aIRSTAR
SPIRIT OF FREEDOM

saturn

main features

- > Helium-inflated lighting balloon
- > RGB LEDs lamps
- > Used with or without suspended acrobat
- > Outdoor use

why should you have the saturn?

An unique carrier balloon: The Saturn is a lighting balloon with an original design, which offers an unforgettable aerial show and an unique communication medium.

Customization: The Saturn is customizable thanks to the vinyl graphics and to the DMX control box, that enables the remote color change of the LEDs. It is also possible to suspend a banner, putting your colors in the spotlight.

An aerial show: In its aerial chiffon option, the Saturn enables an artist to be suspended in the air, and to float over and around the audience on a huge waving piece of fabric at a height that can reach 25 m above the ground. The aerial trapeze option also allows to offer a twirls and pivots show.
