

# RainSaver® Rainwater Harvesting System

## DD750L TANK

### Description

#### Wall mount Rainwater Tank

The DD Wall Tank is a rainwater storage tank for domestic use. It has a capacity of 750 litres and designed to fit close to the wall. With a small footprint, it is space saving and blends beautifully with the exterior of a house.

Steel safety brackets fix the top of the tank to the wall to prevent the tank from tilting.

Rainwater filtered through a suitable filter is channelled to an inlet at the top or side of the tank near the top. The inlet at the top or side of the tank provides sufficient pressure for basic garden watering without the use of a pumping system.

### Features

The tank is made from durable HDPE and is UV-resistant. It is manufactured using the latest rotational moulding technique to ensure even tank wall thickness for optimal strength and shape stability. Water can be removed through the front or rear connection or through the two side outlets near the bottom. All the 4 outlets are internal BSP threaded.

Water inlet can be positioned anywhere on either side of the tank by cutting holes from diameter 2" - 4". Overflow may be added as necessary.

The modular design allows 2 or more tanks to be connected together for higher storage capacities.

*\* Please refer to installation manual details*

### Technical Data

Dimension : 900 x 600 x 1800(h) mm

Capacity : 750 Litres

- 2 nos. 1/2" BSP threaded front/ rear outlets at height 5cm from floor
- 2 nos. 1" BSP threaded side outlets at height 10cm from floor
- All outlets are sealed when new and require punching through to use
- 250mm diameter top opening with cover for cleaning and servicing use
- Tank material : HDPE (High Density Polyethylene)
- Wall Mounting brackets : Hot dipped galvanized steel
- Tank weight : 40kg

#### Standard colours:

Beige and Grey

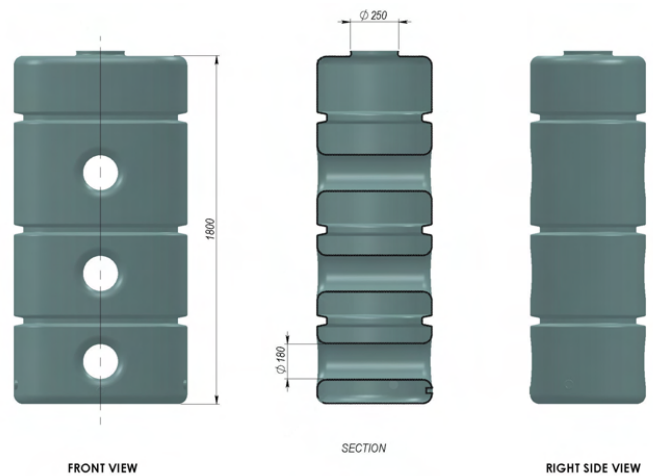

Other colours are available upon request.  
(subject to minimum order quantity)

Beige

Grey

#### Packing:

Individual tank plastic wrapped
