

Market Information Report 23/05/20

Optional Downwards Flexibility Management (ODFM)

Summary

On 23rd May 2020, NGENSO instructed 855MW of forecast volume of ODFM (capacity of 1610MW) for delivery¹ between 00:00 24th May 2020 and 09:00 24th May 2020. This was made up of CHP, demand turn up and wind.

Assessment process

All tenders received from providers are treated in the same way.

1. Assess whether the volume is accessible to the NGENSO due to system constraints
2. Assess whether the volume is available during the period of NGENSO's requirement
3. Assess the volume of MWs offered by generation with variable output
4. Assess the ramping times for units and any additional costs incurred from this
5. Create an effective price
 - a. $\text{Price (£/MW/hr)/NGESO forecast loadfactor} = \text{effective price (£/MW/hr)}$
6. Sort the units from lowest to highest effective price
7. Accept units from the bottom of the stack until requirement is filled

Flexibility from wind and solar generation is less useful in periods when the output from wind and solar generation is lower. Eg solar on an overcast day and wind on a still day. To reflect this an effective price is calculated and applied in the assessment using NGENSO forecast load factors for each unit. Note for some technology types (e.g. demand turn up) the load factor is 100%.

Communications

Accepted units will receive an email from NGENSO no later than 17:00 and need to respond within 1 hour. These emails may be sent earlier than 17:00, though likely earliest time would be 15:00.

The forecast of the volume of ODFM instructed will be shared using our System Operator Notification And Reporting system: SONAR. This is our forecast of volume that we have enacted, not the sum of allocated registered service volume that has been accepted.

You can set up email notifications from this site using this [link](#). If you have any queries, please contact Commercial.Operation@nationalgrideso.com

¹ Note, this period is the period for which there was a requirement for the service. Actual instructions may be outside of this window in order to manage the aggregate impact of service delivery as a result of having many units ramping simultaneously.

Reason codes

Code	Reason
1	Unavailable during requirement
2	Unable to access volume due to system constraints
3	Requirement fulfilled via more effective prices ²

² if prices that were rejected appear cheaper than those accepted, we recommend reflecting on the likely NGESO load-factor impact for that unit for that period.

Results
