Penta	75%	78%	100%

Sierra Leone – COVID-19 Shipments, Expiry tracking and Wastage

Thrive360 Data Analysis example

Sierra Leone: iSC challenges, risks and mitigation

Major iSC risks

- Waste generated by COVID-19 activities, especially at health facility levels.
- Over 200,000 doses of AstraZeneca vaccines are set to expire. Over 400,000 doses will expire in the next 60 days.
- Decreasing risk perception slowing vaccine utilization. Two malfunctioning WIFs

Mitigation efforts

- Another mop-up campaign conducted to avoid expiry of large quantities of vaccines
- Technician engaged to repair the WIFs
- Funds were mobilized to improve Covid-19 vaccine coverage and utilization.

Action points

- Follow up with reports on the status of expiring vaccines.
- Follow up with the repair of WIF
- Finalize Stock balance.

Stockouts (in the next 60 days)

- A quarter of the stores reported stockouts of Penta
- About a fifth of the stores reported zero or less than 300 doses of IPV, Yellow fever, bOPV and PCV

Reasons

- Poor data visibility
- Delay in PO appraisal
- Poor implementation of Min, max and reorder

Mitigation

- Purchase order for Penta raised by CO
- Online SMT is being deployed to improve RI visibility and accountability

Major VMS contributions

- a. Supporting the NLWG/EPI in strengthening stock management systems and downstream distribution planning.
- b. Supporting Forecasting and linkages to CO for shipment planning
- c. Supported the MOH to capture vaccine stock at the National level into the eSMT platform.
- d. Supported EPI programme to forecast the AVAT COVAX vaccine for 2nd and 3rd quarter.
- e. Supported coding of the health facilities into the EVM assessment template
