HYDRAULIC DRIVE SYSTEM

Features

Characteristics

- Up to 950 lb. capacity (750 lb. standard)*
- 40 f.p.m. nominal car speed
- Up to 6 stops with 50’-0” of floor-to-floor travel*
- Minimum pit depth of 8” required (10” recommended)
- Minimum overhead clearance of 8’-0” required (9’-6” recommended)*
- Up to 15 square feet interior cab sizes available (12 sq. ft. standard)

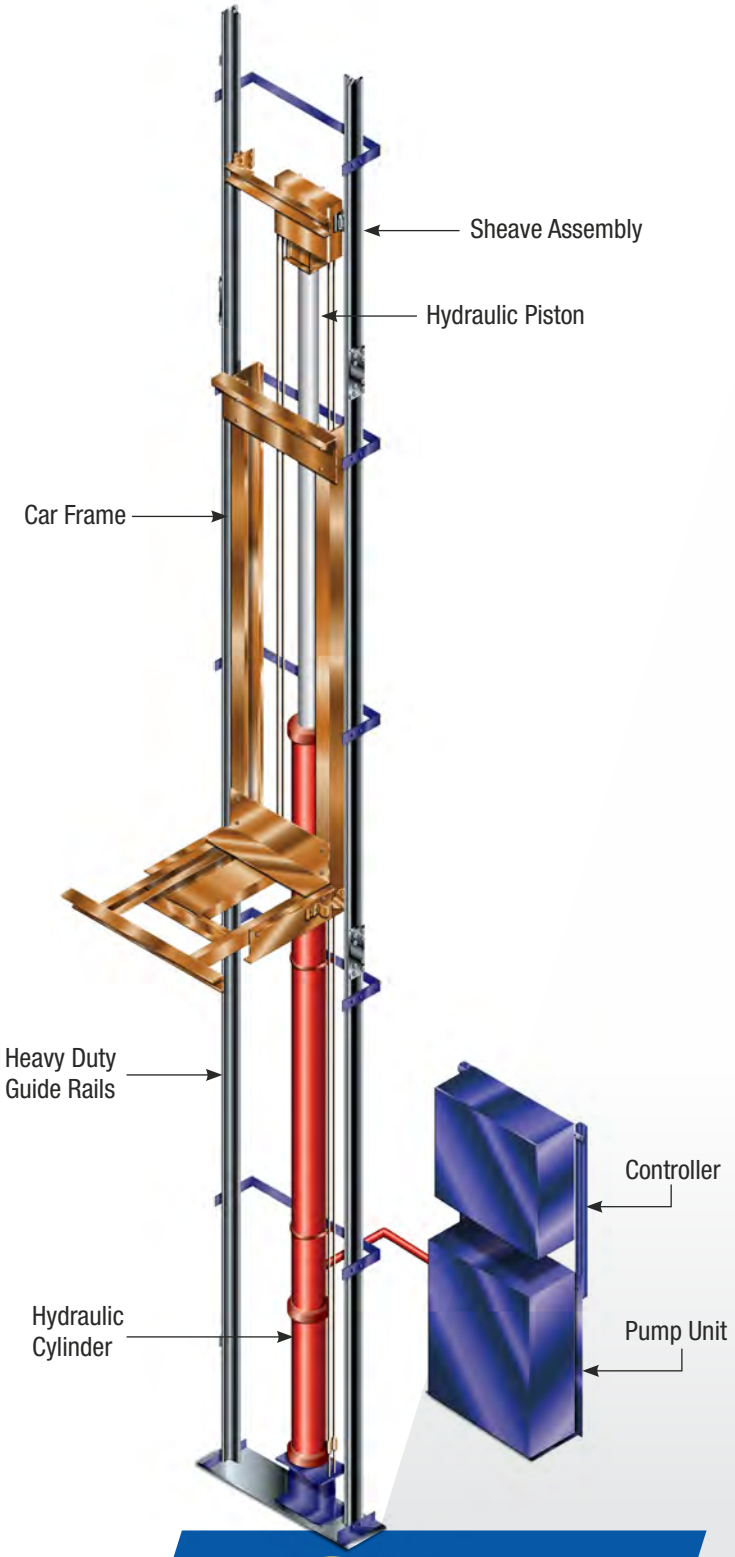

Equipment

- 1:2 roped hydraulic drive
- (2) 3/8” diameter hoist cables
- Single stage hydraulic piston and cylinder with pressure-balanced self-adjusting seal
- Heavy duty cantilevered design car sling with roller guide shoes
- 8 lb. per foot steel tee guide rail system
- 220 volt single-phase power supply
- Vibration free submersible pump/motor assembly with 3 or 5 horsepower motor option
- Two speed control valve with (4) solenoids, soft start and stop, and constant down speed regulation

Safety Devices

- Type “A” instantaneous broken rope car safety
- Pipe rupture valve
- Upper and lower terminal limit switches
- Top final limit switch
- Slack cable switch
- Emergency car lighting in cab
- Emergency push/pull stop switch in cab
- Emergency push button alarm in cab
- Automatic car releveling device
- Floor selectable battery lowering device
- Emergency manual lowering valve
- Emergency telephone in cab
- Solid panel cab doors with approved safety switch
- Approved electro mechanical hoistway door interlocks
- Rubber impact bumper below elevator car
- UL and/or CSA certified electrical and hydraulic devices
- Manufactured in accordance with ASME A17.1 Safety Code

Consult factory for other custom options.

CABLE DRUM DRIVE SYSTEM

Features

Characteristics

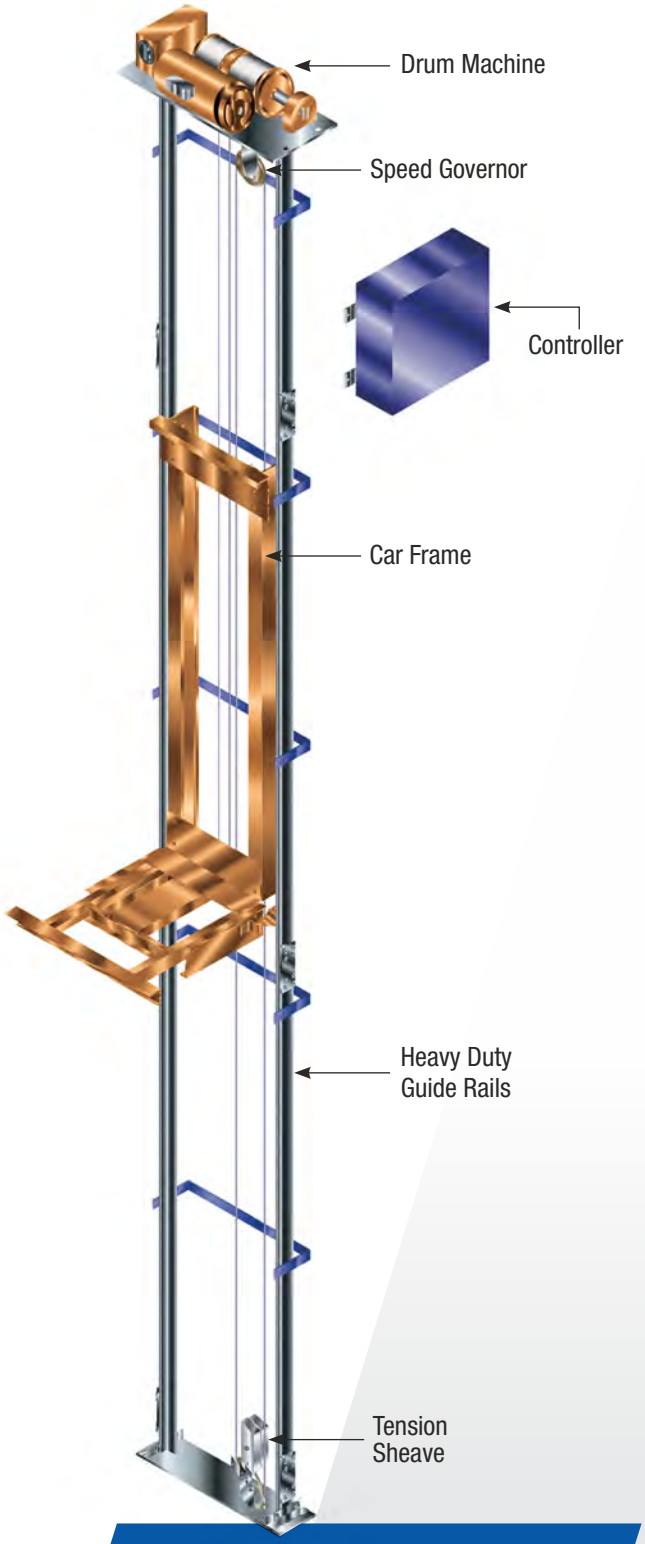

- Up to 950 lb. capacity (750 lb. standard)
- 40 f.p.m. nominal car speed
- Up to 5 stops with 50’-0” of floor-to-floor travel
- Minimum pit depth of 8” required (10” recommended)
- Minimum overhead clearance of 9’-0” required
- Up to 15 square feet interior cab sizes available (12 sq. ft. standard)

Equipment

- Overhead winding drum drive
- (2) 3/8” diameter hoist cables
- Environmentally-friendly, low maintenance, space-saving machine roomless technology
- Heavy duty cantilevered design car sling with roller guide shoes
- 8 lb. per foot steel tee guide rail system
- 220 volt single-phase power supply
- Three horsepower, 3-phase motor with variable voltage, variable frequency (VVVF) drive technology for soft start, soft stop, and smooth operation
- Quiet operating, armature actuated fail safe brake assembly

Safety Devices

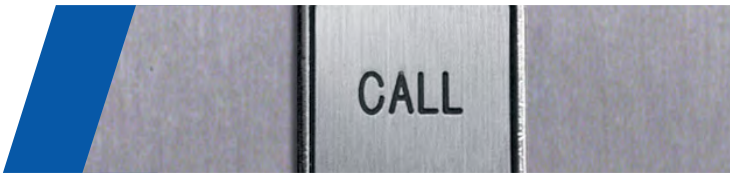

- Type “A” instantaneous broken rope car safety with overspeed governor
- Upper and lower terminal limit switches
- Top and bottom final limit switches
- Slack cable switch
- Machine operated final limit switches
- Emergency car lighting in cab
- Emergency push/pull stop switch in cab
- Emergency push button alarm in cab
- Automatic car releveling device
- Automatic battery lowering device
- Emergency manual lowering
- Emergency telephone in cab
- Solid panel cab doors with approved safety switch
- Approved electro mechanical hoistway door interlocks
- Rubber impact bumper below elevator car
- UL and/or CSA certified electrical devices
- Exceeds ASME A17.1 Safety Code Standards for private residence elevators

3-SPEED CAR DOOR

Features

- Fully automatic car door operation
- Controls are designed so that the car door opens when the hoistway door is open or when the car is parked at the floor, thus eliminating the possibility of an entrapment between doors
- Extremely quiet and smooth operation
- Automatic operation during power failure
- Sleek and compact design
- Lightweight backless doors available in painted white or brushed stainless steel finish
- Features a closed-loop belt drive design that is factory assembled including integral tracks and hangers
- Infrared door edge protection that will retract doors before making contact with a person or obstruction

Specifications

- **Applications:** Residential Elevators
- **Type:** Three speed, side opening, horizontal sliding car doors. Left or right hand configurations
- **Door width:** 32” and 36” (nominal) opening widths available
- **Door Height:** 80” (nominal) height
- **Clear Overhead Required:** 8’-9” minimum
- **Door finishes:** Painted (white), stainless steel (brushed)*
- **Sill finish:** Extruded Aluminum

*Custom finishes available upon request for additional cost and lead-times

ACCORDION CAR DOOR

VINYL LAMINATES

Solid color, textured and woodgrain finishes provide an elegant, realistic appearance with added durability at a great value. Finishes are laminated to 1/4" MDF board providing excellent visual appeal.

HARDWOOD VENEER

Select grade hardwood veneers are laminated to 1/4" MDF providing excellent overall strength. Factory finishing with sealer and protective water-based lacquer top-coats minimizes moisture retention and increases panel stability. Custom stain finishes and exotic or special hardwoods available with additional lead-time.

ALUMINUM

Our exclusive hinge system features as an integrated part of the anodized .080" thick aluminum panels. Choose perforated, solid or a combination of the two for an aesthetically pleasing and secure elevator door.

ACRYLIC

Vision panels utilize a .119" thick, transparent clear or bronze acrylic panel. Custom panel options are also available. We only use "Plexiglas" branded acrylic safety glazing conforming to ANSI Z-97 1-1984 and 16CPSC-FR1201 standards.

Features

- Solid panel door designed to prevent children from extending their hands or feet through openings
- Doors are designed to meet ASME codes for strength and deflection
- Doors fold into pocket leaving maximum clear car opening
- Available in several choices of materials and finishes including laminates, hardwood veneers, aluminum, and acrylics
- Optional automatic operator eliminates the issue of not being able to call the elevator to another floor if the car door is left in the open position
