

**Installation Instructions:**

- Make sure you have a clean, even and level surface to assemble on. This will ensure stability and load capacity
- Use a rubber mallet to avoid damaging the bay
- Wear protective gloves as there may be sharp edges
- Some slots and beam tongues may require gentle adjustment with a screwdriver to open them further
- Place the bottom shelf no greater than 100mm above the floor
- Distribute the remaining shelves evenly
- Wall fixing is recommended
- Use only anchors and fastening screws suitable for your wall type and shelf weight. Anchors, screws, tools and gloves are not included.

The maximum load of each shelf must be uniformly distributed across the shelf to avoid damages to the particle board. These shelving bays are not suitable for use in a damp or humid environment.
