

Market Information Report

Optional Downwards Flexibility Management (ODFM)

General information about the data provided

On weeks when ODFM is dispatched, for each day the service is dispatched during that week, we will share the market information report pdf and accompanying CSV. This will include all units registered for the service, and whether each of the units was accepted or rejected and the reason code. No data will be published for the remaining days of that week as the relevant market data is already reflected in the pdf and CSV files covering days when ODFM is dispatched. The reason codes are included below.

On weeks where ODFM is not dispatched, we will share a CSV of data in the same format. All units will be shown as rejected and given a reason code of 4. From this data set we will remove all the units that were unavailable to the ESO for the entire week. This data allows providers to see the prices and volumes that would have been available to be assessed if there had been a requirement for the service during that week.

Reason codes

Code	Reason
1	Unavailable during requirement
2	Unable to access volume due to system constraints
3	Requirement fulfilled via more effective prices ¹
4	No requirement

¹ if prices that were rejected appear cheaper than those accepted, we recommend reflecting on the likely NGESO load-factor impact for that unit for that period.
