

# Hot Dipped Galvanised Hexagon Head Set Screws

## FEATURES

- Setscrews are full-threaded, and designed to connect two objects
- Example applications include automotive, machinery, engines, manufacturing, industrial equipment, white goods, maintenance, and repair
- The hexagon head enables the setscrew to be tightened and loosened, driven by a socket drive or spanner
- Setscrews can be removed and reinserted endless times
- The galvanised finish offers great resistance to corrosion
- Made of high-tensile steel, these setscrews are very strong
- Comply with DIN 933 specifications

A setscrew is usually fully inserted into a tapped (threaded) hole in the receiving object, intended to connect two objects. Setscrews are secured by being tightened into the hole and generally do not protrude; in such an application, they would not require a nut. Example applications include automotive, machinery, engines, manufacturing, industrial equipment, white goods, maintenance, and repair. The hexagon head enables the setscrew to be tightened and loosened, driven by a socket drive or spanner. Setscrews can be removed and reinserted endless times. The galvanised finish offers great resistance to corrosion. Made of high-tensile steel, these setscrews are very strong. They comply with DIN 933 specifications.
