Water for villages in Africa

River pumping systems will be electrical or diesel generated, located near the river . The pump station will be fenced and roofed. The pumping will start from a small reservoir near the station to the MMF water tank with sanitation and transferring purified water to the village .

Multi media filtering system

20 m³/h Drinking water system
drawing in a container

Main phases in the process:

1. Pressure water supply facility 30m
2. Injection of liquid chlorine to disinfect the water and prevent the formation of bacterial cultures before filtering
3. Create clusters alum injection before filtering
4. Deep bed filtration

Multi media filtering system

Water distribution

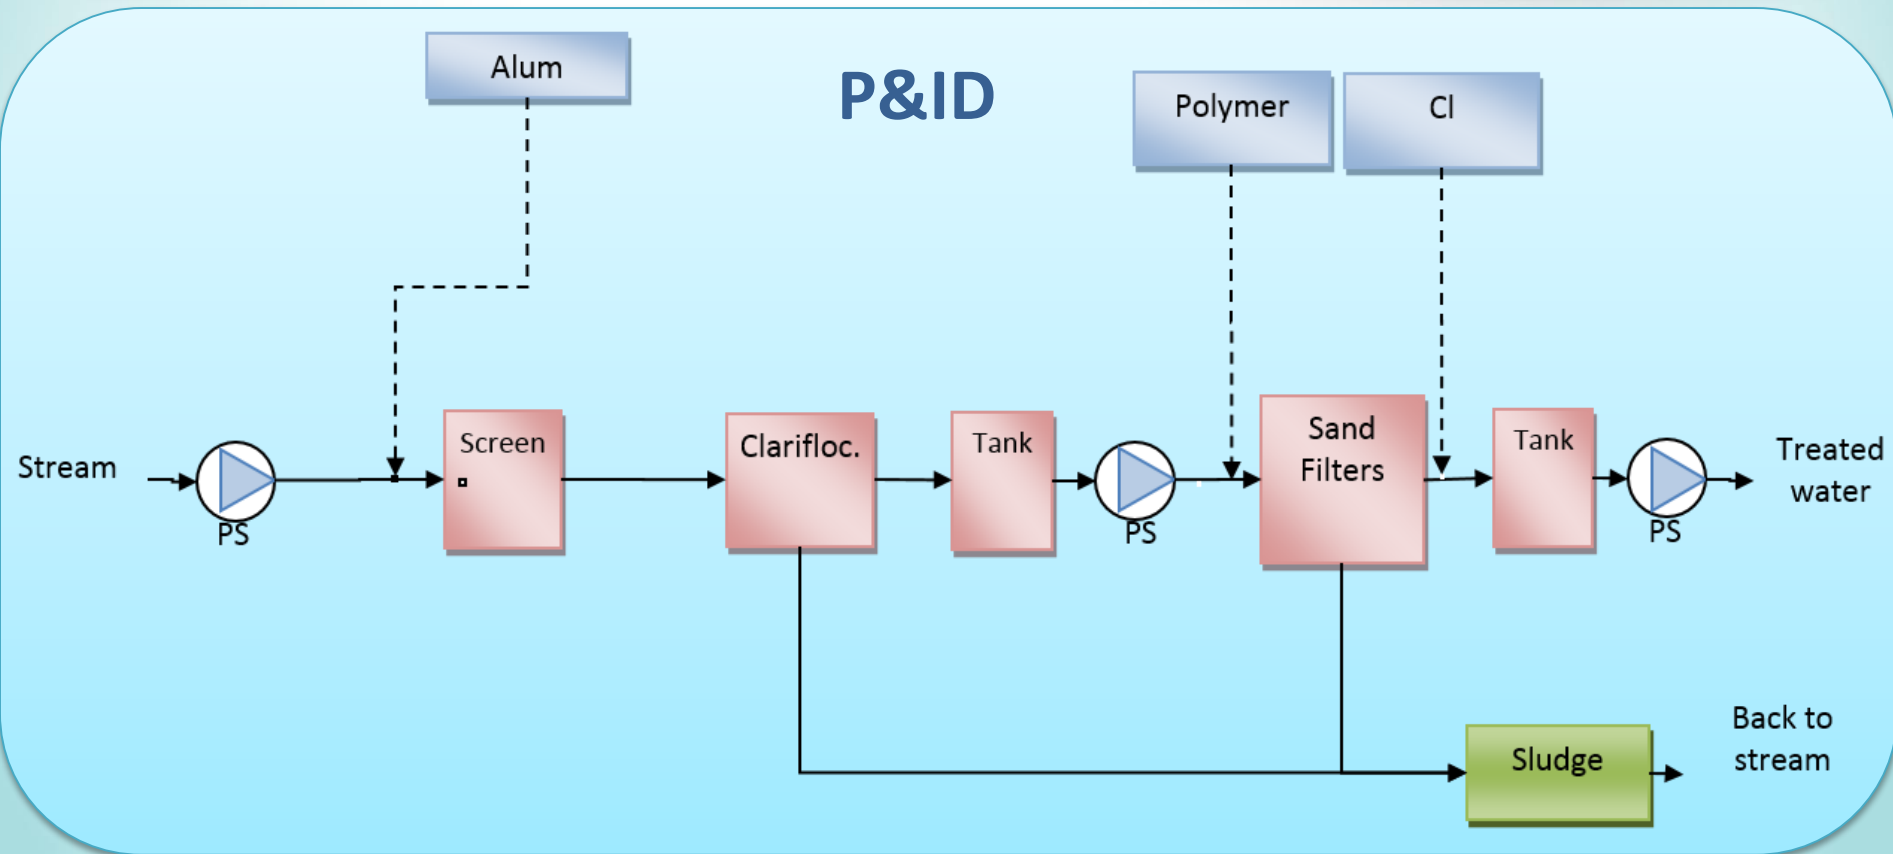

Water pipes conveying drinking water from the source to village will be P.VC. various diameters and adjusted the pressure required by the distances and the required flow rates

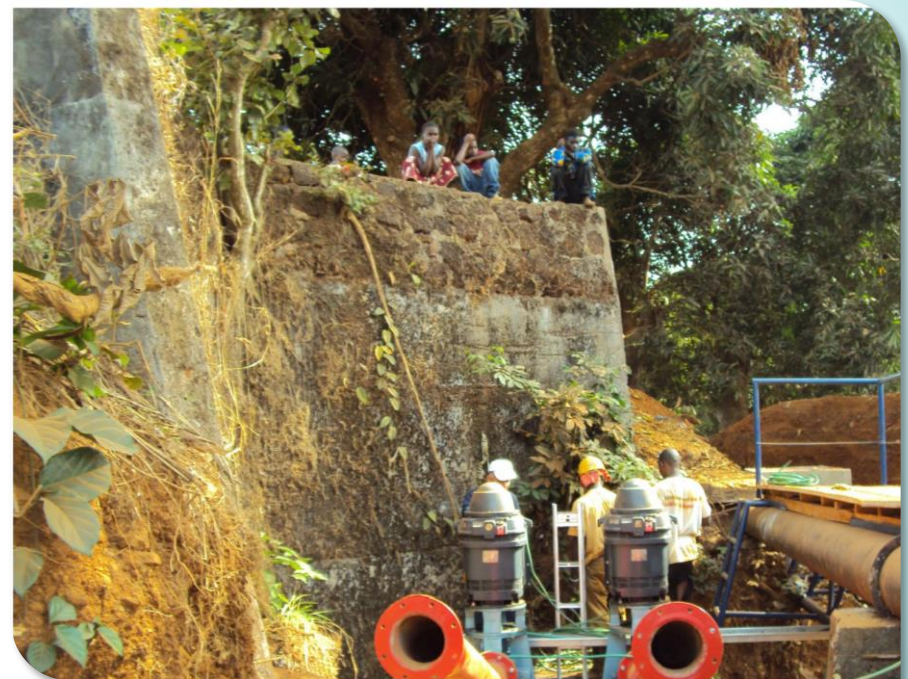

Distribution piping to the village

City water treatment plant

City water treatment plant - Ghana, Africa.

City water treatment plant Soreq, Israel.

Web Site: www.brightech.co.il

Our goal and mission:

- **Maintaining long-term customer relationships.**
- **Implementation of joint training and operation of the facilities after construction.**
- **Full responsibility for projects and their profitability.**
- **Community involvement.**
