from the national store in about 50% of countries.
- More than 50% of countries experience significant voltage fluctuations.
- About 90% of refrigerators are CFC-free.

Key observations:

- Most of the stock record templates in use do not contain all of the recommended fields.
- A third of stores and facilities at each level of the supply chain have inaccurate stock records.
- Vaccine and diluent stock levels match in about two thirds of stores and facilities.
- Most stores and facilities have been unable to meet demand on at least one occasion in the year preceding assessment.

Key observations:

- ❑ Most countries do not have an up-to-date cold chain equipment inventory.
- ❑ About 25% and 40% of national and sub-national stores respectively still use paper-based stock management systems.

Selected Indicator Scores

1st assessment versus
last assessment (64 countries)

2009-2020

Update: WHO EVM1 database, July 2021

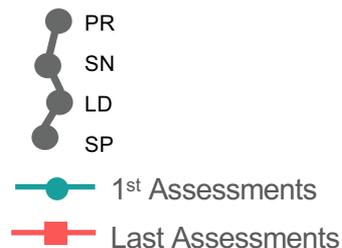

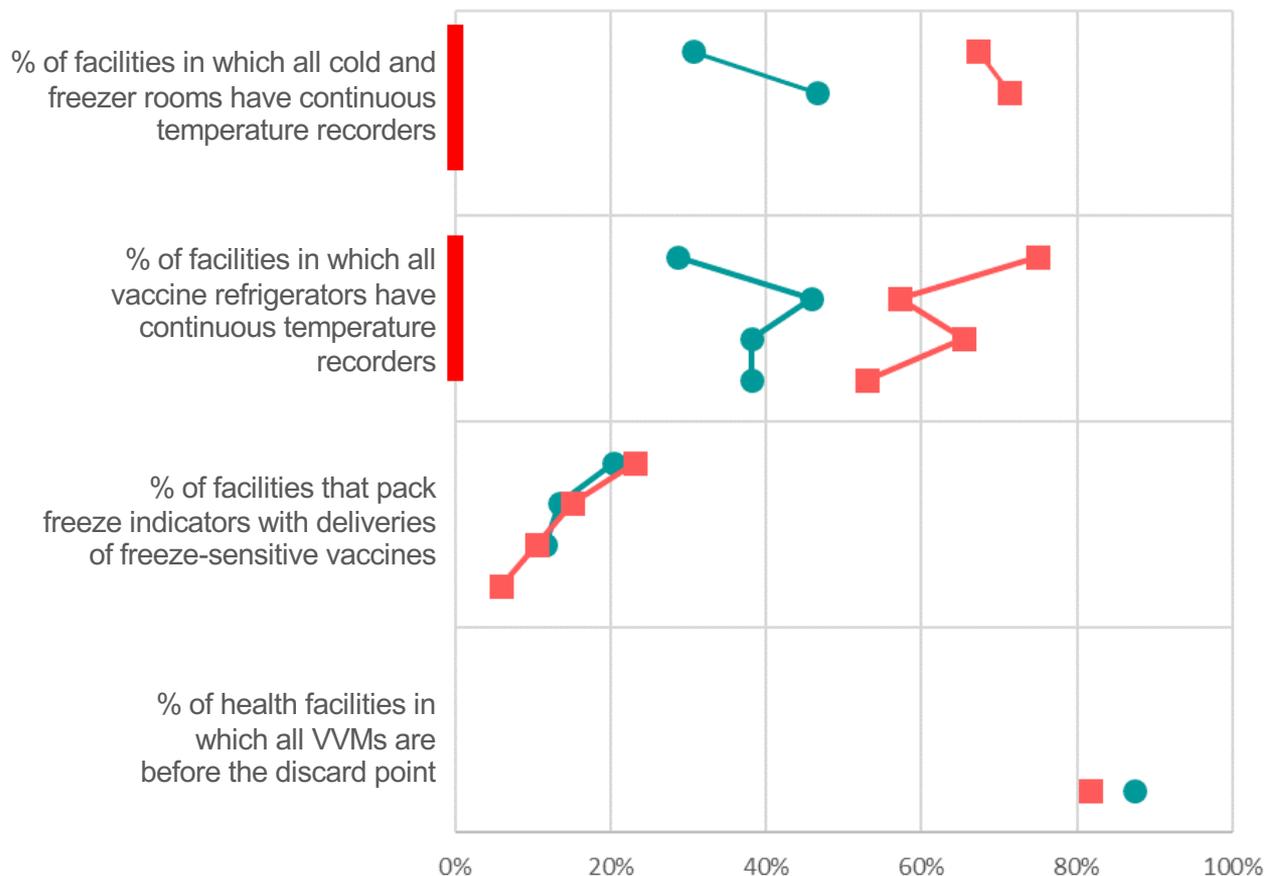

EVM – setting a standard for the vaccine supply chain

World Health
Organization

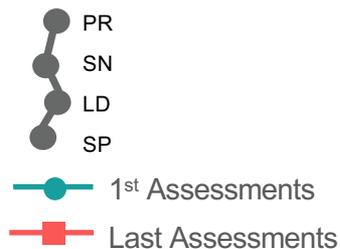

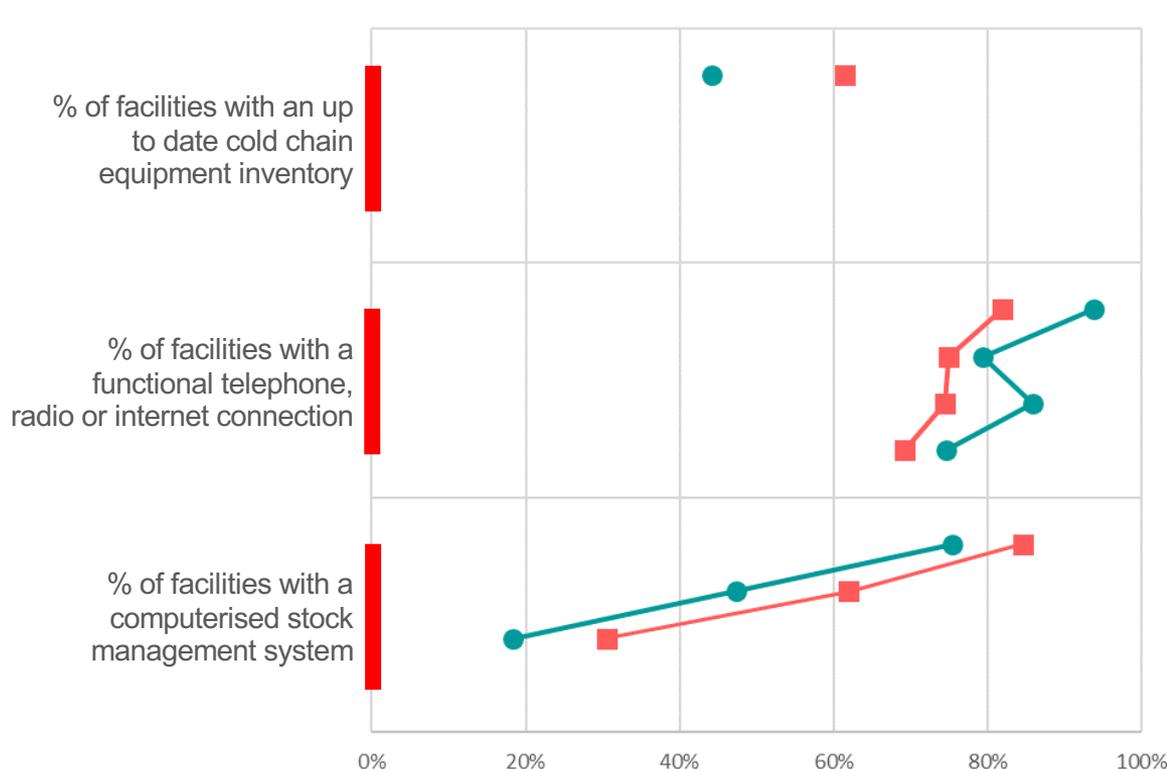

Quality indicators 2 (64 countries)

Key observations:

- More cold rooms are being equipped with continuous temperature monitoring systems.
- Countries are equipping refrigerators with 30DTRs at all levels of the supply chain.
- Freeze indicators are still not being routinely packed with freeze sensitive vaccine when transported with conditioned ice-packs.
- A slight increase in the number of VVMs beyond the discard point at health facilities.

Key observations:

- ❑ A significant increase in the number of national stores with up-to-date cold chain equipment inventories.
- ❑ The number of health facilities with a functional landline telephone or internet connection has decreased.
- ❑ Increase at all levels in the percentage of facilities with computerised stock management systems.

A function requires inputs (e.g. staff, equipment) to achieve its desired outcome or performance (e.g. profit).

A function generates outputs as it is carried out (e.g. records can be inspected, practice can be observed).

EVM2 Framework

- EVM2 sets standards for the immunization supply chain.
- EVM2 sets standards for the inputs, outputs and performance of supply chain functions.
- EVM2 sets standards for functions carried out at vaccine stores and immunization service points.
- EVM2 sets standards for functions carried out at the program management level.
- The input standards are grouped into 6 different categories, similar to the factors of production.
- EVM standard = EVM requirement.

EVM2 Framework – Facility Operations & Management
