

796-2028, 796-2021, 796-2025

Batten mount PIR detectors

Overview

This series of miniature PIR (passive infrared) presence detectors provide automatic control of lighting loads with optional manual control using an infrared handset. It is specifically designed for mounting onto a batten style luminaire.

Three models are available: premium, direct dim, and analogue dim all of which will switch incandescent, fluorescent, compact fluorescent and LED lighting. The direct dim variant controls DALI or DSI digital dimming ballasts whilst the analogue dim variant controls 1-10V dimming ballasts.

The unit detects movement using a PIR sensor and turns the load on. When an area is no longer occupied the load will switch off after an adjustable time out period.

The units are IP65 rated as standard and are therefore suitable for outdoor use as well as wet and wash-down areas.

A selection of fixing washers are supplied to aid fixing to a variety of luminaires.

All functionality is fully programmable using an IR handset.

Features

Front view

PIR Sensor

Detects movement within the unit's detection range, allowing load control in response to changes in occupancy.

IR Receiver

Receives control and programming commands from an IR (infrared) handset.

Light Level Sensor

Measures the overall light level in the detection area

Status LED

The LED flashes Red to indicate the following:

| | |
|-------------------------------|---------------------------|
| Walk Test LED active | when movement is detected |
| Valid setting received | |

Detection diagram

Range

Area of high sensitivity  Area of lower sensitivity 

Note: illustration shows an average of the walk across and walk towards figures below.

Walk across

| Height | Range Diameter |
|--------|----------------|
| 7m | 16m |
| 2.8m | 9m |

Walk towards

| Height | Range Diameter |
|--------|----------------|
| 7m | 10m |
| 2.8m | 5m |

The product is designed to be mounted directly to the outside of a luminaire. The detector should be sited so that the occupants of the room fall inside the detection pattern (shown opposite), at a recommended ceiling height of 2.8m. Note that the lower the sensor is installed the smaller the detection range will be, subject to the parameters shown on the detection diagram.

- For optimum operation of the lux sensor, the lens must be shielded as much as possible from the light source.
- Avoid direct sunlight entering the sensor.
- Do not site within 1m of forced air heating or ventilation.
- Do not fix to a vibrating surface.

Sensor functionality

Detection mode

- **Presence** When movement is detected the load will automatically turn on. When the area is no longer occupied the load will automatically switch off after an adjustable time period.

Sensitivity to movement of the PIR sensor can be adjusted using the Sensitivity parameter.

HINT: To assist in setting the Sensitivity, turn on the Walk Test LED which will flash red when movement is detected.

Switch Level On/Off

Occupancy detection can be made dependant on the ambient light level using the Lux On Level and Lux Off Level parameters.

Maintained Illuminance (daylight harvesting) - 796-2021 and 796-2025 variants only

The detector measures the overall light level in the detection area and calculates the correct output for the luminaires, to achieve a preset lux level (maintained illuminance or daylight harvesting).

Burn-in - 796-2021 & 796-2025 variants only

Burn-in - 796-2021 & 796-2025 variants only

• Overview

It is a requirement of many fluorescent lamp manufacturers to have the lamps on at maximum output for a period of time to guarantee lamp life (refer to the manufacturer's datasheet for details). As the 796-2021 & 796-2025 are able to dim the lamps using DALI/DSI or 1-10V, the products provide a facility to disable this for a given period of time.

• Operation

By setting the "Burn in" parameter, you can select a time during which the lamps are not allowed to deviate from maximum output. The unit counts the time, and even remembers how long has elapsed in the event of a power failure. To cancel the burn in function, simply select a time of 0. Note that when the lamps are changed, the burn in time should be set again.

Installation

Do not grip unit at the lens end. Hold the square body near the threaded end when installing and tightening the nut. Care must be taken to prevent damage to the lens and surrounding IP seal.

Components

| Part | Quantity Supplied |
|--|-------------------|
|  IP Spacer with silicone coating | 1 |
|  Silicone washer | 1 |
|  5° washer | 1 |
|  5° spacer | 1 |
|  M20 nut | 1 |

Mounting hole without key

Mounting hole with key

Note. Key to be at top of sensor.

Standard luminaire fitting

IP luminaire fitting

Wiring diagrams

Wire the products as shown in the diagrams.

796-2028

796-2021

796-2025

Power-up test procedure

- When power is applied to the unit, the load will turn on immediately.
- Set the timeout to 10 seconds, vacate the room or remain very still and wait for the load to switch off .
- Check that the load switches on when movement is detected.
- The unit is now ready for programming.

Fault finding

What if the load does not turn ON?

- Check that the live supply to the circuit is good.
- Check that the load is functioning by bypassing the sensor (e.g. link L and L/ Out).

HINT: *The Walk Test LED function can be used to check that the unit is detecting movement in the required area.*

What if the load does not turn OFF?

- Ensure that the area is left unoccupied for longer than the Time Out Period.
- Ensure that the sensor is not adjacent to circulating air, heaters or lamps.
- If the unit “false triggers” reduce the sensitivity using the sensitivity settings

Basic programming

The functionality is controlled by a number of parameters which can be changed or programmed by any of the following devices:

- 796-2097 Infrared Handset. See below for programmable functions.

For most basic programming operations the 796-2097 handset can be used and the following procedures are based on using this device.

Point the handset at the Sensor and send the required programming commands to the unit as shown below.

Valid commands will be indicated by a red LED flash. See page 1 for details of other LED responses.

Note: other functions on the 796-2097 which are not shown below are not applicable to this product.

| Parameter Name | Default Value | Number of Shift key presses | | | | 796-2097 Handset Graphics | Description |
|-------------------------------------|---------------|-----------------------------|-------------------------|-------------------------------|-------------------------------|---------------------------|--|
| | | 0 SHIFT 1 SHIFT 2 | 1 SHIFT 1 SHIFT 2 | 2 SHIFT 1 SHIFT 2 | 3 SHIFT 1 SHIFT 2 | | |
| Button Activation | | | | | | | |
| On / Raise | | On | Raise | | | | Turn lights on or to raise lights. |
| Off / Lower | | Off | Lower | | | | Turn lights off or to lower lights. |
| Walk test | Off | On | Off | | | | When set to On this causes a red LED to flash on the sensor when it detects movement. Use this feature to check for adequate sensitivity levels. |
| Time Out (Time adjustment) | 20 mins | 1, 10 & 20 minutes | 5, 15 & 30 minutes | 10 seconds | | | Once the detector is turned on, this value sets how long the lights will stay on once movement has ceased. |
| Lux on level (Switch level on) | 9 | 2, 5 & 7 | 4, 6 & 9 | | | | Lux level setting to prevent the luminaires being switched on if the ambient light level is sufficient (adjustable between 1 and 9). The luminaires will always be switched on at level 9. |
| Light Level (DD & AD only) | 6 (600) | | | 2 (200) 5 (500) 7 (700) | 4 (400) 6 (600) 9 (999) | | Sets a target light level to be maintained by the lighting system. 9 (999) = disabled. |
| Lux off level (Switch level off) | 9 | 2, 5 & 7 | 4, 6 & 9 | | | | Lux level setting to switch the luminaires off during occupancy if the ambient light level goes above the setting (adjustable between 1 and 9). Level 9 will always keep the lights on. This setting can be used for "window row switching". <i>Note: the Lux Off Level value must always be greater than the Lux On Level value.</i> |
| Load Type (DD only) | DALI | | | 2-DALI 7-DSI | 2-DALI on | | Sets the ballast control protocol to be used by the output channel. |
| Sensitivity | 9 | 1, 5 & 9 | 3, 6 & 8 | | | | Sensitivity level for detecting movement. 1 = low sensitivity 9 = high sensitivity |
| Defaults | | | | D | | | Returns the unit to the default settings. |
| Burn-in (DD & AD only) | 0 | 0 | 50 | 100 | | | Determines how long the output will be at 100% so that lamps 'burn-in'. The 'burn-in' time is not affected by power supply interruptions. |
| Shift | | | | | | | Use this button to select the settings in red and blue signified by the 'Shift 1' and 'Shift 2' LEDs |

Advanced programming

| Parameter Name | Default Value | Range / Options | Description | | |
|-------------------------------|---------------|------------------------------|--|----|--|
| Detector Parameters | | | | | |
| Walk Test LED | Off | On or Off | When set to On this causes a red LED to flash on the sensor when it detects movement. Use this feature to check for adequate sensitivity levels. | ✓ | |
| Time Out (Time adjustment) | 20 minutes | 0-99 minutes | Once the detector is turned on, this value sets how long the lights will stay on once movement has ceased. Select 0 for 10 second delay – use for commissioning only. | ✓ | |
| Manual Time Out | 10 minutes | 0-99 minutes | When a manual operation occurs, either via the switch input or the infrared, it invokes the timeout period. Example 1: a detector in presence mode has a detector timeout of 15 minutes and a manual timeout of 3 minutes. When the user leaves the room they press the off button. The sensor will revert to automatic after 3 minutes, and then walking back in the room will turn the lights on. Example 2: using the settings above, the user turns the lights off (say for a presentation) but stays in the room. Every time a movement is detected, the manual timeout period is re-triggered, but when it doesn't pick up for the short timeout period, the sensor will timeout and revert to automatic. This means the lights may turn on inadvertently during the presentation, if the occupants are still for the manual timeout period, so adjust the timing carefully. | ✗ | |
| Sensitivity On | 9 | 1 (min) to 9 (max) | Sensitivity level for detecting movement when the detector is already on. *UHS5 sets Sensitivity On and Off to the same value. | ✓* | |
| Sensitivity Off | 9 | 1 (min) to 9 (max) | Sensitivity level for detecting movement when the detector is off. *UHS5 sets Sensitivity On and Off to the same value. | ✓* | |
| Lux time | 0 | 0 (disabled) 1-99 minutes | If the detector measures the lux level and decides that the output needs switching on or off as a consequence, the lux time must elapse first. If at any time during the timed delay the lux change reverses then the process is cancelled. | ✗ | |
| Power Up State | On | On or Off | Select No for a 30 second delay on start up. If Yes is selected, there will be no delay on start up and the detector will always power up detecting. | ✗ | |
| Disable Detector | N | Y or N | Disables detection, leaving the relay output permanently off with the dimming output operational. This mode is used when the unit is for maintained illuminance only. | ✗ | |
| On Delay | 0 minutes | 0-99 minutes | The On Delay to allows the first channel to switch on after the second channel. A typical application for this would be where a detector is controlling lighting and air conditioning in an area. When the occupant is detected, the lighting will be turned on immediately, whereas the air conditioning may be turned on after 15 minutes. If the area is vacated and the detector times out before the delay, then the air conditioning would never go on. The delay can be set only for channel 1 using the on delay parameter. | ✗ | |
| Inhibit | 4 seconds | 1 to 999 seconds | When the detector turns off, a delay is instigated to prevent retriggering. In certain circumstances this delay may not be enough. This parameter allows the delay to be changed. | ✗ | |
| Factory default | - | - | Restores factory default settings | ✓ | |

| User Modes | | | | | |
|----------------------|---|---|--|---|--|
| Raise (DD & AD only) | - | - | Increase light level. Reverts when occupancy cycle complete. | ✓ | |
| Lower (DD & AD only) | - | - | Decrease light level. Reverts when occupancy cycle complete. | ✓ | |
| Scene up | - | - | Steps up between 6 pre-defined scenes. | ✗ | |
| Scene down | - | - | Steps down between 6 pre-defined scenes. | ✗ | |
| Scene # | - | - | Select the individual scene, between 0 and 6. (1 = min. output; 2 = 10%; 3 = 25%; 4 = 50%; 5 = 75%; 6 = 100%) | ✗ | |
| Override On | - | - | If the lights are off, sending the IR command will turn them on immediately and revert to automatic operation using the manual timeout period. | ✓ | |
| Override Off | - | - | If the lights are on, sending the IR command will turn them off immediately. After the manual timeout period (described above), the sensor will revert to automatic. | ✓ | |
| Cancel | - | - | Cancels the on or off override, returning the detector to normal operation. | ✗ | |

Advanced programming

| Parameter Name | Default Value | Range / Options | Description | UHS5 | UNLCDHS |
|---|---------------|---|--|------|---------|
| Channel 1 –Switching Channel(PRM & AD only) | | | | | |
| Lux on level (Switch level on) | 9 | 1 to 9 For a higher resolution a scale of 101-199 is available | Sets a minimum light level below which the PIR sensor is enabled, allowing lights to be turned on by movement. <i>Note: the Lux Level Off value must always be greater than the Lux Level On value.</i> | ✓ | |
| Lux off level (Switch level off) | 9 | 1 to 9 For a higher resolution a scale of 101-199 is available | Sets a maximum light level above which the PIR sensor is disabled, preventing lights from being turned on by movement. | ✓ | |

| | | | | | |
|--|------|---|--|-------------|--|
| Channel 2 -Dimming Channel (DD & AD only) | | | | | |
| Lux on level (Switch level on) | 9 | 1 to 9 For a higher resolution a scale of 101-199 is available | Sets a minimum light level below which the PIR sensor is enabled, allowing lights to be turned on by movement. <i>Note: the Lux Level Off value must always be greater than the Lux Level On value.</i> | ✓ | |
| Lux off level (Switch level off) | 9 | 1 to 9 For a higher resolution a scale of 101-199 is available | Sets a maximum light level above which the PIR sensor is disabled, preventing lights from being turned on by movement. | ✓ | |
| Light Level (maintained illuminance) | 600 | 1 to 998 (999 disabled) | Sets a target light level to be maintained by the lighting system. | ✓ | |
| Load Type (DD only) | DALI | DSI DALI DALI On | Sets the ballast control protocol to DSI. Sets the ballast control protocol to DALI. DALI On provides a permanent voltage to DALI ballasts when DALI has not been implemented correctly in the ballast. Maximum number of ballasts is 4 unless the relay is disabled then it is 10. | ✓ ✓ ✗ | |
| Max Value | 100% | 0 to 100% | Maximum dimming output level. | ✗ | |
| Min Value | 0% | 0 to 100% | Minimum dimming output level. | ✗ | |
| Memorise | N | Yes or No | If this is set to Yes, the last manual lux level set will be memorised and used as the new switch on level. | ✗ | |
| On value | 99 | 0 to 99 | Dimming output level when switched on (0-99). | ✗ | |
| Off value | 0 | 0 to 99 | Dimming output level when switched off (0-99). If a non-zero off value is set, then the output will toggle between this value and completely off depending on the switch level on and off values. For example, if it is light outside, the fittings will be off if there is no occupancy. If it is dark outside, they will adopt the preset off value. This feature is only enabled if 'Min value' is set to 99. | ✗ | |
| Burn-in | 0 | 0 (disabled) or 1 to 999 hours | Determines how long the output will be at 100% so that lamps 'burn-in'. The 'burn-in' time is not affected by power supply interruptions. | ✓ | |
| Fade value | 10 | 0 to 99 | After occupancy ceases, this dimming output level is loaded for the fade time (adjustable between 0 and 99). | ✗ | |
| Fade mins | 0 | 0 to 99 | This is the time period (adjustable between 0 and 99 minutes) that the luminaire will be held at the fade value before turning off. A value of 0 disables the fade function. | ✗ | |
| Speed On | 40 | Measured in 0.1 sec intervals. | Determines the dimming response speed after the setup time has finished. | ✗ | |
| Speed Set | 5 | Measured in 0.1 sec intervals. | Determines the dimming response speed during the set up time. Measured in 0.1 sec intervals. If set to 0 will disable dimming for "Set seconds" below, used if fittings are required to warm up before dimming. | ✗ | |
| Set Seconds | 120 | 1 to 999 seconds | Determines how long the dimming response set-up period lasts on power-up or on setting change. This enables the desired lux level to be achieved rapidly when the lights come on, or during setup. | ✗ | |
